- C. Prepare test and inspection reports.

### 3.10 CLEANING

- A. Clean dirt and debris from sprinklers.
- B. Only sprinklers with their original factory finish are acceptable. Remove and replace any sprinklers that are painted or have any other finish than their original factory finish.

### 3.11 PIPING SCHEDULE

- A. Piping between Fire Department Connections and Check Valves: Galvanized, standard-weight steel pipe with grooved ends, grooved-end fittings, grooved-end-pipe couplings, and grooved joints.
- B. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.
- C. CPVC pipe, Schedule 40 CPVC fittings, and solvent-cemented joints may be used for light-hazard and residential occupancies where concealed within wall or ceiling construction on residential floors of the building.
- D. Standard-pressure, wet-pipe sprinkler system, NPS 2 and smaller, shall be one of the following:
  - 1. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
  - 2. Standard-weight or Schedule 30, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
- E. Standard-pressure, wet-pipe sprinkler system, NPS 2-1/2 to NPS 4, shall be one of the following:
  - 1. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
  - 2. Standard-weight or Schedule 30, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
  - 3. Thinwall, Schedule 10 black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
- F. Standard-pressure, wet-pipe sprinkler system, NPS 5 and larger, shall be one of the following:
  - 1. Standard-weight or Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
  - 2. Standard-weight or Schedule 30, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
  - 3. Thinwall, Schedule 10 black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

### 3.12 SPRINKLER SCHEDULE

- A. Use sprinkler types in subparagraphs below for the following applications:
  - 1. Rooms without Ceilings: Upright sprinklers.
  - 2. Rooms with Suspended Ceilings: Concealed sprinklers.
  - 3. Wall Mounting: Sidewall sprinklers.

- B. Provide sprinkler types in subparagraphs below with finishes indicated.
1. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
  2. Flush Sprinklers: Bright chrome, with painted white escutcheon.
  3. Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
  4. Upright and Sidewall Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.

END OF SECTION 211313

## SECTION 211316 DRY-PIPE SPRINKLER SYSTEMS

### PART 1 - GENERAL

#### 1.1 SUMMARY

##### A. Section Includes:

1. Pipes, fittings, and specialties.
2. Specialty valves.
3. Sprinkler specialty pipe fittings.
4. Sprinklers.
5. Alarm devices.
6. Manual control stations.
7. Pressure gauges.
8. Nitrogen generator-based corrosion-mitigation systems.

##### B. Related Requirements:

1. Section 211119 "Fire Department Connections" for exposed-, flush-, and yard-type fire department connections.
2. Section 230523 "General-Duty Valves for Water-Based Fire-Suppression Piping" for ball, butterfly, check, gate, post-indicator, and trim and drain valves.

#### 1.2 ACTION SUBMITTALS

##### A. Product Data: For each type of product.

##### B. Shop Drawings: For dry-pipe sprinkler systems.

1. Include plans, elevations, sections, and attachment details.
2. Include diagrams for power, signal, and control wiring.

##### C. Delegated-Design Submittal: For dry-pipe sprinkler systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

#### 1.3 INFORMATIONAL SUBMITTALS

##### A. Coordination Drawings: Sprinkler systems, drawn to scale, on which items of other systems and equipment are shown and coordinated with each other, using input from installers of the items involved.

##### B. Design Data:

1. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved by authorities having jurisdiction, including hydraulic calculations if applicable.
  - C. Field Test Reports: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."
  - D. Field quality-control reports.
- 1.4 CLOSEOUT SUBMITTALS
- A. Operation and maintenance data.
- 1.5 QUALITY ASSURANCE
- A. Installer Qualifications:
    1. Installer's responsibilities include designing, fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
      - a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer.

## PART 2 - PRODUCTS

### 2.1 SYSTEM DESCRIPTIONS

- A. Dry-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing compressed air or nitrogen. Opening of sprinklers releases compressed air or nitrogen and permits water pressure to open dry-pipe valve. Water then flows into piping and discharges from opened sprinklers.

### 2.2 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with NFPA 13.
- C. Standard-Pressure Piping System Component: Listed for 175-psig minimum working pressure.
- D. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design dry-pipe sprinkler systems.

1. Available fire-hydrant flow test records indicate the following conditions:

- a. Date: 06/26/2020.
- b. Performed by: NJAWC.
- c. Location of Residual Fire Hydrant R: Rahway Ave.
- d. Location of Flow Fire Hydrant F: Rahway Ave.
- e. Static Pressure at Residual Fire Hydrant S: 55 PSI.
- f. Measured Flow at Flow Fire Hydrant F: 1126 GPM.
- g. Residual Pressure at Residual Fire Hydrant R: 50 PSI.

E. Sprinkler system design shall be approved by authorities having jurisdiction.

- 1. Margin of Safety for Available Water Flow and Pressure: 10 percent, including losses through water-service piping, valves, and backflow preventers.
- 2. Sprinkler Occupancy Hazard Classifications:

- a. Automobile Parking Areas: Ordinary Hazard, Group 1.
- b. Building Service Areas: Ordinary Hazard, Group 1.
- c. Electrical Equipment Rooms: Ordinary Hazard, Group 1.
- d. Elevator Machine Room and Hoistway: Ordinary Hazard, Group 1.
- e. General Storage Areas: Ordinary Hazard, Group 1.
- f. Office and Public Areas: Light Hazard.

3. Minimum Density for Automatic-Sprinkler Piping Design:

- a. Light-Hazard Occupancy: 0.10 gpm over 1500-sq. ft. area.
- b. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm over 1500-sq. ft. area.

4. Maximum protection area per sprinkler according to UL listing.

5. Maximum Protection Area per Sprinkler:

- a. Office Spaces: 225 sq. ft.
- b. Storage Areas: 130 sq. ft.
- c. Mechanical Equipment Rooms: 130 sq. ft.
- d. Electrical Equipment Rooms: 130 sq. ft.
- e. Other Areas: According to NFPA 13 recommendations unless otherwise indicated.

6. Total Combined Hose-Stream Demand Requirement: According to NFPA 13 unless otherwise indicated:

- a. Light-Hazard Occupancies: 100 gpm for 30 minutes.
- b. Ordinary-Hazard Occupancies: 250 gpm for 60 to 90 minutes.

2.3 STEEL PIPE AND FITTINGS

- A. Standard-Weight, Galvanized-Steel Pipe: ASTM A53/A53M, Type E, Grade B. Pipe ends may be factory or field formed to match joining method.

- B. Schedule 30, Galvanized-Steel Pipe: ASTM A135/A135M; ASTM A795/A795M, Type E; or ASME B36.10M wrought steel, with wall thickness not less than Schedule 30 and not more than Schedule 40. Pipe ends may be factory or field formed to match joining method.
- C. Thinwall Galvanized-Steel Pipe: ASTM A135/A135M or ASTM A795/A795M, threadable, with wall thickness less than Schedule 30 and equal to or greater than Schedule 10. Pipe ends may be factory or field formed to match joining method.
- D. Galvanized-Steel Pipe Nipples: ASTM A733, made of ASTM A53/A53M, standard-weight, seamless steel pipe with threaded ends.
- E. Galvanized-Steel Couplings: ASTM A865/A865M, threaded.
- F. Galvanized, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.
- G. Malleable- or Ductile-Iron Unions: UL 860.
- H. Cast-Iron Flanges: ASME B16.1, Class 125.
- I. Plain-End-Pipe Fittings: UL 213, ductile-iron body with retainer lugs that require one-quarter turn or screwed retainer pin to secure pipe in fitting.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Anvil International.
    - b. Shurjoint; a part of Aalberts Integrated piping Systems.
    - c. Or approved equal
- J. Grooved-Joint, Steel-Pipe Appurtenances:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Anvil International.
    - b. CPS Products, Inc.
    - c. National Fittings, Inc.
    - d. Shurjoint; a part of Aalberts Integrated piping Systems.
    - e. Smith-Cooper International.
    - f. Tyco by Johnson Controls Company.
    - g. Victaulic Company.
    - h. Or approved equal
  - 2. Pressure Rating: 175-psig minimum.
  - 3. Galvanized, Grooved-End Fittings for Steel Piping: ASTM A47/A47M, malleable-iron casting or ASTM A536, ductile-iron casting, with dimensions matching steel pipe.
  - 4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213 rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

## 2.4 SPECIALTY VALVES

- A. Listed in UL's "Fire Protection Equipment Directory" or FM Global's "Approval Guide."
- B. Specialty Valves Pressure Rating: 175-psig minimum.
- C. Body Material: Cast or ductile iron.
- D. Size: Same as connected piping.
- E. End Connections: Flanged or grooved.
- F. Dry-Pipe Valves:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Globe Fire Sprinkler Corporation.
    - b. Reliable Automatic Sprinkler Co., Inc. (The).
    - c. Tyco by Johnson Controls Company.
    - d. Victaulic Company.
    - e. Viking Corporation.
    - f. Or approved equal
  - 2. Standard: UL 260.
  - 3. Design: Differential-pressure type.
  - 4. Include UL 1486, quick-opening devices, trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
- G. Automatic (Ball Drip) Drain Valves:
  - 1. Standard: UL 1726.
  - 2. Pressure Rating: 175-psig minimum.
  - 3. Type: Automatic draining, ball check.
  - 4. Size: NPS 3/4.
  - 5. End Connections: Threaded.

## 2.5 DRY-SPRINKLER SYSTEM NITROGEN GENERATOR WITH PURGE/VENT

- A. Dry-Sprinkler System Nitrogen Generator with Purge/Vent: Nitrogen generator system to serve dry-sprinkler zones for piping corrosion mitigation with system high point venting.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Engineered Corrosion Solutions.
    - b. General Air Products, Inc.
    - c. Potter Electric Signal Company, LLC.

- d. South-Tek Systems, LLC.
  - e. Or approved equal
2. Description: Nitrogen generator system for dry-sprinkler system providing required supervisory pressure within sprinkler zone. System is to include either an integrated, oil-less air compressor located within nitrogen generator system package, or a separate vibration-isolation mounted air compressor, also provided by nitrogen generator manufacturer.
3. Standards:
- a. FM Approvals 1035.
  - b. UL 508A listed.
4. Nitrogen Generator:
- a. Wall-mounted or skid-mounted nitrogen generator to provide minimum nitrogen purity of 98 percent to the designated sprinkler systems.
  - b. Power: 120 V ac.
  - c. Bypass mode and nitrogen generating mode.
  - d. Minimum Capacity: As recommended by manufacturer.
  - e. .
5. Automatic Purge Vent/Valve:
- a. Vents oxygen during system nitrogen fill.
  - b. Automatically closes when 98 percent minimum nitrogen has been reached.
  - c. Sized to allow correct purge rate per manufacturer's written instructions and with 14 days.
  - d. Provide one venting device for each dry/pre-action sprinkler system zone.
  - e. Include a connection port for a portable nitrogen purity sensor or a nitrogen purity manifold.
6. Supervisory Gas Monitoring - Nitrogen Purity Sensing Device:
- a. Portable Handheld Nitrogen Purity Sensing Device: Portable sensing device to connect to outlet of the automatic purge/vent valve during periodic inspections to obtain a nitrogen purity reading within each zone.
  - b. Permanently Mounted Nitrogen Purity Monitoring Device or Manifold: Permanent monitoring device to continuously monitor system's nitrogen purity.

## 2.6 SPRINKLER PIPING SPECIALTIES

- A. General Requirements for Dry-Pipe System Fittings: UL listed for dry-pipe service.
- B. Branch Outlet Fittings:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. AGF Manufacturing, Inc.
  - b. Anvil International.
  - c. National Fittings, Inc.
  - d. Shurjoint; a part of Aalberts Integrated piping Systems.
  - e. Tyco by Johnson Controls Company.
  - f. Victaulic Company.
  - g. Or approved equal
2. Standard: UL 213.
  3. Pressure Rating: 175-psig minimum.
  4. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
  5. Type: Mechanical-tee and -cross fittings.
  6. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
  7. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
  8. Branch Outlets: Grooved, plain-end pipe, or threaded.
- C. Flow Detection and Test Assemblies:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. AGF Manufacturing, Inc.
    - b. Reliable Automatic Sprinkler Co., Inc. (The).
    - c. Tyco by Johnson Controls Company.
    - d. Victaulic Company.
    - e. Or approved equal
  2. Standard: UL's "Fire Protection Equipment Directory" or FM Global's "Approval Guide."
  3. Pressure Rating: 175-psig minimum.
  4. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
  5. Size: Same as connected piping.
  6. Inlet and Outlet: Threaded.
- D. Branch Line Testers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. AGF Manufacturing, Inc.
    - b. Elkhart Brass Mfg. Co., Inc.
    - c. Fire-End & Croker Corporation.
    - d. Potter Electric Signal Company, LLC.
    - e. Potter Roemer LLC; a Division of Morris Group International.
    - f. Or approved equal
  2. Standard: UL 199.
  3. Pressure Rating: 175-psig minimum.
  4. Body Material: Brass.

5. Size: Same as connected piping.
6. Inlet: Threaded.
7. Drain Outlet: Threaded and capped.
8. Branch Outlet: Threaded, for sprinkler.

E. Sprinkler Inspector's Test Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AGF Manufacturing, Inc.
  - b. Triple R Specialty.
  - c. Tyco by Johnson Controls Company.
  - d. Victaulic Company.
  - e. Viking Corporation.
  - f. Or
2. Standard: UL's "Fire Protection Equipment Directory" or FM Global's "Approval Guide."
3. Pressure Rating: 175-psig minimum.
4. Body Material: Cast- or ductile-iron housing with sight glass.
5. Size: Same as connected piping.
6. Inlet and Outlet: Threaded.

F. Adjustable Drop Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Aegis Technologies, Inc.
  - b. CECA, LLC.
  - c. CPS Products, Inc.
  - d. Merit Manufacturing.
  - e. Or approved equal
2. Standard: UL 1474.
3. Pressure Rating: 250-psig minimum.
4. Body Material: Steel pipe with EPDM O-ring seals.
5. Size: Same as connected piping.
6. Length: Adjustable.
7. Inlet and Outlet: Threaded.

G. Flexible Sprinkler Hose Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. ALEUM USA.
  - b. FlexHead Industries, Inc.
  - c. Gateway Tubing, Inc.
  - d. Victaulic Company.

e. Or approved equal

2. Standard: UL 1474.
3. Type: Flexible hose for connection to sprinkler, and with bracket for connection to ceiling grid.
4. Pressure Rating: 175-psig minimum.
5. Size: Same as connected piping, for sprinkler.

## 2.7 SPRINKLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Globe Fire Sprinkler Corporation.
  2. Reliable Automatic Sprinkler Co., Inc. (The).
  3. Tyco by Johnson Controls Company.
  4. Venus Fire Protection Ltd.
  5. Victaulic Company.
  6. Viking Corporation.
  7. Or approved equal
- B. Listed in UL's "Fire Protection Equipment Directory" or FM Global's "Approval Guide."
- C. Pressure Rating for Residential Sprinklers: 175-psig maximum.
- D. Pressure Rating for Automatic Sprinklers: 175-psig minimum.
- E. Pressure Rating for High-Pressure Automatic Sprinklers: 250-psig minimum.
- F. Automatic Sprinklers with Heat-Responsive Element:
1. Nonresidential Applications: UL 199.
  2. Characteristics: Nominal 1/2-inch orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.
- G. Sprinkler Finishes: Chrome plated.
- H. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.
1. Ceiling Mounting: Chrome-plated steel, one piece, flat.
  2. Sidewall Mounting: Chrome-plated steel, one piece, flat.
- I. Sprinkler Guards:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Reliable Automatic Sprinkler Co., Inc. (The).
  - b. Tyco by Johnson Controls Company.
  - c. Victaulic Company.
  - d. Viking Corporation.
  - e. Or approved equal
2. Standard: UL 199.
  3. Type: Wire cage with fastening device for attaching to sprinkler.

## 2.8 MANUAL CONTROL STATIONS

- A. Listed in UL's "Fire Protection Equipment Directory" or FM Global's "Approval Guide" for hydraulic operation, with union, NPS 1/2 pipe nipple, and bronze ball valve.
- B. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

## 2.9 PRESSURE GAUGES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. AGF Manufacturing, Inc.
  2. AMETEK, Inc.
  3. Ashcroft Inc.
  4. Brecco Corporation.
  5. WIKA Instrument Corporation.
  6. Or approved equal
- B. Standard: UL 393.
- C. Dial Size: 3-1/2- to 4-1/2-inch diameter.
- D. Pressure Gauge Range: 0- to 250-psig minimum.
- E. Label: Include "WATER" or "AIR/WATER" label on dial face.

## PART 3 - EXECUTION

### 3.1 SERVICE-ENTRANCE PIPING

- A. Connect sprinkler piping to water-service piping for service entrance to building. Comply with requirements in Section 211100 "Facility Fire-Suppression Water-Service Piping" for exterior piping.

- B. Install shutoff valve, backflow preventer, pressure gauge, drain, and other accessories indicated at connection to water-service piping. Comply with requirements for backflow preventers in Section 211100 "Facility Fire-Suppression Water-Service Piping."
- C. Install shutoff valve, check valve, pressure gauge, and drain at connection to water service.

### 3.2 WATER-SUPPLY CONNECTIONS

- A. Connect sprinkler piping to building's interior water-distribution piping. Comply with requirements for interior piping in Section 221116 "Domestic Water Piping."
- B. Install shutoff valve, backflow preventer, pressure gauge, drain, and other accessories indicated at connection to water-distribution piping. Comply with requirements in Section 211100 "Facility Fire-Suppression Water-Service Piping" for backflow preventers.
- C. Install shutoff valve, check valve, pressure gauge, and drain at connection to water supply.

### 3.3 PIPING INSTALLATION

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated on approved working plans.
  - 1. Deviations from approved working plans for piping require written approval from authorities having jurisdiction. File written approval with Architect before deviating from approved working plans.
  - 2. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.
- B. Piping Standard: Comply with NFPA 13 requirements for installation of sprinkler piping.
- C. Install seismic restraints on piping. Comply with NFPA 13 requirements for seismic-restraint device materials and installation.
- D. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- E. Install unions adjacent to each valve in pipes NPS 2 and smaller.
- F. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.
- G. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.
- H. Install sprinkler piping with drains for complete system drainage.
- I. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.

- J. Install automatic (ball drip) drain valves to drain piping between fire department connections and check valves. Drain to floor drain or to outside building.
- K. Connect compressed-air supply to dry-pipe sprinkler piping.
- L. Connect air compressor to the following piping and wiring:
  - 1. Pressure gauges and controls.
  - 2. Electrical power system.
  - 3. Fire-alarm devices, including low-pressure alarm.
- M. Install alarm devices in piping systems.
- N. Install hangers and supports for sprinkler system piping according to NFPA 13. Comply with requirements in NFPA 13. In seismic-rated areas, refer to Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment."
- O. Install pressure gauges on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gauges with connection not less than NPS 1/4 and with soft-metal seated globe valve, arranged for draining pipe between gauge and valve. Install gauges to permit removal, and install where they are not subject to freezing.
- P. Drain dry-pipe sprinkler piping.
- Q. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- R. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 210517 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- S. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 210518 "Escutcheons for Fire-Suppression Piping."

### 3.4 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- B. Install unions adjacent to each valve in pipes NPS 2 and smaller.
- C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.
- D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

- E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- H. Twist-Locked Joints: Insert plain end of steel pipe into plain-end-pipe fitting. Rotate retainer lugs one-quarter turn or tighten retainer pin.
- I. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.
- J. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

### 3.5 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and authorities having jurisdiction.
- B. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- D. Specialty Valves:
  - 1. Install valves in vertical position for proper direction of flow, in main supply to system.
  - 2. Install dry-pipe valves with trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gauges, priming chamber attachment, and fill-line attachment.

### 3.6 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of narrow dimension of acoustical ceiling panels.

- B. Install sprinklers with water supply from heated space. Do not install pendant or sidewall, sprinklers in areas subject to freezing.
- C. Install sprinklers into flexible, sprinkler hose fittings, and install hose into bracket on ceiling grid.

### 3.7 IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

### 3.8 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
  - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
  - 3. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
  - 4. Energize circuits to electrical equipment and devices.
  - 5. Start and run air compressors.
  - 6. Coordinate with fire-alarm tests. Operate as required.
  - 7. Coordinate with fire-pump tests. Operate as required.
  - 8. Verify that equipment hose threads are same as local fire department equipment.
- B. Sprinkler piping system will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

### 3.9 CLEANING

- A. Clean dirt and debris from sprinklers.
- B. Only sprinklers with their original factory finish are acceptable. Remove and replace any sprinklers that are painted or have any other finish than their original factory finish.

### 3.10 PIPING SCHEDULE

- A. Piping between Fire Department Connections and Check Valves: Galvanized, standard-weight steel pipe with threaded ends, cast-iron threaded fittings, and threaded joints.

- B. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.
- C. Standard-pressure, dry-pipe sprinkler system, NPS 2 and smaller, shall be one of the following:
  - 1. Standard-weight, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
- D. Standard-pressure, dry-pipe sprinkler system, NPS 2-1/2 to NPS 6, shall be one of the following:
  - 1. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
  - 2. Standard-weight or Schedule 30, galvanized-steel pipe with roll-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

### 3.11 SPRINKLER SCHEDULE

- A. Use sprinkler types in subparagraphs below for the following applications:
  - 1. Rooms without Ceilings: Upright sprinklers.
  - 2. Rooms with Suspended Ceilings: Dry pendent sprinklers Dry concealed sprinklers.
  - 3. Wall Mounting: Dry sidewall sprinklers.
  - 4. Spaces Subject to Freezing: Upright sprinklers.
- B. Provide sprinkler types in subparagraphs below with finishes indicated.
  - 1. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
  - 2. Flush Sprinklers: Bright chrome, with painted white escutcheon.
  - 3. Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
  - 4. Upright Pendent and Sidewall Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.

END OF SECTION 211316

## SECTION 212200 CLEAN-AGENT FIRE-EXTINGUISHING SYSTEMS

### PART 1 - GENERAL

#### 1.1 SUMMARY

##### A. Section Includes:

1. Clean-agent fire-extinguishing systems.
2. Pipe and fittings.
3. Valves.
4. Extinguishing-agent containers.
5. Fire-extinguishing clean agent.
6. Discharge nozzles.
7. Manifold and orifice unions.
8. Fire control panels.
9. Detection devices.
10. Manual stations.
11. Switches.
12. Alarm devices.

#### 1.2 DEFINITIONS

- A. EPO: Emergency Power Off.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Prepare in accordance with requirements of NFPA 2001, to include, but not be limited to, the following:
1. Include plans, elevations, sections, and attachment details.
  2. Include design calculations.
  3. Include details of equipment assemblies. Indicate dimensions, weights, loads, manufacturer-required clearances, method of field assembly, components, and location and size of each field connection.
  4. Include diagrams for power, signal, and control wiring.
  5. Permit-Approved Documents: Working plans and hydraulic calculations approved by authorities having jurisdiction.
- C. Delegated-Design Submittal: For clean-agent fire-extinguishing systems indicated to comply with performance and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, or BIM model, drawn to scale and coordinated with all building trades. Coordinate for enclosure integrity in accordance with NFPA 2001 requirements.
- B. Seismic Qualification Data: Certificates for extinguishing-agent containers and control panels, from manufacturer.
- C. Welding certificates.
- D. Field quality-control reports.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

#### 1.6 QUALITY ASSURANCE

- A. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators in accordance with ASME Boiler and Pressure Vessel Code.

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- B. FM Global Compliance: Provide components that are FM Approved and that are listed in FM Approvals' "Approval Guide."
- C. UL Compliance: Provide equipment listed in UL's "Fire Protection Equipment Directory."

#### 2.2 CLEAN-AGENT SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Ansul by Johnson Controls Company.
  - 2. Fike Corporation.
  - 3. Siemens Industry, Inc., Building Technologies Division.
  - 4. United Technologies Corporation (UTC Climate, Controls & Security - Kidde).
  - 5. Or approved equal
- B. Description: Clean-agent fire-extinguishing system shall be an engineered system for total flooding of the hazard area including the room cavity above the ceiling, below the ceiling, and

below the raised floor. System includes separate zones above and below the ceiling and beneath the raised floor. If smoke is detected below the raised floor, extinguishing agent shall be discharged in the underfloor zone only. If smoke is detected below the ceiling, extinguishing agent shall be discharged in zones above and below the ceiling and below the floor. If smoke is detected above the ceiling, extinguishing agent shall be discharged in the zone above the ceiling only.

- C. Delegated Design: Design clean-agent fire-extinguishing system and obtain approval from authorities having jurisdiction. Design system for Class A Class B Class C fires as appropriate for areas being protected, and include safety factor. Use clean agent indicated and in concentration suitable for normally occupied areas.
- D. Performance Requirements: Discharge HFC 227ea within 10 seconds and maintain 7.1 percent concentration by volume at 70 deg F for 10-minute holding time in hazard areas.
  - 1. HFC 227ea concentration in hazard areas greater than 9.0 percent immediately after discharge or less than 5.8 percent throughout holding time will not be accepted without written authorization from Owner and authorities having jurisdiction.
  - 2. System Capabilities: Minimum 620-psig calculated working pressure and 360-psig initial charging pressure.
- E. Cross-Zoned Detection: Devices located in two separate zones. Sound alarm on activating single-detection device, and discharge extinguishing agent on actuating single-detection device in another zone.
- F. Verified Detection: Devices located in single zone. Sound alarm on activating single-detection device, and discharge extinguishing agent on actuating second-detection device.
- G. System Operating Sequence:
  - 1. Actuating First Detector: Visual indication on annunciator panel. Energize audible and visual alarms (slow pulse), shut down air-conditioning and ventilating systems serving protected area, close doors in protected area, and send signal to fire-alarm system.
  - 2. Actuating Second Detector: Visual indication on annunciator panel. Energize audible and visual alarms (fast pulse), shut down power to protected equipment, start time delay for extinguishing-agent discharge for 30 seconds, and discharge extinguishing agent.
  - 3. Extinguishing-agent discharge will operate audible alarms and strobe lights inside and outside the protected area.
- H. System Operating Sequence: System shall be cross-zoned, air-sampling detectors and photoelectric detectors reporting to a fully programmable microprocessor-based control panel programmed to operate as follows:
  - 1. If one photoelectric detector and air-sampling detector reaches the third detection level (Fire 1), agent discharge will be initiated as described for the third detection level (Fire 1) below.
  - 2. Air-Sampling System:
    - a. First Detection Level (Alert): Mild audible and visual indication on annunciator panel. Strobe lights flash slowly in the protected area.

- b. Second Detection Level (Action): Strong audible and visual indication on annunciator panel. Strobe lights flash rapidly in the protected area.
  - c. Third Detection Level (Fire 1): Strong audible and visual indication on annunciator panel. Energize horn(s), bell(s), and strobe light(s) in the protected area and outside entry doors. Shut down air-conditioning and ventilating systems serving the protected area, and close doors in the protected area. Send signal to fire-alarm system, initiate 30-second time delay for extinguishing-agent discharge, and discharge extinguishing agent. At agent discharge, terminate power to equipment in the protected area.
  - d. Fourth Detection Level (Fire 2): Same as Fire 1.
- I. Manual stations shall immediately discharge extinguishing agent when activated.
  - J. Operating abort switches will delay extinguishing-agent discharge while being activated, and switches must be reset to prevent agent discharge. Release hand pressure on the switch to cause agent discharge after the time delay has expired.
  - K. EPO: Will terminate power to protected equipment immediately on actuation.
  - L. Low-Agent Pressure Switch: Initiate trouble alarm if sensing less than set pressure.
  - M. Power Transfer Switch: Transfer from normal to standby power source.

## 2.3 PIPE AND FITTINGS

- A. See "HFC 227ea Agent Piping Applications" Article for applications of pipe, tube, fitting, and joining materials.
- B. Piping, Valves, and Discharge Nozzles: Comply with types and standards listed in NFPA 2001, Section "Distribution," for charging pressure of system.
- C. Steel Pipe: ASTM A53/A53M, Type S, Grade B or ASTM A106/A106M, Grade A and Grade B; Schedule 40, Schedule 80, and Schedule 160, seamless steel pipe.
  - 1. Threaded Fittings:
    - a. Malleable-Iron Fittings: ASME B16.3, Class 300.
    - b. Flanges and Flanged Fittings: ASME B16.5, Class 300 unless Class 600 is indicated.
    - c. Fittings Working Pressure: 620 psig minimum.
    - d. Flanged Joints: Class 300 minimum.
  - 2. Forged-Steel Welding Fittings: ASME B16.11, Class 3000, socket pattern.
  - 3. Steel, Grooved-End Fittings: FM Approved and NRTL listed, ASTM A47/A47M malleable iron or ASTM A536 ductile iron, with dimensions matching steel pipe and ends factory grooved in accordance with AWWA C606.
- D. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch-maximum thickness unless thickness or specific material is indicated.

E. Flange Bolts and Nuts: ASME B18.2.1, carbon steel.

F. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

G. Steel, Keyed Couplings: UL 213, AWWA C606, approved or listed for clean-agent service, and matching steel-pipe dimensions. Include ASTM A536, ductile-iron housing, rubber gasket, and steel bolts and nuts.

## 2.4 VALVES

A. General Valve Requirements:

1. UL listed or FM Approved for use in fire-protection systems.
2. Compatible with type of clean agent used.

B. Container Valves: With rupture disc or solenoid and manual-release lever, capable of immediate and total agent discharge and suitable for intended flow capacity.

C. Valves in Sections of Closed Piping and Manifolds: Fabricate to prevent entrapment of liquid, or install valve and separate pressure relief device.

D. Valves in Manifolds: Check valve; installed to prevent loss of extinguishing agent when container is removed from manifold.

## 2.5 EXTINGUISHING-AGENT CONTAINERS

A. Description: Steel tanks complying with ASME Boiler and Pressure Vessel Code: Section VIII, for unfired pressure vessels. Include minimum working-pressure rating that matches system charging pressure, valve, pressure switch, and pressure gage.

1. Finish: Red, enamel or epoxy paint.
2. Manifold: Fabricate with valves, pressure switches, and connections for multiple storage containers, as indicated.
3. Manifold: Fabricate with valves, pressure switches, selector switch, and connections for main- and reserve-supply banks of multiple storage containers.
4. Storage-Tank Brackets: Factory- or field-fabricated retaining brackets consisting of steel straps and channels; suitable for container support, maintenance, and tank refilling or replacement.

## 2.6 FIRE-EXTINGUISHING CLEAN AGENT

A. HFC 227ea Clean Agent: Heptafluoropropane.

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. DuPont.
  - b. Or approved equal

## 2.7 DISCHARGE NOZZLES

- A. Description: Equipment manufacturer's standard one-piece brass or aluminum alloy of type, size, discharge pattern, and capacity required for application.
- B. Material: Corrosion-resistant metal.
- C. Stamped with orifice size and type.

## 2.8 FIRE CONTROL PANELS

- A. Description: FM Approved or NRTL listed, including equipment and features required for testing, supervising, and operating fire-extinguishing system.
- B. Power Requirements: 120/240 V ac; with electrical contacts for connection to system components and fire-alarm system, and transformer or rectifier as needed to produce power at voltage required for accessories and alarm devices.
- C. Enclosure: NEMA ICS 6, Type 1, enameled-steel cabinet.
  1. Mounting: Recessed flush with surface.
- D. Supervised Circuits: Separate circuits for each independent hazard area.
  1. Detection circuits equal to required number of zones, or addressable devices assigned to required number of zones.
  2. Manual pull-station circuit.
  3. Alarm circuit.
  4. Release circuit.
  5. Abort circuit.
  6. EPO circuit.
- E. Control-Panel Features:
  1. Electrical contacts for shutting down fans, activating dampers, and operating system electrical devices.
  2. Automatic switchover to standby power at loss of primary power.
  3. Storage container, low-pressure indicator.
  4. Service disconnect to interrupt system operation for maintenance with visual status indication on the annunciator panel.

- F. Annunciator Panel: Graphic type showing protected, hazard-area plans, as well as locations of detectors and abort, EPO, and manual stations. Include lamps to indicate device-initiating alarm, electrical contacts for connection to control panel, and stainless steel or aluminum enclosure.
- G. Standby Power: Sealed lead calcium batteries with capacity to operate system for 24 hours and alarm for minimum of 15 minutes. Include automatic battery charger that has a varying charging rate between trickle and high depending on battery voltage, and that is capable of maintaining batteries fully charged. Include manual voltage control, dc voltmeter, dc ammeter, electrical contacts for connection to control panel, automatic transfer switch, and suitable enclosure.

## 2.9 DETECTION DEVICES

- A. Description: Comply with NFPA 2001, NFPA 72, and UL 268; 24 V dc, nominal.
- B. Ionization Detectors: Dual-chamber type, having sampling and referencing chambers, with smoke-sensing element.
- C. Photoelectric Detectors: LED light source and silicon photodiode receiving element.
- D. Signals to the Central Fire-Alarm Control Panel: Any type of local system trouble is reported to central fire-alarm control panel as a composite "trouble" signal. Alarms on each system zone are individually reported to central fire-alarm control panel as separately identified zones.

## 2.10 MANUAL STATIONS

- A. Description: Surface FM Approved or NRTL listed, with clear plastic hinged cover, 120-V ac or low-voltage compatible with controls. Include contacts for connection to control panel.
- B. Manual Release: "MANUAL RELEASE" caption, and red finish. Unit can manually discharge extinguishing agent with operating device that remains engaged until unlocked.
- C. Abort Switch: "ABORT" caption, momentary contact, with green finish.
- D. EPO Switch: "EPO" caption, with yellow finish.

## 2.11 SWITCHES

- A. Description: FM Approved or NRTL listed, where available, 120-V ac or low-voltage compatible with controls. Include contacts for connection to control panel.
  - 1. Low-Agent Pressure Switches: Pneumatic operation.
  - 2. Power Transfer Switches: Key-operation selector, for transfer of release circuit signal from main supply to reserve supply.
  - 3. Door Closers: Magnetic retaining and release device or electrical interlock to cause door operator to drive the door closed.

## 2.12 ALARM DEVICES

- A. Description: FM Approved or NRTL listed, low voltage, and surface mounting. Comply with requirements in Section 284621.11 "Addressable Fire-Alarm Systems" or Section 284621.13 "Conventional Fire-Alarm Systems" for alarm and monitoring devices.
- B. Bells: Minimum 6-inch diameter.
- C. Horns: 90 to 94 dBA.
- D. Strobe Lights: Translucent lens, with "FIRE" or similar caption.
- E. Oxygen Deficiency Monitor.
  - 1. Sampling Method and Range: Diffusion, zero to 25 percent O<sub>2</sub>.
  - 2. 24 V dc.
  - 3. Wall mounted with bracket.
  - 4. Built-in audible alarm 90 dBA.
  - 5. Backlit LCD.
  - 6. 10-year no-calibration sensor.
  - 7. No maintenance required.
  - 8. Signal Outputs: Standard 4- to 20-mA analog.
  - 9. Connections for system control data acquisition system and/or programmable logic controller.
  - 10. Plus or minus 1 percent accuracy of full scale.
  - 11. Operating temperature of minus 40 to plus 122 deg F.

## PART 3 - EXECUTION

### 3.1 HFC 227ea AGENT PIPING APPLICATIONS

- A. Flanged pipe and fittings and flanged joints may be used to connect to specialties and accessories and where required for maintenance.
- B. NPS 2 and Smaller: Schedule 40, steel pipe; malleable-iron threaded fittings; and threaded joints.
- C. NPS 2-1/2 and Larger: Schedule 40, steel pipe; forged-steel welding fittings; and welded joints.

### 3.2 CLEAN-AGENT SYSTEM INSTALLATION

- A. Install clean-agent containers, piping, and other components level and plumb, in accordance with manufacturers' written instructions.
- B. Clean-Agent Container Mounting:

1. Install clean-agent containers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
  2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment."
  3. Comply with requirements for vibration isolation devices specified in Section 210548.13 "Vibration Controls for Fire-Suppression Piping and Equipment."
- C. Grooved Piping Joints: Groove pipe ends in accordance with AWWA C606 dimensions. Assemble grooved-end steel pipe and steel, grooved-end fittings with steel, keyed couplings and lubricant in accordance with manufacturer's written instructions.
- D. Install pipe and fittings, valves, and discharge nozzles in accordance with requirements listed in NFPA 2001, Section "Distribution."
1. Install valves designed to prevent entrapment of liquid, or install pressure relief devices in valved sections of piping systems.
  2. Support piping using supports and methods in accordance with NFPA 13.
  3. Install seismic restraints for extinguishing-agent piping systems.
  4. Install control panels, detection system components, alarms, and accessories, in accordance with requirements listed in NFPA 2001, Section "Detection, Actuation, and Control Systems," as required for supervised system application.

### 3.3 PIPING CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to equipment, allow space for service and maintenance.

### 3.4 ELECTRICAL CONNECTIONS

- A. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
- E. Connect electrical devices to control panel and to building's fire-alarm system. Electrical power, wiring, and devices are specified in Section 284621.11 "Addressable Fire-Alarm Systems" or Section 284621.13 "Conventional Fire-Alarm Systems."

### 3.5 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."

### 3.6 IDENTIFICATION

- A. Identify system components and equipment. Comply with requirements for identification specified in Section 210553 "Identification for Fire-Suppression Piping and Equipment."
- B. Identify piping, extinguishing-agent containers, other equipment, and panels in accordance with NFPA 2001.
- C. Install signs at entry doors for protected areas to warn occupants that they are entering a room protected with a clean-agent fire-extinguishing system.
- D. Install signs at entry doors to advise persons outside the room the meaning of horn(s), bell(s), and strobe light(s) outside the protected space.

### 3.7 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections with the assistance of a factory-authorized service representative.
- C. Tests and Inspections:
  - 1. After installing clean-agent fire-extinguishing system and after electrical circuitry has been energized, test for compliance in accordance with requirements listed in NFPA 2001, Section "Approval of Installation."
  - 2. Clean-agent fire-extinguishing system and associated protected enclosure will be considered defective if either does not pass required tests and inspections.
  - 3. Prepare test and inspection reports in accordance with requirements listed in NFPA 2001, Section "Installation Acceptance."

### 3.8 CLEANING

- A. Each pipe section shall be cleaned internally after preparation and before assembly by means of swabbing, using a suitable nonflammable cleaner. Pipe network shall be free of particulate matter and oil residue before installing nozzles or discharge devices.

### 3.9 OPERATIONAL CONDITION SYSTEM FILLING

- A. Preparation:

1. Verify that clean-agent fire-extinguishing system and protected enclosure have passed all required tests and inspections in accordance with NFPA 2001.
2. Verify that clean-agent fire-extinguishing piping system installation is completed and cleaned.
3. Verify complete enclosure integrity.
4. Verify operation of ventilation and exhaust systems.

B. Filling Procedures:

1. Fill clean-agent fire-extinguishing containers with extinguishing agent, and pressurize to indicated charging pressure.
2. Install filled containers.
3. Energize circuits.
4. Adjust operating controls.

3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain clean-agent fire-extinguishing systems.

END OF SECTION 212200

## SECTION 213113 ELECTRIC-DRIVE, CENTRIFUGAL FIRE PUMPS

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section Includes:
1. End-suction fire pumps.
  2. In-line fire pumps.
  3. Fire-pump accessories and specialties.

#### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For fire pumps, motor drivers, and fire-pump accessories and specialties.
1. Include plans, elevations, sections, and mounting and attachment details.
  2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  3. Include diagrams for power, signal, and control wiring.

#### 1.3 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For fire pumps, accessories, and components, from manufacturer.
- B. Field quality-control reports.

#### 1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. NFPA Compliance: Comply with NFPA 20.
- B. Seismic Performance: Fire pumps shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
  2. Component Importance Factor: 1.5.
- C. Pump Equipment, Accessory, and Specialty Pressure Rating: 175 psig minimum unless higher pressure rating is indicated.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

## 2.2 GENERAL REQUIREMENTS FOR CENTRIFUGAL FIRE PUMPS

- A. Description: Factory-assembled and -tested fire-pump and driver unit.
- B. Base: Fabricated and attached to fire-pump and driver unit, with reinforcement to resist movement of pump during seismic events when base is anchored to building substrate.
- C. Finish: Red paint applied to factory-assembled and -tested unit before shipping.

## 2.3 IN-LINE FIRE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. A-C Fire Pump; a Xylem brand.
  2. Patterson Pump Company; a Gorman-Rupp company.
  3. Peerless Pump Company.
  4. Pentair Pump Group.
  5. Or approved equal
- B. Pump:
1. Standard: UL 448, for in-line pumps for fire service.
  2. Casing: Radially split case, cast iron, with ASME B16.1 pipe-flange connections.
  3. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
  4. Wear Rings: Replaceable bronze.
  5. Shaft and Sleeve: Steel shaft with bronze sleeve.
    - a. Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
    - b. Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
  6. Mounting: Pump and driver shaft is vertical, with motor above pump and pump on base. Motor and pump rotating assembly shall be removable from top without removing the pump casing from the piping.
- C. Coupling: None or rigid.

- D. Driver:
  - 1. Standard: UL 1004A.
  - 2. Type: Electric motor; NEMA MG 1, polyphase Design B.

- E. Capacities and Characteristics:
  - 1. Rated Capacity: 500 gpm.
  - 2. Total Rated Head: 85 psig.
  - 3. Inlet Flange: Class 125.
  - 4. Outlet Flange: Class 125.
  - 5. Suction Head Available at Pump: 40 psig.
  - 6. Motor Horsepower: 40 hp.
  - 7. Motor Speed: 3550 rpm.
  - 8. Electrical Characteristics:
    - a. Volts: 460 V.
    - b. Phase: Three.
    - c. Hertz: 60.

#### 2.4 FIRE-PUMP ACCESSORIES AND SPECIALTIES

- A. Automatic Air-Release Valves: Comply with NFPA 20 for installation in fire-pump casing.
- B. Circulation Relief Valves: UL 1478, brass, spring loaded; for installation in pump discharge piping.
- C. Relief Valves:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. CLA-VAL.
    - b. WATTS.
    - c. Zurn Industries, LLC.
    - d. Or approved equal
  - 2. Description: UL 1478, bronze or cast iron, spring loaded; for installation in fire-suppression water-supply piping.
- D. Inlet Fitting: Eccentric tapered reducer at pump suction inlet.
- E. Outlet Fitting: Concentric tapered reducer at pump discharge outlet.
- F. Discharge Cone: Closed or open type.

2.5 GROUT

- A. Standard: ASTM C1107, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink and recommended for interior and exterior applications.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Fire-Pump Installation Standard: Comply with NFPA 20 for installation of fire pumps, relief valves, and related components.
- B. Equipment Mounting:
  - 1. Install fire pumps on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
  - 2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment."
  - 3. Comply with requirements for vibration isolation devices specified in Section 210548.13 "Vibration Controls for Fire-Suppression Piping and Equipment."
- C. Install fire-pump suction and discharge piping equal to or larger than sizes required by NFPA 20.
- D. Support piping and pumps separately, so weight of piping does not rest on pumps.
- E. Install valves that are same size as connecting piping. Comply with requirements for fire-protection valves specified in Section 211313 "Wet-Pipe Sprinkler Systems."
- F. Install pressure gages on fire-pump suction and discharge flange pressure-gage tappings. Comply with requirements for pressure gages specified in Section 211313 "Wet-Pipe Sprinkler Systems."
- G. Install piping hangers and supports, anchors, valves, gages, and equipment supports according to NFPA 20.
- H. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.

- I. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

### 3.2 ALIGNMENT

- A. Align end-suction pump and driver shafts after complete unit has been leveled on concrete base, grout has set, and anchor bolts have been tightened.
- B. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks and shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.
- C. Align piping connections.
- D. Align pump and driver shafts for angular and parallel alignment according to HI 1.4 and to tolerances specified by manufacturer.

### 3.3 CONNECTIONS

- A. Comply with requirements for piping and valves specified in Section 211313 "Wet-Pipe Sprinkler Systems." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to pumps and equipment to allow service and maintenance.
- C. Connect relief-valve discharge to drainage piping or point of discharge.
- D. Connect flowmeter-system meters, sensors, and valves to tubing.
- E. Connect fire pumps to their controllers.

### 3.4 IDENTIFICATION

- A. Identify system components. Comply with requirements for fire-pump marking according to NFPA 20.

### 3.5 FIELD QUALITY CONTROL

- A. Test each fire pump with its controller as a unit. Comply with requirements for electric-motor-driver fire-pump controllers specified in Section 2623933 "Controllers for Fire-Pump Drivers."
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative.
  - 1. After installing components, assemblies, and equipment, including controller, test for compliance with requirements.
  - 2. Test according to NFPA 20 for acceptance and performance testing.

3. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  4. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Components, assemblies, and equipment will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. Furnish fire hoses in number, size, and length required to reach storm drain or other acceptable location to dispose of fire-pump test water. Hoses are for tests only and do not convey to Owner.

### 3.6 STARTUP SERVICE

- A. Perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.

END OF SECTION 213113

## SECTION 213413 PRESSURE-MAINTENANCE PUMPS

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Section Includes:

1. Regenerative-turbine, pressure-maintenance pumps.
2. Vertical-turbine, pressure-maintenance pumps.

B. Related Requirements:

1. Section 262933 "Controllers for Fire-Pump Drivers" for pressure-maintenance-pump controllers.

#### 1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For pumps, accessories, and specialties.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include diagrams for power, signal, and control wiring.

#### 1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

#### 1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

### PART 2 - PRODUCTS

#### 2.1 VERTICAL-TURBINE, PRESSURE-MAINTENANCE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. A-C Fire Pump; a Xylem brand.
  2. Aurora Pump; Pentair Ltd.
  3. Peerless Pump Company.
  4. Ruhrpumpen, Inc.
  5. Or approved equal
- B. Description: Factory-assembled and -tested, vertical, multistage, open-line-shaft turbine pump as defined in HI 2.1-2.2 and HI 2.3; with pump motor mounted above pump head.
- C. Pump Construction:
1. Pump Head: Cast iron, for surface discharge, with flange except connections may be threaded in sizes in which flanges are not available.
  2. Pump Head Seal: Stuffing box and stuffing.
  3. Line Shaft: Stainless steel or steel, with corrosion-resistant shaft sleeves.
  4. Line Shaft Bearings: Rubber sleeve, water lubricated.
  5. Line Shaft: Steel.
  6. Line Shaft Bearings: Corrosion resistant, oil lubricated.
  7. Impeller Shaft: Monel metal or stainless steel.
  8. Bowl Section: Multiple cast-iron bowls with closed-type bronze or stainless-steel impellers.
  9. Column Pipe: ASTM A53/A53M, Schedule 40, galvanized-steel pipe with threaded ends and cast-iron or steel fittings, in sections 10 feet or less, with strainer of cast or fabricated bronze or stainless steel at bottom.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Motor: Single speed with permanently lubricated ball bearings. Comply with requirements in Section 210513 "Common Motor Requirements for Fire Suppression Equipment."
1. Power Cord: Factory-connected to motor for field connection to controller and at least 10 feet long.
- F. Base: Cast iron or steel with hole for electrical cable.
- G. Nameplate: Permanently attached to pump and indicating capacity and characteristics.
- H. Capacities and Characteristics:
1. Rated Capacity: 5 gpm.
  2. Total Dynamic Head: 157 feet.
  3. Working Pressure: 175 psig.
  4. Inlet Size: 1-1/4" NPS.
  5. Outlet Size: 1-1/4" NPS.
  6. Flange: Class 125.
  7. Suction Head Available at Pump: 74 feet.
  8. Motor Horsepower: 1.0.
  9. Motor Speed: 3500 RPM.
  10. Electrical Characteristics:

- a. Volts: 240.
- b. Phases: Three.
- c. Hertz: 60.

## 2.2 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 210513 "Common Motor Requirements for Fire Suppression Equipment."
  1. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

## PART 3 - EXECUTION

### 3.1 EQUIPMENT INSTALLATION

- A. NFPA Standard: Comply with NFPA 20 for installation of pressure-maintenance pumps.
- B. Equipment Mounting:
  1. Install regenerative-turbine, pressure-maintenance pumps according to HI 1.4.
  2. Install vertical-turbine, pressure-maintenance pumps according to HI 2.4.
  3. Install base-mounted pumps on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
    - a. Comply with requirements for vibration isolation and seismic control devices specified in Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment."
    - b. Comply with requirements for vibration isolation devices specified in Section 210548.13 "Vibration Controls for Fire-Suppression Piping and Equipment."
    - c. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
    - d. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
    - e. Install anchor bolts to elevations required for proper attachment to supported equipment.
    - f. Attach pumps to equipment base using anchor bolts.
    - g. Shim pumps as needed to make them level.
  4. Install isolation valves in both inlet and outlet pipes near the pump. Comply with requirements for valves specified in Section 211313 "Wet-Pipe Sprinkler Systems."

### 3.2 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
  - 3. Pressure-maintenance pumps will be considered defective if they do not pass tests and inspections.
- B. Prepare test and inspection reports.

### 3.3 ADJUSTING

- A. Lubricate pumps as recommended by manufacturer.
- B. Set field-adjustable pressure-switch ranges as indicated.

END OF SECTION 213413

## SECTION 220500 COMMON WORK RESULTS FOR PLUMBING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:

1. Piping materials and installation instructions common to most piping systems.
2. Transition fittings.
3. Dielectric fittings.
4. Mechanical sleeve seals.
5. Sleeves.
6. Escutcheons.
7. Grout.
8. Equipment installation requirements common to equipment sections.
9. Painting and finishing.
10. Concrete bases.
11. Supports and anchorages.

#### 1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

F. The following are industry abbreviations for rubber materials:

1. EPDM: Ethylene-propylene-diene terpolymer rubber.
2. NBR: Acrylonitrile-butadiene rubber.

#### 1.4 SUBMITTALS

A. Product Data: For the following:

1. Transition fittings.
2. Dielectric fittings.
3. Mechanical sleeve seals.
4. Escutcheons.

B. Welding certificates.

#### 1.5 QUALITY ASSURANCE

A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, “Structural Welding Code—Steel.”

B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, “Welding and Brazing Qualifications.”

1. Comply with provisions in ASME B31 Series, “Code for Pressure Piping.”
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

C. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

#### 1.7 COORDINATION

- A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for plumbing installations.
- B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- C. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section "Access Doors and Frames."

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:
  - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the manufacturers specified.
  - 2. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.

### 2.2 PIPE, TUBE, AND FITTINGS

- A. Refer to individual Division 22 piping Sections for pipe, tube, and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

### 2.3 JOINING MATERIALS

- A. Refer to individual Division 22 piping Sections for special joining materials not listed below.
- B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
  - 1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
    - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
    - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
  - 2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

- C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- D. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- E. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- F. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.
- G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- H. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.
- I. Mechanically Formed Extruded Outlets in Copper Tube – “T-Drill”
  - 1. Mechanically formed extruded outlets shall comply with the following:
    - a. ASME B31.9, ASTM F 2014-00, IPC 2015, IMC 2015, NSPC.
  - 2. Mechanically formed extruded outlets shall be perpendicular to the axis of the run tube (header). They shall be formed by drilling a pilot hole and drawing out the tube surface to form a collar having a height of not less than three times the thickness of the branch wall.
  - 3. Branch tubes shall not restrict the flow in the run tube. To ensure this by conforming the branch tube to the shape of the inner curve of the run tube, a dimple / depth stop shall be formed in the branch tube to ensure that penetration into the collar is of the correct depth. For inspection purposes, a second dimple shall be placed 0.25 inch above the first dimple. Dimples shall be aligned with the tube run.
  - 4. Branches can be formed up to the run tube size as shown in ASTM F 2014. Forming procedures shall be in accordance with the tool manufacturer’s recommendations.
  - 5. Joints shall be made with the use of approved brazing alloys BCup2 thru BCup5 (0-15% silver content). brazed with a filler that has a melting point above 540 deg Centigrade ( 1000 deg F). Soft soldered joints are not allowed.
  - 6. K, L, M and DWV copper types allowed.
  - 7. Soft and Hard copper allowed.
  - 8. Each model used for making branch connections shall be permanently marked with manufacturer's name and appropriate model number.
  - 9. Mechanically formed extruded outlets can (but not limited to) be used on commercial and residential buildings.

10. Fitter / Plumber shall be trained and certified by “T-Drill” to operate the equipment.

#### 2.4 TRANSITION FITTINGS

- A. AWWA Transition Couplings: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.
  1. Manufacturers:
    - a. Cascade Waterworks Mfg. Co.
    - b. Dresser Industries, Inc.; DMD Div.
    - c. Ford Meter Box Company, Incorporated (The); Pipe Products Div.
    - d. JCM Industries.
    - e. Smith-Blair, Inc.
    - f. Viking Johnson.
    - g. Or approved equal.
  2. Underground Piping NPS 1-1/2 and Smaller: Manufactured fitting or coupling.
  3. Underground Piping NPS 2 and Larger: AWWA C219, metal sleeve-type coupling.
  4. Aboveground Pressure Piping: Pipe fitting.
- B. Plastic-to-Metal Transition Fittings: CPVC one-piece fitting with manufacturer’s Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
  1. Manufacturers:
    - a. Eslon Thermoplastics.
    - b. Or approved equal.
- C. Plastic-to-Metal Transition Adaptors: One-piece fitting with manufacturer’s SDR 11 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.
  1. Manufacturers:
    - a. Thompson Plastics, Inc.
    - b. Or approved equal.
- D. Plastic-to-Metal Transition Unions: MSS SP-107, CPVC four-part union. Include brass end, solvent-cement-joint end, rubber O-ring, and union nut.
  1. Manufacturers:
    - a. NIBCO INC.
    - b. NIBCO, Inc.; Chemtrol Div.
    - c. Or approved equal.
- E. Flexible Transition Couplings for Underground Nonpressure Drainage Piping: ASTM C 1173 with elastomeric sleeve, ends same size as piping to be joined, and corrosion-resistant metal band on each end.

1. Manufacturers:
  - a. Cascade Waterworks Mfg. Co.
  - b. Fernco, Inc.
  - c. Mission Rubber Company.
  - d. Plastic Oddities, Inc.
  - e. Or approved equal.

## 2.5 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150-psig minimum working pressure as required to suit system pressures.

1. Manufacturers:
  - a. Capitol Manufacturing Co.
  - b. Central Plastics Company.
  - c. Epcos Sales, Inc.
  - d. Watts Industries, Inc.; Water Products Div.
  - e. Or approved equal.

- D. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.

1. Manufacturers:
  - a. Advance Products & Systems, Inc.
  - b. Calpico, Inc.
  - c. Central Plastics Company.
  - d. Pipeline Seal and Insulator, Inc.
  - e. Or approved equal.

2. Separate companion flanges and steel bolts and nuts shall have 150-psig minimum working pressure where required to suit system pressures.

- E. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.

1. Manufacturers:
  - a. Calpico, Inc.

- b. Lochinvar Corp.
  - c. Or approved equal.
- F. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.
- 1. Manufacturers:
    - a. Perfection Corp.
    - b. Precision Plumbing Products, Inc.
    - c. Sioux Chief Manufacturing Co., Inc.
    - d. Victaulic Co. of America.
    - e. Or approved equal.

## 2.6 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
- 1. Manufacturers:
    - a. Advance Products & Systems, Inc.
    - b. Calpico, Inc.
    - c. Metraflex Co.
    - d. Pipeline Seal and Insulator, Inc.
    - e. Or approved equal.
  - 2. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
  - 3. Pressure Plates: Carbon steel. Include two for each sealing element.
  - 4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

## 2.7 SLEEVES

- A. Galvanized-Steel Sheet: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.
- B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.
- C. Cast Iron: Cast or fabricated “wall pipe” equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

1. Underdeck Clamp: Clamping ring with set screws.

## 2.8 ESCUTCHEONS

- A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.
- C. One-Piece, Cast-Brass Type: With set screw.
  1. Finish: Polished chrome-plated.
- D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
  1. Finish: Polished chrome-plated
- E. One-Piece, Stamped-Steel Type: With set screw and chrome-plated finish.
- F. Split-Plate, Stamped-Steel Type: With concealed hinge, set screw and chrome-plated finish.
- G. One-Piece, Floor-Plate Type: Cast-iron floor plate.
- H. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

## 2.9 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
  1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
  2. Design Mix: 5000-psi, 28-day compressive strength.
  3. Packaging: Premixed and factory packaged.

## PART 3 - EXECUTION

### 3.1 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 22 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping

systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping to permit valve servicing.
- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Install escutcheons for penetrations of walls, ceilings, and floors.
- M. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
- N. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
  - 1. Install steel pipe for sleeves smaller than 6 inches (150 mm) in diameter.
  - 2. Install cast-iron "wall pipes" for sleeves 6 inches (150 mm) and larger in diameter.  
Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- O. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 07 Section "Penetration Firestopping" for materials.
- P. Verify final equipment locations for roughing-in.

- Q. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

### 3.2 PIPING JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 22 Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- F. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- G. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

### 3.3 PIPING CONNECTIONS

- A. Make connections according to the following, unless otherwise indicated:
1. Install unions, in piping NPS 2 (DN 50) and smaller, at final connection to each piece of equipment.
  2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.
  3. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
  4. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

### 3.4 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

### 3.5 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
  - 1. Concrete base construction shall be as designed and specified by the structural contract documents.
  - 2. Anchor equipment to concrete bases in accordance with contract documents and manufacturer's written instructions.

### 3.6 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 05 Section "Metal Fabrications" for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.
- C. Field Welding: Comply with AWS D1.1.

### 3.7 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor plumbing materials and equipment.
- B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

### 3.8 GROUTING

- A. Mix and install grout for plumbing equipment base bearing surfaces, pump and other equipment

base plates, and anchors.

- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

END OF SECTION 220500

## SECTION 220517 SLEEVES AND SLEEVE SEALS FOR PLUMBING PIPING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Sleeves.
  - 2. Stack-sleeve fittings.
  - 3. Sleeve-seal systems.
  - 4. Sleeve-seal fittings.
  - 5. Grout.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

### PART 2 - PRODUCTS

#### 2.1 SLEEVES

- A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
- B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.
- E. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.

#### 2.2 STACK-SLEEVE FITTINGS

- A. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.
  - 1. Underdeck Clamp: Clamping ring with setscrews.

## 2.3 SLEEVE-SEAL SYSTEMS

- A. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
  - 1. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
  - 2. Pressure Plates: Stainless steel.
  - 3. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements.

## 2.4 SLEEVE-SEAL FITTINGS

- A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber waterstop collar with center opening to match piping OD.

## 2.5 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

## PART 3 - EXECUTION

### 3.1 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.

1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
1. Cut sleeves to length for mounting flush with both surfaces.
    - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
  2. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
1. Cut sleeves to length for mounting flush with both surfaces.
  2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
  3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint.
- E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials.

### 3.2 STACK-SLEEVE-FITTING INSTALLATION

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.
1. Install fittings that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
  2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Section.
  3. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.
  4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
  5. Using grout, seal the space around outside of stack-sleeve fittings.
- B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials.

### 3.3 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service

piping entries into building.

- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

### 3.4 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

### 3.5 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
  - 1. Exterior Concrete Walls above Grade:
    - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves.
  - 2. Exterior Concrete Walls below Grade:
    - a. Piping Smaller Than NPS 6: Galvanized-steel wall sleeves with sleeve-seal system
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  - 3. Concrete Slabs-on-Grade:
    - a. Piping Smaller Than NPS 6: Galvanized-steel-pipe sleeves with sleeve-seal system.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  - 4. Concrete Slabs above Grade:
    - a. Piping Smaller than NPS 6 Galvanized-steel-pipe sleeves, PVC-pipe sleeves.

June 4, 2021  
Issue for Bid

Parking Deck  
Union County Justice Complex  
Elizabeth, New Jersey

5. Interior Partitions:
  - a. Piping Smaller than NPS 6 Galvanized-steel-pipe sleeves, PVC-pipe sleeves.

END OF SECTION 220517

## SECTION 220518 ESCUTCHEONS FOR PLUMBING PIPING

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section Includes:
1. Escutcheons.
  2. Floor plates.

#### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. BrassCraft Manufacturing Co.; a Masco company.
  2. Dearborn Brass.
  3. Jones Stephens Corp.
  4. Keeney Manufacturing Company (The).
  5. ProFlo; a Ferguson Enterprises, Inc. brand.
  6. Or approved equal

#### 2.2 ESCUTCHEONS

- A. One-Piece, Steel Type: With polished, chrome-plated finish and setscrew fastener.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped steel with polished, chrome-plated finish and spring-clip fasteners.
- C. One-Piece, Stamped-Steel Type: With polished, chrome-plated finish and spring-clip fasteners.
- D. Split-Plate, Stamped-Steel Type: With polished, chrome-plated finish; concealed and exposed-rivet hinge; and spring-clip fasteners.

#### 2.3 FLOOR PLATES

- A. Split Floor Plates: Cast brass with concealed hinge.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of insulated piping and with OD that completely covers opening.
  - 1. Escutcheons for New Piping:
    - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep pattern.
    - b. Chrome-Plated Piping: One-piece steel with polished, chrome-plated finish.
    - c. Insulated Piping: One-piece steel with polished, chrome-plated [**polished brass**] finish.
    - d. Insulated Piping: One-piece stamped steel or split-plate, stamped steel with concealed hinge with polished, chrome-plated finish.
    - e. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece steel with polished, chrome-plated finish.
    - f. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece stamped steel or split-plate, stamped steel with concealed hinge with polished, chrome-plated finish.
    - g. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece steel with polished, chrome-plated finish.
    - h. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece stamped steel or split-plate, stamped steel with concealed hinge with polished, chrome-plated finish.
- C. Install floor plates for piping penetrations of equipment-room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
  - 1. New Piping: Split floor plate.
  - 2. Existing Piping: Split floor plate.

#### 3.2 FIELD QUALITY CONTROL

- A. Using new materials, replace broken and damaged escutcheons and floor plates.

END OF SECTION 220518

## SECTION 220519 METERS AND GAGES FOR PLUMBING PIPING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Bimetallic-actuated thermometers.
  - 2. Liquid-in-glass thermometers.
  - 3. Thermowells.
  - 4. Dial-type pressure gages.
  - 5. Gage attachments.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of meter and gage.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

### PART 2 - PRODUCTS

#### 2.1 BIMETALLIC-ACTUATED THERMOMETERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Ashcroft Inc.
  - 2. Ernst Flow Industries.
  - 3. Marsh Bellofram.

4. Miljoco Corporation.
  5. Or approved equal
- B. Standard: ASME B40.200.
- C. Case: Liquid-filled and sealed type(s); stainless steel with 3-inch nominal diameter.
- D. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F.
- E. Connector Type(s): Union joint, adjustable angle, with unified-inch screw threads.
- F. Connector Size: 1/2 inch, with ASME B1.1 screw threads.
- G. Stem: 0.25 or 0.375 inch in diameter; stainless steel.
- H. Window: Plain glass.
- I. Ring: Stainless steel.
- J. Element: Bimetal coil.
- K. Pointer: Dark-colored metal.
- L. Accuracy: Plus or minus 1 percent of scale range.

## 2.2 LIQUID-IN-GLASS THERMOMETERS

- A. Metal-Case, Compact-Style, Liquid-in-Glass Thermometers:
1. Standard: ASME B40.200.
  2. Case: Cast aluminum; 6-inch nominal size.
  3. Case Form: Back angle unless otherwise indicated.
  4. Tube: Glass with magnifying lens and blue or red organic liquid.
  5. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
  6. Window: Glass or plastic.
  7. Stem: Aluminum or brass and of length to suit installation.
    - a. Design for Thermowell Installation: Bare stem.
  8. Connector: 3/4 inch, with ASME B1.1 screw threads.
  9. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

## 2.3 THERMOWELLS

- A. Thermowells:
1. Standard: ASME B40.200.

2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
3. Material for Use with Copper Tubing: CNR or CUNI.
4. Material for Use with Steel Piping: CRES.
5. Type: Stepped shank unless straight or tapered shank is indicated.
6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
8. Bore: Diameter required to match thermometer bulb or stem.
9. Insertion Length: Length required to match thermometer bulb or stem.
10. Lagging Extension: Include on thermowells for insulated piping and tubing.
11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

- B. Heat-Transfer Medium: Mixture of graphite and glycerin.

## 2.4 PRESSURE GAGES

- A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Ametek U.S. Gauge.
  - b. Ashcroft Inc.
  - c. Ernst Flow Industries.
  - d. Trerice, H. O. Co.
  - e. Or approved equal
2. Standard: ASME B40.100.
3. Case: Liquid-filled Sealed Open-front, pressure relief type(s); cast aluminum or drawn steel; 4-1/2-inch nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. Pointer: Dark-colored metal.
9. Window: Glass.
10. Ring: Metal.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

## 2.5 GAGE ATTACHMENTS

- A. Snubbers: ASME B40.100, brass; with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and piston-type surge-dampening device. Include extension for use on insulated piping.
- B. Valves: Brass or stainless-steel needle, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Install thermowells with socket extending one-third of pipe diameter and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.
- G. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
- H. Install remote-mounted pressure gages on panel.
- I. Install valve and snubber in piping for each pressure gage for fluids.
- J. Install thermometers in the following locations:
  - 1. Inlet and outlet of each water heater.
  - 2. Inlets and outlets of each domestic water heat exchanger.
  - 3. Inlet and outlet of each domestic hot-water storage tank.
  - 4. Inlet and outlet of each remote domestic water chiller.
- K. Install pressure gages in the following locations:
  - 1. Building water service entrance into building.
  - 2. Inlet and outlet of each pressure-reducing valve.
  - 3. Suction and discharge of each domestic water pump.
- L. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.
- M. Adjust faces of meters and gages to proper angle for best visibility.

#### 3.2 THERMOMETER SCHEDULE

- A. Thermometers at inlet and outlet of each domestic water heater shall be one of the following:
  - 1. Liquid-filled, bimetallic-actuated type.

2. Metal case, compact-style, liquid-in-glass type.

B. Thermometer stems shall be of length to match thermowell insertion length.

### 3.3 THERMOMETER SCALE-RANGE SCHEDULE

A. Scale Range for Domestic Cold-Water Piping: 0 to 100 deg F.

B. Scale Range for Domestic Hot-Water Piping: 0 to 250 deg F.

### 3.4 PRESSURE-GAGE SCHEDULE

A. Pressure gages at discharge of each water service into building shall be the following:

1. Liquid-filled,-mounted, metal case.

B. Pressure gages at inlet and outlet of each water pressure-reducing valve shall be the following:

1. Liquid-filled,-mounted, metal case.

2. Test plug with chlorosulfonated polyethylene synthetic self-sealing rubber inserts.

C. Pressure gages at suction and discharge of each domestic water pump shall be the following:

1. Liquid-filled, direct-mounted, metal case.

2. Test plug with chlorosulfonated polyethylene synthetic self-sealing rubber inserts.

### 3.5 PRESSURE-GAGE SCALE-RANGE SCHEDULE

A. Scale Range for Water Service Piping: 0 to 100 psi.

B. Scale Range for Domestic Water Piping: 0 to 100 psi.

END OF SECTION 220519

## SECTION 220523.12 BALL VALVES FOR PLUMBING PIPING

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Section Includes:

1. Brass ball valves.
2. Bronze ball valves.

#### 1.2 ACTION SUBMITTALS

A. Product Data: For each type of valve.

1. Certification that products comply with NSF 61 and NSF 372.

### PART 2 - PRODUCTS

#### 2.1 GENERAL REQUIREMENTS FOR VALVES

A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

B. ASME Compliance:

1. ASME B1.20.1 for threads for threaded end valves.
2. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
3. ASME B16.18 for solder-joint connections.
4. ASME B31.9 for building services piping valves.

C. NSF Compliance: NSF 61 and NSF 372 for valve materials for potable-water service.

D. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.

E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

F. Valve Sizes: Same as upstream piping unless otherwise indicated.

G. Valve Actuator Types:

1. Gear Actuator: For quarter-turn valves NPS 4 and larger.
2. Handlever: For quarter-turn valves smaller than NPS 4.

H. Valves in Insulated Piping:

1. Include 2-inch stem extensions.
2. Extended operating handles of nonthermal-conductive material and protective sleeves that allow operation of valves without breaking vapor seals or disturbing insulation.
3. Memory stops that are fully adjustable after insulation is applied.

2.2 BRASS BALL VALVES

A. Brass Ball Valves, One-Piece:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. KITZ Corporation.
  - b. Or approved equal
2. Description:
  - a. Standard: MSS SP-110.
  - b. CWP Rating: 400 psig.
  - c. Body Design: One piece.
  - d. Body Material: Forged brass or bronze.
  - e. Ends: Threaded and soldered.
  - f. Seats: PTFE.
  - g. Stem: Brass or stainless steel.
  - h. Ball: Chrome-plated brass or stainless steel.
  - i. Port: Reduced.

B. Brass Ball Valves, Two-Piece with Full Port and Brass Trim, Threaded or Soldered Ends:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. American Valve, Inc.
  - b. Apollo Flow Controls; Conbraco Industries, Inc.
  - c. Crane; a Crane brand.
  - d. Elkhart Products Corporation.
  - e. Or approved equal
2. Description:
  - a. Standard: MSS SP-110 or MSS SP-145.
  - b. CWP Rating: 600 psig.
  - c. Body Design: Two piece.
  - d. Body Material: Forged brass.
  - e. Ends: Threaded and soldered.
  - f. Seats: PTFE.
  - g. Stem: Brass.

- h. Ball: Chrome-plated brass.
- i. Port: Full.

C. Brass Ball Valves, Two-Piece with Full Port and Brass Trim, Press Ends:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. American Valve, Inc.
  - b. Apollo Flow Controls; Conbraco Industries, Inc.
  - c. Crane; a Crane brand.
  - d. NIBCO INC.
  - e. WATTS.
  - f. Or approved equal
2. Description:
  - a. Standard: MSS SP-110 or MSS SP-145.
  - b. CWP Rating: Minimum 200 psig.
  - c. Body Design: Two piece.
  - d. Body Material: Forged brass.
  - e. Ends: Press.
  - f. Press Ends Connection Rating: Minimum 200 psig.
  - g. Seats: PTFE or RPTFE.
  - h. Stem: Brass.
  - i. Ball: Chrome-plated brass.
  - j. Port: Full.
  - k. O-Ring: Buna-N or EPDM.

D. Brass Ball Valves, Two-Piece with Regular Port and Brass Trim:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Apollo Flow Controls; Conbraco Industries, Inc.
  - b. Milwaukee Valve Company.
  - c. NIBCO INC.
  - d. WATTS.
  - e. Or approved equal
2. Description:
  - a. Standard: MSS SP-110.
  - b. CWP Rating: 600 psig.
  - c. Body Design: Two piece.
  - d. Body Material: Forged brass.
  - e. Ends: Threaded and soldered.
  - f. Seats: PTFE.
  - g. Stem: Brass.

- h. Ball: Chrome-plated brass.
- i. Port: Regular.

### 2.3 BRONZE BALL VALVES

#### A. Bronze Ball Valves, One-Piece:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Apollo Flow Controls; Conbraco Industries, Inc.
  - b. NIBCO INC.
  - c. WATTS.
  - d. Or approved equal
2. Description:
  - a. Standard: MSS SP-110.
  - b. CWP Rating: 400 psig.
  - c. Body Design: One piece.
  - d. Body Material: Bronze.
  - e. Ends: Threaded.
  - f. Seats: PTFE.
  - g. Stem: Bronze.
  - h. Ball: Chrome-plated brass.
  - i. Port: Reduced.

#### B. Bronze Ball Valves, Two-Piece with Full Port, and Bronze or Brass Trim, Threaded or Soldered Ends:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Apollo Flow Controls; Conbraco Industries, Inc.
  - b. Crane; a Crane brand.
  - c. Milwaukee Valve Company.
  - d. NIBCO INC.
  - e. WATTS.
  - f. Or approved equal
2. Description:
  - a. Standard: MSS SP-110 or MSS-145.
  - b. CWP Rating: 600 psig.
  - c. Body Design: Two piece.
  - d. Body Material: Bronze.
  - e. Ends: Threaded and soldered.
  - f. Seats: PTFE.

- g. Stem: Bronze or brass.
- h. Ball: Chrome-plated brass.
- i. Port: Full.

C. Bronze Ball Valves, Two-Piece with Full Port, and Bronze or Brass Trim, Press Ends:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Apollo Flow Controls; Conbraco Industries, Inc.
  - b. Milwaukee Valve Company.
  - c. NIBCO INC.
  - d. WATTS.
  - e. Or approved equal
2. Description:
  - a. Standard: MSS SP-110 or MSS-145.
  - b. CWP Rating: Minimum 200 psig.
  - c. Body Design: Two piece.
  - d. Body Material: Bronze.
  - e. Ends: Press.
  - f. Press Ends Connections Rating: Minimum 200 psig.
  - g. Seats: PTFE or RTPFE.
  - h. Stem: Bronze or brass.
  - i. Ball: Chrome-plated brass.
  - j. Port: Full.
  - k. O-Ring Seal: EPDM or Buna-N.

D. Bronze Ball Valves, Two-Piece with Regular Port and Bronze or Brass Trim:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Apollo Flow Controls; Conbraco Industries, Inc.
  - b. DynaQuip Controls.
  - c. NIBCO INC.
  - d. WATTS.
  - e. Or approved equal
2. Description:
  - a. Standard: MSS SP-110.
  - b. CWP Rating: 600 psig.
  - c. Body Design: Two piece.
  - d. Body Material: Bronze.
  - e. Ends: Threaded.
  - f. Seats: PTFE.
  - g. Stem: Bronze or brass.

- h. Ball: Chrome-plated brass.
- i. Port: Regular.

### PART 3 - EXECUTION

#### 3.1 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.

#### 3.2 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.
- B. Select valves with the following end connections:
  - 1. For Copper Tubing, NPS 2 and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
  - 2. For Steel Piping, NPS 2 and Smaller: Threaded ends.

#### 3.3 LOW-PRESSURE, COMPRESSED-AIR VALVE SCHEDULE (150 PSIG OR LESS)

- A. Pipe NPS 2 and Smaller:
  - 1. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
  - 2. Brass ball valves, one piece.
  - 3. Bronze ball valve, one piece with bronze trim.
  - 4. Brass ball valves, two-piece with full port and brass trim.
  - 5. Bronze ball valves, two-piece with full port and bronze or brass trim.

#### 3.4 HIGH-PRESSURE, COMPRESSED-AIR VALVE SCHEDULE (150 TO 200 PSIG)

- A. Pipe NPS 2 and Smaller:
  - 1. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
  - 2. Brass ball valve, one piece.
  - 3. Bronze ball valve with bronze trim, one piece.
  - 4. Brass ball valves, two-piece with full port and brass trim.

5. Bronze ball valves, two-piece with full port and bronze or brass trim.

### 3.5 DOMESTIC HOT- AND COLD-WATER VALVE SCHEDULE

#### A. Pipe NPS 2 and Smaller:

1. Brass ball valve, one piece. Provide with threaded or solder-joint ends.
2. Bronze ball valve, one piece with bronze trim. Provide with threaded or solder-joint ends.
3. Brass ball valves, two-piece with full port and brass trim. Provide with threaded solder or press connection-joint ends.
4. Bronze ball valves, two-piece with full port and bronze or brass trim. Provide with threaded solder or press-connection-joint ends.

END OF SECTION 220523.12

## SECTION 220523.14 CHECK VALVES FOR PLUMBING PIPING

### PART 1 - GENERAL

#### 1.1 SUMMARY

##### A. Section Includes:

1. Bronze swing check valves.
2. Bronze swing check valves, press ends.
3. Iron swing check valves.
4. Iron swing check valves with closure control.

#### 1.2 ACTION SUBMITTALS

##### A. Product Data: For each type of valve.

1. Certification that products comply with NSF 61.

### PART 2 - PRODUCTS

#### 2.1 GENERAL REQUIREMENTS FOR VALVES

##### A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

##### B. ASME Compliance:

1. ASME B1.20.1 for threads for threaded end valves.
2. ASME B16.1 for flanges on iron valves.
3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
4. ASME B16.18 for solder joint.
5. ASME B31.9 for building services piping valves.

##### C. Drinking Water System Components - Health Effects and Drinking Water System Components - Lead Content Compliance: NSF 61 and NSF 372.

##### D. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.

##### E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

##### F. Valve Sizes: Same as upstream piping unless otherwise indicated.

- G. Valve Bypass and Drain Connections: MSS SP-45.

## 2.2 BRONZE SWING CHECK VALVES

- A. Bronze Swing Check Valves with Bronze Disc, Class 125:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Valve, Inc.
  - b. Apollo Flow Controls; Conbraco Industries, Inc.
  - c. Crane; a Crane brand.
  - d. NIBCO INC.
  - e. WATTS.
  - f. Or approved equal
2. Description:
  - a. Standard: MSS SP-80, Type 3.
  - b. CWP Rating: 200 psig.
  - c. Body Design: Horizontal flow.
  - d. Body Material: ASTM B62, bronze.
  - e. Ends: Threaded or soldered. See valve schedule articles.
  - f. Disc: Bronze.

- B. Bronze Swing Check Valves with Nonmetallic Disc, Class 125:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Apollo Flow Controls; Conbraco Industries, Inc.
  - b. Crane; a Crane brand.
  - c. NIBCO INC.
  - d. Stockham; a Crane brand.
  - e. WATTS.
  - f. Or approved equal
2. Description:
  - a. Standard: MSS SP-80, Type 4.
  - b. CWP Rating: 200 psig.
  - c. Body Design: Horizontal flow.
  - d. Body Material: ASTM B62, bronze.
  - e. Ends: Threaded or soldered. See valve schedule articles.
  - f. Disc: PTFE.

- C. Bronze Swing Check Valves, Press Ends:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Apollo Flow Controls; Conbraco Industries, Inc.
  - b. Elkhart Products Corporation.
  - c. Milwaukee Valve Company.
  - d. NIBCO INC.
  - e. Or approved equal
  
2. Description:
  - a. Standard: MSS SP-80 and MSS SP-139.
  - b. CWP Rating: Minimum 200 psig.
  - c. Body Design: Horizontal flow.
  - d. Body Material: ASTM B584, bronze.
  - e. Ends: Press.
  - f. Press Ends Connection Rating: Minimum 200 psig
  - g. Disc: Brass or bronze.

### PART 3 - EXECUTION

#### 3.1 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.
- E. Install swing check valves for proper direction of flow in horizontal position with hinge pin level.

#### 3.2 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

#### 3.3 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
  1. Pump-Discharge Check Valves:
    - a. NPS 2 and Smaller: Bronze swing check valves with bronze or nonmetallic disc.

- b. NPS 2-1/2 and Larger for Domestic Water: Iron swing check valves with lever and weight or spring; metal-seat or resilient-seat check valves.
  - c. NPS 2-1/2 and Larger for Sanitary Waste and Storm Drainage: Iron swing check valves with lever and weight or spring.
- B. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.
- C. End Connections:
- 1. For Copper Tubing, NPS 2 and Smaller: Threaded or soldered or press-ends.
  - 2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged or threaded.
  - 3. For Copper Tubing, NPS 5 and Larger: Flanged.
  - 4. For Steel Piping, NPS 2 and Smaller: Threaded.
  - 5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged or threaded.
  - 6. For Steel Piping, NPS 5 and Larger: Flanged.

### 3.4 LOW-PRESSURE, COMPRESSED-AIR VALVE SCHEDULE (150 PSIG OR LESS)

- A. Pipe NPS 2 and Smaller:
- 1. Horizontal and Vertical Applications: Bronze swing check valves with bronze disc, Class 125, with soldered or threaded end connections.

### 3.5 DOMESTIC HOT- AND COLD-WATER VALVE SCHEDULE

- A. Pipe NPS 2 and Smaller:
- 1. Bronze swing check valves bronze disc, Class 125, with soldered or threaded end connections.
  - 2. Bronze swing check valves with press-end connections.

END OF SECTION 220523.14

## SECTION 220523.15 GATE VALVES FOR PLUMBING PIPING

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Section Includes:

1. Bronze gate valves.
2. Iron gate valves.
3. Chainwheels.

#### 1.2 ACTION SUBMITTALS

A. Product Data: For each type of valve.

1. Certification that products comply with NSF 61 and NSF 372.

### PART 2 - PRODUCTS

#### 2.1 GENERAL REQUIREMENTS FOR VALVES

A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

B. ASME Compliance:

1. ASME B1.20.1 for threads for threaded end valves.
2. ASME B16.1 for flanges on iron valves.
3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
4. ASME B16.18 for solder joint.
5. ASME B31.9 for building services piping valves.

C. NSF Compliance: NSF 61 and NSF 372 for valve materials for potable-water service.

D. Bronze valves shall be made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.

E. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

F. Valve Sizes: Same as upstream piping unless otherwise indicated.

G. RS Valves in Insulated Piping: With 2-inch stem extensions.

H. Valve Bypass and Drain Connections: MSS SP-45.

2.2 BRONZE GATE VALVES

A. Bronze Gate Valves, NRS, Class 125:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. American Valve, Inc.
  - b. Apollo Flow Controls; Conbraco Industries, Inc.
  - c. NIBCO INC.
  - d. WATTS.
  - e. Or approved equal
2. Description:
  - a. Standard: MSS SP-80, Type 1.
  - b. CWP Rating: 200 psig.
  - c. Body Material: Bronze with integral seat and screw-in bonnet.
  - d. Ends: Threaded or solder joint.
  - e. Stem: Bronze.
  - f. Disc: Solid wedge; bronze.
  - g. Packing: Asbestos free.
  - h. Handwheel: Malleable iron, bronze, or aluminum.

B. Bronze Gate Valves, RS, Class 125:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Valve, Inc.
  - b. Apollo Flow Controls; Conbraco Industries, Inc.
  - c. Crane; a Crane brand.
  - d. NIBCO INC.
  - e. Or approved equal
2. Description:
  - a. Standard: MSS SP-80, Type 2.
  - b. CWP Rating: 200 psig.
  - c. Body Material: Bronze with integral seat and screw-in bonnet.
  - d. Ends: Threaded or solder joint.
  - e. Stem: Bronze.
  - f. Disc: Solid wedge; bronze.
  - g. Packing: Asbestos free.
  - h. Handwheel: Malleable iron, bronze, or aluminum.

C. Bronze Gate Valves, Press Ends:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Apollo Flow Controls; Conbraco Industries, Inc.
  - b. Elkhart Products Corporation.
  - c. Hammond Valve.
  - d. Milwaukee Valve Company.
  - e. NIBCO INC.
  - f. Or approved equal
  
2. Description:
  - a. Standard: MSS SP-80 and MSS SP-139.
  - b. CWP Rating: Minimum 200 psig.
  - c. Body Material: Bronze with integral seat and union-ring bonnet.
  - d. Ends: Press.
  - e. Press Ends Connection Rating: Minimum 200 psig.
  - f. Stem: Brass or bronze non-rising.
  - g. Disc: Solid wedge; bronze.
  - h. Packing: Graphite.
  - i. Port: Full.
  - j. Handwheel: Malleable iron, bronze, or aluminum.

2.3 IRON GATE VALVES

A. Iron Gate Valves, NRS, Class 125:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Apollo Flow Controls; Conbraco Industries, Inc.
  - b. Crane; a Crane brand.
  - c. Milwaukee Valve Company.
  - d. NIBCO INC.
  - e. Or approved equal
  
2. Description:
  - a. Standard: MSS SP-70, Type I.
  - b. CWP Rating: 200 psig.
  - c. Body Material: Gray iron with bolted bonnet.
  - d. Ends: Flanged.
  - e. Trim: Bronze.
  - f. Disc: Solid wedge.
  - g. Packing and Gasket: Asbestos free.

B. Iron Gate Valves, OS&Y, Class 125:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Apollo Flow Controls; Conbraco Industries, Inc.
  - b. Crane; a Crane brand.
  - c. Milwaukee Valve Company.
  - d. NIBCO INC.
  - e. Or approved equal
  
2. Description:
  - a. Standard: MSS SP-70, Type I.
  - b. CWP Rating: 200 psig.
  - c. Body Material: Gray iron with bolted bonnet.
  - d. Ends: Flanged.
  - e. Trim: Bronze.
  - f. Disc: Solid wedge.
  - g. Packing and Gasket: Asbestos free.

### PART 3 - EXECUTION

#### 3.1 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.

#### 3.2 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

#### 3.3 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. Use gate valves for shutoff service only.
- B. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.

3.4 DOMESTIC HOT- AND COLD-WATER VALVE SCHEDULE

- A. Pipe NPS 2 and Smaller:
  - 1. Bronze gate valves, NRS, Class 125 with soldered ends.
  - 2. Bronze gate valves, press ends.
  
- B. Pipe NPS 2-1/2 and Larger: Iron gate valves, NRS, Class 125 with flanged ends.

END OF SECTION 220523.15

## SECTION 220529 HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

### PART 1 - GENERAL

#### 1.1 SUMMARY

##### A. Section Includes:

1. Metal pipe hangers and supports.
2. Trapeze pipe hangers.
3. Thermal hanger-shield inserts.
4. Fastener systems.
5. Pipe-positioning systems.
6. Equipment supports.

##### B. Related Requirements:

1. Section 055000 "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
2. Section 220516 "Expansion Fittings and Loops for Plumbing Piping" for pipe guides and anchors.
3. Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment" for vibration isolation devices.

#### 1.2 ACTION SUBMITTALS

##### A. Product Data: For each type of product.

##### B. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations.

##### C. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

#### 1.3 INFORMATIONAL SUBMITTALS

##### A. Welding certificates.

#### 1.4 QUALITY ASSURANCE

##### A. Structural-Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M.

- B. Pipe Welding Qualifications: Qualify procedures and operators according to "2015 ASME Boiler and Pressure Vessel Code, Section IX."

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design trapeze pipe hangers and equipment supports.
- B. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
  - 1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
  - 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
  - 3. Design seismic-restraint hangers and supports for piping and equipment and obtain approval from authorities having jurisdiction.

### 2.2 METAL PIPE HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
  - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
  - 2. Galvanized Metallic Coatings: Pregalvanized, hot-dip galvanized, or electro-galvanized.
  - 3. Nonmetallic Coatings: Plastic coated or epoxy powder coated.
  - 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
  - 5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
- B. Copper Pipe and Tube Hangers:
  - 1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
  - 2. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-coated steel.

### 2.3 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-58, Type 59, shop- or field-fabricated pipe-support assembly, made from structural-carbon-steel shapes, with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

## 2.4 THERMAL HANGER-SHIELD INSERTS

- A. Insulation-Insert Material for Cold Piping: ASTM C552, Type II cellular glass with 100-psig or ASTM C591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength and vapor barrier.
- B. Insulation-Insert Material for Hot Piping: Water-repellent-treated, ASTM C533, Type I calcium silicate with 100-psig ASTM C552, Type II cellular glass with 100-psig or ASTM C591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength.
- C. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- D. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- E. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

## 2.5 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Hilti, Inc.
    - b. ITW Ramset/Red Head; Illinois Tool Works, Inc.
    - c. MKT Fastening, LLC.
    - d. Simpson Strong-Tie Co., Inc.
    - e. Or approved equal
- B. Mechanical-Expansion Anchors: Insert-wedge-type anchors, for use in hardened portland cement concrete, with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Eaton (B-line).
    - b. Empire Tool and Manufacturing Co., Inc.
    - c. Hilti, Inc.
    - d. ITW Ramset/Red Head; Illinois Tool Works, Inc.
    - e. MKT Fastening, LLC.
    - f. Or approved equal
  - 2. Indoor Applications: Zinc-coated or stainless steel.
  - 3. Outdoor Applications: Stainless steel.

## 2.6 PIPE-POSITIONING SYSTEMS

- A. Description: IAPMO PS 42 positioning system composed of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

## 2.7 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural-carbon-steel shapes.

## 2.8 MATERIALS

- A. Aluminum: ASTM B221.
- B. Carbon Steel: ASTM A1011/A1011M.
- C. Structural Steel: ASTM A36/A36M carbon-steel plates, shapes, and bars; black and galvanized.
- D. Stainless Steel: ASTM A240/A240M.
- E. Grout: ASTM C1107/C1107M, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
  - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
  - 2. Design Mix: 5000-psi, 28-day compressive strength.

## PART 3 - EXECUTION

### 3.1 APPLICATION

- A. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation, for penetrations through fire-rated walls, ceilings, and assemblies.
- B. Strength of Support Assemblies: Where not indicated, select sizes of components, so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.

### 3.2 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-58. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-58. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size, or install intermediate supports for smaller-diameter pipes as specified for individual pipe hangers.
  2. Field fabricate from ASTM A36/A36M carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Thermal Hanger-Shield Installation: Install in pipe hanger or shield for insulated piping.
- D. Fastener System Installation:
1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete, after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
  2. Install mechanical-expansion anchors in concrete, after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- E. Pipe-Positioning-System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture.
- F. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- G. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- H. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- I. Install lateral bracing with pipe hangers and supports to prevent swaying.
- J. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms, and install reinforcing bars through openings at top of inserts.
- K. Load Distribution: Install hangers and supports, so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- L. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- M. Insulated Piping:
1. Attach clamps and spacers to piping.
    - a. Piping Operating Above Ambient Air Temperature: Clamp may project through insulation.
    - b. Piping Operating Below Ambient Air Temperature: Use thermal hanger-shield insert with clamp sized to match OD of insert.

- c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
2. Install MSS SP-58, Type 39 protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
  - a. Option: Thermal hanger-shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
3. Install MSS SP-58, Type 40 protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
  - a. Option: Thermal hanger-shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
4. Shield Dimensions for Pipe: Not less than the following:
  - a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
  - b. NPS 4: 12 inches long and 0.06 inch thick.
  - c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
  - d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
  - e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal Hanger Shields: Install with insulation of same thickness as piping insulation.

### 3.3 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment, and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

### 3.4 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work.

### 3.5 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

### 3.6 PAINTING

- A. Touchup: Clean field welds and abraded, shop-painted areas. Paint exposed areas immediately after erecting hangers and supports. Use same materials as those used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
  - 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- B. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded, shop-painted areas on miscellaneous metal are specified in Section 099123 "Interior Painting."
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas, and apply galvanizing-repair paint to comply with ASTM A780/A780M.

### 3.7 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-58 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finishes.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports and metal trapeze pipe hangers and attachments for general service applications.
- F. Use copper-plated pipe hangers and copper or stainless-steel attachments for copper piping and tubing.
- G. Use padded hangers for piping that is subject to scratching.
- H. Use thermal hanger-shield inserts for insulated piping and tubing.
- I. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
  2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
  3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
  4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.
  5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.
  6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 8.
  7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8.
  11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3.
  12. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
  13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
  14. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
  15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
  16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
  17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction occurs.
  18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction occurs.
  19. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction occurs but vertical adjustment is unnecessary.
  20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 if small horizontal movement caused by expansion and contraction occurs and vertical adjustment is unnecessary.
  21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 if vertical and lateral adjustment during installation, in addition to expansion and contraction, is required.
- J. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
  2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.
- K. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment of up to 6 inches for heavy loads.
  2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
  3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11 split pipe rings.
  4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
  5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.
- L. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable-Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
  2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
  3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
  4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
  5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
  6. C-Clamps (MSS Type 23): For structural shapes.
  7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
  8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
  9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
  10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
  11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
  12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
    - a. Light (MSS Type 31): 750 lb.
    - b. Medium (MSS Type 32): 1500 lb.
    - c. Heavy (MSS Type 33): 3000 lb.
  13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
  14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
  15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

- M. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
  2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
  3. Thermal Hanger-Shield Inserts: For supporting insulated pipe.
- N. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
  2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
  3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41 roll hanger with springs.
  4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
  5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load, and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.
  6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load, and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
  7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load, and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.
  8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
    - a. Horizontal (MSS Type 54): Mounted horizontally.
    - b. Vertical (MSS Type 55): Mounted vertically.
    - c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.
- O. Comply with MSS SP-58 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- P. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.
- Q. Use pipe-positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

END OF SECTION 220529

## SECTION 220553 IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section Includes:
1. Equipment labels.
  2. Warning signs and labels.
  3. Pipe labels.

#### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

### PART 2 - PRODUCTS

#### 2.1 EQUIPMENT LABELS

- A. Plastic Labels for Equipment:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Brady Corporation.
    - b. Brimar Industries, Inc.
    - c. Carlton Industries, LP.
    - d. Champion America.
    - e. Craftmark Pipe Markers.
    - f. Or approved equal
  2. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
  3. Letter Color: White.
  4. Background Color: Black.
  5. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
  6. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
  7. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
  8. Fasteners: Stainless-steel rivets or self-tapping screws.

9. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.
- C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number, and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

## 2.2 WARNING SIGNS AND LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Brady Corporation.
  2. Brimar Industries, Inc.
  3. Carlton Industries, LP.
  4. Champion America.
  5. Craftmark Pipe Markers.
  6. Or approved equal
- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- C. Letter Color: White.
- D. Background Color: Red.
- E. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- F. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- G. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-quarters the size of principal lettering.
- H. Fasteners: Stainless-steel rivets or self-tapping screws.
- I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- J. Label Content: Include caution and warning information plus emergency notification instructions.

### 2.3 PIPE LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Actioncraft Products, Inc.; a division of Industrial Test Equipment Co., Inc.
  - 2. Brady Corporation.
  - 3. Brimar Industries, Inc.
  - 4. Carlton Industries, LP.
  - 5. Champion America.
  - 6. Craftmark Pipe Markers.
  - 7. Or approved equal
- B. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to partially cover circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; also include pipe size and an arrow indicating flow direction.
  - 1. Flow-Direction Arrows: Integral with piping-system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
  - 2. Lettering Size: Size letters according to ASME A13.1 for piping.

## PART 3 - EXECUTION

### 3.1 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

### 3.2 PIPE LABEL INSTALLATION

- A. Piping Color Coding: Painting of piping is specified in Section 099123 "Interior Painting."
- B. Pipe Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
  - 1. Near each valve and control device.

2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
3. Near penetrations and on both sides of through walls, floors, ceilings, and inaccessible enclosures.
4. At access doors, manholes, and similar access points that permit view of concealed piping.
5. Near major equipment items and other points of origination and termination.
6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

C. Pipe Label Color Schedule:

1. Domestic Water Piping
  - a. Background: Safety green.
  - b. Letter Colors: White.
2. Sanitary Waste and Storm Drainage Piping:
  - a. Background Color: Safety black.
  - b. Letter Color: White.

END OF SECTION 220553

## SECTION 220719 PLUMBING PIPING INSULATION

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Section includes insulating the following plumbing piping services:

1. Domestic cold-water piping.
2. Domestic hot-water piping.
3. Domestic recirculating hot-water piping.
4. Domestic chilled-water piping for drinking fountains.
5. Sanitary waste piping exposed to freezing conditions.
6. Storm-water piping exposed to freezing conditions.
7. Roof drains and rainwater leaders.
8. Supplies and drains for handicap-accessible lavatories and sinks.

B. Related Sections:

1. Section 220716 "Plumbing Equipment Insulation" for equipment insulation.

#### 1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
2. Detail attachment and covering of heat tracing inside insulation.
3. Detail insulation application at pipe expansion joints for each type of insulation.
4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
5. Detail removable insulation at piping specialties, equipment connections, and access panels.
6. Detail application of field-applied jackets.
7. Detail application at linkages of control devices.

C. Samples: For each type of insulation and jacket indicated.

#### 1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Material test reports.

- C. Field quality-control reports.

#### 1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products in accordance with ASTM E84 by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
  - 1. Insulation Installed Indoors: Flame-spread index of 25 or less and smoke-developed index of 50 or less.
  - 2. Insulation Installed Outdoors: Flame-spread index of 75 or less and smoke-developed index of 150 or less.
- C. Comply with the following applicable standards and other requirements specified for miscellaneous components:
  - 1. Supply and Drain Protective Shielding Guards: ICC A117.1.

#### 1.5 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."
- B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

#### 1.6 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

## PART 2 - PRODUCTS

### 2.1 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come into contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested in accordance with ASTM C871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable in accordance with ASTM C795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Comply with ASTM C552.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Pittsburgh Corning Corporation.
    - b. Or approved equal
  - 2. Preformed Pipe Insulation: Type II, Class 1, without jacket.
  - 3. Preformed Pipe Insulation: Type II, Class 2, with factory-applied ASJ jacket.
  - 4. Factory fabricate shapes in accordance with ASTM C450 and ASTM C585.
  - 5. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- G. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C534/C534M, Type I for tubular materials.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Aeroflex USA.
    - b. Armacell LLC.
    - c. K-Flex USA.
    - d. Or approved equal
- H. Mineral-Fiber, Preformed Pipe: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C547.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Johns Manville; a Berkshire Hathaway company.
  - b. Knauf Insulation.
  - c. Manson Insulation Inc.
  - d. Owens Corning.
  - e. Or approved equal
2. Preformed Pipe Insulation: Type I, Grade A with factory-applied ASJ.
  3. 850 deg F.
  4. Factory fabricate shapes in accordance with ASTM C450 and ASTM C585.
  5. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- I. Polyolefin: Unicellular, polyethylene thermal plastic insulation. Comply with ASTM C534/C534M or ASTM C1427, Type I, Grade 1, for tubular materials.
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Armacell LLC.
    - b. Or approved equal

## 2.2 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F.
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Foster Brand; H. B. Fuller Construction Products.
- C. Flexible Elastomeric and Polyolefin Adhesive: Solvent-based adhesive.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Aeroflex USA.
    - b. Armacell LLC.
    - c. Foster Brand; H. B. Fuller Construction Products.
    - d. K-Flex USA.
    - e. Or approved equal
  2. Flame-spread index shall be 25 or less and smoke-developed index shall be 50 or less as tested in accordance with ASTM E84.
  3. Wet Flash Point: Below 0 deg F.
  4. Service Temperature Range: 40 to 200 deg F.
  5. Color: Black.

- D. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Foster Brand; H. B. Fuller Construction Products.
    - c. Or approved equal
  
- E. ASJ Adhesive and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A, for bonding insulation jacket lap seams and joints.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Foster Brand; H. B. Fuller Construction Products.
    - c. Mon-Eco Industries, Inc.
    - d. Or approved equal
  
- F. PVC Jacket Adhesive: Compatible with PVC jacket.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Dow Consumer Solutions.
    - b. Johns Manville; a Berkshire Hathaway company.
    - c. P.I.C. Plastics, Inc.
    - d. Speedline Corporation.
    - e. Or approved equal

### 2.3 MASTICS AND COATINGS

- A. Materials shall be compatible with insulation materials, jackets, and substrates.
  
- B. Vapor-Retarder Mastic, Water Based: Suitable for indoor use on below-ambient services.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Foster Brand; H. B. Fuller Construction Products.
    - c. Knauf Insulation.
    - d. Vimasco Corporation.
    - e. Or approved equal
  
  - 2. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
  - 3. Service Temperature Range: 0 to plus 180 deg F.
  - 4. Comply with MIL-PRF-19565C, Type II, for permeance requirements.

5. Color: White.

C. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Childers Brand; H. B. Fuller Construction Products.
- b. Foster Brand; H. B. Fuller Construction Products.
- c. Knauf Insulation.
- d. Mon-Eco Industries, Inc.
- e. Vimasco Corporation.
- f. Or approved equal

2. Water-Vapor Permeance: ASTM E96/E96M, greater than 1.0 perm at manufacturer's recommended dry film thickness.

3. Service Temperature Range: 0 to plus 180 deg F Minus 20 to plus 180 deg F.

4. Color: White.

#### 2.4 SEALANTS

A. Materials shall be as recommended by the insulation manufacturer and shall be compatible with insulation materials, jackets, and substrates.

B. Joint Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Childers Brand; H. B. Fuller Construction Products.
- b. Foster Brand; H. B. Fuller Construction Products.
- c. Mon-Eco Industries, Inc.
- d. Pittsburgh Corning Corporation.
- e. Or approved equal

2. Permanently flexible, elastomeric sealant.

3. Service Temperature Range: Minus 58 to plus 176 deg F.

4. Color: White or gray.

C. FSK and Metal Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Childers Brand; H. B. Fuller Construction Products.
- b. Foster Brand; H. B. Fuller Construction Products.
- c. Mon-Eco Industries, Inc.
- d. Or approved equal

2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F.
4. Color: Aluminum.

D. ASJ Flashing Sealants and PVC Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. Childers Brand; H. B. Fuller Construction Products.
  - b. Or approved equal
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F.
4. Color: White.

2.5 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C1136, Type I.
  2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.
  3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C1136, Type II.

2.6 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C1136, Type I, unless otherwise indicated.
- B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.
- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. P.I.C. Plastics, Inc.
    - c. Proto Corporation.
    - d. Speedline Corporation.
    - e. Or approved equal
  2. Adhesive: As recommended by jacket material manufacturer.

3. Color: White.
4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
  - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

## 2.7 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. 3M Industrial Adhesives and Tapes Division.
    - b. Avery Dennison Corporation, Specialty Tapes Division.
    - c. Ideal Tape Co., Inc., an American Biltrite Company.
    - d. Knauf Insulation.
    - e. Or approved equal
  2. Width: 3 inches.
  3. Thickness: 11.5 mils.
  4. Adhesion: 90 ounces force/inch in width.
  5. Elongation: 2 percent.
  6. Tensile Strength: 40 lbf/inch in width.
  7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. 3M Industrial Adhesives and Tapes Division.
    - b. Avery Dennison Corporation, Specialty Tapes Division.
    - c. Ideal Tape Co., Inc., an American Biltrite Company.
    - d. Knauf Insulation.
    - e. Or approved equal
  2. Width: 3 inches.
  3. Thickness: 6.5 mils.
  4. Adhesion: 90 ounces force/inch in width.
  5. Elongation: 2 percent.
  6. Tensile Strength: 40 lbf/inch in width.
  7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. 3M Industrial Adhesives and Tapes Division.
  - b. Ideal Tape Co., Inc., an American Biltrite Company.
  - c. Or approved equal
2. Width: 2 inches.
3. Thickness: 6 mils.
4. Adhesion: 64 ounces force/inch in width.
5. Elongation: 500 percent.
6. Tensile Strength: 18 lbf/inch in width.

D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. 3M Industrial Adhesives and Tapes Division.
  - b. Avery Dennison Corporation, Specialty Tapes Division.
  - c. Ideal Tape Co., Inc., an American Biltrite Company.
  - d. Knauf Insulation.
  - e. Or approved equal
2. Width: 2 inches.
3. Thickness: 3.7 mils.
4. Adhesion: 100 ounces force/inch in width.
5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch in width.

## 2.8 SECUREMENTS

A. Bands:

1. Stainless Steel: ASTM A240/A240M, Type 304; 0.015 inch thick, 1/2 inch wide with wing seal or closed seal.
2. Aluminum: ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch wide with wing seal or closed seal.

B. Staples: Outward-clinching insulation staples, nominal 3/4-inch-wide, stainless steel or Monel.

C. Wire: 0.080-inch nickel-copper alloy.

## 2.9 PROTECTIVE SHIELDING GUARDS

A. Protective Shielding Pipe Covers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Buckaroos, Inc.
  - b. Just Manufacturing.
  - c. McGuire Manufacturing.
  - d. MVG Molded Products.
  - e. Truebro.
  - f. Or approved equal
2. Description: Manufactured plastic wraps for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements.

B. Protective Shielding Piping Enclosures:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Truebro.
  - b. Zurn Industries, LLC.
  - c. Or approved equal
2. Description: Manufactured plastic enclosure for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with ADA requirements.

### PART 3 - EXECUTION

#### 3.1 PREPARATION

- A. Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
  1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils thick and an epoxy finish 5 mils thick if operating in a temperature range of between 140 and 300 deg F. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
  2. Carbon Steel: Coat carbon steel operating at a service temperature of between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the tradesman installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless steel surfaces, use demineralized water.

### 3.2 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping, including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and of thicknesses required for each item of pipe system, as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during storage, application, and finishing. Replace insulation materials that get wet.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
  - 1. Install insulation continuously through hangers and around anchor attachments.
  - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends attached to structure with vapor-barrier mastic.
  - 3. Install insert materials and insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
  - 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
  - 1. Draw jacket tight and smooth.

2. Cover circumferential joints with 3-inch-wide strips, of same material as insulation jacket. Secure strips with adhesive and outward-clinching staples along both edges of strip, spaced 4 inches o.c.
  3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward-clinching staples along edge at 4 inches o.c.
    - a. For below-ambient services, apply vapor-barrier mastic over staples.
  4. Cover joints and seams with tape, in accordance with insulation material manufacturer's written instructions, to maintain vapor seal.
  5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 25 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches in similar fashion to butt joints.
- P. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
  2. Testing agency labels and stamps.
  3. Nameplates and data plates.
  4. Cleanouts.

### 3.3 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
  4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
  - 1. Seal penetrations with flashing sealant.
  - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
  - 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
  - 1. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
  - 1. Pipe: Install insulation continuously through floor penetrations.
  - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

### 3.4 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials, except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, Mechanical Couplings, and Unions:
  - 1. Install insulation over fittings, valves, strainers, flanges, mechanical couplings, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
  - 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as that of adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
  - 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as that used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
  - 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as that used for adjacent pipe. Overlap adjoining pipe

- insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers, so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
  6. Insulate flanges, mechanical couplings, and unions, using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Stencil or label the outside insulation jacket of each union with the word "union" matching size and color of pipe labels.
  7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
  8. For services not specified to receive a field-applied jacket, except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing, using PVC tape.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers at locations indicated. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as that of adjoining pipe insulation.
  2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union at least 2 times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless steel or aluminum bands. Select band material compatible with insulation and jacket.
  3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
  4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
  5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

### 3.5 INSTALLATION OF CELLULAR-GLASS INSULATION

#### A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches o.c.
4. For insulation with factory-applied jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

#### B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as that of pipe insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

#### C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as that of straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

#### D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

### 3.6 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

#### A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

#### B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as that of pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as that of pipe insulation when available.
2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

### 3.7 INSTALLATION OF MINERAL-FIBER INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward-clinched staples at 6 inches o.c.
4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as that of straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as that of straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.8 INSTALLATION OF POLYOLEFIN INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Seal split-tube longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyolefin sheet insulation of same thickness as that of pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of polyolefin pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install cut sections of polyolefin pipe and sheet insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

### 3.9 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
  1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
  2. Embed glass cloth between two 0.062-inch-thick coats of lagging adhesive.
  3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
  1. Draw jacket material smooth and tight.
  2. Install lap or joint strips with same material as jacket.
  3. Secure jacket to insulation with manufacturer's recommended adhesive.
  4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch-wide joint strips at end joints.
  5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.
  1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless steel bands 12 inches o.c. and at end joints.

### 3.10 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
  1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
    - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

- C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless steel jackets.

### 3.11 FIELD QUALITY CONTROL

- A. Owner will engage a qualified testing agency to perform tests and inspections.
- B. Engage a qualified testing agency to perform tests and inspections.
- C. Perform tests and inspections.
- D. Tests and Inspections: Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- E. All insulation applications will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

### 3.12 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
  - 1. Drainage piping located in crawl spaces.
  - 2. Underground piping.
  - 3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

### 3.13 INDOOR PIPING INSULATION SCHEDULE

- A. Domestic Cold Water:
  - 1. NPS 1 and Smaller: Insulation shall be one of the following:
    - a. Flexible Elastomeric: 1/2 inch thick.
    - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
    - c. Polyolefin: 1 inch thick.
  - 2. NPS 1-1/4 and Larger: Insulation shall be one of the following:

- a. Flexible Elastomeric: 1 inch thick.
- b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
- c. Polyolefin: 1 inch thick.

B. Domestic Hot and Recirculated Hot Water:

1. NPS 1-1/4 and Smaller: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 3/4 inch thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
  - c. Polyolefin: 1 inch thick.
2. NPS 1-1/2 and Larger: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 1 inch thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
  - c. Polyolefin: 1 inch thick.

C. Stormwater and Overflow:

1. All Pipe Sizes: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 1 inch thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
  - c. Polyolefin: 1 inch thick.

D. Roof Drain and Overflow Drain Bodies:

1. All Pipe Sizes: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 1 inch thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
  - c. Polyolefin: 1 inch thick.

E. Exposed Sanitary Drains, Domestic Water, Domestic Hot Water, and Stops for Plumbing Fixtures for People with Disabilities:

1. All Pipe Sizes: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 1/2 inch thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
  - c. Polyolefin: 3/4 inch thick.

END OF SECTION 220719

## SECTION 221116 DOMESTIC WATER PIPING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

- 1. Copper tube and fittings.
- 2. Ductile-iron pipe and fittings.
- 3. Piping joining materials.
- 4. Encasement for piping.
- 5. Transition fittings.
- 6. Dielectric fittings.

- B. Related Requirements:

- 1. Section 221113 "Facility Water Distribution Piping" for water-service piping and water meters outside the building from source to the point where water-service piping enters the building.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For transition fittings and dielectric fittings.

- B. Coordination Drawings: Plumbing systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from the installers of the items involved:

- 1. Domestic water piping.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. System purging and disinfecting activities report.

- B. Field quality-control reports.

## **PART 2 - PRODUCTS**

### **2.1 PIPING MATERIALS**

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.
- B. Potable-water piping and components shall comply with NSF 14, NSF 61, and NSF 372.

### **2.2 COPPER TUBE AND FITTINGS**

- A. Hard Copper Tube: ASTM B88, Type L water tube, drawn temper.
- B. Soft Copper Tube: ASTM B88, Type L water tube, annealed temper.
- C. Wrought-Copper, Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.
- D. Bronze Flanges: ASME B16.24, Class 150, with solder-joint, press-connect, or threaded ends.
- E. Copper Unions:
  - 1. MSS SP-123.
  - 2. Cast-copper-alloy, hexagonal-stock body.
  - 3. Ball-and-socket, metal-to-metal seating surfaces.
  - 4. Solder-joint or threaded ends.
- F. Copper Press-Connect Fittings:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide products by Viega LLC; ProPress or comparable products by one of the following:
    - a. Apollo Flow Controls; Conbraco Industries, Inc., ApolloXpress.
    - b. Elkhart Products Corporation.
    - c. NIBCO INC.
    - d. Or approved equal
  - 2. Fittings for NPS 2 and Smaller: Cast-bronze or wrought-copper fitting with EPDM-rubber, O-ring seal in each end.
  - 3. Fittings for NPS 2-1/2 to NPS 4: Wrought-copper fitting with EPDM-rubber, O-ring seal in each end.
  - 4. Press Ends: Unpressed fitting identification feature to the fitting wall.
  - 5. Sealing Element: EPDM.
- G. Cast Copper Alloy Pipe Flanges with Press-Connect Fittings:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Viega LLC; ProPress Copper or comparable products by one of the following:
    - a. NIBCO INC.

b. Or approved equal

2. Flanges: ASME B 16.24, Class 150, powder coated steel plate; two-piece design.
3. NPS 2-1/2 thru NPS 4 Fittings: Stainless steel grip ring and EPDM O-ring seal in each end.
4. Housing: Copper or bronze.
5. Press Ends: Unpressed fitting identification feature to the fitting wall.
6. Sealing Element: EPDM.

### 2.3 DUCTILE-IRON PIPE AND FITTINGS

#### A. Mechanical-Joint, Ductile-Iron Pipe:

1. AWWA C151/A21.51, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.
2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

#### B. Standard-Pattern, Mechanical-Joint Fittings:

1. AWWA C110/A21.10, ductile or gray iron.
2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

#### C. Compact-Pattern, Mechanical-Joint Fittings:

1. AWWA C153/A21.53, ductile iron.
2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

#### D. Push-on-Joint, Ductile-Iron Pipe:

1. AWWA C151/A21.51.
2. Push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.

#### E. Standard-Pattern, Push-on-Joint Fittings:

1. AWWA C110/A21.10, ductile or gray iron.
2. Gaskets: AWWA C111/A21.11, rubber.

#### F. Compact-Pattern, Push-on-Joint Fittings:

1. AWWA C153/A21.53, ductile iron.
2. Gaskets: AWWA C111/A21.11, rubber.

#### G. Plain-End, Ductile-Iron Pipe: AWWA C151/A21.51.

## 2.4 PIPING JOINING MATERIALS

### A. Pipe-Flange Gasket Materials:

1. AWWA C110/A21.10, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free unless otherwise indicated.
2. Full-face or ring type unless otherwise indicated.

### B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

### C. Solder Filler Metals: ASTM B32, lead-free alloys.

### D. Flux: ASTM B813, water flushable.

### E. Brazing Filler Metals: AWS A5.8M/A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

## 2.5 DIELECTRIC FITTINGS

### A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.

### B. Dielectric Unions:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. A.Y. McDonald Mfg. Co.
  - b. Capitol Manufacturing Company.
  - c. Central Plastics Company.
  - d. HART Industrial Unions, LLC.
  - e. Jomar Valve.
  - f. Matco-Norca.
  - g. WATTS.
  - h. Wilkins.
  - i. Zurn Industries, LLC.
  - j. Or approved equal
2. Standard: ASSE 1079.
3. Pressure Rating: 125 psig minimum at 180 deg F.
4. End Connections: Solder-joint, or press-connect joint, copper alloy and threaded ferrous.

### C. Dielectric Flanges:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Capitol Manufacturing Company.
  - b. Central Plastics Company.

- c. Matco-Norca.
    - d. WATTS.
    - e. Wilkins.
    - f. Zurn Industries, LLC.
    - g. Or approved equal
  2. Standard: ASSE 1079.
  3. Factory-fabricated, bolted, companion-flange assembly.
  4. Pressure Rating: 125 psig minimum at 180 deg F.
  5. End Connections: Solder-joint, threaded, or press-connect, copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
- D. Dielectric-Flange Insulating Kits:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Advance Products & Systems, Inc.
    - b. Calpico, Inc.
    - c. Central Plastics Company.
    - d. Pipeline Seal and Insulator, Inc.
    - e. Or approved equal
  2. Nonconducting materials for field assembly of companion flanges.
  3. Pressure Rating: 150 psig.
  4. Gasket: Neoprene or phenolic.
  5. Bolt Sleeves: Phenolic or polyethylene.
  6. Washers: Phenolic with steel backing washers.
- E. Dielectric Nipples:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Elster Perfection Corporation.
    - b. Grinnell Mechanical Products.
    - c. Matco-Norca.
    - d. Precision Plumbing Products.
    - e. Victaulic Company.
    - f. Or approved equal
  2. Standard: IAPMO PS 66.
  3. Electroplated steel nipple complying with ASTM F1545.
  4. Pressure Rating and Temperature: 300 psig at 225 deg F.
  5. End Connections: Male threaded.
  6. Lining: Inert and noncorrosive, propylene.

### **PART 3 - EXECUTION**

#### **3.1 EARTHWORK**

- A. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.

#### **3.2 PIPING INSTALLATION**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."
- C. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.
- D. Install underground copper tube in PE encasement according to ASTM A674 or AWWA C105/A21.5.
- E. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve inside the building at each domestic water-service entrance. Comply with requirements for pressure gages in Section 220519 "Meters and Gages for Plumbing Piping" and with requirements for drain valves and strainers in Section 221119 "Domestic Water Piping Specialties."
- F. Install shutoff valve immediately upstream of each dielectric fitting.
- G. Install water-pressure-reducing valves downstream from shutoff valves. Comply with requirements for pressure-reducing valves in Section 221119 "Domestic Water Piping Specialties."
- H. Install domestic water piping level and plumb.
- I. Rough-in domestic water piping for water-meter installation according to utility company's requirements.
- J. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- K. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- L. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.

- M. Install piping to permit valve servicing.
- N. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.
- O. Install piping free of sags and bends.
- P. Install fittings for changes in direction and branch connections.
- Q. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.
- R. Install pressure gages on suction and discharge piping for each plumbing pump and packaged booster pump. Comply with requirements for pressure gages in Section 220519 "Meters and Gages for Plumbing Piping."
- S. Install thermostats in hot-water circulation piping. Comply with requirements for thermostats in Section 221123 "Domestic Water Pumps."
- T. Install thermometers on inlet and outlet piping from each water heater. Comply with requirements for thermometers in Section 220519 "Meters and Gages for Plumbing Piping."
- U. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- V. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- W. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

### 3.3 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- D. Brazed Joints for Copper Tubing: Comply with CDA's "Copper Tube Handbook," "Braze Joints" chapter.

- E. Soldered Joints for Copper Tubing: Apply ASTM B813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B828 or CDA's "Copper Tube Handbook."
- F. Press-Connect Joints for Copper Tubing: Join copper tube and pressure-connect fittings with tools recommended by fitting manufacturer.
  - 1. Mark proper insertion depth prior to making press connection.
- G. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.

### 3.4 DIELECTRIC FITTING INSTALLATION

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings or unions.
- C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flange kits or nipples.

### 3.5 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for seismic-restraint devices in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Comply with requirements for pipe hanger, support products, and installation in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."
  - 1. Vertical Piping: MSS Type 8 or 42, clamps.
  - 2. Individual, Straight, Horizontal Piping Runs:
    - a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
    - b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
  - 3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
  - 4. Base of Vertical Piping: MSS Type 52, spring hangers.
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch.
- E. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
  - 1. NPS 3/4 and Smaller: 60 inches with 3/8-inch rod.
  - 2. NPS 1 and NPS 1-1/4: 72 inches with 3/8-inch rod.
  - 3. NPS 1-1/2 and NPS 2: 96 inches with 3/8-inch rod.
  - 4. NPS 2-1/2 (DN 65): 108 inches with 1/2-inch rod.

5. NPS 3 to NPS 5: 10 feet with 1/2-inch rod.
6. NPS 6: 10 feet with 5/8-inch rod.

- F. Install supports for vertical copper tubing every 10 feet.
- G. Support piping and tubing not listed in this article according to MSS SP-58 and manufacturer's written instructions.

### 3.6 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. When installing piping adjacent to equipment and machines, allow space for service and maintenance.
- C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.
- D. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:
  1. Domestic Water Booster Pumps: Cold-water suction and discharge piping.
  2. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
  3. Plumbing Fixtures: Cold- and hot-water-supply piping in sizes indicated, but not smaller than that required by plumbing code.
  4. Equipment (ManaBloc/MiniBloc): Cold- and hot-water-supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 and larger.

### 3.7 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification materials and installation in Section 220553 "Identification for Plumbing Piping and Equipment."
- B. Label pressure piping with system operating pressure.

### 3.8 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
  1. Piping Inspections:
    - a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.

- b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
  - 1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing in after roughing in and before setting fixtures.
  - 2) Final Inspection: Arrange for authorities having jurisdiction to observe tests specified in "Piping Tests" Subparagraph below and to ensure compliance with requirements.
- c. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
- d. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

2. Piping Tests:

- a. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
- b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
- c. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
- d. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow it to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
- e. Repair leaks and defects with new materials, and retest piping or portion thereof until satisfactory results are obtained.
- f. Prepare reports for tests and for corrective action required.

B. Domestic water piping will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.9 ADJUSTING

A. Perform the following adjustments before operation:

- 1. Close drain valves, hydrants, and hose bibbs.
- 2. Open shutoff valves to fully open position.
- 3. Open throttling valves to proper setting.
- 4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
  - a. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide hot-water flow in each branch.
  - b. Adjust calibrated balancing valves to flows indicated.

5. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
6. Remove and clean strainer screens. Close drain valves and replace drain plugs.
7. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and are clean and ready for use.
8. Check plumbing specialties and verify proper settings, adjustments, and operation.

### 3.10 CLEANING

#### A. Clean and disinfect potable domestic water piping as follows:

1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
  - a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
  - b. Fill and isolate system according to either of the following:
    - 1) Fill system or part thereof with water/chlorine solution with at least 50 ppm of chlorine. Isolate with valves and allow to stand for 24 hours.
    - 2) Fill system or part thereof with water/chlorine solution with at least 200 ppm of chlorine. Isolate and allow to stand for three hours.
  - c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
  - d. Repeat procedures if biological examination shows contamination.
  - e. Submit water samples in sterile bottles to authorities having jurisdiction.

#### B. Clean non-potable domestic water piping as follows:

1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
2. Use purging procedures prescribed by authorities having jurisdiction or; if methods are not prescribed, follow procedures described below:
  - a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
  - b. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.

#### C. Prepare and submit reports of purging and disinfecting activities. Include copies of water-sample approvals from authorities having jurisdiction.

#### D. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

### 3.11 PIPING SCHEDULE

- A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
- B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.
- C. Fitting Option: Extruded-tee connections and brazed joints may be used on aboveground copper tubing.
- D. Under-building-slab, domestic water, building-service piping, NPS 3 and smaller shall be the following:
  - 1. Soft copper tube, ASTM B88, Type L; wrought-copper, solder-joint fittings and copper press-connect fittings; and press-connect joints.
- E. Under-building-slab, combined domestic water, building-service, and fire-service-main piping, NPS 6 to NPS 12, shall be the following:
  - 1. Mechanical-joint, ductile-iron pipe; standard or compact pattern, mechanical-joint fittings; and mechanical joints.
- F. Aboveground domestic water piping, NPS 2 and smaller, shall be one of the following:
  - 1. Hard copper tube, ASTM B88, Type L wrought-copper, solder-joint fittings; and soldered joints.
  - 2. Hard copper tube, ASTM B88, Type L copper press-connect fittings; and press-connect joints.
- G. Aboveground domestic water piping, NPS 2-1/2 to NPS 4, shall be one of the following:
  - 1. Hard copper tube, ASTM B88, Type L wrought-copper, solder-joint fittings; and soldered joints.
  - 2. Hard copper tube, ASTM B88, Type L; copper press-connect fittings; and press-connect joints.

### 3.12 VALVE SCHEDULE

- A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
  - 1. Shutoff Duty: Use ball or gate valves for piping NPS 2 and smaller. Use ball or gate valves with flanged ends for piping NPS 2-1/2 and larger.
  - 2. Throttling Duty: Use ball or globe valves for piping NPS 2 and smaller. Use ball valves with flanged ends for piping NPS 2-1/2 and larger.
  - 3. Hot-Water Circulation Piping, Balancing Duty: Memory-stop or Thermostatic balancing valves. Refer to Drawing Schedule.
  - 4. Drain Duty: Hose-end drain valves.
- B. Use check valves to maintain correct direction of domestic water flow to and from equipment.

END OF SECTION 221116

## SECTION 221119 DOMESTIC WATER PIPING SPECIALTIES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

1. Vacuum breakers.
2. Backflow preventers.
3. Water pressure-reducing valves.
4. Balancing valves.
5. Temperature-actuated, water mixing valves.
6. Strainers.
7. Outlet boxes.
8. Hose stations.
9. Hose bibbs.
10. Wall hydrants.
11. Drain valves.
12. Water-hammer arresters.
13. Air vents.
14. Trap-seal primer valves.
15. Trap-seal primer systems.
16. Specialty valves.
17. Flexible connectors.
18. Water meters.

- B. Related Requirements:

1. Section 220519 "Meters and Gages for Plumbing Piping" for thermometers, pressure gages, and flow meters in domestic water piping.
2. Section 221116 "Domestic Water Piping" for water meters.
3. Section 224500 "Emergency Plumbing Fixtures" for water tempering equipment.
4. Section 224713 "Drinking Fountains" for water filters for water coolers.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For domestic water piping specialties.

1. Include diagrams for power, signal, and control wiring.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

#### 1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. NSF Compliance as required by authorities having jurisdiction:
  1. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic domestic water piping components.
  2. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9."
  3. Comply with NSF 372, "Drinking Water System Components – Lead Content."

### PART 2 - PRODUCTS

#### 2.1 GENERAL REQUIREMENTS FOR PIPING SPECIALTIES

- A. Potable-water piping and components shall comply with NSF 61.

#### 2.2 PERFORMANCE REQUIREMENTS

- A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig unless otherwise indicated.

#### 2.3 VACUUM BREAKERS

- A. Pipe-Applied, Atmospheric-Type Vacuum Breakers:
  1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model 35XL (Lead-Free) or comparable product by one of the following:

- a. Conbraco Industries, Inc.
  - b. Watts; a Watts Water Technologies company.
  - c. Or approved equal
2. Standard: ASSE 1001.
  3. Size: NPS 1/4 to NPS 2, as required to match connected piping.
  4. Body: Bronze.
  5. Inlet and Outlet Connections: Threaded.
  6. Finish: Rough bronze.
- B. Hose-Connection Vacuum Breakers:
1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model BFP-8F or comparable product by one of the following:
    - a. Cash Acme; a division of Reliance Worldwide Corporation.
    - b. Watts; a Watts Water Technologies company.
    - c. Or approved equal
  2. Standard: ASSE 1011.
  3. Body: Bronze, nonremovable, with manual drain.
  4. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.
  5. Finish: Rough bronze.
- C. Laboratory-Faucet Vacuum Breakers:
1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model 730 or comparable product by one of the following:
    - a. Conbraco Industries, Inc.
    - b. Watts; a Watts Water Technologies company.
    - c. Or approved equal
  2. Standard: ASSE 1035.
  3. Size: NPS 1/4 or NPS 3/8 matching faucet size.
  4. Body: Bronze.
  5. End Connections: Threaded.
  6. Finish: Chrome plated.
- D. Spill-Resistant Vacuum Breakers:
1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model 460 or comparable product by one of the following:
    - a. Conbraco Industries, Inc.
    - b. Watts; a Watts Water Technologies company.
    - c. Or approved equal
  2. Standard: ASSE 1056.
  3. Operation: Continuous-pressure applications.

4. Size: NPS 1/4 to NPS 25, as required to match connected piping.
5. Accessories:
  - a. Valves: Ball type, on inlet and outlet.

## 2.4 BACKFLOW PREVENTERS

### A. Intermediate Atmospheric-Vent Backflow Preventers:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model 760 or comparable product by one of the following:
  - a. Cash Acme; a division of Reliance Worldwide Corporation.
  - b. Watts; a Watts Water Technologies company.
  - c. Or approved equal
2. Standard: ASSE 1012.
3. Operation: Continuous-pressure applications.
4. Size: NPS 1/2 to NPS 3/4, as required to match connected piping.
5. Body: Bronze.
6. End Connections: Union, solder joint.
7. Finish: Chrome plated.

### B. Reduced-Pressure-Principle Backflow Preventers:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model 375A (Lead-Free) or comparable product by one of the following:
  - a. Conbraco Industries, Inc.
  - b. Watts; a Watts Water Technologies company.
  - c. Or approved equal
2. Standard: ASSE 1013, CSA B64.4, IAPMO, USC FCCCHR, UL Listed, FMG approved, and AWWA C511.
3. Operation: Continuous-pressure applications.
4. Pressure Loss: 12 psig maximum, through middle third of flow range.
5. Size: NPS 1/2 to NPS 10.
6. Body: Bronze for NPS 2-1/2 and larger.
7. Configuration: Designed for horizontal, straight-through flow.
8. Accessories:
  - a. Valves NPS 2 and Smaller: Ball type with threaded ends on inlet and outlet.
  - b. Valves NPS 2-1/2 and Larger:
    - 1) Valve Type: Non-rising stem gate valves.
    - 2) End Connection: Flanged end connections.
  - c. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.

d. Strainer Option: Cast iron wye strainer.

C. Double-Check, Backflow-Prevention Assemblies:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model 350A (Lead-Free) or comparable product by one of the following:
  - a. Conbraco Industries, Inc.
  - b. Watts; a Watts Water Technologies company.
  - c. Or approved equal
2. Standard: ASSE 1015.
3. Operation: Continuous-pressure applications unless otherwise indicated.
4. Pressure Loss: 5 psig maximum, through middle third of flow range.
5. Size: NPS 1/2 to NPS 12.
6. Body: Bronze for NPS 2 and smaller; cast iron with interior lining that complies with AWWA C550 for NPS 2-1/2 and larger.
7. Configuration: Designed for horizontal flow.
8. Accessories:
  - a. Valves NPS 2 and Smaller: Ball type with threaded ends on inlet and outlet.
  - b. Valves NPS 2-1/2 and Larger:
    - 1) Valve Type: Non-rising stem gate valves.
    - 2) End Connection: Flanged end connections.
  - c. Strainer Option: Epoxy coated wye strainer.

D. Beverage-Dispensing-Equipment Backflow Preventers:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model 375ST (Lead-Free) or comparable product by one of the following:
  - a. Conbraco Industries, Inc.
  - b. Watts; a Watts Water Technologies company.
  - c. Or approved equal
2. Standard: ASSE 1022.
3. Operation: Continuous-pressure applications.
4. Size: NPS 1/4 to NPS 1.
5. Body: Stainless steel.
6. End Connections: Threaded.

E. Hose-Connection Backflow Preventers:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

- a. Conbraco Industries, Inc.
  - b. Watts; a Watts Water Technologies company.
  - c. Woodford Manufacturing Company; a division of WCM Industries, Inc.
  - d. Or approved equal
2. Standard: ASSE 1052.
  3. Operation: Up to 10-foot head of water back pressure.
  4. Inlet Size: NPS 1/2 or NPS 3/4.
  5. Outlet Size: Garden-hose thread complying with ASME B1.20.7.
  6. Capacity: At least 3-gpm flow.

## 2.5 WATER PRESSURE-REDUCING VALVES

### A. Water Regulators:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model 70XL (Lead-Free) or comparable product by one of the following:
  - a. Cash Acme; a division of Reliance Worldwide Corporation.
  - b. Watts; a Watts Water Technologies company.
  - c. Or approved equal
2. Standard: ASSE 1003.
3. Pressure Rating: Initial working pressure of 150 psig.
4. Size: NPS 1/2 to NPS 3.
5. Body: Bronze.
6. Valves for Booster Heater Water Supply: Include integral bypass.
7. End Connections: Threaded.

### B. Water-Control Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model ZW204 (Lead-Free) or comparable product by one of the following:
  - a. CLA-VAL.
  - b. OCV Control Valves.
  - c. Or approved equal
2. Description: Pilot-operated, diaphragm-type, single-seated, main water-control valve.
3. Pressure Rating: Initial working pressure of 150 psig minimum with AWWA C550 or FDA-approved, interior epoxy coating. Include small pilot-control valve, restrictor device, specialty fittings, and sensor piping.
4. Main Valve Body: Cast- or ductile-iron body with AWWA C550 or FDA-approved, interior epoxy coating; or stainless-steel body.
  - a. Size: NPS 1-1/2 to NPS 10.
  - b. Pattern: Globe-valve design.

- c. Trim: Stainless steel.
- 5. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.

## 2.6 BALANCING VALVES

### A. Memory-Stop Balancing Valves:

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Conbraco Industries, Inc.
  - b. Bell & Gossett
  - c. Crane Co.; Crane Valve Group; Crane Valves.
  - d. Crane Co.; Crane Valve Group; Jenkins Valves.
  - e. Crane Co.; Crane Valve Group; Stockham Div.
  - f. Hammond Valve.
  - g. Milwaukee Valve Company.
  - h. NIBCO Inc.
  - i. Red-White Valve Corp.
  - j. Or approved equal
- 2. Standard: MSS SP-110 for two-piece, copper-alloy ball valves.
- 3. Pressure Rating: 400-psig minimum CWP.
- 4. Size: NPS 2 or smaller.
- 5. Body: Copper alloy.
- 6. Port: Standard or full port.
- 7. Ball: Chrome-plated brass.
- 8. Seats and Seals: Replaceable.
- 9. End Connections: Solder joint or threaded.
- 10. Handle: Vinyl-covered steel with memory-setting device.

## 2.7 TEMPERATURE-ACTUATED, WATER MIXING VALVES

### A. Water-Temperature Limiting Devices:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model ZW1017XL (Lead-Free) or comparable product by one of the following:
  - a. Leonard Valve Company.
  - b. Powers; a division of Watts Water Technologies, Inc.
  - c. Or approved equal
- 2. Standard: ASSE 1017.
- 3. Pressure Rating: 125 psig.
- 4. Type: Thermostatically controlled, water mixing valve.

5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Threaded union inlets and outlet.
7. Accessories: Check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.
8. Valve Finish: Rough bronze.

B. Individual-Fixture, Water Tempering Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Wilkins; Model ZW3870XLT (Lead-Free) or comparable product by one of the following:
  - a. Cash Acme; a division of Reliance Worldwide Corporation.
  - b. Watts; a Watts Water Technologies company.
  - c. Or approved equal
2. Standard: ASSE 1016, thermostatically controlled, water tempering valve.
3. Pressure Rating: 125 psig minimum unless otherwise indicated.
4. Body: Bronze body with corrosion-resistant interior components.
5. Temperature Control: Adjustable.
6. Inlets and Outlet: Threaded.
7. Finish: Rough or chrome-plated bronze.

2.8 STRAINERS FOR DOMESTIC WATER PIPING

A. Y-Pattern Strainers:

1. Pressure Rating: 125 psig minimum unless otherwise indicated.
2. Body: Bronze for NPS 2 and smaller; cast iron with interior lining that complies with AWWA C550 for NPS 2-1/2 and larger.
3. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
4. Screen: Stainless steel with round perforations unless otherwise indicated.
5. Perforation Size:
  - a. Strainers NPS 2 and Smaller: 0.020 inch.
  - b. Strainers NPS 2-1/2 to NPS 4: 0.045 inch.
  - c. Strainers NPS 5 and Larger: 0.10 inch.
6. Drain: Factory-installed, hose-end drain valve.

2.9 OUTLET BOXES

A. Clothes Washer Outlet Boxes:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Light Commercial Products; or comparable product by one of the following:

- a. Acorn Engineering Company.
  - b. Guy Gray Manufacturing Co., Inc.
  - c. IPS Corporation.
  - d. LSP Products Group, Inc.
  - e. Oatey.
  - f. Plastic Oddities.
  - g. Symmons Industries, Inc.
  - h. Watts; a Watts Water Technologies company.
  - i. Whitehall Manufacturing; a div. of Acorn Engineering Company.
  - j. Or approved equal
2. Mounting: Recessed.
  3. Material and Finish: Enameled-steel, epoxy-painted-steel, or plastic box and faceplate.
  4. Faucet: Combination valved fitting or separate hot- and cold-water valved fittings complying with ASME A112.18.1. Include garden-hose thread complying with ASME B1.20.7 on outlets.
  5. Supply Shutoff Fittings: NPS 1/2 gate, globe, or ball valves and NPS 1/2 copper, water tubing.
  6. Drain: NPS 1-1/2 standpipe and P-trap for direct waste connection to drainage piping.
  7. Inlet Hoses: Two 60-inch-long, rubber household clothes washer inlet hoses with female, garden-hose-thread couplings. Include rubber washers.
  8. Drain Hose: One 48-inch-long, rubber household clothes washer drain hose with hooked end.

B. Icemaker Outlet Boxes:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Acorn Engineering Company.
  - b. IPS Corporation.
  - c. LSP Products Group, Inc.
  - d. Oatey.
  - e. Plastic Oddities.
  - f. Or approved equal
2. Mounting: Recessed.
3. Material and Finish: Enameled-steel, epoxy-painted-steel, or plastic box and faceplate.
4. Faucet: Valved fitting complying with ASME A112.18.1. Include NPS 1/2 or smaller copper tube outlet.
5. Supply Shutoff Fitting: NPS 1/2 gate, globe, or ball valve and NPS 1/2 copper, water tubing.

2.10 HOSE STATIONS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ARCHON Industries, Inc.
2. Armstrong International, Inc.
3. Cooney Brothers, Inc.
4. DynaFluid Ltd.
5. Leonard Valve Company.
6. Strahman Valves, Inc.
7. T & S Brass.
8. Or approved equal

## 2.11 HOSE BIBBS

### A. Hose Bibbs:

1. Standard: ASME A112.18.1 for sediment faucets.
2. Body Material: Bronze.
3. Seat: Bronze, replaceable.
4. Supply Connections: NPS 1/2 or NPS 3/4 threaded or solder-joint inlet.
5. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
6. Pressure Rating: 125 psig.
7. Vacuum Breaker: Integral, nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
8. Finish for Equipment Rooms: Rough bronze, or chrome or nickel plated.
9. Finish for Service Areas: Rough bronze.
10. Finish for Finished Rooms: Chrome or nickel plated.
11. Operation for Equipment Rooms: Wheel handle or operating key.
12. Operation for Service Areas: Wheel handle.
13. Operation for Finished Rooms: Operating key.
14. Include operating key with each operating-key hose bibb.
15. Include integral wall flange with each chrome- or nickel-plated hose bibb.

## 2.12 WALL HYDRANTS

### A. Nonfreeze Wall Hydrants:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Light Commercial Products or comparable product by one of the following:
  - a. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
  - b. Woodford Manufacturing Company; a division of WCM Industries, Inc.
  - c. Or approved equal
2. Standard: ASME A112.21.3M for concealed-outlet, self-draining wall hydrants.
3. Pressure Rating: 125 psig.
4. Operation: Loose key.
5. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
6. Inlet: NPS 3/4 or NPS 1.

7. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
8. Box: Deep, flush mounted with cover.
9. Box and Cover Finish: Polished nickel bronze.
10. Outlet: Exposed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
11. Nozzle and Wall-Plate Finish: Polished nickel bronze.
12. Operating Keys(s): Two with each wall hydrant.

B. Nonfreeze, Hot- and Cold-Water Wall Hydrants:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Specification Drainage Products; Z1325 or comparable product by one of the following:
  - a. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
  - b. Woodford Manufacturing Company; a division of WCM Industries, Inc.
  - c. Or approved equal
2. Standard: ASME A112.21.3M for concealed-outlet, self-draining wall hydrants.
3. Pressure Rating: 125 psig.
4. Operation: Loose key.
5. Casing and Operating Rods: Of length required to match wall thickness. Include wall clamps.
6. Inlet: NPS 3/4 or NPS 1.
7. Outlet: Concealed.
8. Box: Deep, flush mounted with cover.
9. Box and Cover Finish: Polished nickel bronze.
10. Vacuum Breaker:
  - a. Nonremovable, manual-drain-type, hose-connection vacuum breaker complying with ASSE 1011 or backflow preventer complying with ASSE 1052.
  - b. Garden-hose thread complying with ASME B1.20.7 on outlet.
11. Operating Keys(s): Two with each wall hydrant.

2.13 DRAIN VALVES

A. Gate-Valve-Type, Hose-End Drain Valves:

1. Standard: MSS SP-80 for gate valves.
2. Pressure Rating: Class 125.
3. Size: NPS 3/4.
4. Body: ASTM B 62 bronze.
5. Inlet: NPS 3/4 threaded or solder joint.
6. Outlet: Garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

B. Stop-and-Waste Drain Valves:

1. Standard: MSS SP-110 for ball valves or MSS SP-80 for gate valves.
2. Pressure Rating: 200-psig minimum CWP or Class 125.
3. Size: NPS 3/4.
4. Body: Copper alloy or ASTM B 62 bronze.
5. Drain: NPS 1/8 side outlet with cap.

#### 2.14 WATER-HAMMER ARRESTERS

##### A. Water-Hammer Arresters:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Specification Drainage Products; Z1700 or comparable product by one of the following:
  - a. Precision Plumbing Products, Inc.
  - b. Sioux Chief Manufacturing Company, Inc.
  - c. Or approved equal
2. Standard: ASSE 1010 or PDI-WH 201.
3. Type: Copper tube with piston.
4. Size: ASSE 1010, Sizes AA and A through F, or PDI-WH 201, Sizes A through F.

#### 2.15 AIR VENTS

##### A. Bolted-Construction Automatic Air Vents:

1. Body: Bronze.
2. Pressure Rating and Temperature: 125-psig minimum pressure rating at 140 deg F.
3. Float: Replaceable, corrosion-resistant metal.
4. Mechanism and Seat: Stainless steel.
5. Size: NPS 3/8 minimum inlet.
6. Inlet and Vent Outlet End Connections: Threaded.

#### 2.16 TRAP-SEAL PRIMER DEVICE

##### A. Supply-Type, Trap-Seal Primer Device:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Z1021 or comparable product by one of the following:
  - a. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
  - b. Watts; a Watts Water Technologies company.
  - c. Precision Piping Products.
  - d. Or approved equal
2. Standard: ASSE 1018.
3. Pressure Rating: 125 psig minimum.

4. Body: Bronze.
5. Inlet and Outlet Connections: NPS 1/2 threaded, union, or solder joint.
6. Gravity Drain Outlet Connection: NPS 1/2 threaded or solder joint.
7. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome finished.

## 2.17 TRAP-SEAL PRIMER SYSTEMS

### A. Trap-Seal Primer Systems:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Industries, LLC; Z1020XL or comparable product by one of the following:
  - a. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
  - b. Precision Piping Products
  - c. Watts; a Watts Water Technologies company.
  - d. Or approved equal
2. Standard: ASSE 1044.
3. Piping: NPS 3/4, ASTM B 88, Type L; copper, water tubing.
4. Cabinet: Surface-mounted steel box with stainless-steel cover.
5. Electric Controls: 24-hour timer, solenoid valve, and manual switch for 120-V ac power.
  - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
6. Vacuum Breaker: ASSE 1001.
7. Size Outlets: NPS 1/2.

## 2.18 FLEXIBLE CONNECTORS

### A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Flex-Hose Co., Inc.
2. Flexicraft Industries.
3. Flex Pression, Ltd.
4. Flex-Weld Incorporated.
5. Hyspan Precision Products, Inc.
6. Mercer Gasket & Shim, Inc.
7. Metraflex, Inc.
8. Proco Products, Inc.
9. TOZEN Corporation.
10. Unaflex.Universal Metal Hose; a Hyspan company
11. Or approved equal

B. Stainless-Steel-Hose Flexible Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.

1. Working-Pressure Rating: Minimum 200 psig.
2. End Connections NPS 2 and Smaller: Threaded steel-pipe nipple.

## 2.19 WATER METERS

A. Displacement-Type Water Meters:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. AALIANT; a Venture Measurement product line.
- b. ABB.
- c. Badger Meter, Inc.
- d. Carlon Meter.
- e. Mueller Co. Ltd.; a subsidiary of Mueller Water Products Inc.
- f. Schlumberger Limited; Water Services.
- g. Sensus.
- h. Or approved equal

2. Description:

- a. Standard: AWWA C700.
- b. Pressure Rating: 150-psig working pressure.
- c. Body Design: Nutating disc; totalization meter.
- d. Registration: In gallons or as required by utility company.
- e. Case: Bronze.
- f. End Connections: Threaded.

B. Turbine-Type Water Meters:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. AALIANT; a Venture Measurement product line.
- b. ABB.
- c. Badger Meter, Inc.
- d. Hays Fluid Controls.
- e. Master Meter, Inc.
- f. McCrometer, Inc.
- g. Mueller Co. Ltd.; a subsidiary of Mueller Water Products Inc.
- h. Schlumberger Limited; Water Services.
- i. SeaMetrics Inc.
- j. Sensus.
- k. Or approved equal

2. Description:

- a. Standard: AWWA C701.
- b. Pressure Rating: [150-psig working pressure.
- c. Body Design: Turbine; totalization meter.
- d. Registration: In gallons, or as required by utility company.
- e. Case: Bronze.
- f. End Connections for Meters NPS 2 and Smaller: Threaded.
- g. End Connections for Meters NPS 2-1/2 and Larger: Flanged.

C. Compound-Type Water Meters:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. ABB.
- b. Badger Meter, Inc.
- c. Master Meter, Inc.
- d. Mueller Co. Ltd.; a subsidiary of Mueller Water Products Inc.
- e. Schlumberger Limited; Water Services.
- f. Sensus.
- g. Or approved equal

2. Description:

- a. Standard: AWWA C702.
- b. Pressure Rating: 150-psig working pressure.
- c. Body Design: With integral mainline and bypass meters; totalization meter.
- d. Registration: In gallons or as required by utility company.
- e. Case: Bronze.
- f. Pipe Connections: Flanged.

D. Remote Registration System: Direct-reading type complying with AWWA C706; modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly as required by utility company.

E. Remote Registration System: Encoder type complying with AWWA C707; modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly as required by utility company.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

A. Install backflow preventers in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.

1. Locate backflow preventers in same room as connected equipment or system.
  2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe-to-floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are unacceptable for this application.
  3. Do not install bypass piping around backflow preventers.
- B. Install water regulators with inlet and outlet shutoff valves and bypass with memory-stop balancing valve. Install pressure gages on inlet and outlet.
- C. Install water-control valves with inlet and outlet shutoff valves and bypass with globe valve. Install pressure gages on inlet and outlet.
- D. Install balancing valves in locations where they can easily be adjusted.
- E. Install temperature-actuated, water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.
- F. Install Y-pattern strainers for water on supply side of each control valve, water pressure-reducing valve and pump.
- G. Install outlet boxes recessed in wall or surface mounted on wall. Install 2-by-4-inch fire-retardant-treated-wood blocking, wall reinforcement between studs. Comply with requirements for fire-retardant-treated-wood blocking in Section 061000 "Rough Carpentry."
- H. Install hose stations with check stops or shutoff valves on inlets and with thermometer on outlet.
- I. Install water-hammer arresters in water piping according to PDI-WH 201.
- J. Install air vents at high points of water piping.
- K. Install supply-type, trap-seal primer valves with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust valve for proper flow.
- L. Install drainage-type, trap-seal primer valves as lavatory trap with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting.
- M. Install trap-seal primer systems with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust system for proper flow.
- 3.2 CONNECTIONS
- A. Comply with requirements for ground equipment in Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Fire-retardant-treated-wood blocking is specified in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical connections.

### 3.3 LABELING AND IDENTIFYING

- A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
1. Pressure vacuum breakers.
  2. Intermediate atmospheric-vent backflow preventers.
  3. Reduced-pressure-principle backflow preventers.
  4. Double-check, backflow-prevention assemblies.
  5. Carbonated-beverage-machine backflow preventers.
  6. Dual-check-valve backflow preventers.
  7. Reduced-pressure-detector, fire-protection, backflow-preventer assemblies.
  8. Water pressure-reducing valves.
  9. Calibrated balancing valves.
  10. Primary, thermostatic, water mixing valves.
  11. Outlet boxes.
  12. Hose stations.
  13. Supply-type, trap-seal primer valves.
  14. Trap-seal primer systems.
- B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 220553 "Identification for Plumbing Piping and Equipment."

### 3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
1. Test each reduced-pressure-principle backflow preventer and double-check, backflow-prevention assembly according to authorities having jurisdiction and the device's reference standard.
- B. Domestic water piping specialties will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

### 3.5 ADJUSTING

- A. Set field-adjustable pressure set points of water pressure-reducing valves.
- B. Set field-adjustable flow set points of balancing valves.
- C. Set field-adjustable temperature set points of temperature-actuated, water mixing valves.

END OF SECTION 221119

## SECTION 221123 FACILITY NATURAL-GAS PIPING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Pipes, tubes, and fittings.
  - 2. Piping specialties.
  - 3. Piping and tubing joining materials.
  - 4. Valves.
  - 5. Pressure regulators.
  - 6. Service meters.
  - 7. Concrete bases.

#### 1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

#### 1.4 PERFORMANCE REQUIREMENTS

- A. Minimum Operating-Pressure Ratings:
  - 1. Piping and Valves: 100 psig minimum unless otherwise indicated.
  - 2. Service Regulators: 65 psig minimum unless otherwise indicated.
  - 3. Minimum Operating Pressure of Service Meter: 5 psig.
- B. Natural-Gas System Pressure within Buildings: More than 0.5 psig but not more than 2 psig.

## 1.5 ACTION SUBMITTALS

- A. Product Data: For each type of the following:
1. Piping specialties.
  2. Corrugated, stainless-steel tubing with associated components.
  3. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
  4. Pressure regulators. Indicate pressure ratings and capacities.
  5. Service meters.
  6. Dielectric fittings.

## 1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans and details, drawn to scale, on which natural-gas piping is shown and coordinated with other installations, using input from installers of the items involved.
- B. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities.
- C. Qualification Data: For qualified professional engineer.
- D. Welding certificates.
- E. Field quality-control reports.

## 1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For motorized gas valves, pressure regulators, and service meters to include in emergency, operation, and maintenance manuals.

## 1.8 QUALITY ASSURANCE

- A. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

## 1.9 DELIVERY, STORAGE, AND HANDLING

- A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping according to requirements of authorities having jurisdiction.

- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.

#### 1.10 PROJECT CONDITIONS

- A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.

#### 1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces. Comply with requirements in Section 083113 "Access Doors and Frames."

### PART 2 - PRODUCTS

#### 2.1 PIPES, TUBES, AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
  - 1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
  - 2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M for butt welding and socket welding.
  - 3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
  - 4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
    - a. Material Group: 1.1.
    - b. End Connections: Threaded or butt welding to match pipe.
    - c. Lapped Face: Not permitted underground.
    - d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum o-rings, and spiral-wound metal gaskets.
    - e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.
  - 5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.
    - a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.

## 2.2 PIPING SPECIALTIES

### A. Appliance Flexible Connectors:

1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
2. Indoor, Movable-Appliance Flexible Connectors: Comply with ANSI Z21.69.
3. Outdoor, Appliance Flexible Connectors: Comply with ANSI Z21.75.
4. Corrugated stainless-steel tubing with polymer coating.
5. Operating-Pressure Rating: 0.5 psig.
6. End Fittings: Zinc-coated steel.
7. Threaded Ends: Comply with ASME B1.20.1.
8. Maximum Length: 72 inches

### B. Quick-Disconnect Devices: Comply with ANSI Z21.41.

1. Copper-alloy convenience outlet and matching plug connector.
2. Nitrile seals.
3. Hand operated with automatic shutoff when disconnected.
4. For indoor or outdoor applications.
5. Adjustable, retractable restraining cable.

### C. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 40-mesh startup strainer and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

### D. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

## 2.3 JOINING MATERIALS

### A. Joint Compound and Tape: Suitable for natural gas.

### B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

### C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.

## 2.4 MANUAL GAS SHUTOFF VALVES

- A. See "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles for where each valve type is applied in various services.
- B. General Requirements for Metallic Valves, NPS 2 and Smaller: Comply with ASME B16.33.
  - 1. CWP Rating: 125 psig.
  - 2. Threaded Ends: Comply with ASME B1.20.1.
  - 3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
  - 4. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  - 5. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch and smaller.
  - 6. Service Mark: Valves 1-1/4 inches to NPS 2 shall have initials "WOG" permanently marked on valve body.
- C. General Requirements for Metallic Valves, NPS 2-1/2 and Larger: Comply with ASME B16.38.
  - 1. CWP Rating: 125 psig.
  - 2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
  - 3. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  - 4. Service Mark: Initials "WOG" shall be permanently marked on valve body.
- D. One-Piece, Bronze Ball Valve with Bronze Trim: MSS SP-110.
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. BrassCraft Manufacturing Company; a Masco company.
    - b. Conbraco Industries, Inc.; Apollo Div.
    - c. Lyall, R. W. & Company, Inc.
    - d. McDonald, A. Y. Mfg. Co.
    - e. Perfection Corporation; a subsidiary of American Meter Company.
    - f. Or approved equal
  - 2. Body: Bronze, complying with ASTM B 584.
  - 3. Ball: Chrome-plated brass.
  - 4. Stem: Bronze; blowout proof.
  - 5. Seats: Reinforced TFE; blowout proof.
  - 6. Packing: Separate packnut with adjustable-stem packing threaded ends.
  - 7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  - 8. CWP Rating: 600 psig.
  - 9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.

10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- E. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Brass Craft Manufacturing Company; a Masco company.
    - b. Conbraco Industries, Inc.; Apollo Div.
    - c. Lyall, R. W. & Company, Inc.
    - d. McDonald, A. Y. Mfg. Co.
    - e. Perfection Corporation; a subsidiary of American Meter Company.
    - f. Or approved equal
  2. Body: Bronze, complying with ASTM B 584.
  3. Ball: Chrome-plated bronze.
  4. Stem: Bronze; blowout proof.
  5. Seats: Reinforced TFE; blowout proof.
  6. Packing: Threaded-body packnut design with adjustable-stem packing.
  7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  8. CWP Rating: 600 psig.
  9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
  10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- F. Bronze Plug Valves: MSS SP-78.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Lee Brass Company.
    - b. McDonald, A. Y. Mfg. Co.
    - c. Or approved equal
  2. Body: Bronze, complying with ASTM B 584.
  3. Plug: Bronze.
  4. Ends: Threaded, socket, or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  5. Operator: Square head or lug type with tamperproof feature where indicated.
  6. Pressure Class: 125 psig.
  7. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
  8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- G. Cast-Iron, Lubricated Plug Valves: MSS SP-78.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Flowserve.
  - b. Homestead Valve; a division of Olson Technologies, Inc.
  - c. McDonald, A. Y. Mfg. Co.
  - d. Milliken Valve Company.
  - e. Mueller Co.; Gas Products Div.
  - f. R&M Energy Systems, A Unit of Robbins & Myers, Inc.
  - g. Or approved equal
2. Body: Cast iron, complying with ASTM A 126, Class B.
3. Plug: Bronze or nickel-plated cast iron.
4. Seat: Coated with thermoplastic.
5. Stem Seal: Compatible with natural gas.
6. Ends: Threaded or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
7. Operator: Square head or lug type with tamperproof feature where indicated.
8. Pressure Class: 125 psig.
9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

H. Valve Boxes:

1. Cast-iron, two-section box.
2. Top section with cover with "GAS" lettering.
3. Bottom section with base to fit over valve and barrel a minimum of 5 inches in diameter.
4. Adjustable cast-iron extensions of length required for depth of bury.
5. Include tee-handle, steel operating wrench with socket end fitting valve nut or flat head, and with stem of length required to operate valve.

2.5 MOTORIZED GAS VALVES

A. Automatic Gas Valves: Comply with ANSI Z21.21.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. ASCO Power Technologies, LP; Division of Emerson.
  - b. Dungs, Karl, Inc.
  - c. Eaton Corporation; Controls Div.
  - d. Eclipse Combustion, Inc.
  - e. Honeywell International Inc.
  - f. Johnson Controls.
  - g. Or approved equal

2. Body: Brass or aluminum.
3. Seats and Disc: Nitrile rubber.
4. Springs and Valve Trim: Stainless steel.
5. Normally closed.
6. Visual position indicator.
7. Electrical operator for actuation by appliance automatic shutoff device.

## 2.6 PRESSURE REGULATORS

### A. General Requirements:

1. Single stage and suitable for natural gas.
2. Steel jacket and corrosion-resistant components.
3. Elevation compensator.
4. End Connections: Threaded for regulators NPS 2 and smaller; flanged for regulators NPS 2-1/2 and larger.

### B. Line Pressure Regulators: Comply with ANSI Z21.80.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Actaris.
  - b. American Meter Company.
  - c. Eclipse Combustion, Inc.
  - d. Fisher Control Valves and Regulators; Division of Emerson Process Management.
  - e. Invensys.
  - f. Maxitrol Company.
  - g. Richards Industries; Jordan Valve Div.
  - h. Or approved equal
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: 5 psig.

### C. Appliance Pressure Regulators: Comply with ANSI Z21.18.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Canadian Meter Company Inc.
  - b. Eaton Corporation; Controls Div.
  - c. Harper Wyman Co.
  - d. Maxitrol Company.
  - e. SCP, Inc.
  - f. Or approved equal
2. Body and Diaphragm Case: Die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber.
6. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
7. Factory-Applied Finish: Minimum three-layer polyester and polyurethane paint finish.
8. Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction.
9. Maximum Inlet Pressure: 5 psig.

## 2.7 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
  1. Basis-of-Design Product: Subject to compliance with requirements, provide Wilkins; a Zurn company; Model DUBI or comparable product by one of the following:
    - a. Capitol Manufacturing Company.
    - b. Central Plastics Company.
    - c. Hart Industries International, Inc.
    - d. Jomar International Ltd.
    - e. Matco-Norca, Inc.
    - f. McDonald, A. Y. Mfg. Co.
    - g. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
    - h. Or approved equal
  2. Description:
    - a. Standard: ASSE 1079.
    - b. Pressure Rating: 125 psig.
    - c. End Connections: Solder-joint copper alloy and threaded ferrous.
- C. Dielectric Flanges:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Wilkins; a Zurn company; Model DUBI or comparable product by one of the following:
  - a. Capitol Manufacturing Company.
  - b. Central Plastics Company.
  - c. Matco-Norca, Inc.
  - d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
  - e. Or approved equal
  
2. Description:
  - a. Standard: ASSE 1079.
  - b. Factory-fabricated, bolted, companion-flange assembly.
  - c. Pressure Rating: 125 psig minimum at 180 deg F.
  - d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

## 2.8 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored yellow.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Close equipment shutoff valves before turning off natural gas to premises or piping section.
- B. Inspect natural-gas piping according to the International Fuel Gas Code to determine that natural-gas utilization devices are turned off in piping section affected.
- C. Comply with the International Fuel Gas Code requirements for prevention of accidental ignition.

### 3.3 OUTDOOR PIPING INSTALLATION

- A. Comply with the International Fuel Gas Code for installation and purging of natural-gas piping.
- B. Install underground, natural-gas piping buried at least 36 inches below finished grade. Comply with requirements in Section 312000 "Earth Moving" for excavating, trenching, and backfilling.
  - 1. If natural-gas piping is installed less than 36 inches below finished grade, install it in containment conduit.
- C. Install underground, PE, natural-gas piping according to ASTM D 2774.
- D. Install fittings for changes in direction and branch connections.
- E. Install pressure gage downstream of each service regulator. Pressure gages are specified in Section 220519 "Meters and Gages for HVAC Piping."

### 3.4 INDOOR PIPING INSTALLATION

- A. Comply with the International Fuel Gas Code for installation and purging of natural-gas piping.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access.
- H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Verify final equipment locations for roughing-in.
- L. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.

- M. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
  - 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
- N. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- O. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.
- P. Concealed Location Installations: Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.
  - 1. Above Accessible Ceilings: Natural-gas piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit.
  - 2. In Floor Channels: Install natural-gas piping in floor channels. Channels must have cover and be open to space above cover for ventilation.
  - 3. In Walls or Partitions: Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.
    - a. Exception: Tubing passing through partitions or walls does not require striker barriers.
  - 4. Prohibited Locations:
    - a. Do not install natural-gas piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
    - b. Do not install natural-gas piping in solid walls or partitions.
- Q. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- R. Connect branch piping from top or side of horizontal piping.
- S. Install unions in pipes NPS 2 and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
- T. Do not use natural-gas piping as grounding electrode.
- U. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.

- V. Install pressure gage downstream from each line regulator. Pressure gages are specified in Section 220519 "Meters and Gages for Plumbing Piping."
- W. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- X. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- Y. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

### 3.5 SERVICE-METER ASSEMBLY INSTALLATION

- A. Install service-meter assemblies aboveground, on concrete bases.
- B. Install metal shutoff valves upstream from service regulators. Shutoff valves are not required at second regulators if two regulators are installed in series.
- C. Install strainer on inlet of service-pressure regulator and meter set.
- D. Install service regulators mounted outside with vent outlet horizontal or facing down. Install screen in vent outlet if not integral with service regulator.
- E. Install metal shutoff valves upstream from service meters. Install dielectric fittings downstream from service meters.
- F. Install service meters downstream from pressure regulators.
- G. Install metal bollards to protect meter assemblies. Comply with requirements in Section 055000 "Metal Fabrications" for pipe bollards.

### 3.6 VALVE INSTALLATION

- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.
- B. Install underground valves with valve boxes.
- C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
- D. Install earthquake valves aboveground outside buildings according to listing.
- E. Install anode for metallic valves in underground PE piping.

### 3.7 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
  - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
  - 2. Cut threads full and clean using sharp dies.
  - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
  - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
  - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints:
  - 1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
  - 2. Bevel plain ends of steel pipe.
  - 3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
- F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.
- G. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, then use wrench. Do not overtighten.
- H. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
  - 1. Plain-End Pipe and Fittings: Use butt fusion.
  - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.

### 3.8 HANGER AND SUPPORT INSTALLATION

- A. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Comply with requirements for pipe hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

- C. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:
  - 1. NPS 1 and Smaller: Maximum span, 96 inches; minimum rod size, 3/8 inch.
  - 2. NPS 1-1/4: Maximum span, 108 inches; minimum rod size, 3/8 inch.
  - 3. NPS 1-1/2 and NPS 2: Maximum span, 108 inches; minimum rod size, 3/8 inch.
  - 4. NPS 2-1/2 to NPS 3-1/2: Maximum span, 10 feet; minimum rod size, 1/2 inch.
  - 5. NPS 4 and Larger: Maximum span, 10 feet; minimum rod size, 5/8 inch.

### 3.9 CONNECTIONS

- A. Connect to utility's gas main according to utility's procedures and requirements.
- B. Install natural-gas piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.
- C. Install piping adjacent to appliances to allow service and maintenance of appliances.
- D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.
- E. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

### 3.10 LABELING AND IDENTIFYING

- A. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for piping and valve identification.
- B. Install detectable warning tape directly above gas piping, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.

### 3.11 PAINTING

- A. Comply with requirements in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting" for painting interior and exterior natural-gas piping.
- B. Paint exposed, exterior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.
  - 1. Alkyd System: MPI EXT 5.1D.
    - a. Prime Coat: Alkyd anticorrosive metal primer.
    - b. Intermediate Coat: Exterior alkyd enamel matching topcoat.
    - c. Topcoat: Exterior alkyd enamel semigloss.

d. Color: Pipe – Safety Yellow, Accessories - Gray.

C. Damage and Touchup: Repair marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

### 3.12 CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base.

1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Use 3000-psig, 28-day, compressive-strength concrete and reinforcement as specified in Section 033000 "Cast-in-Place Concrete."

### 3.13 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. Test, inspect, and purge natural gas according to the International Fuel Gas Code and authorities having jurisdiction.

C. Natural-gas piping will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

### 3.14 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain earthquake valves.

### 3.15 OUTDOOR PIPING SCHEDULE

A. Underground natural-gas piping shall be the following:

1. PE pipe and fittings joined by heat fusion, or mechanical couplings; service-line risers with tracer wire terminated in an accessible location.

- B. Aboveground natural-gas piping shall be one of the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
  - 2. Steel pipe with wrought-steel fittings and welded joints.
- C. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.

3.16 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES LESS THAN 0.5 PSIG

- A. Aboveground, distribution piping shall be one of the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
  - 2. Steel pipe with wrought-steel fittings and welded joints.
- B. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- C. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

3.17 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 0.5 PSIG AND LESS THAN 5 PSIG:

- A. Aboveground, branch piping NPS 1 and smaller shall be the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping shall be one of the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
  - 2. Steel pipe with steel welding fittings and welded joints.
- C. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat underground pipe and fittings with protective coating for steel piping.
- D. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

3.18 UNDERGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

- A. Connections to Existing Gas Piping: Use valve and fitting assemblies made for tapping utility's gas mains and listed by an NRTL.
- B. Underground:

1. PE valves.
2. NPS 2 and Smaller: Bronze plug valves.
3. NPS 2-1/2 and Larger: Cast-iron, lubricated plug valves.

3.19 ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

- A. Valves for pipe sizes NPS 2 and smaller at service meter shall be one of the following:
1. One-piece, bronze ball valve with bronze trim.
  2. Two-piece, full-port, bronze ball valves with bronze trim.
  3. Bronze plug valve.
- B. Valves for pipe sizes NPS 2-1/2 and larger at service meter shall be one of the following:
1. Two-piece, full-port, bronze ball valves with bronze trim.
  2. Bronze plug valve.
  3. Cast-iron, nonlubricated plug valve.
- C. Distribution piping valves for pipe sizes NPS 2 and smaller shall be one of the following:
1. One-piece, bronze ball valve with bronze trim.
  2. Two-piece, full-port, bronze ball valves with bronze trim.
  3. Bronze plug valve.
- D. Distribution piping valves for pipe sizes NPS 2-1/2 and larger shall be one of the following:
1. Two-piece, full-port, bronze ball valves with bronze trim.
  2. Bronze plug valve.
  3. Cast-iron, lubricated plug valve.
- E. Valves in branch piping for single appliance shall be one of the following:
1. One-piece, bronze ball valve with bronze trim.
  2. Two-piece, full-port, bronze ball valves with bronze trim.
  3. Bronze plug valve.

END OF SECTION 231123

## SECTION 221316 SANITARY WASTE AND VENT PIPING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

1. Pipe, tube, and fittings.
2. Specialty pipe fittings.
3. Encasement for underground metal piping.

- B. Related Sections:

1. Section 226600 "Chemical-Waste Systems for Laboratory and Healthcare Facilities" for chemical-waste and vent piping systems.

#### 1.3 PERFORMANCE REQUIREMENTS

- A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:

1. Soil, Waste, and Vent Piping: 10-foot head of water.
2. Waste, Force-Main Piping: 50 psig.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

#### 1.6 QUALITY ASSURANCE

- A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

- B. Comply with NSF/ANSI 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-dwv" for plastic drain, waste, and vent piping and "NSF-sewer" for plastic sewer piping.

## **PART 2 - PRODUCTS**

### **2.1 PIPING MATERIALS**

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

### **2.2 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS**

- A. Pipe and Fittings: ASTM A 74, Service class.
- B. Gaskets: ASTM C 564, rubber.
- C. Calking Materials: ASTM B 29, pure lead and oakum or hemp fiber.

### **2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS**

- A. Pipe and Fittings: ASTM A 888 or CISPI 301.
- B. CISPI, Hubless-Piping Couplings:
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. ANACO-Husky.
    - b. Dallas Specialty & Mfg. Co.
    - c. Fernco Inc.
    - d. Matco-Norca, Inc.
    - e. MIFAB, Inc.
    - f. Mission Rubber Company; a division of MCP Industries, Inc.
    - g. Stant.
    - h. Tyler Pipe.
    - i. Or approved equal
  - 2. Standards: ASTM C 1277 and CISPI 310.
  - 3. Description: Stainless-steel corrugated shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

## 2.4 GALVANIZED-STEEL PIPE AND FITTINGS

- A. Galvanized-Steel Pipe: ASTM A 53/A 53M, Type E, Standard Weight class. Include square-cut-grooved or threaded ends matching joining method.
- B. Steel Pipe Pressure Fittings:
  - 1. Galvanized-Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M or ASTM A 106/A 106M, Schedule 40, seamless steel pipe. Include ends matching joining method.
  - 2. Malleable-Iron Unions: ASME B16.39; Class 150; hexagonal-stock body with ball-and-socket, metal-to-metal, bronze seating surface; and female threaded ends.
  - 3. Galvanized-Gray-Iron, Threaded Fittings: ASME B16.4, Class 125, standard pattern.
- C. Grooved-Joint, Galvanized-Steel-Pipe Appurtenances:
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Anvil International; a subsidiary of Mueller Water Products, Inc.
    - b. Grinnell Mechanical Products.
    - c. Shurjoint Piping Products.
    - d. Victaulic Company.
    - e. Or approved equal
  - 2. Galvanized, Grooved-End Fittings for Galvanized-Steel Piping: ASTM A 536 ductile-iron castings, ASTM A 47/A 47M malleable-iron castings, ASTM A 234/A 234M forged steel fittings, or ASTM A 106/A 106M steel pipes with dimensions matching ASTM A 53/A 53M steel pipe, and complying with AWWA C606 for grooved ends.
  - 3. Grooved Mechanical Couplings for Galvanized-Steel Piping: ASTM F 1476, Type I. Include ferrous housing sections with continuous curved keys; EPDM-rubber gasket suitable for hot and cold water; and bolts and nuts.

## 2.5 COPPER TUBE AND FITTINGS

- A. Copper DWV Tube: ASTM B 306, drainage tube, drawn temper.
- B. Copper Drainage Fittings: ASME B16.23, cast copper or ASME B16.29, wrought copper, solder-joint fittings.
- C. Hard Copper Tube: ASTM B 88, Type L, water tube, drawn temper.
- D. Solder: ASTM B 32, lead free with ASTM B 813, water-flushable flux.

## 2.6 SPECIALTY PIPE FITTINGS

- A. Transition Couplings:

1. General Requirements: Fitting or device for joining piping with small differences in OD's or of different materials. Include end connections same size as and compatible with pipes to be joined.
2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
3. Unshielded, Nonpressure Transition Couplings:
  - a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - 1) Dallas Specialty & Mfg. Co.
    - 2) Fernco Inc.
    - 3) Mission Rubber Company; a division of MCP Industries, Inc.
    - 4) Plastic Oddities; a division of Diverse Corporate Technologies, Inc.
  - b. Standard: ASTM C 1173.
  - c. Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
  - d. Sleeve Materials:
    - 1) For Cast-Iron Soil Pipes: ASTM C 564, rubber.
    - 2) For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
    - 3) For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.

### **PART 3 - EXECUTION**

#### **3.1 EARTH MOVING**

- A. Comply with requirements for excavating, trenching, and backfilling specified in Section 312000 "Earth Moving."

#### **3.2 PIPING INSTALLATION**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if two fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
- K. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
- L. Install soil and waste drainage and vent piping at the following minimum slopes unless otherwise indicated:
  - 1. Building Sanitary Drain: 2 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.
  - 2. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.
- M. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
  - 1. Install encasement on underground piping according to ASTM A 674 or AWWA C105/A 21.5.
- N. Install steel piping according to applicable plumbing code.
- O. Install aboveground copper tubing according to CDA's "Copper Tube Handbook."
- P. Plumbing Specialties:
  - 1. Install backwater valves in sanitary waster gravity-flow piping. Comply with requirements for backwater valves specified in Section 221319 "Sanitary Waste Piping Specialties."

2. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping. Comply with requirements for cleanouts specified in Section 221319 "Sanitary Waste Piping Specialties."
  3. Install drains in sanitary drainage gravity-flow piping. Comply with requirements for drains specified in Section 221319 "Sanitary Waste Piping Specialties."
- Q. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
- R. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- S. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- T. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

### 3.3 JOINT CONSTRUCTION

- A. Join hub-and-spigot, cast-iron soil piping with gasket joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
- B. Join hub-and-spigot, cast-iron soil piping with calked joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead-and-oakum calked joints.
- C. Join hubless, cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.
- D. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- E. Join copper tube and fittings with soldered joints according to ASTM B 828. Use ASTM B 813, water-flushable, lead-free flux and ASTM B 32, lead-free-alloy solder.
- F. Grooved Joints: Cut groove ends of pipe according to AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections, over gasket, with keys seated in piping grooves. Install and tighten housing bolts.

### 3.4 SPECIALTY PIPE FITTING INSTALLATION

#### A. Transition Couplings:

1. Install transition couplings at joints of piping with small differences in OD's.
2. In Drainage Piping: Unshielded, nonpressure transition couplings.
3. In Aboveground Force Main Piping: Fitting-type transition couplings.
4. In Underground Force Main Piping:
  - a. NPS 1-1/2 and Smaller: Fitting-type transition couplings.
  - b. NPS 2 and Larger: Pressure transition couplings.

### 3.5 VALVE INSTALLATION

#### A. General valve installation requirements are specified in Section 220523.12 "Ball Valves for Plumbing Piping," Section 220523.13 "Butterfly Valves for Plumbing Piping," Section 220523.14 "Check Valves for Plumbing Piping," and Section 220523.15 "Gate Valves for Plumbing Piping."

#### B. Shutoff Valves:

1. Install shutoff valve on each sewage pump discharge.
2. Install gate or full-port ball valve for piping NPS 2 and smaller.
3. Install gate valve for piping NPS 2-1/2 and larger.

#### C. Check Valves: Install swing check valve, between pump and shutoff valve, on each sewage pump discharge.

#### D. Backwater Valves: Install backwater valves in piping subject to backflow.

1. Horizontal Piping: Horizontal backwater valves. Use normally closed type unless otherwise indicated.
2. Install backwater valves in accessible locations.
3. Comply with requirements for backwater valve specified in Section 221319 "Sanitary Waste Piping Specialties."

### 3.6 HANGER AND SUPPORT INSTALLATION

#### A. Comply with requirements for pipe hanger and support devices and installation specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

1. Install carbon-steel pipe hangers for horizontal piping in noncorrosive environments.
2. Install carbon-steel pipe support clamps for vertical piping in noncorrosive environments.
3. Install stainless-steel pipe support clamps for vertical piping in corrosive environments.
4. Vertical Piping: MSS Type 8 or Type 42, clamps.
5. Install individual, straight, horizontal piping runs:
  - a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.

- b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
- 6. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
- 7. Base of Vertical Piping: MSS Type 52, spring hangers.
- B. Support horizontal piping and tubing within 12 inches of each fitting and coupling.
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch minimum rods.
- E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
  - 1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
  - 2. NPS 3: 60 inches with 1/2-inch rod.
  - 3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.
  - 4. NPS 6 and NPS 8: 60 inches with 3/4-inch rod.
- F. Install supports for vertical cast-iron soil piping every 10 feet.
- G. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
  - 1. NPS 1-1/4: 84 inches with 3/8-inch rod.
  - 2. NPS 1-1/2: 108 inches with 3/8-inch rod.
  - 3. NPS 2: 10 feet with 3/8-inch rod.
- H. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
  - 1. NPS 1-1/4: 72 inches with 3/8-inch rod.
  - 2. NPS 1-1/2 and NPS 2: 96 inches with 3/8-inch rod.

### 3.7 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.
- C. Connect drainage and vent piping to the following:
  - 1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code.
  - 2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.

3. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code.
4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
5. Install horizontal backwater valves with cleanout cover flush with floor.
6. Comply with requirements for backwater valves, cleanouts and drains specified in Section 221319 "Sanitary Waste Piping Specialties."

D. Connect force-main piping to the following:

1. Sanitary Sewer: To exterior force main.
2. Sewage Pump: To sewage pump discharge.

E. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

F. Make connections according to the following unless otherwise indicated:

1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.

### 3.8 IDENTIFICATION

A. Identify exposed sanitary waste and vent piping. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

### 3.9 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test sanitary drainage and vent piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
  2. Leave uncovered and unconcealed new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
  3. Roughing-in Plumbing Test Procedure: Test drainage and vent piping except outside leaders on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
  4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg. Use U-tube or manometer inserted in trap of water closet to measure this pressure. Air pressure must remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.
  5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
  6. Prepare reports for tests and required corrective action.
- E. Test force-main piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
  2. Cap and subject piping to static-water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
  3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
  4. Prepare reports for tests and required corrective action.

### 3.10 CLEANING AND PROTECTION

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

### 3.11 PIPING SCHEDULE

- A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.

- B. Aboveground, soil and waste piping NPS 4 and smaller shall be any of the following:
  - 1. Hubless, cast-iron soil pipe and fittings; CISPI hubless-piping couplings; and coupled joints.
  - 2. Copper DWV tube, copper drainage fittings, and soldered joints.
- C. Aboveground, soil and waste piping [NPS 5 and larger shall be the following:
  - 1. Hubless, cast-iron soil pipe and fittings; CISPI hubless-piping couplings; and coupled joints.
- D. Aboveground, vent piping NPS 4 and smaller shall be any of the following:
  - 1. Hubless, cast-iron soil pipe and fittings; CISPI hubless-piping couplings; and coupled joints.
  - 2. Copper DWV tube, copper drainage fittings, and soldered joints.
- E. Aboveground, vent piping NPS 5 and larger shall be the following:
  - 1. Hubless, cast-iron soil pipe and fittings; CISPI hubless-piping couplings; and coupled joints.
- F. Underground, soil, waste, and vent piping NPS 4 and smaller shall be the following:
  - 1. Service class, cast-iron soil piping; gaskets; and gasketed joints.
- G. Underground, soil and waste piping NPS 5 and larger shall be the following:
  - 1. Service class, cast-iron soil piping; gaskets; and gasketed joints.
- H. Aboveground sanitary-sewage force mains NPS 1-1/2 and NPS 2 shall be any of the following:
  - 1. Hard copper tube, Type L; copper pressure fittings; and soldered joints.
  - 2. Galvanized-steel pipe, pressure fittings, and threaded joints.

END OF SECTION 221316

## SECTION 221319 SANITARY WASTE PIPING SPECIALTIES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

1. Backwater valves.
2. Cleanouts.
3. Floor drains.
4. Roof flashing assemblies.
5. Through-penetration firestop assemblies.
6. Miscellaneous sanitary drainage piping specialties.
7. Flashing materials.
8. FOG disposal systems.
9. Grease interceptors.
10. Solids interceptors.

- B. Related Requirements:

1. Section 221423 "Storm Drainage Piping Specialties" for storm drainage piping inside the building, drainage piping specialties, and drains.
2. Section 224300 "Medical Plumbing Fixtures" for plaster sink interceptors.

#### 1.3 DEFINITIONS

- A. ABS: Acrylonitrile-butadiene-styrene plastic.
- B. FOG: Fats, oils, and greases.
- C. FRP: Fiberglass-reinforced plastic.
- D. HDPE: High-density polyethylene plastic.
- E. PE: Polyethylene plastic.
- F. PP: Polypropylene plastic.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and accessories for the following:
  - 1. Grease interceptors.
- B. Shop Drawings: Show fabrication and installation details for frost-resistant vent terminals.
  - 1. Wiring Diagrams: Power, signal, and control wiring.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For drainage piping specialties to include in emergency, operation, and maintenance manuals.

#### 1.7 QUALITY ASSURANCE

- A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

#### 1.8 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 033000 "Cast-in-Place Concrete."
- B. Coordinate size and location of roof penetrations.

#### 1.9 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

### PART 2 - PRODUCTS

#### 2.1 CLEANOUTS

A. Exposed Metal Cleanouts:

1. ASME A112.36.2M, Cast-Iron Cleanouts:

a. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Plumbing Products Group or comparable product by one of the following:

- 1) Josam Company.
- 2) MIFAB, Inc.
- 3) Smith, Jay R. Mfg. Co.
- 4) Tyler Pipe.
- 5) Watts Drainage Products.
- 6) Or approved equal

2. Standard: ASME A112.36.2M for cast iron for cleanout test tee.
3. Size: Same as connected drainage piping
4. Body Material: Hub-and-spigot, cast-iron soil pipe T-branch, or Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
7. Closure: Stainless-steel plug with seal.

B. Metal Floor Cleanouts:

1. ASME A112.36.2M, Cast-Iron Cleanouts:

a. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Plumbing Products Group; Z1400B or comparable product by one of the following:

- 1) Josam Company.
- 2) MIFAB, Inc.
- 3) Smith, Jay R. Mfg. Co.
- 4) Tyler Pipe; Wade Div.
- 5) Or approved equal

2. Standard: ASME A112.36.2M for threaded, adjustable housing cleanout.
3. Size: Same as connected branch.
4. Type: Threaded, adjustable housing.
5. Body or Ferrule: Cast iron.
6. Outlet Connection: Spigot.
7. Closure: Brass plug with straight threads and gasket.
8. Adjustable Housing Material: Cast iron.
9. Frame and Cover Material and Finish: Nickel-bronze, copper alloy.
10. Frame and Cover Shape: Round.
11. Top Loading Classification: Medium Duty.
12. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.

C. Cast-Iron Wall Cleanouts:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Plumbing Products Group; Specification Drainage Operation; Z1441 or Z1443 or comparable product by one of the following:
  - a. Josam Company; Josam Div.
  - b. MIFAB, Inc.
  - c. Smith, Jay R. Mfg. Co.
  - d. Tyler Pipe; Wade Div.
  - e. Watts Drainage Products.
  - f. Or approved equal
2. Standard: ASME A112.36.2M. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: Hub-and-spigot, cast-iron soil pipe T-branch or Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
7. Wall Access: Round, flat, chrome-plated brass or stainless-steel cover plate with screw.
8. Wall Access: Round, nickel-bronze, copper-alloy, or stainless-steel wall-installation frame and cover.

## 2.2 FLOOR DRAINS

### A. Cast-Iron Floor Drains:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Plumbing Products Group; Specification Drainage Operation or comparable product by one of the following:
  - a. Josam Company; Josam Div.
  - b. MIFAB, Inc.
  - c. Smith, Jay R. Mfg. Co.
  - d. Tyler Pipe; Wade Div.
  - e. Watts Drainage Products.
  - f. Or approved equal
2. Standard: ASME A112.6.3.
3. Body Material: Gray iron.
4. Seepage Flange: Required.
5. Outlet: Bottom.
6. Top or Strainer Material: Nickel bronze.
7. Top Shape: Round.
8. Trap Material: Cast iron.
9. Trap Pattern: Deep-seal P-trap.
10. Trap Features: Trap-seal primer valve drain connection.

### B. Wall Box:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Durgo, Inc.
  - b. Oatey.
  - c. RectorSeal.
  - d. Studor, Inc.
  - e. Or approved equal
2. Description: White plastic housing with white plastic grille, made for recessed installation.

### 2.3 ROOF FLASHING ASSEMBLIES

#### A. Roof Flashing Assemblies:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Acorn Engineering Company; Elmdor/Stoneman Div.
  - b. Thaler Metal Industries Ltd.
  - c. Or approved equal
2. Description: Manufactured assembly made of 4.0-lb/sq. ft., 0.0625-inch-thick, lead flashing collar and skirt extending at least 6 inches from pipe, with galvanized-steel boot reinforcement and counterflashing fitting.
  - a. Open-Top Vent Cap: Without cap.
  - b. Low-Silhouette Vent Cap: With vandal-proof vent cap.
  - c. Extended Vent Cap: With field-installed, vandal-proof vent cap.

### 2.4 THROUGH-PENETRATION FIRESTOP ASSEMBLIES

#### A. Through-Penetration Firestop Assemblies:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. ProSet Systems Inc.
  - b. Hilti.
  - c. Or approved equal
2. Standard: UL 1479 assembly of sleeve and stack fitting with firestopping plug.
3. Size: Same as connected soil, waste, or vent stack.

4. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.
5. Stack Fitting: ASTM A 48/A 48M, gray-iron, hubless-pattern, wye branch with neoprene O-ring at base and gray-iron plug in thermal-release harness. Include PVC protective cap for plug.
6. Special Coating: Corrosion resistant on interior of fittings.

## 2.5 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

### A. Open Drains:

1. Description: Shop or field fabricate from ASTM A 74, Service class, hub-and-spigot, cast-iron, soil-pipe fittings. Include P-trap, hub-and-spigot riser section; and where required, increaser fitting joined with ASTM C 564, rubber gaskets.
2. Size: Same as connected waste piping.

### B. Deep-Seal Traps:

1. Description: Cast-iron or bronze casting, with inlet and outlet matching connected piping and cleanout trap-seal primer valve connection.
2. Size: Same as connected waste piping.
  - a. NPS 2 inch to 4-inch-minimum water seal.
  - b. NPS 2-1/2 and Larger: 5-inch-minimum water seal.

### C. Floor-Drain, Trap-Seal Primer Fittings:

1. Description: Cast iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection.
2. Size: Same as floor drain outlet with NPS 1/2 side inlet.

### D. Air-Gap Fittings:

1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
2. Body: Bronze or cast iron.
3. Inlet: Opening in top of body.
4. Outlet: Larger than inlet.
5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.

### E. Sleeve Flashing Device:

1. Description: Manufactured, cast-iron fitting, with clamping device, that forms sleeve for pipe floor penetrations of floor membrane. Include galvanized-steel pipe extension in top of fitting that will extend 2 inches above finished floor and galvanized-steel pipe extension in bottom of fitting that will extend through floor slab.
2. Size: As required for close fit to riser or stack piping.

F. Stack Flashing Fittings:

1. Description: Counterflashing-type, cast-iron fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.
2. Size: Same as connected stack vent or vent stack.

G. Vent Caps:

1. Description: Cast-iron body with threaded or hub inlet and vandal-proof design. Include vented hood and setscrews to secure to vent pipe.
2. Size: Same as connected stack vent or vent stack.

H. Frost-Resistant Vent Terminals:

1. Description: Manufactured or shop-fabricated assembly constructed of copper, lead-coated copper, or galvanized steel.
2. Design: To provide 1-inch enclosed air space between outside of pipe and inside of flashing collar extension, with counterflashing.

I. Expansion Joints:

1. Standard: ASME A112.21.2M.
2. Body: Cast iron with bronze sleeve, packing, and gland.
3. End Connections: Matching connected piping.
4. Size: Same as connected soil, waste, or vent piping.

2.6 FLASHING MATERIALS

A. Lead Sheet: ASTM B 749, Type L51121, copper bearing, with the following minimum weights and thicknesses, unless otherwise indicated:

1. General Use: 4.0-lb/sq. ft., 0.0625-inch thickness.
2. Vent Pipe Flashing: 3.0-lb/sq. ft., 0.0469-inch thickness.

B. Copper Sheet: ASTM B 152/B 152M, of the following minimum weights and thicknesses, unless otherwise indicated:

1. General Applications: 12 oz./sq. ft.
2. Vent Pipe Flashing: 8 oz./sq. ft.

C. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04-inch minimum thickness, unless otherwise indicated. Include G90 hot-dip galvanized, mill-phosphatized finish for painting if indicated.

D. Elastic Membrane Sheet: ASTM D 4068, flexible, chlorinated polyethylene, 40-mil minimum thickness.

E. Fasteners: Metal compatible with material and substrate being fastened.

- F. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.
- G. Solder: ASTM B 32, lead-free alloy.
- H. Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic.

## 2.7 GREASE INTERCEPTORS

### A. Grease Interceptors:

#### 1. Cast-Iron or Steel Grease Interceptors:

- a. Basis-of-Design Product: Subject to compliance with requirements, provide Josam; 60117A or comparable product by one of the following:

- 1) Zurn.
- 2) MIFAB, Inc.
- 3) Rockford Sanitary Systems, Inc.
- 4) Schier Products Company.
- 5) Smith, Jay R. Mfg. Co.
- 6) Tyler Pipe; Wade Div..
- 7) Watts Drainage Products.
- 8) Or approved equal

- 2. Standard: ASME A112.14.3 and PDI-G101, for intercepting and retaining fats, oils, and greases from food preparation wastewater.
- 3. Plumbing and Drainage Institute Seal: Required.
- 4. Body Material: Cast iron or steel.
- 5. Interior Lining: Corrosion-resistant epoxy.
- 6. Exterior Coating: Corrosion-resistant epoxy.
- 7. End Connections: Threaded.
- 8. Mounting: Above floor.
- 9. Flow-Control Fitting: Required.
- 10. Operation: Manual cleaning.

## 2.8 SOLIDS INTERCEPTORS

### A. Solids Interceptors:

#### 1. Cast-Iron or Steel Solids Interceptors:

- a. Basis-of-Design Product: Subject to compliance with requirements, provide Jay R Smith; Fig. 8714 or comparable product by one of the following:

- 1) Josam Company.
- 2) MIFAB, Inc.
- 3) Zurn Plumbing Products Group.

- 4) Schier Products Company.
- 5) Smith, Jay R. Mfg. Co.
- 6) Tyler Pipe; Wade Div.
- 7) Watts Drainage Products.
- 8) Or approved equal

## 2.9 MOTORS

- A. General requirements for motors are specified in Section 220513 "Common Motor Requirements for Plumbing Equipment."
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Equipment Mounting:
1. Comply with requirements for vibration isolation devices specified in Section 220548.13 "Vibration Controls for Plumbing Piping and Equipment."
- B. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
1. Size same as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
  2. Locate at each change in direction of piping greater than 45 degrees.
  3. Locate at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
  4. Locate at base of each vertical soil and waste stack.
- C. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- D. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- E. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
1. Position floor drains for easy access and maintenance.
  2. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.

3. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.
- F. Install roof flashing assemblies on sanitary stack vents and vent stacks that extend through roof.
- G. Install flashing fittings on sanitary stack vents and vent stacks that extend through roof.
- H. Install deep-seal traps on floor drains and other waste outlets, if indicated.
- I. Install floor-drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.
  1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
  2. Size: Same as floor drain inlet.
- J. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.
- K. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.
- L. Install vent caps on each vent pipe passing through roof.
- M. Install frost-resistant vent terminals on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.
- N. Install expansion joints on vertical stacks and conductors. Position expansion joints for easy access and maintenance.
- O. Install frost-proof vent caps on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.
- P. Install grease interceptors, including trapping, venting, and flow-control fitting, according to authorities having jurisdiction and with clear space for servicing.
  1. Above-Floor Installation: Set unit with bottom resting on floor, unless otherwise indicated.
  2. Install cleanout immediately downstream from interceptors not having integral cleanout on outlet.
- Q. Install grease removal devices on floor. Install trap, vent, and flow-control fitting according to authorities having jurisdiction. Install control panel adjacent to unit, unless otherwise indicated.
- R. Install solids interceptors with cleanout immediately downstream from interceptors that do not have integral cleanout on outlet. Install trap on interceptors that do not have integral trap and are connected to sanitary drainage and vent systems.
- S. Install wood-blocking reinforcement for wall-mounting-type specialties.

- T. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

### 3.2 CONNECTIONS

- A. Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for piping installation requirements. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Grease Interceptors: Connect inlet and outlet to unit and connect flow-control fitting and vent to unit inlet piping.
- D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

### 3.3 FLASHING INSTALLATION

- A. Fabricate flashing from single piece unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
  - 1. Lead Sheets: Solder joints of lead sheets 4.0-lb/sq. ft., 0.0625-inch thickness or thinner.
  - 2. Copper Sheets: Solder joints of copper sheets.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
  - 1. Pipe Flashing: Sleeve type, matching pipe size, with minimum length of 10 inches, and skirt or flange extending at least 8 inches around pipe.
  - 2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches around sleeve.
  - 3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches around specialty.
- C. Set flashing on floors and roofs in solid coating of bituminous cement.
- D. Secure flashing into sleeve and specialty clamping ring or device.
- E. Install flashing for piping passing through roofs with counterflashing or commercially made flashing fittings, according to Section 076200 "Sheet Metal Flashing and Trim."
- F. Extend flashing up vent pipe passing through roofs and turn down into pipe, or secure flashing into cast-iron sleeve having calking recess.
- G. Fabricate and install flashing and pans, sumps, and other drainage shapes.

3.4 LABELING AND IDENTIFYING

- A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
  - 1. Grease interceptors.
- B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.5 FIELD QUALITY CONTROL

- A. Tests and Inspections:
  - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.6 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 221319

## SECTION 221319.13 SANITARY DRAINS

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Section Includes:

1. Floor drains.
2. Floor sinks.
3. Trench drains.

#### 1.2 DEFINITIONS

- A. ABS: Acrylonitrile-butadiene styrene.
- B. FRP: Fiberglass-reinforced plastic.
- C. HDPE: High-density polyethylene.
- D. PE: Polyethylene.
- E. PP: Polypropylene.
- F. PVC: Polyvinyl chloride.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

### PART 2 - PRODUCTS

#### 2.1 DRAIN ASSEMBLIES

- A. Sanitary drains shall bear label, stamp, or other markings of specified testing agency.
- B. Comply with NSF 14 for plastic sanitary piping specialty components.

#### 2.2 FLOOR DRAINS

- A. Cast-Iron Floor Drains:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Jay R. Smith Mfg Co; a division of Morris Group International.
  - b. Josam Company.
  - c. MIFAB, Inc.
  - d. WATTS.
  - e. Zurn Industries, LLC.
  - f. Or approved equal
2. Standard: ASME A112.6.3.
3. Pattern: Floor drain.
4. Body Material: Gray iron.
5. Seepage Flange: Required.
6. Anchor Flange: Required.
7. Clamping Device: Required.
8. Outlet: Bottom.
9. Backwater Valve: Integral, ASME A112.14.1, swing-check type.
10. Coating on Interior and Exposed Exterior Surfaces
11. Top or Strainer Material: Nickel bronze.
12. Top of Body and Strainer Finish: Nickel bronze.
13. Top Shape: Round.
14. Top Loading Classification: Medium Duty.
15. Trap Material: Cast iron.
16. Trap Pattern: Deep-seal P-trap.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
  1. Position floor drains for easy access and maintenance.
  2. Set floor drains below elevation of surrounding finished floor to allow floor drainage.
  3. Set with grates depressed according to the following drainage area radii:
    - a. Radius, 30 Inches or Less: Equivalent to 1 percent slope, but not less than 1/4-inch total depression.
    - b. Radius, 30 to 60 Inches: Equivalent to 1 percent slope.
    - c. Radius, 60 Inches or Larger: Equivalent to 1 percent slope, but not greater than 1-inch total depression.
  4. Install floor-drain flashing collar or flange, so no leakage occurs between drain and adjoining flooring.
    - a. Maintain integrity of waterproof membranes where penetrated.

5. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.

### 3.2 CONNECTIONS

- A. Comply with requirements in Section 221316 "Sanitary Waste and Vent Piping" for piping installation requirements. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements in Section 221319 "Sanitary Waste Piping Specialties" for backwater valves, air admittance devices and miscellaneous sanitary drainage piping specialties.
- C. Comply with requirements in Section 221323 "Sanitary Waste Interceptors" for grease interceptors, grease-removal devices, oil interceptors, sand interceptors, and solid interceptors.
- D. Install piping adjacent to equipment to allow service and maintenance.
- E. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- F. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

### 3.3 LABELING AND IDENTIFYING

- A. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 220553 "Identification for Plumbing Piping and Equipment."

### 3.4 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 221319.13

## SECTION 221413 FACILITY STORM DRAINAGE PIPING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Hub-and-spigot, cast-iron soil pipe and fittings.
  - 2. Hubless, cast-iron soil pipe and fittings.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Detail storm drainage piping. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Structural members to which drainage piping will be attached or suspended from.
- B. Field quality-control reports.

#### 1.5 QUALITY ASSURANCE

- A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:
  - 1. Storm Drainage Piping: 10-foot head of water.

2.2 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AB & I Foundry; a part of the McWane family of companies.
  2. Charlotte Pipe and Foundry Company.
  3. NewAge Casting.
  4. Tyler Pipe; a part of McWane family of companies.
  5. Or approved equal
- B. Pipe and Fittings:
1. Marked with CISPI collective trademark and NSF certification mark.
  2. Class: ASTM A74, Service class.
- C. Gaskets: ASTM C564, rubber.
- D. Caulking Materials: ASTM B29, pure lead and oakum or hemp fiber.

2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. AB & I Foundry; a part of the McWane family of companies.
  2. Charlotte Pipe and Foundry Company.
  3. NewAge Casting.
  4. Tyler Pipe; a part of McWane family of companies.
  5. Or approved equal
- B. Pipe and Fittings:
1. Marked with CISPI collective trademark and NSF certification mark.
  2. Standard: ASTM A888 or CISPI 301.
- C. CISPI, Hubless-Piping Couplings:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. ANACO-Husky.
    - b. Charlotte Pipe and Foundry Company.
    - c. Dallas Specialty & Mfg. Co.
    - d. Fernco Inc.
    - e. Ideal Clamp Products, Inc.
    - f. Matco-Norca.
    - g. MIFAB, Inc.
    - h. Mission Rubber Company, LLC; a division of MCP Industries.
    - i. NewAge Casting.

- j. Tyler Pipe; a subsidiary of McWane Inc.
  - k. Or approved equal
- 2. Couplings shall bear CISPI collective trademark.
  - 3. Standards: ASTM C1277 and CISPI 310.
  - 4. Description: Stainless steel corrugated shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.
- D. Heavy-Duty, Hubless-Piping Couplings:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. ANACO-Husky.
    - b. Charlotte Pipe and Foundry Company.
    - c. Clamp-All Corp.
    - d. Dallas Specialty & Mfg. Co.
    - e. Ideal Clamp Products, Inc.
    - f. MIFAB, Inc.
    - g. Mission Rubber Company, LLC; a division of MCP Industries.
    - h. NewAge Casting.
    - i. Tyler Pipe; a subsidiary of McWane Inc.
    - j. Or approved equal
  - 2. Standard: ASTM C1540.
  - 3. Description: Stainless steel shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.

### PART 3 - EXECUTION

#### 3.1 EARTH MOVING

- A. Comply with requirements for excavating, trenching, and backfilling specified in Section 312000 "Earth Moving."

#### 3.2 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems.
  - 1. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations.
  - 2. Install piping as indicated unless deviations from layout are approved on coordination drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping at indicated slopes.
- F. Install piping free of sags and bends.
- G. Install fittings for changes in direction and branch connections.
- H. Install piping to allow application of insulation.
- I. Make changes in direction for piping using appropriate branches, bends, and long-sweep bends.
  - 1. Do not change direction of flow more than 90 degrees.
  - 2. Use proper size of standard increasers and reducers if pipes of different sizes are connected.
    - a. Reducing size of drainage piping in direction of flow is prohibited.
- J. Lay buried building piping beginning at low point of each system.
  - 1. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream.
  - 2. Install required gaskets in accordance with manufacturer's written instructions for use of lubricants, cements, and other installation requirements.
  - 3. Maintain swab in piping and pull past each joint as completed.
- K. Install piping at the following minimum slopes unless otherwise indicated:
  - 1. Building Storm Drain: 2 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.
- L. Install cast-iron soil piping in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
  - 1. Install encasement on underground piping in accordance with ASTM A674 or AWWA C105/A 21.5.
- M. Plumbing Specialties:
  - 1. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers in storm drainage gravity-flow piping.
    - a. Install cleanout fitting with closure plug inside the building in storm drainage force-main piping.
    - b. Comply with requirements for cleanouts specified in Section 221423 "Storm Drainage Piping Specialties."

2. Install drains in storm drainage gravity-flow piping.
    - a. Comply with requirements for drains specified in Section 221423 "Storm Drainage Piping Specialties."
  - N. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
  - O. Install sleeves for piping penetrations of walls, ceilings, and floors.
    1. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
  - P. Install sleeve seals for piping penetrations of concrete walls and slabs.
    1. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
  - Q. Install escutcheons for piping penetrations of walls, ceilings, and floors.
    1. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."
- 3.3 JOINT CONSTRUCTION
- A. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
  - B. Hub-and-Spigot, Cast-Iron Soil Piping Caulked Joints: Join in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead-and-oakum caulked joints.
  - C. Hubless, Cast-Iron Soil Piping Coupled Joints:
    1. Join in accordance with CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.
- 3.4 HANGER AND SUPPORT INSTALLATION
- A. Comply with requirements for pipe hanger and support devices and installation specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."
    1. Vertical Piping: MSS Type 8 or Type 42, clamps.
    2. Install individual, straight, horizontal piping runs:
      - a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
      - b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
    3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
    4. Base of Vertical Piping: MSS Type 52, spring hangers.

- B. Support horizontal piping and tubing within 12 inches of each fitting and coupling.
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch minimum rods.
- E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
  - 1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
  - 2. NPS 3: 60 inches with 1/2-inch rod.
  - 3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.
  - 4. NPS 6 and NPS 8: 60 inches with 3/4-inch rod.
  - 5. Spacing for 10-foot pipe lengths may be increased to 10 feet. Spacing for fittings is limited to 60 inches.
- F. Install supports for vertical cast-iron soil piping every 15 feet.

### 3.5 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.
- C. Connect storm drainage piping to roof drains and storm drainage specialties.
  - 1. Install test tees (wall cleanouts) in conductors near floor, and floor cleanouts with cover flush with floor.
  - 2. Comply with requirements for cleanouts and drains specified in Section 221423 "Storm Drainage Piping Specialties."

### 3.6 IDENTIFICATION

- A. Identify exposed storm drainage piping.
- B. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

### 3.7 FIELD QUALITY CONTROL

- A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
  - 1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
  - 2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

- B. Test storm drainage piping in accordance with procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
  - 1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired.
    - a. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
  - 2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved.
    - a. Expose work that was covered or concealed before it was tested.
  - 3. Test Procedure:
    - a. Test storm drainage piping, except outside leaders, on completion of roughing-in.
    - b. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts until completion of inspection, water level must not drop. Inspect joints for leaks.
  - 4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
  - 5. Prepare reports for tests and required corrective action.
- C. Piping will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

### 3.8 CLEANING AND PROTECTION

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

### 3.9 PIPING SCHEDULE

- A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
- B. Aboveground storm drainage piping NPS 4 to NPS 10 shall be the following:
  - 1. Hubless, cast-iron soil pipe and fittings; CISPI, hubless-piping couplings; and coupled joints.
- C. Underground storm drainage piping NPS 4 to NPS 10 shall be the following:
  - 1. Push-Fit, 316L Stainless steel pipe and fittings; gaskets; and gasketed joints.

June 4, 2021  
Issue for Bid

Parking Deck  
Union County Justice Complex  
Elizabeth, New Jersey

2. Service class, cast-iron soil pipe and fittings; lead and oakum joints.

END OF SECTION 221413

## SECTION 221423 STORM DRAINAGE PIPING SPECIALTIES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

- 1. Metal roof drains.
- 2. Miscellaneous storm drainage piping specialties.
- 3. Cleanouts.

- B. Related Requirements:

- 1. Section 076200 "Sheet Metal Flashing and Trim" for penetrations of roofs.
- 2. Section 078413 "Penetration Firestopping" for firestopping roof penetrations.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

#### 1.4 QUALITY ASSURANCE

- A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

### PART 2 - PRODUCTS

#### 2.1 METAL ROOF DRAINS

- A. Cast-Iron, Combination Roof Drain and Secondary Overflow Drain:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Z163 Series or a comparable product by one of the following:
  - a. MIFAB, Inc.
  - b. Wade; a subsidiary of McWane Inc.
  - c. Watts.

- d. Or approved equal
- 2. Description: Combination roof drain and overflow roof drain with epoxy coated cast iron drain bodies, flashing clamps with integral gravel guards, 2-inch high internal standpipe, self-locking polyethylene domes (standard), and no hub (standard) outlets.
- 3. Standard: ASME A112.6.4.
- 4. Body Material: Cast iron.
- 5. Combination Flashing Ring and Gravel Stop: Required.
- 6. Outlet: Bottom.
- 7. Outlet Type: No hub.
- 8. Sump Receiver Plate: Required.
- 9. Dome Material: Poly.
- 10. Overflow with Internal Standpipe: 2 inches high.

## 2.2 MISCELLANEOUS STORM DRAINAGE PIPING SPECIALTIES

### A. Downspout Boots:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide WATTS; RD-970 or a comparable product by one of the following:
  - a. J.R. Hoe & Sons Inc.
  - b. Neenah Foundry Company.
  - c. Zurn.
  - d. Or approved equal
- 2. Description: Manufactured, ASTM A 48/A 48M, gray-iron casting, with strap or ears for attaching to building; NPS 4 outlet; and shop-applied bituminous coating.
- 3. Size: Inlet size to match downspout and NPS 4 outlet.

### B. Downspout Nozzles:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Z199-DC or a comparable product by one of the following:
  - a. MIFAB, Inc.
  - b. Wade; a subsidiary of McWane Inc.
  - c. Watts
  - d. Or approved equal
- 2. Description: Cast-nickel-bronze downspout nozzle with anchor flange, countersunk mounting holes, and IPS threaded (standard), no hub, or push-on connection.
- 3. Outlet Type: No hub.
- 4. Size: Same as connected conductor.

## 2.3 CLEANOUTS

### A. Cast-Iron Exposed Floor Cleanouts:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Z1400 Series or a comparable product by one of the following:
  - a. Josam Company.
  - b. Oatey.
  - c. Watts.
  - d. Or approved equal
2. Standard: ASME A112.36.2M.
3. Size: Same as connected branch.
4. Type: Adjustable housing.
5. Body Material: Epoxy-coated cast iron.
6. Closure: Plastic plug.
7. Adjustable Housing Material: Cast iron with threads.
8. Frame and Cover Material and Finish: Painted cast iron.
9. Frame and Cover Shape: Round.
10. Top Loading Classification: Extra-Heavy Duty.
11. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.
12. Access Housing, CO-300-MF: Epoxy coated cast-iron access housing with two fixed anchor flanges, and extra-heavy-duty ductile iron (standard) access cover.
13. Isolation Cleanout, CO-600-R: Neoprene movement compensator coupling.

B. Cast-Iron Wall Cleanouts:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn Z1446 or a comparable product by one of the following:
  - a. MIFAB, Inc.
  - b. Wade; a subsidiary of McWane Inc.
  - c. Watts.
  - d. Or approved equal
2. Standard: ASME A112.36.2M. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: No hub, cast-iron soil pipe test tee as required to match connected piping.
5. Closure Plug:
  - a. ABS.
  - b. Raised head.
  - c. Drilled and threaded for cover attachment screw.
  - d. Size: Same as, or not more than, one size smaller than cleanout size.
6. Wall Access: Round, flat, stainless-steel cover plate with screw.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions.
  - 1. Install flashing collar or flange of roof drain to prevent leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
  - 2. Install expansion joints, if indicated, in roof drain outlets.
  - 3. Position roof drains for easy access and maintenance.
- B. Install downspout adapters on outlet of back-outlet parapet roof drains and connect to sheet metal downspouts.
- C. Install downspout boots at grade with top 6 inches above grade. Secure to building wall.
- D. Install conductor nozzles at exposed bottom of conductors where they spill onto grade.
- E. Install cleanouts in aboveground piping and building drain piping according to the following instructions unless otherwise indicated:
  - 1. Use cleanouts the same size as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
  - 2. Locate cleanouts at each change in direction of piping greater than 45 degrees.
  - 3. Locate cleanouts at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
  - 4. Locate cleanouts at base of each vertical storm piping conductor.
- F. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- G. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- H. Install wall cleanouts in vertical conductors. Install access door in wall if indicated.
- I. Install through-penetration firestop assemblies for penetrations of fire- and smoke-rated assemblies.
  - 1. Comply with requirements in Section 078413 "Penetration Firestopping."

#### 3.2 CONNECTIONS

- A. Comply with requirements for piping specified in Section 221413 "Facility Storm Drainage Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

3.3 FLASHING INSTALLATION

- A. Fabricate flashing from single piece of metal unless large pans, sumps, or other drainage shapes are required.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
- C. Set flashing on floors and roofs in solid coating of bituminous cement.
- D. Secure flashing into sleeve and specialty clamping ring or device.

3.4 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 221423

## SECTION 224213.13 COMMERCIAL WATER CLOSETS

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Section Includes:

1. Wall-mounted water closets.
2. Flushometer valves and tanks.
3. Toilet seats.
4. Supports.

#### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Include diagrams for power, signal, and control wiring.

#### 1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For flushometer valves and electronic sensors to include in operation and maintenance manuals.

### PART 2 - PRODUCTS

#### 2.1 WALL-MOUNTED WATER CLOSETS

A. Water Closets, Wall Mounted, Top Spud:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. American Standard.
  - b. Crane Plumbing, L.L.C.
  - c. Kohler Co.
  - d. TOTO USA, INC.
  - e. Zurn Industries, LLC.
  - f. Or approved equal
2. Bowl:
  - a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
  - b. Material: Vitreous china.

- c. Type: Siphon jet.
- d. Style: Flushometer valve.
- e. Height: Standard.
- f. Rim Contour: Elongated.
- g. Water Consumption: 1.28 gal. per flush.
- h. Spud Size and Location: NPS 1-1/2; top.

## 2.2 FLUSHOMETER VALVES

### A. Battery Operated Sensor Diaphragm Flushometer Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Kohler.
  - b. Sloan Valve Company.
  - c. Zurn Industries, LLC.
  - d. Or approved equal
- 2. Standard: ASSE 1037.
- 3. Minimum Pressure Rating: 125 psig.
- 4. Features: Include integral check stop and backflow-prevention device.
- 5. Material: Brass body with corrosion-resistant components.
- 6. Exposed Flushometer-Valve Finish: Chrome plated.
- 7. Panel Finish: Chrome plated or stainless steel.
- 8. Style: Exposed.
- 9. Consumption: 1.28 gal. per flush.
- 10. Minimum Inlet: NPS 1.
- 11. Minimum Outlet: NPS 1-1/4.

## 2.3 TOILET SEATS

### A. Toilet Seats:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Bemis Manufacturing Company.
  - b. Kohler Co.
  - c. Olsonite Seat Co.
  - d. Or approved equal
- 2. Standard: IAPMO/ANSI Z124.5.
- 3. Material: Plastic.
- 4. Type: Commercial (Standard).
- 5. Shape: Elongated rim, open front.
- 6. Hinge: Self-sustaining, check.
- 7. Hinge Material: Noncorroding metal.

8. Seat Cover: Not required.
9. Color: White.

## 2.4 SUPPORTS

### A. Water Closet Carrier:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Jay R Smith.
  - b. Josam Company.
  - c. Zurn Industries, LLC.
  - d. Or approved equal
2. Standard: ASME A112.6.1M.
3. Description: Waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet; bolts and hardware matching fixture.

## PART 3 - EXECUTION

### 3.1 INSTALLATION, GENERAL

#### A. Water-Closet Installation:

1. Install level and plumb according to roughing-in drawings.
2. Install accessible, wall-mounted water closets at mounting height for handicapped/elderly, according to ICC/ANSI A117.1.

#### B. Support Installation:

1. Install supports, affixed to building substrate, for floor-mounted, back-outlet water closets.
2. Use carrier supports with waste-fitting assembly and seal.
3. Install wall-mounted, back-outlet water-closet supports with waste-fitting assembly and waste-fitting seals; and affix to building substrate.

#### C. Flushometer-Valve Installation:

1. Install flushometer-valve, water-supply fitting on each supply to each water closet.
2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
3. Install actuators in locations that are easy for people with disabilities to reach.

#### D. Install toilet seats on water closets.

#### E. Wall Flange and Escutcheon Installation:

1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork.
2. Install deep-pattern escutcheons if required to conceal protruding fittings.
3. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."

F. Joint Sealing:

1. Seal joints between water closets and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
2. Match sealant color to water-closet color.
3. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

3.2 CONNECTIONS

- A. Connect water closets with water supplies and soil, waste, and vent piping. Use size fittings required to match water closets.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."
- D. Where installing piping adjacent to water closets, allow space for service and maintenance.

3.3 ADJUSTING

- A. Operate and adjust water closets and controls. Replace damaged and malfunctioning water closets, fittings, and controls.
- B. Adjust water pressure at flushometer valves to produce proper flow.

3.4 CLEANING AND PROTECTION

- A. Clean water closets and fittings with manufacturers' recommended cleaning methods and materials.
- B. Install protective covering for installed water closets and fittings.
- C. Do not allow use of water closets for temporary facilities unless approved in writing by Owner.

END OF SECTION 224213.13

## SECTION 224216.13 COMMERCIAL LAVATORIES

### PART 1 - GENERAL

#### 1.1 SUMMARY

##### A. Section Includes:

1. Vitreous-china, counter-mounted lavatories.
2. Automatically operated lavatory faucets.
3. Supply fittings.
4. Waste fittings.

#### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Include diagrams for power, signal, and control wiring of automatic faucets.

#### 1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories.

#### 1.4 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

### PART 2 - PRODUCTS

#### 2.1 VITREOUS-CHINA, COUNTER-MOUNTED LAVATORIES

##### A. Lavatory - Vitreous China, Undercounter Mounted:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Standard.
  - b. Kohler Co.
  - c. TOTO USA, INC.
  - d. Or approved equal
2. Fixture:

- a. Standard: ASME A112.19.2/CSA B45.1.
- b. Type: Self-rimming for above-counter mounting.
- c. Nominal Size:
  - 1) Rectangular, 17 by 13 inches.
- d. Color: White.
- e. Mounting Material: Sealant.

## 2.2 AUTOMATICALLY OPERATED LAVATORY FAUCETS

- A. Lavatory faucets intended to convey or dispense water for human consumption are to comply with the U.S. Safe Drinking Water Act (SDWA), with requirements of the Authority Having Jurisdiction (AHJ), and with NSF 61/NSF 372, or be certified in compliance with NSF 61/NSF 372 by an American National Standards Institute (ANSI) accredited third-party certification body, that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.
- B. Lavatory Faucets - Automatic Type: Hardwired Electronic Sensor Operated, Mixing,:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Kohler Co.
    - b. Sloan Valve Company.
    - c. T&S Brass and Bronze Works, Inc.
    - d. Or approved equal
  - 2. Standards: ASME A112.18.1/CSA B125.1 and UL 1951.
  - 3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 4. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and fixture receptor.
  - 5. Body Material: Commercial, solid-brass, or die-cast housing with brazed copper and brass waterway.
  - 6. Finish: Polished chrome plate.
  - 7. Maximum Flow Rate: 0.5 gpm.
  - 8. Mounting Type: Deck, concealed.
  - 9. Spout: Rigid type.
  - 10. Spout Outlet: Aerator.
  - 11. Drain: Not part of faucet.

## 2.3 SUPPLY FITTINGS

- A. NSF Standard: Comply with NSF 61 and NSF 372 for supply-fitting materials that will be in contact with potable water.

- B. Standard: ASME A112.18.1/CSA B125.1.
- C. Supply Piping: Chrome-plated-brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated-brass or stainless steel wall flange.
- D. Supply Stops: Chrome-plated-brass, one-quarter-turn, ball-type or compression valve with inlet connection matching supply piping.
- E. Operation: Loose key.
- F. Risers:
  - 1. NPS 3/8.
  - 2. ASME A112.18.6/CSA B125.6, braided- or corrugated-stainless steel, flexible hose riser.

#### 2.4 WASTE FITTINGS

- A. Standard: ASME A112.18.2/CSA B125.2.
- B. Drain: Grid type with NPS 1-1/4 offset and straight tailpiece.
- C. Trap:
  - 1. Size: NPS 1-1/4.
  - 2. Material:
    - a. Chrome-plated, two-piece, cast-brass trap and swivel elbow with 0.032-inch-thick brass tube to wall; and chrome-plated, brass or steel wall flange.
    - b. Stainless steel, two-piece trap and swivel elbow with 0.012-inch-thick stainless steel tube to wall; and stainless steel wall flange.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Install lavatories level and plumb in accordance with roughing-in drawings.
- B. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- C. Seal joints between lavatories, counters, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."
- D. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible lavatories. Comply with requirements in Section 220719 "Plumbing Piping Insulation."

### 3.2 PIPING CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

### 3.3 ELECTRICAL CONNECTIONS

- A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted in accordance with NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
  - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."

### 3.4 ADJUSTING

- A. Operate and adjust lavatories and controls. Replace damaged and malfunctioning lavatories, fittings, and controls.
- B. Install new batteries in battery-powered, electronic-sensor mechanisms.

### 3.5 CLEANING AND PROTECTION

- A. After completing installation of lavatories, inspect and repair damaged finishes.
- B. Clean lavatories, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed lavatories and fittings.
- D. Do not allow use of lavatories for temporary facilities unless approved in writing by Owner.

END OF SECTION 224216.13

## SECTION 230500 COMMON WORK RESULTS FOR HVAC

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Piping materials and installation instructions common to most piping systems.
  - 2. Mechanical sleeve seals.
  - 3. Sleeves.
  - 4. Escutcheons.
  - 5. Equipment installation requirements common to equipment sections.
  - 6. Painting and finishing.
  - 7. Concrete bases.
  - 8. Supports and anchorages.
  - 9. Specific requirements for conducting work required by this contract.

#### 1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
- F. The following are industry abbreviations for plastic materials:
  - 1. CPVC: Chlorinated polyvinyl chloride plastic.
  - 2. PE: Polyethylene plastic.
  - 3. PVC: Polyvinyl chloride plastic.
- G. The following are industry abbreviations for rubber materials:

1. EPDM: Ethylene-propylene-diene terpolymer rubber.
2. NBR: Acrylonitrile-butadiene rubber.

#### 1.4 SUBMITTALS

A. Product Data: For the following:

1. Transition fittings.
2. Dielectric fittings.
3. Mechanical sleeve seals.
4. Escutcheons.

B. Welding certificates.

#### 1.5 QUALITY ASSURANCE

A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

C. Electrical Characteristics for HVAC Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

#### 1.7 COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for HVAC installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for HVAC items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section "Access Doors and Frames."

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:
  - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the manufacturers specified.

### 2.2 PIPE, TUBE, AND FITTINGS

- A. Refer to individual Division 23 piping Sections for pipe, tube, and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

### 2.3 JOINING MATERIALS

- A. Refer to individual Division 23 piping Sections for special joining materials.

### 2.4 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
  - 1. Manufacturers:
    - a. Advance Products & Systems, Inc.
    - b. Calpico, Inc.
    - c. Metraflex Co.
    - d. Pipeline Seal and Insulator, Inc.
    - e. Or approved equivalent.
  - 2. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
  - 3. Pressure Plates: Carbon steel. Include two for each sealing element.
  - 4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

### 2.5 SLEEVES

- A. Galvanized-Steel Sheet: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.
- B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.
- C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

- D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
  - 1. Underdeck Clamp: Clamping ring with set screws.
- E. Molded PVC: Permanent, with nailing flange for attaching to wooden forms.
- F. PVC Pipe: ASTM D 1785, Schedule 40.
- G. Molded PE: Reusable, PE, tapered-cup shaped, and smooth-outer surface with nailing flange for attaching to wooden forms.

## 2.6 ESCUTCHEONS

- A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.
- C. One-Piece, Cast-Brass Type: With set screw.
  - 1. Finish: Polished chrome-plated
- D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
  - 1. Finish: Polished chrome-plated.
- E. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

## PART 3 - EXECUTION

### 3.1 COMPLIANCE WITH CODES, STANDARDS AND REGULATIONS

- A. In addition to general instructions contained in the General or Project Requirements, equipment and its installation shall conform to the following applicable codes, standards and regulations, latest editions:
  - 1. American Society for Testing and Materials (ASTM).
  - 2. American Society of Mechanical Engineers (ASME).
  - 3. American National Standard Institute (ANSI).
  - 4. American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE).
  - 5. American Refrigeration Institute (ARI).
  - 6. American Welding Society Code (AWS).
  - 7. Code for Pressure Piping (ANSI B 31.1).
  - 8. International Building Code – New Jersey Edition (IBC).
  - 9. International Mechanical Code – New Jersey Edition (IMC.)
  - 10. National Electrical Code (NEC).
  - 11. National Fire Protection Association (NFPA).
  - 12. National and Local Building, Plumbing and Mechanical Codes.
  - 13. Occupational Safety & Health Act (OSHA).
  - 14. Sheet Metal & Air Conditioning Contractors National Association (SMACNA).
  - 15. Underwriters' Laboratories, Inc. (UL).

16. Air Moving and Conditioning Association, Inc. (AMCA).
17. Associated Air Balance Council (AABC).
18. National Environmental Balancing Bureau (NEBB).
19. Building Officials and Code Administrators (BOCA).
20. Hydraulic Institute (HI).
21. Manufacturer's Standardization Society (MSS).
22. Cooling Tower Institute (CTI).
23. Environmental Protection Agencies - Federal, State and Local (EPA).

### 3.2 STANDARD OF QUALITY

- A. The specifications establish the standards of quality required, either by description or by references to brand name, name of manufacturers or manufacturer's model number.
- B. Where one product only is specifically identified by name or manufacturer's model number, the Contractor shall base his bid on the use of the named product. Where multiple names are used, the Contractor shall base his bid on the use of any of those products named. The Contractor is advised that the scheduled manufacturer on the contract drawings and/or the first manufacturer listed in the specifications is the manufacturer whose equipment was used as the Basis of Design. As such the other manufacturer's listed may have variances requiring additional coordination and revisions to the product of other trades. The Contractor bears full responsibility for the cost of any changes incurred by using equipment other than the Basis of Design noted equipment.
- C. When equipment and/or materials are proposed to be purchased from a manufacturer other than those specified, the Contractor shall provide data sufficient to inform the Engineer of the basis of equality of the substitution to that of the equipment and/or materials specified.
- D. When equipment other than that specified is used, the Contractor shall be responsible for any extra cost of required revisions such as structural steel, concrete, electrical, piping, ductwork and any engineering review or redesign, etc. Such additional cost shall be identified at the time such substitutions are proposed.
- E. Contractor is responsible for the installation of all systems and equipment in strict accordance with the equipment or systems manufacturer's recommendations and/or requirements. In the event that the contract documents are not in accordance with the manufacturer's recommendations, the Contractor must notify the Engineer of the discrepancy, prior to proceeding with the installation of the equipment.

### 3.3 PROTECTION OF WORK

- A. Contractor is responsible for the protection of his materials, equipment and completed work as defined in the General or Project Requirements and as supplemented herein.
- B. All openings into any part of the piping and duct systems, all fixtures and equipment must be securely covered or otherwise protected to prevent damage due to dropped tools or materials, work by others or intrusion of grit, dirt or other foreign matter. The Contractor shall be held responsible for all damage done to unprotected work or materials.
- C. All equipment on site, whether stored or installed, shall be protected with weather tight covers.

### 3.4 MOVING OF EQUIPMENT

- A. Verify that mechanical equipment will pass through all restricting openings, and when equipment or sections of equipment are larger than these openings, install this equipment prior to construction of enclosing walls, floors or roofs.
- B. Use planking or cribbing as required to protect adjoining existing construction or new construction from damage.

### 3.5 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 23 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping to permit valve servicing.
- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Install escutcheons for penetrations of walls, ceilings, and floors.
- M. Sleeves are not required for core-drilled holes.
- N. Permanent sleeves are not required for holes formed by removable PE sleeves.
- O. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.
- P. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
  - 1. Cut sleeves to length for mounting flush with both surfaces.

- a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
  2. Install sleeves in new walls and slabs as new walls and slabs are constructed.
  3. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
    - a. Steel Pipe Sleeves: For pipes smaller than NPS 6.
    - b. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.
    - c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level. Refer to Division 07 Section "Sheet Metal Flashing and Trim" for flashing.
      - 1) Seal space outside of sleeve fittings with grout.
  4. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 07 Section "Joint Sealants" for materials and installation.
- Q. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
1. Install steel pipe for sleeves smaller than 6 inches in diameter.
  2. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter.
  3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- R. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
1. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- S. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to "Firestopping" specification for additional requirements.
- T. Verify final equipment locations for roughing-in.
- U. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.
- 3.6 PIPING JOINT CONSTRUCTION
- A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.

- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

### 3.7 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

### 3.8 CUTTING, PATCHING AND PAINTING

- A. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.
- B. Provide all openings through walls, floors and ceilings, etc. required for the installation of work defined on the Contract Drawings and Specifications.
- C. Following installation and testing, restore floors, walls and ceilings with materials equivalent to the original construction and finish to match existing surfaces. All existing fire ratings shall be maintained without exception.
- D. Cutting and patching shall be performed only by tradesmen familiar with the construction involved.

### 3.9 FLASHING

- A. Where ducts, pipes or other items pass through any roof, wall or other exterior component, provide flashing as detailed on Contract Drawings. At a minimum, for roofing penetrations, contractor shall finalize all penetrations in accordance with roofing system manufacturer's requirements (whether warranty is valid or invalid). If roof warranty is intact, contractor shall notify roofing manufacturer prior to commencing work to insure all warranties will be maintained post work completion.

### 3.10 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.

1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
7. Use 3000-psi, 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Miscellaneous Cast-in-Place Concrete."

### 3.11 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 05 Section "Structural Steel Framing" for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor HVAC materials and equipment. Provide all miscellaneous steel supports and anchors required for equipment and materials installed under this Specification. Manual of Construction by American Institute of Steel Construction latest edition shall be followed in design and construction except paragraph 4.2.1 and 4.2.2, Section 4 of Division 5, page 5-177 will not apply. Structural steel members shall conform to ASTM A36, and shall have a shop applied coat of rust inhibitive paint.
- C. Field Welding: Comply with AWS D1.1.
- D. Bolts, nuts and washer shall be high tensile type minimum 3/4" diameter conforming to ASTM A325.

END OF SECTION 230500

## SECTION 230513 COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

#### 1.2 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
  - 1. Motor controllers.
  - 2. Torque, speed, and horsepower requirements of the load.
  - 3. Ratings and characteristics of supply circuit and required control sequence.
  - 4. Ambient and environmental conditions of installation location.

### PART 2 - PRODUCTS

#### 2.1 GENERAL MOTOR REQUIREMENTS

- A. Comply with requirements in this Section except when stricter requirements are specified in HVAC equipment schedules or Sections.
- B. Comply with NEMA MG 1 unless otherwise indicated.

#### 2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

#### 2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.

1. For motors with 2:1 speed ratio, consequent pole, single winding.
  2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Rotor: Random-wound, squirrel cage.
- F. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- G. Temperature Rise: Match insulation rating.
- H. Insulation: Class F.
- I. Code Letter Designation:
1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
  2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.
- J. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

#### 2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
- B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
  2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
  3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
  4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

#### 2.5 SINGLE-PHASE MOTORS

- A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
1. Permanent-split capacitor.
  2. Split phase.
  3. Capacitor start, inductor run.
  4. Capacitor start, capacitor run.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.

June 4, 2021  
Issue for Bid

Parking Deck  
Union County Justice Complex  
Elizabeth, New Jersey

- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

END OF SECTION 230513

## SECTION 230517 SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section Includes:
  - 1. Sleeves.
  - 2. Sleeve-seal systems.
  - 3. Grout.

#### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

### PART 2 - PRODUCTS

#### 2.1 SLEEVES

- A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
- B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.
- E. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

#### 2.2 SLEEVE-SEAL SYSTEMS

- A. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
  - 1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
  - 2. Pressure Plates: Carbon steel.
  - 3. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating of length required to secure pressure plates to sealing elements.

### 2.3 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

## PART 3 - EXECUTION

### 3.1 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
  - 1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
  - 1. Cut sleeves to length for mounting flush with both surfaces.
    - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
  - 2. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
  - 1. Cut sleeves to length for mounting flush with both surfaces.
  - 2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
  - 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Section 079220 "Interior Joint Sealants."
- E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 078413 "Penetration Firestopping."

### 3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.

- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

### 3.3 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
  - 1. Exterior Concrete Walls above Grade:
    - a. Piping Smaller than NPS 6 Cast-iron wall sleeves.
    - b. Piping NPS 6 and Larger: Cast-iron wall sleeves.
  - 2. Exterior Concrete Walls below Grade:
    - a. Piping Smaller than NPS 6 Cast-iron wall sleeves with sleeve-seal system.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
    - b. Piping NPS 6 Cast-iron wall sleeves with sleeve-seal system.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  - 3. Concrete Slabs-on-Grade:
    - a. Piping Smaller than NPS 6 Cast-iron wall sleeves with sleeve-seal system.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
    - b. Piping NPS 6 and Larger: Cast-iron wall sleeves with sleeve-seal system.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  - 4. Concrete Slabs above Grade:
    - a. Piping Smaller than NPS 6 Galvanized-steel-pipe sleeves.
    - b. Piping NPS 6 and Larger: Galvanized-steel-pipe sleeves.
  - 5. Interior Partitions:
    - a. Piping Smaller than NPS 6 Galvanized-steel-pipe sleeves.
    - b. Piping NPS 6 and Larger: Galvanized-steel-sheet sleeves.

END OF SECTION 230517

## SECTION 230529 HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section Includes:
1. Metal pipe hangers and supports.
  2. Trapeze pipe hangers.
  3. Thermal-hanger shield inserts.
  4. Fastener systems.
  5. Equipment supports.

#### 1.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
1. Design supports for multiple pipes capable of supporting combined weight of supported systems, system contents, and test water.
  2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
  3. Design seismic-restraint hangers and supports for piping and equipment and obtain approval from authorities having jurisdiction.

#### 1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following; include Product Data for components:
1. Trapeze pipe hangers.
  2. Equipment supports.
- C. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- D. Welding certificates.

#### 1.4 QUALITY ASSURANCE

- A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

### PART 2 - PRODUCTS

#### 2.1 METAL PIPE HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
  - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
  - 2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
  - 3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
  - 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
  - 5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
- B. Stainless-Steel Pipe Hangers and Supports:
  - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
  - 2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
  - 3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.
- C. Copper Pipe Hangers:
  - 1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
  - 2. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-coated steel or stainless steel.

#### 2.2 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

#### 2.3 THERMAL-HANGER SHIELD INSERTS

- A. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig or ASTM C 591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength and vapor barrier.
- B. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- C. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

- D. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

#### 2.4 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
- B. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated or stainless-steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

#### 2.5 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

#### 2.6 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
  - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
  - 2. Design Mix: 5000-psi, 28-day compressive strength.

### PART 3 - EXECUTION

#### 3.1 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
  - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
  - 2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- D. Fastener System Installation:
  - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are

- licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- E. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- F. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- G. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- H. Install lateral bracing with pipe hangers and supports to prevent swaying.
- I. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- J. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- K. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- L. Insulated Piping:
1. Attach clamps and spacers to piping.
    - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
    - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
    - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
  2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
    - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
  3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
    - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
  4. Shield Dimensions for Pipe: Not less than the following:
    - a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
    - b. NPS 4: 12 inches long and 0.06 inch thick.
    - c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
    - d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.

- e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
- 5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
- 6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

### 3.2 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

### 3.3 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove welding flux immediately.
  - 4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

### 3.4 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

### 3.5 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
  - 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- B. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Division 09 painting Sections.

- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

### 3.6 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports and metal trapeze pipe hangers and attachments for general service applications.
- F. Use stainless-steel pipe hangers and stainless-steel or corrosion-resistant attachments for hostile environment applications.
- G. Use copper-plated pipe hangers and copper or stainless-steel attachments for copper piping and tubing.
- H. Use padded hangers for piping that is subject to scratching.
- I. Use thermal-hanger shield inserts for insulated piping and tubing.
- J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
  - 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F, pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
  - 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
  - 4. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  - 5. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
  - 6. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
  - 7. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
  - 8. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction might occur.
  - 9. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
- K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
  2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.
- L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
  2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
- M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
  2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
  3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
  4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
  5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
  6. C-Clamps (MSS Type 23): For structural shapes.
  7. Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:
    - a. Light (MSS Type 31): 750 lb.
    - b. Medium (MSS Type 32): 1500 lb.
    - c. Heavy (MSS Type 33): 3000 lb.
  8. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
  9. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
- N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
  2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
  3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
  2. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
  3. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
- P. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

Parking Deck  
Union County Justice Complex  
Elizabeth, New Jersey

- Q. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.

END OF SECTION 230529

SECTION 230548 –VIBRATION ISOLATION AND WIND LOAD RESTRAINTS FOR HVAC COMPONENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications Sections apply to this Section
- B. This section specifies required vibration control for all equipment, where applicable, with the wind load requirements for all equipment in outdoor locations. Additionally, included are provisions for flood control as stated herein. When projects are located in a geographically active wind or flood location, Section 1.4, General Design and Performance Requirements, will elaborate on those requirements and include specifics pertaining to a facility's "continued operation." Para. 1.2, Section D is a partial list of components covered herein. This specification is part of the general conditions for the HVAC contract.

1.2 SUMMARY

- A. This section includes the following:
  - 1. All equipment, piping, ductwork and conduit as noted on the drawing's schedule or in the specification shall be seismically braced if the building is so classified as listed herein. Vibration control shall apply as described in all cases herein.
  - 2. All outdoor equipment, including roof-mounted components, shall comply with section 1609, Wind Load, IBC-2018. There shall be no decrease of the effects of wind load on a component due to other structures or components acting as blocks or screens.
  - 3. All below, at grade or above grade locations located in a flood hazard area as defined and located herein.
  - 4. Wind, flood load and isolation materials shall be the certified products of the same manufacturing group and shall be certified by that group.
  - 5. It is the intent of the wind load portion of this specification to keep all mechanical building system components in place during a seismic or high wind event and additionally operational where the occupancy category of the building so requires as listed herein.
  - 6. All such systems must be installed in strict accordance with wind codes, component manufacturer's and building construction standards.
  - 7. This specification is considered to be minimum requirements for wind, flood and vibration control considerations.
  - 8. Any variation, which results in non-compliance with the specification requirements, shall be corrected by the contractor in an approved manner.
- B. The work in this section includes, but is not limited to, the following:
  - 1. Vibration isolation for piping, ductwork, bus duct, cable tray conduit and equipment, all referred to as components.

2. Component isolation bases.
  3. Wind restraints for isolated components.
  4. Wind restraints for non-isolated components.
  5. Certification of wind restraint designs.
  6. Installation supervision.
  7. Design of attachment of housekeeping pads.
  8. All components requiring IBC compliance and certification.
  9. All inspection and test procedures for components requiring IBC compliance.
- C. All mechanical equipment, pipe and ductwork, within, on or outdoors of the building and entry of services to the building, up to but not including, the utility connection, is part of this Specification.
- D. Components referred to below are typical. (Components not listed are still included in this specification.) All systems that are part of the building in any way are referred to as components, including:
- |                        |                             |
|------------------------|-----------------------------|
| ▪ AC Units             | ▪ Fan Coil Units            |
| ▪ Adapter Curb         | ▪ Gas Detection Systems     |
| ▪ Air Handling Units   | ▪ Heat Exchangers           |
| ▪ Air Separators       | ▪ Humidifiers               |
| ▪ Boilers              | ▪ Pipe                      |
| ▪ Cabinet Unit Heaters | ▪ Pumps (all types)         |
| ▪ Chillers             | ▪ Risers                    |
| ▪ Compressor           | ▪ Rooftop Units             |
| ▪ Computer Room Units  | ▪ Supports                  |
| ▪ Condensing Units     | ▪ Tanks (all types)         |
| ▪ Cooling Towers       | ▪ Unit Heaters              |
| ▪ Curbs                | ▪ Unit Ventilators          |
| ▪ Dry Coolers          | ▪ Variable Frequency Drives |
| ▪ Ductwork             | ▪ VAV Boxes                 |
| ▪ Equipment Supports   | ▪ Vibration Isolators       |
| ▪ Fans (all types)     | ▪ Water Heaters             |

### 1.3 DEFINITIONS (BUILDING AND COMPONENTS, ALL CODES)

#### A. ESSENTIAL FACILITIES, (Occupancy Category, IBC-2018)

1. Buildings and other structures that are intended to remain operational in the event of extreme environmental loading from flood, wind, snow or earthquakes.

#### B. General

1. Anchor: A device, such as an expansion bolt, for connecting equipment bracing members to the structure of a building.
2. Approved Agency: An established and recognized agency regularly engaged in conducting tests or furnishing analytical or inspection services, when such agency has been approved.

3. Attachment: See Positive Attachment below.
4. Basic Wind Speed: The basic wind speed, in mph, for determination of the wind loads shall be as per Section 1609 (IBC-2018), or local code, if more severe. Local jurisdictions shall determine wind speeds for indicated special wind regions located near gorges or mountainous terrain. Section 6.5.4 of ASCE 7-05 shall be used after determination of basic wind speed by the local jurisdiction. See Section 1609.3 ASCE 7-05 for basic wind speed determination in non-hurricane prone regions.
5. Bracing: Metal channels, cables or hanger angles that prevent components from breaking away from the structure during an earthquake or high winds. See also Longitudinal Bracing and Transverse Bracing. Together, they resist environmental loads from any direction.
6. Certificate of Compliance: A certificate stating that materials and products meet specified standards or that work was done in compliance with approved construction documents, provided by an approved agency. (Certificate to be supplied by equipment component manufacturer.)
7. Component: A non-structural part or element of an architectural, electrical, mechanical, plumbing or fire protection system within or without of a building system.
8. Component Importance Factor: Factor applied to a component that defines the criticality of that component. This factor can be 1.0 or 1.5.
9. Component, flexible: Component, including its attachments, having a fundamental period greater than 0.06 seconds.
10. Component, rigid: Component, including its attachments, having a fundamental period less than or equal to 0.06 seconds.
11. Consequential Damage: The functional and physical interrelationship of components, their supports and their effect on each other shall be considered so that the failure of an essential or non-essential architectural, mechanical or electrical component shall not cause the failure of an essential architectural, mechanical or electrical component.
12. Equipment: Systems associated with ducts, pipes and conduits also called components.
13. Flood or Flooding: A general and temporary condition or partial and complete inundation of normally dry land from:
  - a. The overflow of inland or tidal waters.
  - b. The unusual and rapid accumulation of runoff of surface waters from any source.
14. Flood Hazard Area: The greater of the following of two areas:
  - a. The area within a flood plain subject to a 1 percent or greater chance of flooding in any year.
  - b. The area designated as a flood hazard area on a community's flood hazard map, or otherwise legally designated.
15. Special Flood Hazard Area Subject to High Velocity Wave Action: Area within the flood hazard area that is subject to high velocity wave action and shown on a Flood Insurance Rate Map (FIRM) or other flood hazard map as zone V, VO, VE or VI-30.

16. Flood Insurance Rate Map (FIRM): An official map of a community on which the Federal Emergency Management Agency (FEMA) has delineated both the special flood hazard areas and the risk premium zones applicable to the community.
17. Gas pipes: For the purposes of this Specification Guide, gas pipe is any pipe that carries fuel, gas, fuel oil, medical gas, or compressed air.
18. Hazardous Contents: A material that is highly toxic or potentially explosive or corrosive and in sufficient quantity to pose a significant life-safety threat to the general public if an uncontrolled release were to occur.
19. Hurricane Prone Regions: Areas prone to hurricanes include the U.S. Atlantic Ocean, Gulf Coasts, Hawaii, Puerto Rico, Guam, Virgin Islands, and American Samoa where the wind speed is greater than 90 mph.
20. Importance Factor, I: A factor that accounts for the degree of hazard to human life and damage to property.
21. Inspection Certificate: An identification applied on a product by an approved agency containing the name of the manufacturer, the function and performance characteristics, and the name and identification of an approved agency that indicates that the product or material has been inspected and evaluated by an approved agency (see Section 1703.5 and “Label” and “Manufacturer’s Designation” and “Mark”).
22. Label: An identification applied on a product by the manufacturer that contains the name of the manufacturer, the function and performance characteristics, and the name and identification of an approved agency that indicates that the representative sample of the product or material has been tested and evaluated by an approved agency (see Section 1703.5 and “Inspection Certificate,” “Manufacturer’s Designation” and “Mark”).
23. Lateral forces: A force acting on a component in the horizontal plane. This force can be in any direction.
24. Longitudinal bracing: Bracing that prevents a component from moving in the direction of its run.
25. Longitudinal force: An applied force that happens to be in the same direction as the duct or pipe run.
26. Mark: An identification applied on a product by the manufacturer indicating the name of the manufacturer and the function of a product or material (see also “Inspection Certificate,” “Label” and “Manufacturer’s Designation”).
27. Manufacturer’s Designation: An identification applied on a product by the manufacturer indicating that a product or material complies with a specified standard or set of rules (see also “Inspection Certificate,” “Label” and “Mark”).
28. Occupancy Category: A classification used to determine structural load requirements including those imposed by wind, flood, snow and seismic based on occupancy of the structure.
29. Positive Attachment: A mechanical device, designed to resist seismic forces, which connects a non-structural element, such as a duct, to a structural element, such as a beam. Bolts and welding are examples of positive attachments. Surface glue and friction anchorage do not constitute positive attachment. Examples of positive attachment are epoxy cast in anchors and drill in wedge shaped anchor bolts to concrete and welded or bolted connections directly to the building

structure. Double-sided beam clamps, C type are not acceptable as either brace point attachments to the structure or for the support of the component at the bracing location.

30. Site Class: A classification assigned to a site based on the types of soils present and their engineering properties as defined in Table 1613.5.2 (IBC-2018).
31. Special Inspection: Inspection as herein required of the materials, installation, fabrication, erection or placement of components and connections requiring special documents and referenced standards (see Section 1704, IBC-2018).
32. Special Inspection, Continuous: The full-time observation of work requiring special inspection by an approved special inspector who is present in the area where the work is being performed.
33. Special Inspection, Periodic: The part-time or intermittent observation of work requiring special inspection by an approved special inspector who is present in the area where the work has been or is being performed and at the completion of the work.
34. Story Drift Ratio: The story drift (Lateral displacement) divided by the story height.
35. Wind-Borne Debris Region: Portions of hurricane-prone regions that are within 1 mile of the coastal mean high water line where the basic wind speed is 110 mph or greater, or portions of hurricane-prone regions where the basic wind speed is 120 mph or greater; or Hawaii.

#### 1.4 GENERAL DESIGN AND PERFORMANCE REQUIREMENTS

##### A. General Design Requirements.

1. SEISMIC AND WIND CONSIDERATIONS: This project has seismic and wind design requirements as follows:
  - a. Per table provided by the Structural Engineer on S-200:

LATERAL LOAD DESIGN SCHEDULE			
INTERNATIONAL BUILDING CODE 2018/ASCE 7-16			
WIND LOAD			
ITEM	SYMBOL	VALUE	REFERENCE
BASIC WIND SPEED (3 SEC. GUST)	V	114	FIGURE 1609.3
RISK CATEGORY	-	II	TABLE 1.5-1
WIND EXPOSURE CATEGORY	-	B	SECTION 1609.4.3
SEISMIC LOAD			
ITEM	SYMBOL	VALUE	REFERENCE
IMPORTANCE FACTOR	$I_E$	1.0	TABLE 1.5-2
SHORT PERIOD SPECTRAL ACCELERATION	$S_{DS}$	0.245	SECTION 1613.2.4
(1) SECOND PERIOD SPECTRAL ACCELERATION	$S_{D1}$	0.059	SECTION 1613.2.4
RISK CATEGORY	-	II	TABLE 1604.5
SEISMIC DESIGN CATEGORY	-	B	SECTION 11.6
SITE CLASSIFICATION	-	C	TABLE 20.3-1
SEISMIC FORCE-RESISTING SYSTEM	-	INTERMEDIATE P/C CONCRETE SHEAR WALL	TABLE 12.2-1
RESPONSE MODIFICATION COEFFICIENT	R	4	TABLE 12.2-1
DEFLECTION AMPLIFICATION FACTOR	$C_d$	4	TABLE 12.2-1
SEISMIC BASE SHEAR	V	-	SECTION 12.8.1
ANALYSIS PROCEDURE	EQUIVALENT LATERAL FORCE PROCEDURE		SECTION 12.8

2. FLOOD CONSIDERATIONS: This project has design requirements in accordance with FEMA and/or FIRM as follows:

a. NONE.

B. General Design Performance Requirements

1. Design Wind Loads:

a. All outdoor mounted components shall be positively fastened to their supporting structure as discussed below. Fastening to metal deck is unacceptable.

- 1) If component is curb mounted, article 7, Design Seismic Loads, paragraph g shall be followed for all roof-mounted components in excess of 9 sq. ft. in cross-sectional area. Curbs shall be as described in Base type B-3 if isolated, Base type B-4 if non-isolated.
- 2) If component is support mounted, article 7, Design Seismic Loads, paragraph g shall be followed for all roof-mounted components requiring waterproofed rail supports. Equipment supports shall be Base type B-5 if isolated, Base type B-6 if non-isolated.
- 3) If equipment is dunnage mounted, positive attachment shall occur through welding or bolting of equipment to dunnage steel.

- b. Loads and calculations shall be based on IBC-2018, figure 1609 and related sections in ASCE 7-05.
- c. Where buildings are less than or equal to 60 feet in height to the top of the roof slab (not parapet walls), the force on roof-mounted components shall be based on Section 6.5.15.1, ASCE 7-05.
- d. Equivalent basic wind speed shall be based on IBC-2018, Table 1609.3.1.
- e. In no event shall adjacent buildings, structures or screens be considered to diminish the calculated wind load or its effect on an outdoor component.

## 1.5 SUBMITTALS

- A. Refer to Part 1, General.
- B. Product Data: The manufacturer of vibration isolation, seismic, wind and flood restraints shall provide submittals for products as follows:
  1. Descriptive Data:
    - a. Catalog cuts or data sheets on vibration isolators and specific restraints detailing compliance with the specification.
    - b. Detailed schedules of flexible and rigidly mounted equipment, showing vibration isolators and restraints by referencing numbered descriptive drawings.
  2. Shop Drawings:
    - a. Submit fabrication details for equipment bases including dimensions, structural member sizes and support point locations.
    - b. Provide all details of suspension and support for ceiling hung equipment.
    - c. Provide specific details of restraints and anchors, include number, size and locations for each piece of equipment. Restraint and anchor allowables shall be by structural testing, shake testing, analysis or third party certification.
    - d. Calculations shall be submitted as required in Section 1.4, General Design and Performance Requirements.

## 1.6 QUALITY ASSURANCE

- A. Manufacturer of vibration isolation and wind load control equipment or manufacturer's approved representative shall have the following responsibilities:
  1. Determine vibration isolation and restraint sizes and locations.
  2. Provide vibration isolation and restraints as scheduled or specified.
  3. Provide calculations and materials, if required, for restraint of non-isolated equipment.
  4. Provide installation instructions in writing, drawings and trained field supervision, where necessary, to insure proper installation and performance.
  5. Certify correctness of installation upon completion, in writing.
  6. All provisions of Section 1.4, General Design and Performance Requirements.

- B. All manufacturers of vibration control, wind or flood restraining systems must provide a Design Error and Omissions Insurance Certificate for their firm or their design consultant to certify their ability to provide engineering and design as required by this section. This document shall be provided at the time of first submittal from the restraint provider.
- C. All manufacturers of any type of equipment including OEM are responsible for Section 1.4.
- D. Equipment manufacturer's substitution of internally or externally isolated and/or restrained equipment supplied by the equipment vendor, in lieu of the isolation and restraints specified in this section, is acceptable provided all conditions of this section are met.
- E. All costs for converting to the specified vibration isolation and/or restraints shall be borne by the component vendor in the event of non-compliance with the preceding. Substitution of internal isolation is unacceptable.

#### 1.7 RELATED WORK

- A. Housekeeping pad structural design, including its attachment to building structure, shall be by the structural engineer of record or as shown on the contract drawings. Attachment of all components and restraints to the pad and size of the pad shall be designed and certified according to this section by the seismic/isolation supplier. Material and labor required for attachment and construction shall be by the concrete section contractor, or by the contractor where specified. Housekeeping pads shall be sized to accommodate a minimum 6" of clearance all around the equipment; or 12 times the outermost anchor bolt diameter, whichever is greater. Where exterior isolators are used, this distance shall be as measured from the outermost holes in the isolator base plate to the edge of the housekeeping pad.
- B. The project's structural engineer shall design all roof and interior steel to support and make connections to all components, including roof-mounted equipment specified in other sections. Design shall comply with IBC requirements including load path to structure.
- C. Roof steel supporting roof-mounted equipment shall be designed for all wind forces including, but not limited to, tension, compression and moment loads.
- D. Chimneys, stacks and boiler breeching passing through floors are to be attached at each floor level with a riser guide.

#### 1.8 CODE AND STANDARDS REQUIREMENTS

- A. Typical Applicable Codes and Standards
  - 1. All City, State and Local Codes (Code)
    - a. American Society For Testing and Materials (ASTM) (Standard)
    - b. International Conference of Building Officials (ICBO) (Standard)
    - c. International Building Code (Code)
    - d. ASHRAE (Standard reference, to be used for design purposes only, not code).
    - e. VISCMA (Vibration Isolation and Seismic Controls Manufacturers Association) (Standard reference, to be used for design purposes only, not code).
- B. In cases where requirements vary, the guideline for the most stringent shall be utilized.
- C. International Fire Code

- D. Use IBC-2018 as reference code standard unless otherwise designated.

## PART 2 - PRODUCTS

### 2.1 DESCRIPTION

- A. All vibration isolators and seismic restraints described in this Section shall be the product of a single manufacturer. The basis of this specification is The VMC Group, including Vibration Mountings & Controls, Amber/Booth, Korfund Dynamics or approved equal. Products from other nationally recognized manufacturers are acceptable provided their systems strictly comply with these specifications and have the approval of the specifying engineer. Manufacturer shall be a regular member of VISCMA (Vibration Isolation and Seismic Controls Manufacturers Association). See Form VL-1 listing other manufacturers to be considered for use on this project.

### 2.2 VIBRATION ISOLATION TYPES

- A. Type A: Spring Isolator – Free Standing,  
A\*

1. Spring isolators shall be free standing and laterally stable without any housing and complete with a molded elastomeric cup or ¼” elastomeric acoustical friction pad between the bottom of isolator and the support.
2. All mountings shall have leveling bolts that must be rigidly bolted to the equipment.
3. Spring diameters shall be no less than 0.8” of the compressed height of the spring at rated load.
4. Springs shall have a minimum additional travel to solid equal to 50% of the operating deflection.

- B. Type B: Wind Restrained Spring Isolator  
MS, MSS, AEQM, ASCM, AMSR

1. Restrained spring mountings shall have a Type A spring isolator within a rigid housing that includes vertical limit stops to prevent spring extension if weight is removed. The housing shall serve as blocking during erection. A maximum clearance of ¼” shall be maintained around restraining bolts and internal elastomeric deceleration bushings. Limit stops shall be out of contact during normal operation. If housings are to be bolted or welded in position there must be an internal isolation pad or elastomeric cup. Housing shall be designed to resist all seismic forces.

- C. Type C: Combination Spring/Elastomer Hanger Isolator (30° Type)  
HRSA

1. Hangers shall consist of rigid steel frames containing minimum 1 ¼” thick elastomeric elements at the top and a steel spring with general characteristics as in Type A. The elastomeric element shall have resilient bushings projecting through the steel box.
2. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30° arc from side to side before contacting the rod bushing and short-circuiting the spring.
3. Submittals shall include a hanger drawing showing the 30° capability.

4. Hanger locations requiring pre-compression for holding piping at fixed elevation shall be type pre-compressed or pre-positioning for all manufacturers.
- D. Type D: Elastomer Double Deflection Hanger Isolator  
HR
1. Molded (minimum 1 ¼” thick) elastomeric element with projecting bushing lining the rod clearance hole. Static deflection at rated load shall be a minimum of 0.35.”
  2. Steel retainer box encasing elastomeric mounting capable of supporting equipment up to two times the rated capacity of the element.
- E. Type E: Combination Spring/Elastomer Hanger Isolator  
HRS
1. Spring and elastomeric elements in a steel retainer box with the features as described for Type C and D isolators.
  2. Hanger locations requiring pre-compression for holding piping at fixed elevation shall be type pre-compressed or pre-positioning for all manufacturers.
  3. 30° angularity feature is not required.
- F. Type F: Wind Restrained Elastomer Floor Isolator  
RSM, MB, RUD
1. Bridge-bearing elastomeric mountings shall have a minimum static deflection of 0.2” and all-directional seismic capability. The mount shall consist of a ductile iron or aluminum casting containing molded elastomeric elements. The elements shall prevent the central threaded sleeve and attachment bolt from contacting the casting during normal operation. The shock-absorbing elastomeric materials shall be compounded to bridge-bearing or Durulene™ specifications.
- G. Type G: Pad Type Elastomer Isolator (Standard)  
Maxiflex
1. One layer of ¾” thick elastomeric pad consisting of 2” square modules for size required.
  2. Load distribution plates shall be used as required.
  3. Bolting required for seismic compliance. Elastomeric and duck washers and bushings shall be provided to prevent short-circuiting.
- H. Type H: Pad Type Elastomer Isolator (High Density)  
Fabri-Flex, NDB, NRC
1. Laminated canvas duck and neoprene, maximum loading 1000 psi, minimum ½” thick.
  2. Load distribution plate shall be used as required.
  3. Bolting required for seismic compliance. Elastomeric and duck washers and bushings shall be provided to prevent short-circuiting.
- I. Type I: Thrust Restraints  
RSHTR, TRK

1. A spring element similar to Type A isolator shall be combined with steel angles, backup plates, threaded rod, washers and nuts to produce a pair of devices capable of limiting movement of air handling equipment to ¼" due to thrust forces. Contractor shall supply hardware.
2. Thrust restraints shall be installed on all cabinet fan heads, axial or centrifugal fans whose thrust exceeds 10% of unit weight.

J. Type J: Pipe Anchors  
MDPA, AG

1. All-directional acoustical pipe anchor, consisting of two sizes of steel tubing or piping separated by a minimum ½" thick 60 durometer elastomer.
2. Vertical restraint shall be provided by similar material arranged to prevent vertical travel in either direction.
3. Applied loads on the isolation material shall not exceed 500 psi and the design shall be balanced for equal resistance in any direction.

K. Type K: Pipe Guides  
PG/AG/SWP/SWX

1. Pipe guides shall consist of a telescopic arrangement of two sizes of steel tubing or piping separated by a minimum ½" thickness of 60 durometer elastomer.
2. The height of the guides shall be preset with a shear pin to allow vertical motion due to pipe expansion or contraction. Shear pin shall be removable and replaceable to allow for selection of pipe movement.
3. Guides shall be capable of ± 1 5/8" motion, or to meet location requirements.

L. Type L: Isolated Pipe Hanger System  
CIH, CIR, TIH, PIH

1. Pre-compressed spring and elastomer isolation hanger combined with pipe support into one assembly. Replaces standard clevis, single or double rod roller, or double rod fixed support.
2. Spring element (same as Type A) with steel lower spring retainer and an upper elastomer retainer cup with an integral bushing to insulate support rod from the isolation hanger.
3. The elastomeric element under the lower steel spring retainer shall have an integral bushing to insulate the support rod from the steel spring retainer.
4. Hangers shall be designed and constructed to support loads over three times the rated load without failure.
5. Systems shall be pre-compressed to allow for rod insertion and standard leveling.

2.3 WIND RESTRAINT TYPES

A. Type I: Spring Isolator, Restrained  
MS, MSS, AEQM, ASCM, AMRS

1. Refer to vibration isolation Type B.
- B. Type II: Wind Restrained Elastomer Floor Isolator  
MB, RUD
  1. Refer to vibration isolation Type F.
- C. Type III: All-Directional Wind Snubber  
SR, ER
  1. All-directional snubbers shall consist of interlocking steel members restrained by an elastomeric bushing. Bushing shall be replaceable and a minimum of 1/4" thick. Applied loading shall not exceed 1000 psi. A minimum air gap of 1/8" shall be incorporated in the snubber design in all directions before contact is made between the rigid and resilient surfaces. Snubber end caps shall be removable to allow inspection of internal clearances. Elastomeric bushings shall be rotated to insure no short circuits exist before systems are activated.
- D. Type IV: Floor or Roof Anchorage  
Cast-In Plates
  1. Rigid attachment to structure utilizing wedge type anchor bolts, anchored plates, machine screw, bolting or welding. Power shots are unacceptable.

## 2.4 EQUIPMENT BASES

- A. General
  1. All curbs and roof rails are to be bolted or welded to the building steel or anchored to the concrete deck (minimum thickness shall be 4") for resisting wind and seismic forces in accordance with the project location. (Fastening to metal deck is unacceptable.)
- B. Base Types
  1. Type B-1: Integral Structural Steel Base  
WFB, SFB, WSB
    - a. Rectangular bases are preferred for all equipment.
    - b. Centrifugal refrigeration machines and pump bases may be T or L shaped where space is a problem. Pump bases for split case and end suction pumps shall include supports for suction and discharge elbows.
    - c. All perimeter members shall be structural steel beams with a minimum depth equal to 1/12 of the longest dimension between isolators.
    - d. Base depth need not exceed 12" provided that the deflection and misalignment is kept within acceptable limits as determined by the manufacturer.
    - e. Height saving brackets shall be employed in all mounting locations to provide a minimum base clearance of 2."
  2. Type B-2: Concrete Inertia Base  
MPF, WPF, CPF
    - a. Vibration isolation manufacturer shall furnish rectangular welded or bolted modular steel concrete pouring forms for floating and inertia foundations.

- b. Bases for split case and end suction pumps shall be large enough to provide for suction and discharge elbows.
  - c. Bases shall be a minimum of 1/12 of the longest dimension between isolators but not less than 6.”
  - d. The base depth need not exceed 12” unless specifically recommended by the base manufacturer for mass or rigidity.
  - e. Forms shall include a minimum concrete reinforcing consisting of 3/8” bars welded in place a maximum of 16” on centers running both ways in a layer 1 to 1½” above the bottom.
  - f. Forms shall be furnished with steel templates to hold the component anchor bolts sleeves and anchors while concrete is being poured.
  - g. Height saving brackets shall be employed in all mounting locations to maintain a 2” minimum operational clearance below the base.
3. Type B-3: Wind Load Isolation Curb  
P6200, P6300
- a. Option: Sound Package 1 & 2 VMC/AB-RPFMA/SRPFMA
    - 1) Curb-mounted rooftop equipment shown on isolation schedule shall be mounted on structural wind restrained spring isolation curbs. The upper frame must provide continuous support for the equipment and must be captive so as to resiliently resist wind load forces. The lower frame must accept point support for both wind load attachment and leveling. The upper frame must be designed with positive fastening provisions (welding or bolting), to anchor the rooftop unit to the curb, which will not violate the National Roofing Contractors Association (NRCA) ratings of the membrane waterproofing. Sheet metal screws are only acceptable if all provisions in Section 1.4, Article B, paragraph 7, Design Wind Loads, are met. Contact points between the rooftop unit, the curb and the building’s structure shall show load path through those locations only.
    - 2) All-directional elastomeric snubber bushings shall be minimum of ¼” thick. Steel springs shall be laterally stable and rest on ¼” thick elastomeric acoustical pads or cups.
    - 3) Hardware must be plated and the springs shall be powder-coated or cadmium-plated.
    - 4) The curb’s waterproofing shall be designed to meet all NRCA requirements.
    - 5) All spring locations shall have full spring view access ports with removable waterproof covers and all isolators shall be adjustable, removable and interchangeable.
    - 6) Isolated curbs shall be supplied with a continuous air seal between the upper floating member and the stationary wood nailer.
4. Type B-4: Wind Load Non-Isolated Curbs  
P6000
- a. Option: Sound Package VMC-RPFMA/SRPFMA System
    - 1) Wind load curbs shall have all provisions as Type B-3 curbs with the exception of spring isolation.
    - 2) System shall be designed for positive anchorage or welding of equipment to supports and welding of supports to the building steel, capable of carrying the design wind loads.
5. Type B-5: Isolated Equipment Supports  
R7200/R7300

- a. Continuous structural equipment support rails that combine equipment support and isolation mounting into one unitized roof flashed assembly with all features as described for Type B-3.
  - b. System shall be designed for positive anchorage or welding of equipment to supports and welding of supports to the building steel, capable of carrying the design wind loads.
6. Type B-6: Non-Isolated Equipment Supports  
R7000
- a. This shall have the same provisions as Type B-5 without the spring isolation.
7. Type B-8 AHU / AC unit Structural Base Frames
- a. Where roof mounted Air Conditioning or Air Handling Units are placed on steel platforms and are incapable of being point loaded or supported, structural frames shall be furnished which will either match the centerline dimensions of the unit's base frame rail or its curb dimensions. The structural frame shall have provisions to be welded or bolted to the unit's base frame and shall be supported on type "B" wind restrained isolation system.
  - b. Isolator deflection shall be either 1.5" or 2.5" depending on the tonnage of the roof mounted component as shown in Isolation Table "A". Structural Base Frame shall be type RTSBF as manufactured by The VMC Group.

2.5 FLEXIBLE CONNECTORS

A. Type FC-2: Flexible Stainless Steel Hose  
SS-FP, SS-FW, SS-PM, SS-WE

- 1. Flexible stainless steel hose shall have stainless steel braid and carbon steel fittings. Sizes 3" and larger shall be flanged. Smaller sizes shall have male nipples.

B. Type BC-2 connector shall be braided bronze for Freon connections.

- 1. Minimum lengths shall be as tabulated:

<u>Flanged</u>		<u>Male Nipples</u>	
3 x 14	10 x 26	½ x 9	1 ½ x 13
4 x 15	12 x 28	¾ x 10	2 x 14
5 x 19	14 x 30	1 x 11	2 ½ x 18
6 x 20	16 x 32	1 ¼ x 12	8 x 22

- 2. Hoses shall be installed on the equipment side of the shut-off valves horizontally and parallel to the equipment shafts wherever possible.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. All areas that will receive components requiring vibration control or wind load bracing shall be thoroughly examined for deficiencies that will affect their installation or performance. Such deficiencies shall be corrected prior to the installation of any such system.

- B. Examine all “rough ins” including anchors and reinforcing prior to placement.

### 3.2 APPLICATIONS

- A. All vibration isolators and wind restraint systems must be installed in strict accordance with the manufacturer’s written instructions and all certified submittal data.
- B. Installation of vibration isolators and wind restraints must not cause any change of position of equipment, piping or ductwork resulting in stresses or misalignment.
- C. No rigid connections between equipment and the building structure shall be made that degrades the noise and vibration control system specified herein.
- D. The contractor shall not install any isolated components in a manner that makes rigid connections with the building unless isolation is not specified. “Building” includes, but is not limited to, slabs, beams, columns, studs and walls.
- E. Coordinate work with other trades to avoid rigid contact with the building.
- F. Overstressing of the building structure must not occur due to overhead support of equipment. Contractor must submit loads to the structural engineer of record for approval. General bracing may occur from flanges of structural beams, upper truss cords in bar joist construction and cast in place inserts or wedge type drill-in concrete anchors.
- G. Vibration isolation manufacturer shall furnish integral structural steel bases as required. Independent steel rails are not permitted.
- H. Air handling equipment and centrifugal fans shall be protected against excessive displacement which results from high air thrust in relation to the equipment weight. Horizontal thrust restraints shall be those described in the specification when horizontal motion exceeds 3/8.”

### 3.3 EQUIPMENT INSTALLATION

- A. Equipment shall be isolated and/or restrained as per Tables A-E at the end of this section.
- B. Place floor mounted equipment on 4” actual height concrete housekeeping pads properly sized and doweled or expansion shielded to the structural deck. Anchor isolators and/or bases to housekeeping pads. Concrete work is specified under that section of the contract documents.
- C. Additional Requirements:
  - 1. The minimum operating clearance under all isolated components bases shall be 2.”
  - 2. All bases shall be placed in position and supported temporarily by blocks or shims, as appropriate, prior to the installation of the equipment, isolators and restraints.
  - 3. All components shall be installed on blocks to the operating height of the isolators. After the entire installation is complete and under full load including water, the isolators shall be adjusted so that the load is transferred from the blocks to the isolators. Remove all debris from beneath the equipment and verify that there are no short circuits of the isolation. The equipment shall be free to move in all directions, within the limits of the restraints.

4. All floor or wall-mounted equipment and tanks shall be restrained with Type V restraints.

### 3.4 PIPING AND DUCTWORK ISOLATION

#### A. Vibration Isolation of Piping:

1. HVAC Water Piping: All spring type isolation hangers shall be pre-compressed or pre-positioned if isolators are installed prior to fluid charge. If installed afterwards, field pre-compressed isolators can be used. All HVAC piping in the machine room shall be isolated. Heat exchangers and expansion tanks are considered part of the piping run. The first 3 isolators from the isolated equipment shall have at least the same static deflection as specified for the mountings under the connected equipment. If piping is connected to equipment located in basements and hangs from ceilings under occupied spaces, the first 3 hangers shall have 0.75" nominal deflection or greater for pipe sizes up to and including 3," 1 3/8" nominal deflection or greater for pipe sizes greater than 3." Where column spacing exceeds 35', isolation hanger deflection shall be 2½" for pipes exceeding 3" diameter. Type L hangers may be substituted for the above where isolation hangers are required.
2. Plumbing Water Lines: Plumbing water lines in the machine room shall only be isolated if connected to isolated equipment. (See Table B.) Isolator type shall be as listed in Article 1, above.
3. Gas lines shall not be isolated.
4. Fire protection lines shall not be isolated.

PART 4 - SELECTION GUIDE FOR VIBRATION ISOLATION AND WIND RESTRAINTS

TABLE "A" HVAC EQUIPMENT										
EQUIPMENT (See Notes)	ON GRADE, BASEMENT OR SLAB ON GRADE						ABOVE GRADE			
	Size/Type	Mtg	Isol	Nom Defl*	Base	Restr	Isol	Nom Defl*	Base	Restr

\*See Minimum Deflection Guide for Equipment with Low RPM

\*Where Component cannot be point supported, Base Type B-1 shall be used.

Minimum Deflection Guide for Equipment with Low RPM:

Lowest RPM of Rotating Equipment	Minimum Actual Deflection
Less Than 400	3.5"
401 thru 600	2.5"

601 thru 900	1.5"
Greater than 900	0.75"

General Notes for Table:

1. Abbreviations:
  - (1) Mtg = Mounting
  - (2) ol = Vibration Isolator Type per Section 2.2, Vibration Isolation Types
  - (3) Defl = Minimum Deflection of Vibration Isolator
  - (4) Base = Base Type per Section 2.4, Equipment Bases
  - (5) Restr = Seismic Restraint Type per Section 2.3 Seismic Restraint Types
2. All deflections indicated are in inches. For equipment with variable speed driven components having driven operating speed below 600 rpm, select isolation deflection from minimum deflection guide.
3. For roof applications, use base Type B-5.
4. Units may not be capable of point support. Refer to separate air handling unit specification section. If that section does not provide base and external isolation is required, provide Type B-1 base by this section for entire unit.
5. Static deflection shall be determined based on the deflection guide for Table "A."
6. Deflections indicated are minimums at actual load and shall be selected for manufacturer's nominal 5," 4," 3," 2" and 1" deflection spring series; RPM is defined as the lowest operating speed of the equipment.
7. Single stroke compressors may require inertia bases with thicknesses greater than 14" maximum as described for base B-2. Inertia base mass shall be sufficient to maintain double amplitude for 1/8."
8. Floor mounted fans, substitute base Type B-2 for class 2 or 3 or any fan having static pressure over 5."
9. Indoor utility sets with wheel diameters less than 24" need not have deflections greater than .75."
10. Curb-mounted fans with curb area less than 9 square feet are excluded.
11. For equipment with multiple motors, Horsepower classification applies to largest single motor.

END OF SECTION 230548

## SECTION 230553 IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section Includes:
  - 1. Equipment labels.
  - 2. Warning signs and labels.
  - 3. Pipe labels.
  - 4. Duct labels.
  - 5. Valve tags.

#### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve numbering scheme.
- E. Valve Schedules: For each piping system to include in maintenance manuals.

#### 1.3 COORDINATION

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

### PART 2 - PRODUCTS

#### 2.1 EQUIPMENT LABELS

- A. Plastic Labels for Equipment:
  - 1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
  - 2. Letter Color: White.
  - 3. Background Color: Black.

4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
7. Fasteners: Stainless-steel rivets or self-tapping screws.
8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

- B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

## 2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: White. Unless otherwise directed by owner.
- C. Background Color: Red. Unless otherwise directed by owner.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

## 2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- D. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
  1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.

2. Lettering Size: At least 1-1/2 inches high.

#### 2.4 DUCT LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: White.
- C. Background Color: Green.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, duct size, and an arrow indicating flow direction.
  1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions, or as separate unit on each duct label to indicate flow direction.
  2. Lettering Size: At least 1-1/2 inches high.

#### 2.5 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
  1. Tag Material: Brass, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
  2. Fasteners: Brass wire-link or beaded chain; or S-hook.
- B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
  1. Valve-tag schedule shall be included in operation and maintenance data.

### PART 3 - EXECUTION

#### 3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

### 3.2 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

### 3.3 PIPE LABEL INSTALLATION

- A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
  - 1. Near each valve and control device.
  - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
  - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
  - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
  - 5. Near major equipment items and other points of origination and termination.
  - 6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
  - 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- B. Pipe Label Color Schedule:
  - 1. Refrigerant and Air-Conditioning Condensate Piping:
    - a. Background Color: Green.
    - b. Letter Color: White.

### 3.4 DUCT LABEL INSTALLATION

- A. Install plastic-laminated or self-adhesive duct labels with permanent adhesive on air ducts in the following color codes:
  - 1. Green: For supply-, exhaust-, outside-, relief-, return-, and mixed-air ducts.
  - 2. ASME A13.1 Colors and Designs: For hazardous material exhaust.
- B. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 50 feet in each space where ducts are exposed or concealed by removable ceiling system.

### 3.5 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.

- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
1. Valve-Tag Size and Shape:
    - a. Refrigerant: 1-1/2 inches, round.
  2. Valve-Tag Color:
    - a. Refrigerant: Natural.
  3. Letter Color:
    - a. Refrigerant: Black.

END OF SECTION 230553

## SECTION 230593 TESTING, ADJUSTING, AND BALANCING FOR HVAC

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. This Section includes Testing, Adjusting and Balancing (TAB) to produce design objectives for the following:
  - 1. Balancing Air Systems:
    - a. Constant-volume air systems.
  - 2. Balancing and Verification that automatic control devices are functioning properly for all equipment covered by this Section including their interlock/monitoring with the fire alarm system.
  - 3. Reporting results of activities and procedures specified in this Section.

#### 1.2 DEFINITIONS

- A. AABC: Associated Air Balance Council.
- B. NEBB: National Environmental Balancing Bureau.
- C. TAB: Testing, adjusting, and balancing.
- D. TABB: Testing, Adjusting, and Balancing Bureau.
- E. TAB Specialist: An entity engaged to perform TAB Work.

#### 1.3 SUBMITTALS

- A. Strategies and Procedures Plan: Within 30 days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.
- B. Certified TAB reports.

#### 1.4 QUALITY ASSURANCE

- A. TAB Contractor Qualifications: Engage a TAB entity certified by AABC NEBB or TABB.
  - 1. TAB Field Supervisor: Employee of the TAB contractor and certified by AABC NEBB or TABB.
  - 2. TAB Technician: Employee of the TAB contractor and who is certified by AABC NEBB or TABB as a TAB technician.
- B. Certify TAB field data reports and perform the following:
  - 1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.

2. Certify that the TAB team complied with the approved TAB plan and the procedures specified and referenced in this Specification.
- C. TAB Report Forms: Use standard TAB contractor's forms approved by Owner.
- D. Instrumentation Type, Quantity, Accuracy, and Calibration: As described in ASHRAE 111, Section 5, "Instrumentation."

## PART 2 - PRODUCTS (Not Applicable)

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment.
- B. Examine systems for installed balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are accessible.
- C. Examine the approved submittals for HVAC systems and equipment.
- D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.
- E. Examine ceiling plenums and underfloor air plenums used for supply, return, or relief air to verify that they meet the leakage class of connected ducts as specified in Division 23 Section "Metal Ducts" and are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.
- F. Examine equipment performance data including fan and pump curves.
  1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
  2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.
- G. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.
- H. Examine test reports specified in individual system and equipment Sections.
- I. Examine HVAC equipment and filters and verify that bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.
- J. Examine operating safety interlocks and controls on HVAC equipment.

- K. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

### 3.2 PREPARATION

- A. Prepare a TAB plan that includes strategies and step-by-step procedures.
- B. Complete system-readiness checks and prepare reports. Verify the following:
  - 1. Permanent electrical-power wiring is complete.
  - 2. Automatic temperature-control systems are operational.
  - 3. Equipment and duct access doors are securely closed.
  - 4. Balance, smoke, and fire dampers are open.
  - 5. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
  - 6. Windows and doors can be closed so indicated conditions for system operations can be met.

### 3.3 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance" or ASHRAE 111 or NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems" or SMACNA's "HVAC Systems - Testing, Adjusting, and Balancing" and in this Section.
- B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
  - 1. After testing and balancing, patch probe holes in ducts with same material and thickness as used to construct ducts.
  - 2. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Division 23 Section "HVAC Insulation."
- C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.
- D. Take and report testing and balancing measurements in inch-pound (IP) and metric (SI) units.

### 3.4 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

- A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' "as-built" duct layouts.
- C. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.
- D. Check airflow patterns from the outdoor-air louvers and dampers and the supply- and exhaust-air dampers through the supply and exhaust-fan discharge.
- E. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.

- F. Verify that motor starters are equipped with properly sized thermal protection.
- G. Check dampers for proper position to achieve desired airflow path.
- H. Check for airflow blockages.
- I. Check condensate drains for proper connections and functioning.
- J. Check for proper sealing of exhaust fan components.
- K. Verify that air duct system is sealed as specified in Division 23 Section "Metal Ducts."

### 3.5 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

- A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
  - 1. Measure total airflow.
    - a. Where sufficient space in ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow.
  - 2. Measure fan static pressures as follows to determine actual static pressure:
    - a. Measure outlet static pressure as far downstream from the fan as practical and upstream from restrictions in ducts such as elbows and transitions.
    - b. Measure static pressure directly at the fan outlet or through the flexible connection.
    - c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from the flexible connection, and downstream from duct restrictions.
  - 3. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
  - 4. Obtain approval from Owner for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in Division 23 Sections for adjustment of fans, belts, and pulley sizes to achieve indicated unit performance.
  - 5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full-exhaust, full-supply, and any other operating mode to determine the maximum required brake horsepower.
- B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows within specified tolerances.
  - 1. Measure airflow of submain and branch ducts.
    - a. Where sufficient space in submain and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.
  - 2. Measure static pressure at a point downstream from the balancing damper, and adjust volume dampers until the proper static pressure is achieved.

3. Remeasure each submain and branch duct after all have been adjusted. Continue to adjust submain and branch ducts to indicated airflows within specified tolerances.
- C. Measure air outlets and inlets without making adjustments.
1. Measure terminal outlets using a direct-reading hood or outlet manufacturer's written instructions and calculating factors.
- D. Adjust air outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Make adjustments using branch volume dampers rather than extractors and the dampers at air terminals.
1. Adjust each outlet in same room or space to within specified tolerances of indicated quantities without generating noise levels above the limitations prescribed by the Contract Documents.
  2. Adjust patterns of adjustable outlets for proper distribution without drafts.

### 3.6 PROCEDURES FOR MOTORS

- A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:
1. Manufacturer's name, model number, and serial number.
  2. Motor horsepower rating.
  3. Motor rpm.
  4. Efficiency rating.
  5. Nameplate and measured voltage, each phase.
  6. Nameplate and measured amperage, each phase.
  7. Starter thermal-protection-element rating.
- B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass of the controller to prove proper operation. Record observations including name of controller manufacturer, model number, serial number, and nameplate data.

### 3.7 TOLERANCES

- A. Set HVAC system's air flow rates and water flow rates within the following tolerances:
1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus or minus 10 percent.
  2. Air Outlets and Inlets: Plus or minus 10 percent.

### 3.8 REPORTING

- A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems' balancing devices. Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.
- B. Status Reports: Prepare weekly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being

tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

### 3.9 FINAL REPORT

- A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
  2. Include a list of instruments used for procedures, along with proof of calibration.
- B. Final Report Contents: In addition to certified field-report data, include the following:
1. Pump curves.
  2. Fan curves.
  3. Manufacturers' test data.
  4. Field test reports prepared by system and equipment installers.
  5. Other information relative to equipment performance; do not include Shop Drawings and product data.
- C. General Report Data: In addition to form titles and entries, include the following data:
1. Title page.
  2. Name and address of the TAB contractor.
  3. Project name.
  4. Project location.
  5. Engineer's name and address.
  6. Contractor's name and address.
  7. Report date.
  8. Signature of TAB supervisor who certifies the report.
  9. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
  10. Summary of contents including the following:
    - a. Indicated versus final performance.
    - b. Notable characteristics of systems.
    - c. Description of system operation sequence if it varies from the Contract Documents.
  11. Nomenclature sheets for each item of equipment.
  12. Data for terminal units, including manufacturer's name, type, size, and fittings.
  13. Notes to explain why certain final data in the body of reports vary from indicated values.
  14. Test conditions for fans and pump performance forms including the following:
    - a. Settings for outdoor-, return-, and exhaust-air dampers.
    - b. Conditions of filters.
    - c. Cooling coil, wet- and dry-bulb conditions.
    - d. Face and bypass damper settings at coils.
    - e. Fan drive settings including settings and percentage of maximum pitch diameter.
    - f. Inlet vane settings for variable-air-volume systems.
    - g. Settings for supply-air, static-pressure controller.
    - h. Other system operating conditions that affect performance.

- D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outdoor, supply, return, and exhaust airflows.
  2. Water and steam flow rates.
  3. Duct, outlet, and inlet sizes.
  4. Pipe and valve sizes and locations.
  5. Terminal units.
  6. Balancing stations.
  7. Position of balancing devices.
- E. Air-Handling-Unit Test Reports <RTU, AHU, MUA, IDU>: For air-handling units with coils, include the following:
1. Unit Data:
    - a. Unit identification.
    - b. Location.
    - c. Make and type.
    - d. Model number and unit size.
    - e. Manufacturer's serial number.
    - f. Unit arrangement and class.
    - g. Discharge arrangement.
    - h. Sheave make, size in inches, and bore.
    - i. Center-to-center dimensions of sheave, and amount of adjustments in inches.
    - j. Number, make, and size of belts.
    - k. Number, type, and size of filters.
  2. Motor Data:
    - a. Motor make, and frame type and size.
    - b. Horsepower and rpm.
    - c. Volts, phase, and hertz.
    - d. Full-load amperage and service factor.
    - e. Sheave make, size in inches, and bore.
    - f. Center-to-center dimensions of sheave, and amount of adjustments in inches.
  3. Test Data (Indicated and Actual Values):
    - a. Total air flow rate in cfm.
    - b. Total system static pressure in inches wg.
    - c. Fan rpm.
    - d. Discharge static pressure in inches wg.
    - e. Filter static-pressure differential in inches wg.
    - f. Cooling-coil static-pressure differential in inches wg.
    - g. Heating-coil static-pressure differential in inches wg.
    - h. Heating Coil Temperature Difference in deg F.
    - i. Cooling Coil Temperature Difference in deg F.
    - j. Heating and Cooling Entering Air Temperature in deg F.
    - k. Heating and Cooling Leaving Air Temperature in deg F.
    - l. Outdoor airflow in cfm.
    - m. Return airflow in cfm.
    - n. Outdoor-air damper position.
    - o. Variable frequency drive settings.

- F. Fan Test Reports <SF, EF, TF>: For supply, return, and exhaust fans, include the following:
1. Fan Data:
    - a. System identification.
    - b. Location.
    - c. Make and type.
    - d. Model number and size.
    - e. Manufacturer's serial number.
    - f. Arrangement and class.
    - g. Sheave make, size in inches, and bore.
    - h. Center-to-center dimensions of sheave, and amount of adjustments in inches.
  2. Motor Data:
    - a. Motor make, and frame type and size.
    - b. Horsepower and rpm.
    - c. Volts, phase, and hertz.
    - d. Full-load amperage and service factor.
    - e. Sheave make, size in inches, and bore.
    - f. Center-to-center dimensions of sheave, and amount of adjustments in inches.
    - g. Number, make, and size of belts.
  3. Test Data (Indicated and Actual Values):
    - a. Total airflow rate in cfm.
    - b. Total system static pressure in inches wg.
    - c. Fan rpm.
    - d. Discharge static pressure in inches wg.
    - e. Suction static pressure in inches wg.
- G. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
1. Report Data:
    - a. System and air-handling-unit number.
    - b. Location and zone.
    - c. Traverse air temperature in deg F.
    - d. Duct static pressure in inches wg.
    - e. Duct size in inches.
    - f. Duct area in sq. ft..
    - g. Indicated air flow rate in cfm.
    - h. Indicated velocity in fpm.
    - i. Actual air flow rate in cfm.
    - j. Actual average velocity in fpm.
    - k. Barometric pressure in psig.
- H. Air-Terminal-Device Reports <CD, SR, SG, RR, RG, ER, EG>:
1. Unit Data:
    - a. System and air-handling unit identification.
    - b. Location and zone.

- c. Apparatus used for test.
  - d. Area served.
  - e. Make.
  - f. Number from system diagram.
  - g. Type and model number.
  - h. Size.
  - i. Effective area in sq. ft.
2. Test Data (Indicated and Actual Values):
    - a. Air flow rate in cfm.
    - b. Air velocity in fpm.
    - c. Preliminary air flow rate as needed in cfm.
    - d. Preliminary velocity as needed in fpm.
    - e. Final air flow rate in cfm.
    - f. Final velocity in fpm.
    - g. Space temperature in deg F.
- I. Instrument Calibration Reports:
    1. Report Data:
      - a. Instrument type and make.
      - b. Serial number.
      - c. Application.
      - d. Dates of use.
      - e. Dates of calibration.
- 3.10 INSPECTIONS
- A. Initial Inspection:
    1. After testing and balancing efforts are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the Final Report.
  - B. Final Inspection:
    1. After initial inspection is complete and evidence by random checks verifies that testing and balancing are complete and accurately documented in the final report, request that a final inspection be made by Owner, Engineer and/or Commissioning Agent.
    2. TAB firm test and balance representative shall conduct the inspection in the presence of the Owner, Engineer and/or Commissioning Agent.
    3. The Engineer or Commissioning Agent shall randomly select measurements documented in the final report to be rechecked. The rechecking shall be limited to either 10 percent of the total measurements recorded, or the extent of measurements that can be accomplished in a normal 8-hour business day.
    4. If the rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."

5. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.
6. TAB firm shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes and resubmit the final report.
7. Request a second final inspection. If the second final inspection also fails, Owner shall contract the services of another TAB firm to complete the testing and balancing in accordance with the Contract Documents and deduct the cost of the services from the final payment.

3.11 ADDITIONAL TESTS

- A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.
- B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

END OF SECTION 230593

## SECTION 230700 MECHANICAL INSULATION

### PART 1 - GENERAL

#### 1.1 SUMMARY

A. This Section includes mechanical insulation for duct, equipment, and pipe including the following:

1. Insulation Materials:
  - a. Flexible elastomeric.
  - b. Mineral fiber.
2. Fire-rated insulation systems.
3. Insulating cements.
4. Adhesives.
5. Mastics.
6. Sealants.
7. Factory-applied jackets.
8. Field-applied fabric-reinforcing mesh.
9. Field-applied jackets.
10. Tapes.
11. Securements.
12. Corner angles.

#### 1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show details for the following:

1. Application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
2. Attachment and covering of heat tracing inside insulation.
3. Insulation application at pipe expansion joints for each type of insulation.
4. Insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
5. Removable insulation at piping specialties, equipment connections, and access panels.
6. Application of field-applied jackets.
7. Application at linkages of control devices.
8. Field application for each equipment type.

C. Field quality-control inspection reports.

#### 1.3 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, and cement material containers, with appropriate markings of applicable testing and inspecting agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

B. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

C. Insulation products shall carry ISO 9000/9001/9002 certification or guaranteed to meet the ISO standards.

#### 1.4 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

#### 1.5 DEFINITIONS

A. Exposed: Piping located in mechanical equipment rooms and in indoor areas which will be visible without removing ceilings or opening access panels.

B. Concealed: Indoor piping which is not exposed.

C. Outdoor: Piping which is exposed to the weather.

D. Underground: Piping which is buried; whereas piping located in a trench below grade is considered concealed.

#### 1.6 REFERENCE STANDARDS

A. Published specifications standards, tests or recommended methods of trade, industry or governmental organizations apply to work in this Section.

B. Comply with all applicable national, state and local codes and refer to specification 230500 Common Work Results for HVAC for additional reference standards.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Products: Subject to compliance with requirements, provide one of the products specified.

#### 2.2 INSULATION MATERIALS

A. Refer to Part 3 schedule articles for requirements about where insulating materials shall be applied.

- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials. Thermal conductivity (k-value) at 75 deg F is 0.25 Btu x in./h x sq. ft. x deg F or less.
  - 1. Available Products:
    - a. Aeroflex USA Inc.; Aerocel.
    - b. Armacell LLC; AP Armaflex.
    - c. RBX Corporation; Insul-Sheet 1800 and Insul-Tube 180.
    - d. Or approved equivalent.
- G. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type III with factory-applied FSK jacket. Thermal conductivity (k-value) at 100 deg F is 0.29 Btu x in./h x sq. ft. x deg F or less. Factory-applied jacket requirements are specified in Part 2 "Factory-Applied Jackets" Article.
  - 1. Available Products:
    - a. CertainTeed Corp.; Duct Wrap.
    - b. Johns Manville; Microlite.
    - c. Knauf Insulation; Duct Wrap.
    - d. Manson Insulation Inc.; Alley Wrap.
    - e. Owens Corning; All-Service Duct Wrap.
    - f. Or approved equivalent.
- H. High-Temperature, Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type V, without factory-applied jacket.
  - 1. Available Products:
    - a. Johns Manville; HTB 23 Spin-Glas.
    - b. Owens Corning; High Temperature Flexible Batt Insulations.
    - c. Knauf Insulation
    - d. Or approved equivalent.
- I. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For duct and plenum applications, provide insulation with factory-applied FSK jacket. For equipment applications, provide insulation with factory-applied ASJ. Thermal conductivity (k-value) at 100 deg F is 0.24 Btu x in./h x sq. ft. x deg F or less. Factory-applied jacket requirements are specified in Part 2 "Factory-Applied Jackets" Article.
  - 1. Available Products:
    - a. CertainTeed Corp.; Commercial Board.

- b. Fibrex Insulations Inc.; FBX.
  - c. Johns Manville; 800 Series Spin-Glas.
  - d. Knauf Insulation; Insulation Board.
  - e. Manson Insulation Inc.; AK Board.
  - f. Owens Corning; Fiberglas 700 Series.
  - g. Or approved equivalent.
- J. High-Temperature, Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type III, without factory-applied jacket.
- 1. Available Products:
    - a. Fibrex Insulations Inc.; FBX.
    - b. Johns Manville; 1000 Series Spin-Glas.
    - c. Owens Corning; High Temperature Industrial Board Insulations.
    - d. Rock Wool Manufacturing Company; Delta Board.
    - e. Roxul Inc.; Roxul RW.
    - f. Thermafiber; Thermafiber Industrial Felt.
    - g. Or approved equivalent.
- K. Mineral-Fiber, Preformed Pipe Insulation:
- 1. Available Products:
    - a. Fibrex Insulations Inc.; Coreplus 1200.
    - b. Johns Manville; Micro-Lok.
    - c. Knauf Insulation; 1000 Pipe Insulation.
    - d. Manson Insulation Inc.; Alley-K.
    - e. Owens Corning; Fiberglas Pipe Insulation.
    - f. Or approved equivalent.
  - 2. Type I, 850 deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ-SSL. Factory-applied jacket requirements are specified in Part 2 "Factory-Applied Jackets" Article.
  - 3. Type II, 1200 deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type II, Grade A, with factory-applied ASJ-SSL. Factory-applied jacket requirements are specified in Part 2 "Factory-Applied Jackets" Article.
- L. Mineral-Fiber, Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semirigid board material with factory-applied ASJ complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is 2.5 lb/cu. ft. or more. Thermal conductivity (k-value) at 100 deg F is 0.29 Btu x in./h x sq. ft. x deg F or less. Factory-applied jacket requirements are specified in Part 2 "Factory-Applied Jackets" Article.
- 1. Available Products:
    - a. CertainTeed Corp.; CrimpWrap.
    - b. Johns Manville; MicroFlex.
    - c. Knauf Insulation; Pipe and Tank Insulation.
    - d. Manson Insulation Inc.; AK Flex.
    - e. Owens Corning; Fiberglas Pipe and Tank Insulation.
    - f. Or approved equivalent.

### 2.3 FIRE-RATED INSULATION SYSTEMS

- A. Description: High-temperature, flexible, blanket insulation with FSK jacket that is UL tested and certified to provide a 2-hour fire rating.

1. Available Products:

- a. CertainTeed Corp.; FlameChek.
- b. Johns Manville; Firetemp Wrap.
- c. Nelson Firestop Products; Nelson FSB Flameshield Blanket.
- d. Thermal Ceramics; FireMaster Duct Wrap.
- e. 3M; Fire Barrier Wrap Products.
- f. Unifrax Corporation; FyreWrap.
- g. Vesuvius; PYROSCAT FP FASTR Duct Wrap.
- h. Or approved equivalent.

### 2.4 INSULATING CEMENTS

- A. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449/C 449M.

1. Available Products:

- a. Insulco, Division of MFS, Inc.; SmoothKote.
- b. P. K. Insulation Mfg. Co., Inc.; PK No. 127, and Quik-Cote.
- c. Rock Wool Manufacturing Company; Delta One Shot.
- d. Or approved equivalent.

### 2.5 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

- B. Cellular-Glass and Polystyrene Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F.

1. Available Products:

- a. Childers Products, Division of ITW; CP-96.
- b. Foster Products Corporation, H. B. Fuller Company; 81-33.
- c. RBX Corporation.
- d. Or approved equivalent.

- C. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.

1. Available Products:

- a. Aeroflex USA Inc.; AeroSeal.
- b. Armacell LCC; 520 Adhesive.
- c. Foster Products Corporation, H. B. Fuller Company; 85-75.
- d. RBX Corporation; Rubatex Contact Adhesive.
- e. Or approved equivalent.

- D. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. Available Products:
    - a. Childers Products, Division of ITW; CP-82.
    - b. Foster Products Corporation, H. B. Fuller Company; 85-20.
    - c. ITW TACC, Division of Illinois Tool Works; S-90/80.
    - d. Marathon Industries, Inc.; 225.
    - e. Mon-Eco Industries, Inc.; 22-25.
    - f. Or approved equivalent.
- E. ASJ Adhesive, and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
1. Available Products:
    - a. Childers Products, Division of ITW; CP-82.
    - b. Foster Products Corporation, H. B. Fuller Company; 85-20.
    - c. ITW TACC, Division of Illinois Tool Works; S-90/80.
    - d. Marathon Industries, Inc.; 225.
    - e. Mon-Eco Industries, Inc.; 22-25.
    - f. Or approved equivalent.
- F. PVC Jacket Adhesive: Compatible with PVC jacket.
1. Available Products:
    - a. Dow Chemical Company (The); 739, Dow Silicone.
    - b. Johns-Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
    - c. P.I.C. Plastics, Inc.; Welding Adhesive.
    - d. Red Devil, Inc.; Celulon Ultra Clear.
    - e. Speedline Corporation; Speedline Vinyl Adhesive.
    - f. Or approved equivalent.

## 2.6 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates: Comply with MIL-C-19565C, Type II.
- B. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
1. Available Products:
    - a. Childers Products, Division of ITW; CP-35.
    - b. Foster Products Corporation, H. B. Fuller Company; 30-90.
    - c. ITW TACC, Division of Illinois Tool Works; CB-50.
    - d. Marathon Industries, Inc.; 590.
    - e. Mon-Eco Industries, Inc.; 55-40.
    - f. Vimasco Corporation; 749.
    - g. Or approved equivalent.
  2. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm at 43-mil dry film thickness.
  3. Service Temperature Range: Minus 20 to plus 180 deg F.

4. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.
5. Color: White.

C. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.

1. Available Products:

- a. Childers Products, Division of ITW; CP-10.
- b. Foster Products Corporation, H. B. Fuller Company; 35-00.
- c. ITW TACC, Division of Illinois Tool Works; CB-05/15.
- d. Marathon Industries, Inc.; 550.
- e. Mon-Eco Industries, Inc.; 55-50.
- f. Vimasco Corporation; WC-1/WC-5.
- g. Or approved equivalent.

2. Water-Vapor Permeance: ASTM F 1249, 3 perms at 0.0625-inch dry film thickness.
3. Service Temperature Range: Minus 20 to plus 200 deg F.
4. Solids Content: 63 percent by volume and 73 percent by weight.
5. Color: White.

## 2.7 SEALANTS

A. Joint Sealants:

1. Available Joint Sealants for Cellular-Glass Products:

- a. Childers Products, Division of ITW; CP-76.
- b. Foster Products Corporation, H. B. Fuller Company; 30-45.
- c. Marathon Industries, Inc.; 405.
- d. Mon-Eco Industries, Inc.; 44-05.
- e. Pittsburgh Corning Corporation; Pittseal 444.
- f. Vimasco Corporation; 750.
- g. Or approved equivalent.

2. Available Joint Sealants for Polystyrene Products:

- a. Childers Products, Division of ITW; CP-70.
- b. Foster Products Corporation, H. B. Fuller Company; 30-45/30-46.
- c. Marathon Industries, Inc.; 405.
- d. Mon-Eco Industries, Inc.; 44-05.
- e. Vimasco Corporation; 750.
- f. Or approved equivalent.

3. Materials shall be compatible with insulation materials, jackets, and substrates.
4. Permanently flexible, elastomeric sealant.
5. Service Temperature Range: Minus 100 to plus 300 deg F.
6. Color: White or gray.

B. FSK and Metal Jacket Flashing Sealants:

1. Available Products:

- a. Childers Products, Division of ITW; CP-76-8.

- b. Foster Products Corporation, H. B. Fuller Company; 95-44.
  - c. Marathon Industries, Inc.; 405.
  - d. Mon-Eco Industries, Inc.; 44-05.
  - e. Vimasco Corporation; 750.
  - f. Or approved equivalent.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
  3. Fire- and water-resistant, flexible, elastomeric sealant.
  4. Service Temperature Range: Minus 40 to plus 250 deg F.
  5. Color: Aluminum.

C. ASJ Flashing Sealants, and Vinyl, and PVC Jacket Flashing Sealants:

1. Available Products:
  - a. Childers Products, Division of ITW; CP-76.
  - b. Mon-Eco Industries, Inc.
  - c. Vimasco Corporation.
  - d. Or approved equivalent.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: White.

2.8 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
  2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
  3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
  4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.

2.9 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.
- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Available Products:
    - a. Johns Manville; Zeston.

- b. P.I.C. Plastics, Inc.; FG Series.
    - c. Proto PVC Corporation; LoSmoke.
    - d. Speedline Corporation; SmokeSafe.
    - e. Or approved equivalent.
  2. Adhesive: As recommended by jacket material manufacturer.
  3. Color: White.
  4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
    - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.
  5. Factory-fabricated tank heads and tank side panels.
- D. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105 or 5005, Temper H-14.
  1. Available Products:
    - a. Childers Products, Division of ITW; Metal Jacketing Systems.
    - b. PABCO Metals Corporation; Surefit.
    - c. RPR Products, Inc.; Insul-Mate.
    - d. Or approved equivalent.
  2. Factory cut and rolled to size.
  3. Finish and thickness are indicated in field-applied jacket schedules.
  4. Moisture Barrier for Indoor Applications: 1-mil- thick, heat-bonded polyethylene and kraft paper.
  5. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
  6. Factory-Fabricated Fitting Covers:
    - a. Same material, finish, and thickness as jacket.
    - b. Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
    - c. Tee covers.
    - d. Flange and union covers.
    - e. End caps.
    - f. Beveled collars.
    - g. Valve covers.
    - h. Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
- E. Underground Direct-Buried Jacket: 125-mil- thick vapor barrier and waterproofing membrane consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.
  1. Available Products:
    - a. Pittsburgh Corning Corporation; Pittwrap.
    - b. Polyguard; Insulrap No Torch 125.
    - c. Or approved equivalent.
- F. Self-Adhesive Outdoor Jacket: 60-mil- thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a crosslaminated polyethylene film covered with white aluminum-foil facing.

1. Available Products:
  - a. Polyguard; Alumaguard 60.
  - b. Or approved equivalent.

## 2.10 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136 and UL listed.
  1. Width: 3 inches.
  2. Thickness: 11.5 mils.
  3. Adhesion: 90 ounces force/inch in width.
  4. Elongation: 2 percent.
  5. Tensile Strength: 40 lbf/inch in width.
  6. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136 and UL listed.
  1. Width: 3 inches.
  2. Thickness: 6.5 mils.
  3. Adhesion: 90 ounces force/inch in width.
  4. Elongation: 2 percent.
  5. Tensile Strength: 40 lbf/inch in width.
  6. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive. Suitable for indoor and outdoor applications.
  1. Width: 2 inches.
  2. Thickness: 6 mils.
  3. Adhesion: 64 ounces force/inch in width.
  4. Elongation: 500 percent.
  5. Tensile Strength: 18 lbf/inch in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive and UL listed.
  1. Width: 2 inches.
  2. Thickness: 3.7 mils.
  3. Adhesion: 100 ounces force/inch in width.
  4. Elongation: 5 percent.
  5. Tensile Strength: 34 lbf/inch in width.

## 2.11 SECUREMENTS

- A. Aluminum Bands: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with wing seal.
- B. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:

1. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
  2. Spindle: Aluminum, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
  3. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
- C. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
1. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
  2. Spindle: Nylon, 0.106-inch- diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.
  3. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
- D. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
1. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
  2. Spindle: Aluminum, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
  3. Adhesive-backed base with a peel-off protective cover.
- E. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick, aluminum sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
1. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
- F. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
- G. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.
- H. Wire: 0.062-inch soft-annealed, stainless steel.
- 2.12 CORNER ANGLES
- A. PVC Corner Angles: 30 mils thick, minimum 1 by 1 inch, PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209, Alloy 3003, 3005, 3105 or 5005; Temper H-14.

### PART 3 - EXECUTION

#### 3.1 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

#### 3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

#### 3.3 COMMON INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment, ducts and fittings, and piping including fittings, valves, and specialties.
- B. Install insulation with tightly butted joints free of voids and gaps. Vapor barriers shall be continuous. Before installing jacket material, install vapor-barrier system.
- C. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment, duct system, and pipe system as specified in insulation system schedules.
- D. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- E. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- F. Install multiple layers of insulation with longitudinal and end seams staggered.
- G. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- H. Keep insulation materials dry during application and finishing.
- I. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- J. Install insulation with least number of joints practical.
- K. Hangers and Anchors: Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
  - 1. Install insulation continuously through hangers and around anchor attachments.

2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
  3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
  4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- L. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- M. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth.
  2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
  3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
    - a. For below ambient services, apply vapor-barrier mastic over staples.
  4. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
  5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct and pipe flanges and fittings.
- N. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- O. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- P. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- Q. For above ambient services, do not install insulation to the following:
1. Vibration-control devices.
  2. Testing agency labels and stamps.
  3. Nameplates and data plates.
  4. Manholes.
  5. Handholes.
  6. Cleanouts.
- 3.4 PENETRATIONS
- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.

3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
  4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Below-Grade Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
  4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions. Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches. Seal penetration with firestopping materials to match existing fire rating.
- F. Insulation Installation at Floor Penetrations:
1. Duct: Install insulation continuously through floor penetrations that are not fire rated. For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
  2. Pipe: Install insulation continuously through floor penetrations.
  3. Seal penetrations through fire-rated assemblies with firestopping materials to match existing fire rating.

### 3.5 DUCT AND PLENUM INSULATION INSTALLATION

- A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
  2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
  3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
    - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
    - b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
    - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.

- d. Do not overcompress insulation during installation.
  - e. Impale insulation over pins and attach speed washers.
  - f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from 1 edge and 1 end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
- a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
  - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches.
5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface.
7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch-wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.
- B. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
  2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
  3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
    - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
    - b. On duct sides with dimensions larger than 18 inches, space pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
    - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
    - d. Do not overcompress insulation during installation.
    - e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
  4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from 1 edge and 1 end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
    - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.

- b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches.
5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch-wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

### 3.6 EQUIPMENT, TANK, AND VESSEL INSULATION INSTALLATION

- A. Secure insulation with adhesive and anchor pins and speed washers.
  1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of tank and vessel surfaces.
  2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
  3. Protect exposed corners with secured corner angles.
  4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
    - a. Do not weld anchor pins to ASME-labeled pressure vessels.
    - b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
    - c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches o.c. in both directions.
    - d. Do not overcompress insulation during installation.
    - e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
    - f. Impale insulation over anchor pins and attach speed washers.
    - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
  5. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
  6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches o.c. Use this network for securing insulation with tie wire or bands.
  7. Stagger joints between insulation layers at least 3 inches.
  8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
  9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
  10. For equipment with surface temperatures below ambient, apply vapor-barrier mastic to open ends, joints, seams, breaks, and punctures in insulation. Create a facing lap for longitudinal seams and

end joints with insulation by removing 2 inches from 1 edge and 1 end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.

- B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
  - 1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
  - 2. Seal longitudinal seams and end joints.
- C. Insulation Installation on Pumps:
  - 1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch centers, starting at corners. Install 3/8-inch- diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
  - 2. Fabricate boxes from aluminum, at least 0.040 inch thick.
  - 3. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

### 3.7 PIPE INSULATION INSTALLATION

- A. Requirements in this Article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Secure single-layer insulation with bands at 12-inch intervals and tighten bands without deforming insulation materials.
- C. Install 2-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with 0.062-inch wire spaced at 12-inch intervals. Secure outer layer with bands at 12-inch intervals.
- D. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
- E. Cover segmented insulated surfaces with a layer of insulating cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
- F. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
- G. Stencil or label the outside insulation jacket of each union with the word "UNION." Match size and color of pipe labels.
- H. Insulation Installation on Straight Pipes and Tubes:
  - 1. Secure each layer of preformed insulation to pipe with wire or bands and tighten bands without deforming insulation materials. Orient longitudinal joints between half sections in 3 and 9 o'clock positions on the pipe.

2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above ambient services, secure laps with outward clinched staples at 6 inches o.c.
4. For insulation with factory-applied jackets with vapor barriers, do not staple longitudinal tabs but secure tabs with additional adhesive or tape as recommended by insulation material manufacturer and seal with vapor-barrier mastic.
5. For insulation with factory-applied jackets on below ambient services, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

I. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of same insulation material and thickness as pipe insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.
5. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

J. Insulation Installation on Pipe Fittings and Elbows:

1. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
2. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.

K. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.
5. Install insulation to flanges as specified for flange insulation application.

- L. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- M. Install removable insulation covers at locations indicated. Installation shall conform to the following:
  - 1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
  - 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
  - 3. Construct removable valve insulation covers in same manner as for flanges except divide the two-part section on the vertical center line of valve body.
  - 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
  - 5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.
- N. Special Installation Requirements for Flexible Elastomeric and Polyolefin Insulation:
  - 1. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
  - 2. Insulation Installation on Pipe Flanges:
    - a. Install pipe insulation to outer diameter of pipe flange.
    - b. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
    - c. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
    - d. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
  - 3. Insulation Installation on Pipe Fittings and Elbows:
    - a. Install mitered sections of pipe insulation.
    - b. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

### 3.8 FIELD-APPLIED JACKET INSTALLATION

- A. Where FSK jackets are indicated, install as follows:
  - 1. Draw jacket material smooth and tight.
  - 2. Install lap or joint strips with same material as jacket.
  - 3. Secure jacket to insulation with manufacturer's recommended adhesive.
  - 4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.

5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-retarder mastic.
  - B. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
    1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
  - C. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints. Provide metal jackets for all outdoor piping.
- 3.9 FIRE-RATED INSULATION SYSTEM INSTALLATION
- A. Where fire-rated insulation system is indicated, secure system to ducts and duct hangers and supports to maintain a continuous UL-listed fire rating.
  - B. Insulate duct access panels and doors to achieve same fire rating as duct.
  - C. Install firestopping at penetrations through fire-rated assemblies to maintain existing fire rating.
- 3.10 FINISHES
- A. Duct, Equipment, and Pipe Insulation with ASJ or Other Paintable Jacket Material:
    1. Apply two finish coats of interior, flat, latex-emulsion size over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
  - B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
  - C. Color: Final color as selected by Owner. Vary first and second coats to allow visual inspection of the completed Work.
  - D. Do not field paint aluminum jackets.
- 3.11 FIELD QUALITY CONTROL
- A. Perform the following field tests and inspections and prepare test reports:
    1. Inspect ductwork, randomly selected by Engineer or Construction Manager, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to one location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.
    2. Inspect field-insulated equipment, randomly selected by Engineer or Construction Manager, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to one location(s) for each type of equipment defined in the

"Equipment Insulation Schedule" Article. For large equipment, remove only a portion adequate to determine compliance.

3. Inspect pipe, fittings, strainers, and valves, randomly selected by Engineer or Construction Manager, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- B. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements. Remove defective Work.
- C. Install new insulation and jackets to replace insulation and jackets removed for inspection. Repeat inspection procedures after new materials are installed.

### 3.12 DUCT INSULATION SCHEDULE, GENERAL

A. Plenums and Ducts Requiring Insulation:

1. Indoor, concealed supply and outdoor air.
2. Indoor, exposed supply and outdoor air.
3. Indoor, concealed return located in non-conditioned space.
4. Indoor, exposed return located in non-conditioned space.
5. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
6. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
7. Outdoor, concealed supply and return.
8. Outdoor, exposed supply and return.

B. Items Not Insulated:

1. Fibrous-glass ducts.
2. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
3. Factory-insulated flexible ducts.
4. Factory-insulated plenums and casings.
5. Flexible connectors.
6. Vibration-control devices.
7. Factory-insulated access panels and doors.
8. Refrigerant exhaust duct.

### 3.13 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

- A. Insulation materials and thicknesses are identified below. Refer to Division 23 Section "Metal Ducts" and contract drawings for both rectangular and spiral duct systems requiring duct liner.
- B. Concealed, Supply-Air Duct and Plenum Insulation: Mineral-fiber blanket, 2-1/2 inches thick and 0.75-lb/cu. ft. nominal density.
- C. Concealed, Return-Air Duct and Plenum Insulation: Mineral-fiber blanket, 2-1/2 inches thick and 0.75-lb/cu. ft. nominal density.

- D. Concealed, Outdoor-Air Duct and Plenum Insulation: Mineral-fiber blanket, 2-1/2 inches thick and 0.75-lb/cu. ft. nominal density.
- E. Exposed, Supply-Air Duct and Plenum Insulation: Mineral-fiber board, 2 inches thick and 1.0-lb/cu. ft. nominal density.
- F. Exposed, Return-Air Duct and Plenum Insulation: Mineral-fiber board, 1-1/2 inches thick and 1.0-lb/cu. ft. nominal density.
- G. Exposed, Outdoor-Air Duct and Plenum Insulation: Mineral-fiber board, 2 inches thick and 1.0-lb/cu. ft. nominal density.

### 3.14 ABOVEGROUND, OUTDOOR DUCT AND PLENUM INSULATION SCHEDULE

- A. Insulation materials and thicknesses are identified below. If more than one material is listed for a duct system, selection from materials listed is Contractor's option. Refer to Division 23 Section "Metal Ducts" and contract drawings for systems requiring duct liner and/or utilizing a pre-fabricated, double-wall insulated system.
- B. Supply-Air Duct and Plenum Insulation: Mineral-fiber board, 2 inches thick and 3-lb/cu. ft. nominal density.
- C. Return-Air Duct and Plenum Insulation: Mineral-fiber board, 2 inches thick and 3-lb/cu. ft. nominal density.
- D. Outdoor-Air Duct and Plenum Insulation: Mineral-fiber board, 2 inches thick and 3-lb/cu. ft. nominal density.
- E. Exhaust-Air Duct and Plenum Insulation: Mineral-fiber board, 2 inches thick and 3-lb/cu. ft. nominal density.

### 3.15 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
  - 1. Fire-suppression piping.
  - 2. Drainage piping located in crawl spaces.
  - 3. Below-grade piping.
  - 4. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

### 3.16 INDOOR PIPING INSULATION SCHEDULE

- A. Condensate and equipment drain piping (including all HVAC equipment, cooling coil condensate, boiler condensate, etc.): Mineral-Fiber pipe insulation, Type I, 1 inch thick.
- B. Refrigerant Suction and Liquid Piping: Insulation shall be the following:

1. Flexible elastomeric, 1 inch thick.

3.17 OUTDOOR PIPING INSULATION SCHEDULE

- A. Refrigerant Suction and Liquid Piping: Insulation shall be the following:

1. Flexible elastomeric, 1 inch thick.

3.18 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

- B. If more than one material is listed, selection from materials listed is Contractor's option.

- C. Ducts and Plenums, Concealed:

1. None.

- D. Ducts and Plenums, Exposed:

1. None.

- E. Piping, Concealed:

1. None.

- F. Piping, Exposed:

1. PVC, 30 mils thick.

3.19 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

- B. If more than one material is listed, selection from materials listed is Contractor's option.

- C. Ducts and Plenums:

1. VentureClad Jacketing System, or approved equivalent, for outdoor application.

- D. Piping:

1. PVC, 30 mils thick.
2. Extruded HDPE jacket for pre-insulated piping systems.

END OF SECTION 230700

## SECTION 230710 PENETRATION FIRESTOPPING FOR HVAC

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification Section, apply to work specified in this section.

#### 1.2 DEFINITIONS

- A. Firestopping: Material or combination of materials used to retain integrity of fire-rated construction by maintaining an effective barrier against the spread of flame, smoke, and hot gases through penetrations in fire rated wall and floor assemblies.

#### 1.3 GENERAL DESCRIPTION OF THE WORK OF THIS SECTION

Only tested firestop systems shall be used in specific locations as follows:

- A. Penetrations for the passage of duct, piping, and other mechanical equipment through fire-rated vertical barriers (walls and partitions), horizontal barriers (floor/ceiling assemblies), and vertical service shaft walls and partitions.
- B. Repetitive plumbing penetrations in fire-rated floor assemblies. Penetrations exist for the installation of tubs, showers, aerators and other plumbing fixtures.

#### 1.4 RELATED WORK OF OTHER SECTIONS

- A. Coordinate work of this section with work of other sections as required to properly execute the work and as necessary to maintain satisfactory progress of the work of other sections, including, but not limited to:
  - 1. Section 078413 – Penetration Firestopping.

#### 1.5 REFERENCES

- A. Test Requirements: ASTM E 814, "Standard Method of Fire Tests of Through Penetration Fire Stops"
- B. Test Requirements: UL 1479, "Fire Tests of Through-Penetration Firestops"
- C. Underwriters Laboratories (UL) of Northbrook, IL publishes tested systems in their "FIRE RESISTANCE DIRECTORY" that is updated annually.
  - 1. UL Fire Resistance Directory:
    - a. Firestop Devices (XHJI)
    - b. Fire Resistance Ratings (BXRH)
    - c. Through-Penetration Firestop Systems (XHEZ)
    - d. Fill, Voids, or Cavity Material (XHHW)
    - e. Forming Materials (XHKU)

- D. International Firestop Council Guidelines for Evaluating Firestop Systems Engineering Judgments
- E. Inspection Requirements: ASTM E 2174, "Standard Practice for On-site Inspection of Installed Fire Stops."
- F. ASTM E 84, "Standard Test Method for Surface Burning Characteristics of Building Materials."
- G. International Building Code 2015, NJ Edition.
- H. NFPA 101 - Life Safety Code

#### 1.6 QUALITY ASSURANCE

- A. A manufacturer's direct representative (not distributor or agent) to be on-site during initial installation of firestop systems to train appropriate contractor personnel in proper selection and installation procedures. This will be done per manufacturer's written recommendations published in their literature and drawing details.
- B. Firestop System installation must meet requirements of ASTM E 814 or UL 1479 tested assemblies that provide a fire rating equal to that of construction being penetrated.
- C. Proposed firestop materials and methods shall conform to applicable governing codes having local jurisdiction.
- D. Firestop Systems do not reestablish the structural integrity of load bearing partitions/assemblies, or support live loads and traffic. Installer shall consult the structural engineer prior to penetrating any load bearing assembly.
- E. For those firestop applications that exist for which no UL tested system is available through a manufacturer, a manufacturer's engineering judgment derived from similar UL system designs or other tests will be submitted to local authorities having jurisdiction for their review and approval prior to installation. Engineering judgment drawings must follow requirements set forth by the International Firestop Council.

#### 1.07 SUBMITTALS

- A. Submit Product Data: Manufacturer's specifications and technical data for each material including the composition and limitations, documentation of UL firestop systems to be used and manufacturer's installation instructions.
- B. Manufacturer's engineering judgment identification number and drawing details when no UL system is available for an application. Engineering judgment must include both project name and contractor's name who will install firestop system as described in drawing.
- C. Submit material safety data sheets provided with product delivered to job-site.

#### 1.08 INSTALLER QUALIFICATIONS

- A. Engage an experienced Installer who is certified, licensed, or otherwise qualified by the firestopping manufacturer as having been provided the necessary training to install manufacturer's products per specified requirements. A manufacturer's willingness to sell its firestopping products to the Contractor or to an Installer engaged by the Contractor does not in itself confer qualification on the buyer.

- B. Installation Responsibility: assign installation of through-penetration firestop systems and fire-resistive joint systems in Project to a single sole source firestop specialty contractor.
- C. The work is to be installed by a contractor with at least one of the following qualifications:
  - FM 4991 Approved Contractor
  - UL Approved Contractor
  - Hilti Accredited Fire Stop Specialty Contractor
- D. Firm with not less than three years of experience with fire stop installation.
- E. Successfully completed not less than three comparable scale projects using similar systems.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials undamaged in manufacturer's clearly labeled, unopened containers, identified with brand, type, and UL label where applicable.
- B. Coordinate delivery of materials with scheduled installation date to allow minimum storage time at job-site.
- C. Store materials under cover and protect from weather and damage in compliance with manufacturer's requirements.
- D. Comply with recommended procedures, precautions or remedies described in material safety data sheets as applicable.
- E. Do not use damaged or expired materials.

1.10 PROJECT CONDITIONS

- A. Do not use materials that contain flammable solvents.
- B. Scheduling
  - 1. Schedule installation of CAST IN PLACE firestop devices after completion of floor formwork, metal form deck, or composite deck but before placement of concrete.
  - 2. Schedule installation of other firestopping materials after completion of penetrating item installation but prior to covering or concealing of openings.
- C. Verify existing conditions and substrates before starting work. Correct unsatisfactory conditions before proceeding.
- D. Weather conditions: Do not proceed with installation of firestop materials when temperatures exceed the manufacturer's recommended limitations for installation printed on product label and product data sheet.
- E. During installation, provide masking and drop cloths to prevent firestopping materials from contaminating any adjacent surfaces.

PART 2 - PRODUCTS

## 2.1 FIRESTOPPING - GENERAL

- A. Provide firestopping composed of components that are compatible with each other, the substrates forming openings, and the items, if any, penetrating the firestopping under conditions of service and application, as demonstrated by the firestopping manufacturer based on testing and field experience.
- B. Provide components for each firestopping system that are needed to install fill material. Use only components specified by the firestopping manufacturer and approved by the qualified testing agency for the designated fire-resistance-rated systems.
- C. Penetrations in Fire Resistance Rated Walls: Provide firestopping with ratings determined in accordance with UL 1479 or ASTM E 814.
  - 1. F-Rating: Not less than the fire-resistance rating of the wall construction being penetrated.
- D. Penetrations in Horizontal Assemblies: Provide firestopping with ratings determined in accordance with UL 1479 or ASTM E 814.
  - 1. F-Rating: Minimum of 1-hour rating, but not less than the fire-resistance rating of the floor construction being penetrated.
  - 2. T-Rating: when penetrant is located outside of a wall cavity, minimum of 1-hour rating, but not less than the fire-resistance rating of the floor construction being penetrated.
  - 3. W-Rating: Class 1 rating in accordance with water leakage test per UL 1479.
- E. Mold Resistance: Provide penetration firestopping with mold and mildew resistance rating of 0 as determined by ASTM G21.

## 2.2 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with through penetration firestop systems (XHEZ) listed in Volume II of the UL Fire Resistance Directory, provide products of the following manufacturers as identified below:
  - 1. Hilti, Inc.
  - 2. 3M.
  - 3. FSI.
  - 4. Or approved equivalent.

## 2.3 MATERIALS

- A. Use only firestop products that have been UL 1479 or ASTM E 814 tested for specific fire-rated construction conditions conforming to construction assembly type, penetrating item type, annular space requirements, and fire-rating involved for each separate instance.
- B. Pre-installed firestop devices for use with noncombustible and combustible pipes (closed and open systems) penetrating concrete floors and/or gypsum walls, the following products are acceptable:
  - 1. Hilti Cast-In Place Firestop Device (CP 680-P) for use with combustible penetrants.
  - 2. Hilti Cast-In Place Firestop Device (CP 680-M) for use with noncombustible penetrants.
  - 3. Hilti Firestop Speed Sleeve (CP 653) for use with cable penetrations.
  - 4. Hilti Firestop Drop-In Device (CFS-DID) for use with noncombustible and combustible penetrants.
  - 5. Hilti Firestop Block (CFS-BL)

- C. Sealants, caulking materials, or foams for use with non-combustible items including steel pipe, copper pipe, rigid steel conduit and electrical metallic tubing (EMT), the following products are acceptable:
1. Hilti Intumescent Firestop Sealant (FS-ONE MAX)
  2. Hilti Fire Foam (CP 620)
  3. Hilti Flexible Firestop Sealant (CP 606)
- D. Sealants or caulking materials for use with sheet metal ducts, the following products are acceptable:
1. Hilti Flexible Firestop Sealant (CP 606)
  2. Hilti Intumescent Firestop Sealant (FS-ONE MAX)
- E. Intumescent sealants, caulking materials for use with combustible items (penetrants consumed by high heat and flame) including insulated metal pipe, PVC jacketed, flexible cable or cable bundles and plastic pipe, the following products are acceptable:
1. Hilti Intumescent Firestop Sealant (FS-ONE MAX)
- F. Foams, intumescent sealants, or caulking materials for use with flexible cable or cable bundles, the following products are acceptable:
1. Hilti Intumescent Firestop Sealant (FS-ONE MAX)
  2. Hilti Fire Foam (CP 620)
  3. Hilti Flexible Firestop Sealant (CP 606)
- G. Non-curing, re-penetrable, intumescent putty or foam materials for use with flexible cable or cable bundles, the following products are acceptable:
1. Hilti Firestop Putty Stick (CP 618)
  2. Hilti Firestop Plug (CFS-PL)
- H. Firestop collar or wrap devices attached to assembly around combustible plastic pipe (closed and open piping systems), the following products are acceptable:
1. Hilti Firestop Collar (CP 643N)
  2. Hilti Firestop Collar (CP 644)
  3. Hilti Wrap Strips (CP 648E/648S)
- I. Materials used for large openings and complex penetrations made to accommodate cable trays and bundles, multiple steel and copper pipes, electrical busways in raceways, the following products are acceptable:
1. Hilti Firestop Mortar (CP 637)
  2. Hilti Firestop Block (CFS-BL)
  3. Hilti Fire Foam (CP 620)
  4. Hilti Firestop Board (CP 675T)
- J. Non curing, re-penetrable materials used for large openings and complex penetrations made to accommodate cable trays and bundles, multiple steel and copper pipes, electrical busways in raceways, the following products are acceptable:
1. Hilti Firestop Block (CFS-BL)
  2. Hilti Firestop Board (CP 675T)

- K. For blank openings made in fire-rated wall or floor assemblies, where future penetration of pipes, conduits, or cables is expected, the following products are acceptable:
  - 1. Hilti Firestop Block (CFS-BL)
  - 2. Hilti Firestop Plug (CFS-PL)
- L. Provide a firestop system with a "F" Rating as determined by UL 1479 or ASTM E 814 which is equal to the time rating of construction being penetrated.

### PART 3 - EXECUTION

#### 3.1 PREPARATION

- A. Verification of Conditions: Examine areas and conditions under which work is to be performed and identify conditions detrimental to proper or timely completion.
  - 1. Verify penetrations are properly sized and in suitable condition for application of materials.
  - 2. Surfaces to which firestop materials will be applied shall be free of dirt, grease, oil, rust, laitance, release agents, water repellents, and any other substances that may affect proper adhesion.
  - 3. Provide masking and temporary covering to prevent soiling of adjacent surfaces by firestopping materials.
  - 4. Comply with manufacturer's recommendations for temperature and humidity conditions before, during and after installation of firestopping.
  - 5. Do not proceed until unsatisfactory conditions have been corrected.

#### 3.2 COORDINATION

- A. Coordinate location and proper selection of cast-in-place Firestop Devices with trade responsible for the work. Ensure device is installed before placement of concrete.
- B. Responsible trade to provide adequate spacing of field run pipes to allow for installation of cast-in-place firestop devices without interferences.

#### 3.3 INSTALLATION

- A. Regulatory Requirements: Install firestop materials in accordance with UL Fire Resistance Directory.
- B. Manufacturer's Instructions: Comply with manufacturer's instructions for installation of through-penetration joint materials.
  - 1. Seal all holes or voids made by penetrations to ensure an air and water resistant seal.
  - 2. Consult with mechanical engineer, project manager, and damper manufacturer prior to installation of UL firestop systems that might hamper the performance of fire dampers as it pertains to duct work.
  - 3. Protect materials from damage on surfaces subjected to traffic.

#### 3.4 FIELD QUALITY CONTROL

- A. Examine sealed penetration areas to ensure proper installation before concealing or enclosing areas.

- B. Keep areas of work accessible until inspection by applicable code authorities.
- C. Inspection of through-penetration firestopping shall be performed in accordance with ASTM E 2174, "Standard Practice for On-Site Inspection of Installed Fire Stops" or other recognized standard.
- D. Perform under this section patching and repairing of firestopping caused by cutting or penetrating of existing firestop systems already installed by other trades.

### 3.5 IDENTIFICATION & DOCUMENTATION

- A. The firestop contractor is to supply documentation for each single application addressed. This documentation is to identify each penetration location on the entire project.
  - 1. The Documentation Form for through penetrations is to include:
    - a. A Sequential Location Number.
    - b. The Project Name.
    - c. Date of Installation.
    - d. Detailed description of the penetration's location.
    - e. Tested System or Engineered Judgment Number.
    - f. Type of assembly penetrated.
    - g. A detailed description of the size and type of penetrating item.
    - h. Size of opening.
    - i. Number of sides of assemblies addressed.
    - j. Hourly rating to be achieved.
    - k. Installers Name.
- B. Copies of these documents are to be provided to the general contractor at the completion of the project.
- C. Identify through-penetration firestop systems with pressure-sensitive, self-adhesive, preprinted vinyl labels. Attach labels permanently to surfaces of penetrated construction on both sides of each firestop system installation where labels will be visible to anyone seeking to remove penetrating items or firestop systems. Include the following information on labels:
  - 1. The words: "Warning -Through Penetration Firestop System-Do Not Disturb. Notify Building Management of Any Damage."
  - 2. Contractor's Name, address, and phone number.
  - 3. Through-Penetration firestop system designation of applicable testing and inspecting agency.
  - 4. Date of Installation.
  - 5. Through-Penetration firestop system manufacturer's name.
  - 6. Installer's Name.

### 3.6 ADJUSTING AND CLEANING

- A. Remove equipment, materials, and debris, leaving area in undamaged, clean condition.
- B. Clean all surfaces adjacent to sealed holes and joints to be free of excess firestop materials and soiling as work progresses.

END OF SECTION 230710

## SECTION 232300 REFRIGERANT PIPING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes refrigerant piping used for air-conditioning applications.

#### 1.3 PERFORMANCE REQUIREMENTS

- A. Line Test Pressure for Refrigerant R-410A:
  - 1. Suction Lines for Air-Conditioning Applications: 300 psig.
  - 2. Suction Lines for Heat-Pump Applications: 535 psig.
  - 3. Hot-Gas and Liquid Lines: 535 psig.

#### 1.4 SUBMITTALS

- A. Product Data: For each type of valve and refrigerant piping specialty indicated. Include pressure drop, based on manufacturer's test data, for thermostatic expansion valves, solenoid valves, and pressure-regulating valves.
  - 1. Thermostatic expansion valves.
  - 2. Solenoid valves.
  - 3. Hot-gas bypass valves.
  - 4. Filter dryers.
  - 5. Strainers.
  - 6. Pressure-regulating valves.
- B. Shop Drawings: Show layout of refrigerant piping and specialties, including pipe, tube, and fitting sizes, flow capacities, valve arrangements and locations, slopes of horizontal runs, oil traps, double risers, wall and floor penetrations, and equipment connection details. Show interface and spatial relationship between piping and equipment.
  - 1. Refrigerant piping indicated on Drawings is schematic only. Size piping and design actual piping layout, including oil traps, double risers, specialties, and pipe and tube sizes to accommodate, as a minimum, equipment provided, elevation difference between compressor and evaporator, and length of piping to ensure proper operation and compliance with warranties of connected equipment.
- C. Welding Certificates: Copies of certificates for welding procedures and personnel.

- D. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.
- E. Operation and Maintenance Data: For refrigerant valves and piping specialties to include in maintenance manuals.

#### 1.5 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX; "Welding and Brazing Qualifications."
- B. ASHRAE Standard: Comply with ASHRAE 15, "Safety Code for Mechanical Refrigeration."
- C. ASME Standard: Comply with ASME B31.5, "Refrigeration Piping."
- D. UL Standard: Provide products complying with UL 207, "Refrigerant-Containing Components and Accessories, Nonelectrical"; or UL 429, "Electrically Operated Valves."

#### 1.6 PRODUCT STORAGE AND HANDLING

- A. Store piping in a clean and protected area with end caps in place to ensure that piping interior and exterior are clean when installed.

#### 1.7 COORDINATION

- A. Coordinate layout and installation of refrigerant piping and suspension system components with other construction, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.
- B. Coordinate pipe sleeve installations for foundation wall penetrations.
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations.
- D. Coordinate pipe sleeve installations for penetrations in exterior walls and floor assemblies. Coordinate with requirements for firestopping specified in Division 07 Section "Through-Penetration Firestop Systems" for materials and methods for sealing pipe penetrations through fire and smoke barriers.
- E. Coordinate pipe fitting pressure classes with products specified in related Sections.

#### 1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Refrigeration Oil Test Kits: Two each, containing everything required to conduct one test.
  - 2. Refrigerant: Two containers each, with 20 lb of refrigerant.
  - 3. Filter-Dryer Cartridges: Three of each type.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Refrigerants:

- a. Allied Signal, Inc./Fluorine Products; Genetron Refrigerants.
- b. DuPont Company; Fluorochemicals Div.
- c. Elf Atochem North America, Inc.; Fluorocarbon Div.
- d. ICI Americas Inc./ICI KLEA; Fluorochemicals Bus.
- e. Or approved equivalent.

2. Refrigerant Valves and Specialties:

- a. Climate & Industrial Controls Group; Parker-Hannifin Corp.; Refrigeration & Air Conditioning Division.
- b. Danfoss Electronics, Inc.
- c. Emerson Electric Company; Alco Controls Div.
- d. Henry Valve Company.
- e. Sporlan Valve Company.
- f. Or approved equivalent.

### 2.2 COPPER TUBE AND FITTINGS

- A. Drawn-Temper Copper Tube: ASTM B 280, Type ACR
- B. Annealed-Temper Copper Tube: ASTM B 88, Type L.
- C. Wrought-Copper Fittings: ASME B16.22.
- D. Bronze Filler Metals: AWS A5.8, Classification BAg-1 (silver)

### 2.3 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53, Schedule 40, seamless black steel.
- B. Wrought-Steel Fittings: ASTM A 234/A 234M, for welded joints.
- C. Steel Flanges and Flanged Fittings: ASME B16.5, steel, including bolts, nuts, and gaskets, butt-welded end connection, and raised face.
- D. Flanged Unions: 400-psig working pressure, 330 deg F maximum operating temperature; 2 brass tailpiece adapters for solder-end connections to copper tubing; forged-steel flanges for NPS 1 to NPS 1-1/2 and ductile iron for NPS 2 to NPS 3 with 4 plated-steel bolts, with silicon bronze nuts and fiber gasket; and having factory-applied, rust-resistant coating on flanges and bolts.

- E. Flexible Connectors: 500-psig operating pressure; seamless tin-bronze or stainless-steel core, high-tensile bronze-braid covering, solder-end connections, and synthetic covering; dehydrated, pressure tested, minimum 7 inches long.

## 2.4 VALVES

- A. Service Valves: 500-psig pressure rating; forged-brass body with copper stubs, brass caps, removable valve core, integral ball check valve, and with solder-end connections.
- B. Solenoid Valves: Comply with ARI 760; 250 deg F temperature rating and 400-psig working pressure; forged brass, with polytetrafluoroethylene valve seat, 2-way, straight-through pattern, and solder-end connections; manual operator; fitted with suitable NEMA 250 enclosure of type required by location, with 1/2-inch conduit adapter and 24-V, normally closed holding coil.
- C. Pressure-Regulating Valves: Comply with ARI 770; pilot operated, forged brass or cast bronze, stainless-steel bottom spring, pressure-gage tappings, 24-V dc standard coil, and wrought-copper fittings for solder-end connections; suitable for refrigerant specified.
- D. Thermostatic Expansion Valves: Comply with ARI 750; brass body with stainless-steel parts; thermostatic-adjustable, modulating type; size and operating characteristics as recommended by manufacturer of evaporator, and factory set for superheat requirements; solder-end connections; with sensing bulb, distributor having side connection for hot-gas bypass line, and external equalizer line.
- E. Hot-Gas Bypass Valve: Pulsating-dampening design, stainless-steel bellows and polytetrafluoroethylene valve seat; adjustable; sized for capacity equal to last step of compressor unloading; with solder-end connections.

## 2.5 REFRIGERANT PIPING SPECIALITIES

- A. Straight- or Angle-Type Strainers: 500-psig working pressure; forged-brass or steel body with stainless-steel wire or brass-reinforced Monel screen of 80 to 100 mesh in liquid lines up to 1-1/8 inches, 60 mesh in larger liquid lines, and 40 mesh in suction lines; with screwed cleanout plug and solder-end connections.
- B. Moisture/Liquid Indicators: 500-psig maximum working pressure and 200 deg F operating temperature; all-brass body with replaceable, polished, optical viewing window with color-coded moisture indicator; with solder-end connections.
- C. Replaceable-Core Filter-Dryers: 500-psig maximum working pressure; heavy gage protected with corrosion-resistant-painted steel shell, flanged ring and spring, ductile-iron cover plate with steel cap screws; wrought-copper fittings for solder-end connections; with replaceable-core kit, including gaskets and the following:
  - 1. Filter Cartridge: Pleated media with integral end rings, stainless-steel support, ARI 730 rated for capacity.
  - 2. Filter-Dryer Cartridge: Pleated media with solid-core sieve with activated alumina, ARI 730 rated for capacity.
  - 3. Wax Removal Cartridge: Molded, bonded core of activated charcoal and desiccant with integral gaskets.

- D. Permanent Filter-Dryer: 350-psig maximum operating pressure and 225 deg F maximum operating temperature; steel shell and wrought-copper fittings for solder-end connections; molded-felt core surrounded by desiccant.
- E. Mufflers: 500-psig operating pressure, welded-steel construction with fusible plug; sized for refrigeration capacity.

## 2.6 REFRIGERANTS

- A. ASHRAE 34, R-410A: Pentafluoroethane/Difluoromethane.

## PART 3 - EXECUTION

### 3.1 PIPING APPLICATIONS

- A. Aboveground, within Building: Type ACR drawn-copper tubing
- B. Aboveground, outside Building for NPS 2 and Smaller: Type L drawn-copper tubing.

### 3.2 VALVE APPLICATIONS

- A. Install a full-sized, three-valve bypass around each dryer.
- B. Install solenoid valves upstream from each expansion valve and hot-gas bypass valve.
  - 1. Install solenoid valves in horizontal lines with coil at top.
  - 2. Electrical wiring for solenoid valves is specified in Division 16 Sections. Coordinate electrical requirements and connections.
- C. Install thermostatic expansion valves as close as possible to evaporator.
  - 1. If refrigerant distributors are used, install them directly on expansion-valve outlet.
  - 2. Install valve so diaphragm case is warmer than bulb.
  - 3. Secure bulb to clean, straight, horizontal section of suction line using two bulb straps. Do not mount bulb in a trap or at bottom of the line.
  - 4. If external equalizer lines are required, make connection where it will reflect suction-line pressure at bulb location.
- D. Install pressure-regulating and pressure relief valves as required by ASHRAE 15. Pipe pressure relief valve discharge to outside.

### 3.3 SPECIALTY APPLICATIONS

- A. Install liquid indicators in liquid line leaving condenser, in liquid line leaving receiver, and on leaving side of liquid solenoid valves.
- B. Install strainers immediately upstream from each automatic valve, including expansion valves, solenoid valves, hot-gas bypass valves, and compressor suction valves.

- C. Install strainers in main liquid line where multiple expansion valves with integral strainers are used.
- D. Install strainers in suction line of steel pipe.
- E. Install moisture-liquid indicators in liquid lines between filter-dryers and thermostatic expansion valves and in liquid line to receiver.
- F. Install pressure relief valves on ASME receivers; pipe discharge to outdoors.
- G. Install replaceable-core filter-dryers in vertical liquid line adjacent to receivers and before each solenoid valve.
- H. Install permanent filter-dryers in low-temperature systems, in systems using hermetic compressors, and before each solenoid valve.
- I. Install solenoid valves in liquid line of systems operating with single pump-out or pump-down compressor control, in liquid line of single or multiple evaporator systems, and in oil bleeder lines from flooded evaporators to stop flow of oil and refrigerant into suction line when system shuts down.
- J. Install receivers, sized to accommodate pump-down charge, on systems 5 tons and larger and on systems with long piping runs.
- K. Install flexible connectors at or near compressors where piping configuration does not absorb vibration.

#### 3.4 PIPING INSTALLATION

- A. Install refrigerant piping according to ASHRAE 15.
- B. Basic piping installation requirements are specified in Division 23 Section "Common Work Results for HVAC."
- C. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.
- D. Arrange piping to allow inspection and service of compressor and other equipment. Install valves and specialties in accessible locations to allow for service and inspection.
- E. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation. Use sleeves through floors, walls, or ceilings, sized to permit installation of full-thickness insulation.
- F. Install copper tubing in rigid or flexible conduit in locations where copper tubing will be exposed to mechanical injury.
- G. Slope refrigerant piping as follows:
  - 1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
  - 2. Install horizontal suction lines with a uniform slope downward to compressor.
  - 3. Install traps and double risers to entrain oil in vertical runs.
  - 4. Liquid lines may be installed level.
- H. Install bypass around moisture-liquid indicators in lines larger than NPS 2.

- I. Install unions to allow removal of solenoid valves, pressure-regulating valves, and expansion valves and at connections to compressors and evaporators.
- J. When brazing, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion valve bulb.
- K. Hanger, support, and anchor products are specified in Division 23 Section "Hangers and Supports."
- L. Install the following pipe attachments:
  - 1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet long.
  - 2. Roller hangers and spring hangers for individual horizontal runs 20 feet or longer.
  - 3. Pipe rollers for multiple horizontal runs 20 feet or longer, supported by a trapeze.
  - 4. Spring hangers to support vertical runs.
- M. Install hangers for copper tubing with the following maximum spacing and minimum rod sizes:
  - 1. NPS 1/2: Maximum span, 60 inches; minimum rod size, 1/4 inch.
  - 2. NPS 5/8: Maximum span, 60 inches; minimum rod size, 1/4 inch.
  - 3. NPS 1: Maximum span, 72 inches; minimum rod size, 1/4 inch.
  - 4. NPS 1-1/4: Maximum span, 96 inches; minimum rod size, 3/8 inch.
  - 5. NPS 1-1/2: Maximum span, 96 inches; minimum rod size, 3/8 inch.
  - 6. NPS 2: Maximum span, 96 inches; minimum rod size, 3/8 inch.
  - 7. NPS 2-1/2: Maximum span, 108 inches; minimum rod size, 3/8 inch.
  - 8. NPS 3: Maximum span, 10 feet; minimum rod size, 3/8 inch.
  - 9. NPS 4: Maximum span, 12 feet; minimum rod size, 1/2 inch.
- N. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:
  - 1. NPS 1/2: Maximum span, 84 inches; minimum rod size, 1/4 inch.
  - 2. NPS 3/4: Maximum span, 84 inches; minimum rod size, 1/4 inch.
  - 3. NPS 1: Maximum span, 84 inches; minimum rod size, 1/4 inch.
  - 4. NPS 1-1/2: Maximum span, 108 inches; minimum rod size, 3/8 inch.
  - 5. NPS 2: Maximum span, 10 feet; minimum rod size, 3/8 inch.
  - 6. NPS 2-1/2: Maximum span, 11 feet; minimum rod size, 3/8 inch.
  - 7. NPS 3: Maximum span, 12 feet; minimum rod size, 3/8 inch.
  - 8. NPS 4: Maximum span, 14 feet; minimum rod size, 1/2 inch.
- O. Support vertical runs at each floor.

### 3.5 PIPE JOINT CONSTRUCTION

- A. Braze joints according to Division 23 Section " Common Work Results for HVAC."
- B. Fill pipe and fittings with an inert gas (nitrogen or carbon dioxide) during brazing to prevent scale formation.

### 3.6 FIELD QUALITY CONTROL

- A. Test and inspect refrigerant piping according to ASME B31.5, Chapter VI.
  - 1. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure.
  - 2. Test high- and low-pressure side piping of each system at not less than the lower of the design pressure or the setting of pressure relief device protecting high and low side of system.
    - a. System shall maintain test pressure at the manifold gage throughout duration of test.
    - b. Test joints and fittings by brushing a small amount of soap and glycerine solution over joint.
    - c. Fill system with nitrogen to raise a test pressure of 150 psig or higher as required by authorities having jurisdiction.
    - d. Remake leaking joints using new materials, and retest until satisfactory results are achieved.

### 3.7 ADJUSTING

- A. Adjust thermostatic expansion valve to obtain proper evaporator superheat requirements.
- B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.
- C. Adjust set-point temperature of the conditioned air or chilled-water controllers to the system design temperature.
- D. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:
  - 1. Open shutoff valves in condenser water circuit.
  - 2. Check compressor oil level above center of sight glass.
  - 3. Open compressor suction and discharge valves.
  - 4. Open refrigerant valves, except bypass valves that are used for other purposes.
  - 5. Check compressor-motor alignment and lubricate motors and bearings.

### 3.8 CLEANING

- A. Before installing copper tubing other than Type ACR, clean tubing and fittings with trichloroethylene.
- B. Replace core of filter-dryer after system has been adjusted and design flow rates and pressures are established.

### 3.9 SYSTEM CHARGING

- A. Charge system using the following procedures:
  - 1. Install core in filter-dryer after leak test but before evacuation.

June 4, 2021  
Issue for Bid

Parking Deck  
Union County Justice Complex  
Elizabeth, New Jersey

2. Evacuate entire refrigerant system with a vacuum pump to a vacuum of 500 micrometers. If vacuum holds for 12 hours, system is ready for charging.
3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
4. Charge system with a new filter-dryer core in charging line. Provide full-operating charge.

END OF SECTION 232300

## SECTION 233113 METAL DUCTS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

1. Single-wall rectangular ducts and fittings.
2. Single-wall round and flat-oval ducts and fittings.
3. Sheet metal materials.
4. Sealants and gaskets.
5. Hangers and supports.

- B. Related Sections:

1. Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.
2. Division 23 Section "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.
3. Division 23 Section "Mechanical Insulation" for insulation requirements for systems that do not require duct liner as noted within this Section.

#### 1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Duct Design: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, duct sealing, and hangers and supports, shall comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and performance requirements and design criteria indicated in "Duct Schedule" Article.
- B. Structural Performance: Duct hangers and supports shall withstand the effects of gravity loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"
- C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

#### 1.4 SUBMITTALS

- A. Product Data: For each type of the following products:

1. Liners and adhesives.
2. Sealants and gaskets.

B. Shop Drawings:

1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
2. Factory- and shop-fabricated ducts and fittings.
3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes for all systems indicated on drawings.
4. Elevation of top of ducts.
5. Dimensions of main duct runs from building grid lines.
6. Fittings.
7. Reinforcement and spacing.
8. Seam and joint construction.
9. Seam, joint and wall penetration sealing class and product data.
10. Penetrations through fire-rated and other partitions.
11. Equipment installation based on equipment being used on Project.
12. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
13. Hangers and supports, including methods for duct and building attachment and vibration isolation.

C. Delegated-Design Submittal:

1. Sheet metal thicknesses.
2. Joint and seam construction and sealing.
3. Reinforcement details and spacing.
4. Materials, fabrication, assembly, and spacing of hangers and supports.
5. Design Calculations: Calculations for selecting hangers and supports.

D. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
2. Suspended ceiling components.
3. Structural members to which duct will be attached.
4. Penetrations of smoke barriers and fire-rated construction.

E. Welding certificates.

F. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
3. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.

- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."
- E. NFPA Compliance:
  - 1. NFPA 90A, "Installation of Air Conditioning and Ventilating Systems."
  - 2. NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."
- F. Comply with NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations," Ch. 3, "Duct System," for range hood ducts, unless otherwise indicated.

## PART 2 - PRODUCTS

### 2.1 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
- B. Galvanized Sheet Steel: Lock-forming quality; complying with ASTM A 653/A 653M and having G90 coating designation; ducts shall have mill-phosphatized finish for surfaces exposed to view.
- C. Carbon-Steel Sheets: ASTM A 366/A 366M, cold-rolled sheets; commercial quality; with oiled, matte finish for exposed ducts.
- D. Aluminum Sheets: ASTM B 209 (ASTM B 209M), alloy 3003, temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.
- E. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts.
- F. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- G. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- H. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

## 2.2 SINGLE-WALL ROUND AND FLAT-OVAL DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Lindab Inc.
    - b. McGill AirFlow LLC.
    - c. SEMCO Incorporated.
    - d. Or approved equivalent.
- B. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).
- C. Spiral Ducts: Indicated dimensions are the inside clear diameter of the duct.
- D. Transverse Joints: Select joint types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
1. Transverse Joints in Ducts Larger Than 60 Inches in Diameter: Flanged.
- E. Longitudinal Seams: Select seam types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
1. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
  2. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.
- F. Tees and Laterals: Select types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

## 2.3 SHEET METAL MATERIALS

- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
1. Galvanized Coating Designation: G90.
  2. Finishes for Surfaces Exposed to View: Mill phosphatized.

- C. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

## 2.4 SEALANT AND GASKETS

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.

- B. Water-Based Joint and Seam Sealant:

1. Application Method: Brush on.
2. Solids Content: Minimum 65 percent.
3. Shore A Hardness: Minimum 20.
4. Water resistant.
5. Mold and mildew resistant.
6. VOC: Maximum 75 g/L (less water).
7. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
8. Service: Indoor or outdoor.
9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

- C. Solvent-Based Joint and Seam Sealant:

1. Application Method: Brush on.
2. Base: Synthetic rubber resin.
3. Solvent: Toluene and heptane.
4. Solids Content: Minimum 60 percent.
5. Shore A Hardness: Minimum 60.
6. Water resistant.
7. Mold and mildew resistant.
8. Maximum Static-Pressure Class: 10-inch wg, positive or negative.
9. Service: Indoor or outdoor.
10. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

- D. Flanged Joint Sealant: Comply with ASTM C 920.

1. General: Single-component, acid-curing, silicone, elastomeric.
2. Type: S.
3. Grade: NS.
4. Class: 25.
5. Use: O.

- E. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

## 2.5 HANGERS AND SUPPORTS

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.

- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."
- D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.
- E. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- F. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- G. Trapeze and Riser Supports:
  - 1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.

### PART 3 - EXECUTION

#### 3.1 DUCT INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.
- B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- C. Install ducts in maximum practical lengths.
- D. Install ducts with fewest possible joints.
- E. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- F. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
- G. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- H. Install ducts with a clearance of 1 inch.
- I. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.
- J. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.

- K. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers. Comply with requirements in Division 23 Section "Air Duct Accessories" for fire and smoke dampers.
- L. Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA's "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."

### 3.2 INSTALLATION OF EXPOSED DUCTWORK

- A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
- B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.
- C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter.
- D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Repair or replace damaged sections and finished work that does not comply with these requirements.

### 3.3 DUCT SEALING

- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- B. Seal ducts to the following seal classes according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":
  - 1. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  - 2. Unconditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg and Lower: Seal Class B.
  - 3. Unconditioned Space, Exhaust Ducts: Seal Class C.

### 3.4 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
  - 1. Where practical, install concrete inserts before placing concrete.
  - 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
  - 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches thick.
  - 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
  - 5. Do not use powder-actuated concrete fasteners for seismic restraints.

- C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.
- D. Hangers Exposed to View: Threaded rod and angle or channel supports.
- E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet.
- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

### 3.5 CONNECTIONS

- A. Make connections to equipment with flexible connectors complying with Division 23 Section "Air Duct Accessories."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

### 3.6 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Leakage Tests:
  - 1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test.
  - 2. Test the following systems:
    - a. Supply Ducts with a Pressure Class of 2-Inch wg or Higher: Test representative duct sections, selected by Architect from sections installed, totaling no less than 100 percent of total installed duct area for each designated pressure class.
    - b. Exhaust Ducts with a Pressure Class of 2-Inch wg or Higher: Test representative duct sections, selected by Architect from sections installed, totaling no less than 100 percent of total installed duct area for each designated pressure class.
    - c. Outdoor Air Ducts with a Pressure Class of 2-Inch wg or Higher: Test representative duct sections, selected by Architect from sections installed, totaling no less than 100 percent of total installed duct area for each designated pressure class.
  - 3. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
  - 4. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
  - 5. Give seven days' advance notice for testing.
- C. Duct System Cleanliness Tests:
  - 1. Visually inspect duct system to ensure that no visible contaminants are present.
  - 2. Test sections of metal duct system, chosen randomly by Owner, for cleanliness according to "Vacuum Test" in NADCA ACR, "Assessment, Cleaning and Restoration of HVAC Systems."

- a. Acceptable Cleanliness Level: Net weight of debris collected on the filter media shall not exceed 0.75 mg/100 sq. cm.

D. Duct system will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.7 START UP

- A. Air Balance: Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC."

3.8 DUCT SCHEDULE

- A. Fabricate ducts with galvanized sheet steel except as otherwise indicated and as follows:

HVAC System:	Duct Type:	Static Pressure Construction Class	Seal Class	Sealing Applicable	Leakage Class	
					Rectangular Metal	Round Metal
AHU / IDU	SA, RA, OA	2"	A	Note 4	6	3
EF	EA	2"	A	Note 4	6	3
Ventilation Louver	OA at MER's	2"	A	Note 4	6	3

Notes:

1. Refer to SMACNA Tables for additional information.
2. Ventilation (Outside) Air shall be considered/constructed same as Supply Air.
3. Transverse Joints Only.
4. Joints, Seams and All Wall Penetrations.

- B. Intermediate Reinforcement:

1. Galvanized-Steel Ducts: Galvanized steel.

- C. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."

- a. Velocity 1000 fpm or Lower:

- 1) Radius Type RE 1 with minimum 0.5 radius-to-diameter ratio.
- 2) Mitered Type RE 4 without vanes.

- b. Velocity 1000 to 1500 fpm:

- 1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
  - 2) Radius Type RE 3 with minimum 0.5 radius-to-diameter ratio and two vanes.
  - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
- c. Velocity 1500 fpm or Higher:
- 1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
  - 2) Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
  - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
2. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
- a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
  - b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
  - c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
3. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
- a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
    - 1) Velocity 1000 fpm or Lower: 0.5 radius-to-diameter ratio and three segments for 90-degree elbow.
    - 2) Velocity 1000 to 1500 fpm: 1.0 radius-to-diameter ratio and four segments for 90-degree elbow.
    - 3) Velocity 1500 fpm or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow.
    - 4) Radius-to Diameter Ratio: 1.5.
  - b. Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
  - c. Round Elbows, 14 Inches and Larger in Diameter: Standing seam or Welded.
- D. Branch Configuration:
1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."
    - a. Rectangular Main to Rectangular Branch: 45-degree entry.
    - b. Rectangular Main to Round Branch: Spin in.
  2. Round and Flat Oval: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees." Saddle taps are permitted in existing duct.

June 4, 2021  
Issue for Bid

Parking Deck  
Union County Justice Complex  
Elizabeth, New Jersey

- a. Velocity 1000 fpm or Lower: 90-degree tap.
- b. Velocity 1000 to 1500 fpm: Conical tap.
- c. Velocity 1500 fpm or Higher: 45-degree lateral.

END OF SECTION 233113

## SECTION 233300 AIR DUCT ACCESSORIES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General Requirements Division 01, Division 23 Specification Sections, and Common Work Requirements for HVAC apply to the work specified in this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Backdraft and pressure relief dampers.
  - 2. Manual volume dampers.
  - 3. Control dampers.
  - 4. Fire dampers.
  - 5. Turning vanes.
  - 6. Duct-mounted access doors.
  - 7. Duct access panel assemblies.
  - 8. Flexible connectors.
  - 9. Flexible ducts.
  - 10. Duct accessory hardware.
  - 11. Wire mesh grilles.

#### 1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
  - 1. For all accessories specified, include construction details, dimensions, materials, finishes, bearings and compliance with applicable codes.
  - 2. Performance: Show compliance with pressure drops or specific requirements noted.
  - 3. Provide manufacturer's installation instructions.
  - 4. For duct silencers/sound attenuators, include pressure drop and dynamic insertion loss data. Include breakout noise calculations for high transmission loss casings.
- B. Shop Drawings: For duct accessories. Include plans, elevations, sections, details and attachments to other work.
  - 1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
    - a. Special fittings.
    - b. Manual volume damper installations.
    - c. Control damper installations.
    - d. Wiring Diagrams: For power, signal, and control wiring.

- C. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from Installers of the items involved.
- D. Source quality-control reports.
- E. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.

#### 1.4 QUALITY ASSURANCE

- A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."
- B. Comply with AMCA 500-D testing for damper rating.

### PART 2 - PRODUCTS

#### 2.1 MATERIALS

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
  - 1. Galvanized Coating Designation: G60 G90.
  - 2. Exposed-Surface Finish: Mill phosphatized.
- C. Aluminum Sheets: Comply with ASTM B 209, Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.
- D. Extruded Aluminum: Comply with ASTM B 221, Alloy 6063, Temper T6.
- E. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.
- F. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

#### 2.2 BACKDRAFT AND PRESSURE RELIEF DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Air Balance Inc.; a division of Mestek, Inc.
  - 2. American Warming and Ventilating; a division of Mestek, Inc.
  - 3. Duro Dyne Inc.
  - 4. Greenheck Fan Corporation.

5. Ruskin Company.
  6. Vent Products Company, Inc.
  7. Or approved equivalent.
- B. Description: Gravity balanced.
- C. Maximum Air Velocity: 2000 fpm
- D. Maximum System Pressure: 1-inch wg
- E. Frame: 0.052-inch- thick, galvanized sheet steel or 0.063-inch- thick extruded aluminum, with welded corners and mounting flange.
- F. Blades: Multiple single-piece blades, center-pivoted, maximum 6-inch width, 0.025-inch- thick, roll-formed aluminum with sealed edges.
- G. Blade Action: Parallel.
- H. Blade Seals: Neoprene, mechanically locked.
- I. Blade Axles:
1. Material: galvanized steel, plated steel or aluminum, mechanically attached to blade.
  2. Diameter: 0.20 inch.
- J. Tie Bars and Brackets: Aluminum or Galvanized steel.
- K. Return Spring: Adjustable tension.
- L. Bearings: Steel ball or synthetic pivot bushings.

## 2.3 MANUAL VOLUME DAMPERS

- A. Standard, Steel, Manual Volume Dampers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Air Balance Inc.; a division of Mestek, Inc.
    - b. American Warming and Ventilating; a division of Mestek, Inc.
    - c. McGill AirFlow LLC.
    - d. Ruskin Company.
    - e. Vent Products Company, Inc.
    - f. Or approved equivalent.
  2. Standard leakage rating, with linkage outside airstream.
  3. Suitable for horizontal or vertical applications.
  4. Frames:
    - a. Hat-shaped, galvanized-steel channels, 0.064-inch minimum thickness.
    - b. Mitered and welded corners.
    - c. Flanges for attaching to walls and flangeless frames for installing in ducts.

5. Blades:
  - a. Single blade up to 6 inches blade width; multiple blades for width over 6 inches.
  - b. Opposed-blade design for multiple blades dampers.
  - c. Round or oval ducts: butterfly type.
  - d. Stiffen damper blades for stability.
  - e. Galvanized-steel, 0.064 inch thick.
6. Blade Axles: Galvanized steel.
7. Bearings:
  - a. Oil-impregnated bronze or Molded synthetic.
  - b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
8. Tie Bars and Brackets: Galvanized steel.

B. Standard, Aluminum, Manual Volume Dampers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Air Balance Inc.; a division of Mestek, Inc.
  - b. American Warming and Ventilating; a division of Mestek, Inc.
  - c. McGill AirFlow LLC.
  - d. Ruskin Company.
  - e. Vent Products Company, Inc. Or approved equivalent.
2. Standard leakage rating, with linkage outside airstream.
3. Suitable for horizontal or vertical applications.
4. Frames: Hat-shaped, 0.10-inch- thick, aluminum sheet channels; frames with flanges for attaching to walls and flangeless frames for installing in ducts.
5. Blades:
  - a. Single blade up to 6 inches blade width; multiple blades for width over 6 inches.
  - b. Opposed-blade design for multiple blades dampers.
  - c. Stiffen damper blades for stability.
  - d. Roll-Formed Aluminum Blades: 0.10-inch- thick aluminum sheet.
  - e. Extruded-Aluminum Blades: 0.050-inch- thick extruded aluminum.
6. Blade Axles: Galvanized steel.
7. Bearings:
  - a. Oil-impregnated bronze or Molded synthetic.
  - b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
8. Tie Bars and Brackets: Aluminum.

2.4 CONTROL DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Warming and Ventilating; a division of Mestek, Inc.
  2. Arrow United Industries; a division of Mestek, Inc.
  3. Duro Dyne Inc.
  4. McGill AirFlow LLC.
  5. Ruskin Company.
  6. Vent Products Company, Inc.
  7. Young Regulator Company.
  8. Greenheck.
  9. Or approved equivalent.
- B. Low-leakage rating, with linkage outside airstream, and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.
- C. Frames:
1. Hat shaped.
  2. Extruded Aluminum Channel, 0.125 inch thick.
  3. Reinforced corners.
- D. Blades:
1. Multiple blades with maximum blade width of 8 inches.
  2. Parallel -blade design.
  3. Extruded Aluminum.
  4. 0.125 inch thick.
  5. Blade Edging: Closed-cell neoprene edging.
- E. Blade Axles: 1/2-inch- diameter; hex-shaped Plated steel; blade-linkage hardware of zinc-plated steel and brass; ends sealed against blade bearings.
1. Operating Temperature Range: From minus 40 to plus 200 deg F.
- F. Bearings:
1. Molded synthetic
  2. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
- 2.5 FIRE DAMPERS
- A. Manufacturers:
1. Greenheck.
  2. McGill AirFlow Corporation.
  3. Nailor Industries Inc.
  4. Ruskin Company.
  5. Or approved equivalent.
- B. Fire dampers shall be labeled according to UL 555.
- C. Fire Rating: 1-1/2 hours.

- D. Provide only dynamic type dampers.
- E. Frame: Curtain type with blades outside airstream; fabricated with roll-formed, 0.034-inch thick galvanized steel; with mitered and interlocking corners.
- F. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.
  - 1. Minimum Thickness: 0.052 or 0.138 inch thick as indicated and of length to suit application.
  - 2. Exceptions: Omit sleeve where damper frame width permits direct attachment of perimeter mounting angles on each side of wall or floor, and thickness of damper frame complies with sleeve requirements.
- G. Mounting Orientation: Vertical or horizontal as indicated.
- H. Blades: Roll-formed, interlocking, 0.034-inch thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch thick, galvanized-steel blade connectors.
- I. Horizontal Dampers: Include blade lock and stainless-steel closure spring.
- J. Fusible Links: Replaceable, 165 deg F rated.

## 2.6 TURNING VANES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Aero-Dyne Sound Control Co.
  - 2. CL WARD & Family Inc.
  - 3. Ductmate Industries, Inc.
  - 4. Duro Dyne Inc.
  - 5. Elgen Manufacturing.
- B. Manufactured Turning Vanes for Metal Ducts: Curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
  - 1. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.
- C. Manufactured Turning Vanes for Nonmetal Ducts: Fabricate curved blades of resin-bonded fiberglass with acrylic polymer coating; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
- D. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 4-3, "Vanes and Vane Runners," and 4-4, "Vane Support in Elbows."
- E. Vane Construction: Double wall.

## 2.7 DUCT-MOUNTED ACCESS DOORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. American Warming and Ventilating; a division of Mestek, Inc.

2. Ductmate Industries, Inc.
3. McGill AirFlow LLC.
4. Pottorff; a division of PCI Industries, Inc.
5. Ventfabrics, Inc.
6. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
7. Or approved equivalent.

B. Duct-Mounted Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 2-10, "Duct Access Doors and Panels," and 2-11, "Access Panels - Round Duct."

1. Door:
  - a. Double wall, rectangular.
  - b. Sheet metal, to match duct material, with insulation fill and thickness as indicated for duct pressure class.
  - c. Vision panel.
  - d. Hinges and Latches: 2-by-2-inch butt or piano hinge and cam latches.
  - e. Fabricate doors airtight and suitable for duct pressure class.
  - f. Size: Not less than 16 inches by 14 inches. Ducts less than 16 inches in height, install with one dimension 16 inches and other dimension 2 inches less than duct width. Install larger sized doors where required for access.
2. Frame: Same material as door, with bend-over tabs and foam gaskets.
3. Number of Hinges and Locks:
  - a. Access Doors Less Than 12 Inches Square: No hinges and two sash locks.
  - b. Access Doors up to 18 Inches Square: Two hinges and two sash locks.
  - c. Access Doors up to 24 by 48 Inches: Three hinges and two compression latches with outside and inside handles.
  - d. Access Doors Larger Than 24 by 48 Inches: Four hinges and two compression latches with outside and inside handles.

## 2.8 DUCT ACCESS PANEL ASSEMBLIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Ductmate Industries, Inc.
  2. Flame Gard, Inc.
  3. 3M.
  4. Or approved equivalent.
- B. Labeled according to UL 1978 by an NRTL.
- C. Panel and Frame: Minimum thickness 0.0528-inch carbon steel.
- D. Fasteners: Carbon steel. Panel fasteners shall not penetrate duct wall.
- E. Gasket: Comply with NFPA 96; grease-tight, high-temperature ceramic fiber, rated for minimum 2000 deg F.
- F. Minimum Pressure Rating: 10-inch wg, positive or negative.

2.9 FLEXIBLE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ductmate Industries, Inc.
  2. Duro Dyne Inc.
  3. Ventfabrics, Inc.
  4. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
  5. Or approved equivalent.
- B. Materials: Flame-retardant or noncombustible fabrics.
- C. Coatings and Adhesives: Comply with UL 181, Class 1.
- D. Metal-Edged Connectors: Factory fabricated with a fabric strip 3-1/2 inches wide attached to 2 strips of 2-3/4-inch wide, 0.028-inch thick, galvanized sheet steel or 0.032-inch thick aluminum sheets. Provide metal compatible with connected ducts.
- E. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.
1. Minimum Weight: 30 oz./sq. yd..
  2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
  3. Service Temperature: Minus 40 to plus 200 deg F.
- F. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.
1. Minimum Weight: 30 oz./sq. yd..
  2. Tensile Strength: 530 lbf/inch in the warp and 440 lbf/inch in the filling.
  3. Service Temperature: Minus 50 to plus 250 deg F.
- G. Thrust Limits: Combination coil spring and elastomeric insert with spring and insert in compression, and with a load stop. Include rod and angle-iron brackets for attaching to fan discharge and duct.
1. Frame: Steel, fabricated for connection to threaded rods and to allow for a maximum of 30 degrees of angular rod misalignment without binding or reducing isolation efficiency.
  2. Outdoor Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
  3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
  4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
  5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
  6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
  7. Coil Spring: Factory set and field adjustable for a maximum of 1/4-inch movement at start and stop.

2.10 FLEXIBLE DUCTS

- A. Manufacturers:
1. Type 8M by Flexmaster U.S.A., Inc.
  2. Thermaflex Type MK-E by Flexible Technologies, Inc

3. Hart & Cooley, Inc.
4. McGill AirFlow Corporation.
5. Or approved equivalent.

B. Acoustical Insulated Steel Spiral Type:

1. Comply with SMACNA HVAC Flexible Duct Construction Standards and NFPA 90A.
2. Construct ducts of corrosion-resistant coated steel spiral that is mechanically locked or permanently bonded to a CPE inner liner film.
3. Duct shall be factory-insulated with a fiberglass blanket covered with a flame-resistant low permeability metalized vapor barrier jacket. Thermal conductivity of the insulation shall not exceed 0.23 (BTU) (inch)/(hour) (square foot) (degree F) at 75 degrees F mean temperature.
4. The internal working pressure rating shall be at least 4 inches w.g. positive and 0.5 inches w.g. negative.
5. The flexible duct assembly shall carry UL 181, Class 1 duct label.
6. Maximum length shall be 6 feet or less, as dictated by codes. The remainder shall be galvanized sheet metal. Provide flexible duct runs as straight as possible. Provide a minimum installed length of 4 feet at each air terminal.

C. Flexible Duct Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action, in sizes 3 through 18 inches to suit duct size.

2.11 DUCT ACCESSORY HARDWARE

- A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.
- B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

2.12 WIRE MESH GRILLES

- A. Construction: 1/2 inch (12.5 mm) mesh screen with 1 inch (2.5 mm) sheet metal frame, bolted to flanged duct connection.
- B. Materials:
  1. Screen: Minimum 18 gauge galvanized steel.
  2. Frame: Minimum 0.040 inch (1.02 mm) thick galvanized sheet steel.
  3. Bolts and nuts: Indoors, galvanized steel; exposed to weather, stainless steel.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.
- B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.
- C. Install backdraft and control dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
- D. Fire Dampers:
  - 1. Install dampers in accordance with manufacturer's UL Installation Instructions, labeling, and NFPA 90A at locations indicated on the drawings. Any damper installation that is not in accordance with the manufacturer's UL Installation Instructions must be approved prior to installation.
  - 2. Dampers must be accessible to allow inspection, adjustment, and replacement of components. The sheet metal contractor shall furnish any access doors in ductwork or plenums required to provide this access. The general contractor shall furnish any access doors required in walls, ceilings, or other general building construction.
  - 3. Install dampers square and free from racking.
  - 4. The installing contractor shall provide and install bracing for multiple section assemblies to support assembly weight and to hold against system pressure.
  - 5. Do not compress or stretch the damper frame into the duct or opening.
  - 6. Attach multiple damper section assemblies together in accordance with manufacturer's instructions. Install support mullions as reinforcement between assemblies as required.
  - 7. Handle dampers using the frame or sleeve. Do not lift or move dampers using blades, actuator or jackshaft.
- E. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts and as indicated. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
  - 1. Install volume dampers at the following locations:
    - a. Where indicated on drawings and in details.
    - b. Where required for balancing.
  - 2. Install steel volume dampers in steel ducts.
  - 3. Install aluminum volume dampers in aluminum ducts.
- F. Set dampers to fully open position before testing, adjusting, and balancing.
- G. Install test holes at fan inlets and outlets and elsewhere as indicated and in ductwork where required for testing and adjusting.

- H. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
  - 1. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
  - 2. At each change in direction and at maximum 50-foot spacing.
  - 3. Upstream from turning vanes.
- I. Install access doors with swing against duct static pressure.
- J. Access Door Sizes:
  - 1. One-Hand or Inspection Access: 8 by 5 inches.
  - 2. Two-Hand Access: 12 by 6 inches.
- K. Label access doors according to Division 23 Section "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.
- L. Install flexible connectors at duct connections to equipment, at building expansion joints, at connections between ducts of dissimilar metals and at penetrations of mechanical equipment room walls.
  - 1. Install flexible connections with 2 inches slack in fabric and minimum movement of 1 inch.
- M. Install duct test holes where required for testing and balancing purposes.
- N. Install wire mesh screen grilles at refrigerant exhaust air ducts and in other places where indicated. Bolt grilles to flanged connections or ducts at terminations.

### 3.2 FIELD QUALITY CONTROL

- A. Tests and Inspections:
  - 1. Operate dampers to verify full range of movement.
  - 2. Inspect locations of access doors and verify that purpose of access door can be performed.
  - 3. Inspect turning vanes for proper and secure installation.
  - 4. Operate remote damper operators to verify full range of movement of operator and damper.

### 3.3 MANUFACTURER'S FIELD SERVICES

- A. After start-up, and final corrections and balancing of systems, take octave band sound measurements over full audio frequency range in areas adjacent to mechanical equipment rooms, duct and pipe shafts, and other critical locations, as directed.

END OF SECTION 233300

## SECTION 233423 HVAC POWER VENTILATORS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Ceiling Mounted Centrifugal Fan – General Exhaust.
  - 2. In-line Centrifugal Fans – General Supply/Exhaust.
  - 3. Centrifugal Roof Ventilators – General Exhaust.
  - 4. Sidewall Propeller Fans – General Supply/Exhaust.
- B. Extent of power ventilators work required by this Section is indicated on equipment schedules within the contract drawings and by the requirements of the Section. The information contained in the equipment schedules is as follows:
  - 1. Fan performance data including capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.
  - 2. Fan arrangement including wheel configuration, inlet and discharge configurations, and required accessories.

#### 1.3 SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.
- B. Product Data including rated capacities of each unit, weights (shipping, installed, and operating), furnished specialties, accessories, and the following:
  - 1. Certified fan performance curves with system operating conditions indicated.
  - 2. Certified fan sound power ratings.
  - 3. Motor ratings and electrical characteristics plus motor and electrical accessories.
  - 4. Material gages and finishes, including color charts.
  - 5. Dampers, including housings, linkages, and operators.
  - 6. Roof Curbs.
  - 7. Fan speed controllers.
- C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 1. Wiring Diagrams: Power, signal, and control wiring.

2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
3. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.

D. Field quality-control test reports.

E. Operation and Maintenance Data: For power ventilators to include in emergency, operation, and maintenance manuals.

#### 1.4 QUALITY ASSURANCE

A. Electrical Component Standard: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. AMCA Compliance: Products shall comply with performance requirements and shall be licensed to use the AMCA-Certified Ratings Seal.

C. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.

D. UL Standard:

1. For Electrical Components: Provide power ventilators that comply with UL 705.

E. Fans and ventilators as specified in this section shall be installed in strict accord with the International Mechanical Code (IMC) Standard – Latest Edition, Chapter 5 for Exhaust Systems.

#### 1.5 PROJECT CONDITIONS

A. Field Measurements: Verify dimensions by field measurements. Verify clearances.

B. Do not operate fans until ductwork is clean, filters are in place, bearings are lubricated, and fans have been commissioned.

#### 1.6 COORDINATION AND SCHEDULING

A. Coordinate the size and location of structural steel support members.

B. Coordinate the installation of roof curbs, equipment supports, and roof penetrations.

#### 1.7 EXTRA MATERIALS

A. Furnish two sets of belts for each belt-driven fan that match products installed, are packaged with protective covering for storage, and are identified with labels clearly describing contents.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.
1. Warranty Period: Two (2) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ceiling Mounted Centrifugal Fans- General Exhaust:
    - a. Greenheck Fan Corp.
    - b. Penn-Barry.
    - c. Loren Cook Co.
  2. In-Line Centrifugal Fans – General Supply/Exhaust:
    - a. Greenheck Fan Corp.
    - b. Loren Cook Co.
    - c. Penn-Barry.
    - d. Or approved equivalent.
  3. Centrifugal Roof Ventilators – General Exhaust:
    - a. Greenheck Fan Corp.
    - b. Loren Cook Co.
    - c. Penn-Barry.
    - d. Or approved equivalent.
  4. Sidewall Propeller Fans – General Supply/Exhaust.
    - a. Greenheck Fan Corp.
    - b. Loren Cook Co.
    - c. Penn-Barry.
    - d. Or approved equivalent.

2.2 CEILING MOUNTED CENTRIFUGAL FANS – GENERAL EXHAUST

- A. Description: Direct-drive centrifugal fans, as indicated, consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch and accessories.
- B. Housing, Outlet and Grille:
1. Housing:

- a. Constructed of heavy gauge galvanized steel
  - b. Profile as low as 6 15/16 inches
2. Outlet:
- a. Steel duct collar shall be six or four inches in diameter to accept a six or four inch round duct work.
  - b. Shall include an aluminum backdraft damper.
3. Grille:
- a. Designer; Constructed of high impact polystyrene plastic attached to housing with screws.
- C. Fan Wheels:
1. Forward curved centrifugal wheel
  2. Constructed of calcium carbonate filled polypropylene
  3. Statically and dynamically balanced in accordance to AMCA Standard 204-05
- D. Accessories: The following items are required as indicated:
1. Disconnect Switch: NEMA 1, non-fusible type, with thermal-overload protection.
  2. Mounting vibration kit.
  3. Refer to equipment schedule for additional requirements.
- 2.3 IN-LINE CENTRIFUGAL FANS – GENERAL SUPPLY/EXHAUST
- A. Description: In-line, belt-driven or direct driven centrifugal fans consisting of housing, wheel, outlet guide vanes, fan shaft, bearings, drive assembly, motor and disconnect switch, mounting brackets, and accessories.
- B. Construction: The fan shall be of bolted construction utilizing corrosion resistant fasteners. Housing shall be minimum 18 gauge galvanized steel with integral duct collars. Bolted access doors shall be provided on three sides, sealed with closed cell neoprene gasketing. Pivoting motor plate shall utilize threaded L-bolt design for positive belt tensioning. Housing shall be pre-drilled to accommodate universal mounting feet for vertical or horizontal installation. Unit shall bear an engraved aluminum nameplate. Nameplate shall indicate design CFM, static pressure, and maximum fan RPM. Unit shall be shipped in ISTA certified transit tested packaging.
- C. Direct-Drive Units: Motor encased in housing out of air stream, factory wired to disconnect located on outside of fan housing.
- D. Belt-Driven Units: Motor mounted on adjustable base, with adjustable sheaves, enclosure around belts within fan housing, and lubricating tubes from fan bearings extended to outside of fan housing.
- E. Fan Wheel: Wheel shall be centrifugal backward inclined, constructed of 100% aluminum, including a precision machined cast aluminum hub. Wheel inlet shall overlap an aerodynamic aluminum inlet cone to provide maximum performance with AMCA Standard 204-96, Balance Quality and Vibration Levels for Fans.
- F. Bearings: Bearings shall be designed and individually tested specifically for use in air handling applications. Construction shall be heavy duty regreasable ball type in a pillow block cast iron housing selected for a minimum L50 life in excess of 200,000 hours at maximum cataloged operating speed.

- G. Motor: Motor shall be heavy duty type with permanently lubricated sealed ball bearings and furnished at the specified voltage, phase and enclosure.
- H. Accessories: The following accessories are required as indicated:
  - 1. Companion Flanges: For inlet and outlet duct connections.
  - 2. Motor and Drive Cover (Belt Guard): Epoxy-coated steel.
  - 3. Refer to equipment schedule for additional requirements.

#### 2.4 CENTRIFUGAL ROOF VENTILATORS – GENERAL EXHAUST

- A. Description: Belt-drive or direct-drive centrifugal fans, as indicated, consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, curb base, and accessories.
- B. Housing: Removable, galvanized-steel, mushroom-domed top; square, one-piece, aluminum base with venturi inlet cone.
  - 1. Upblast Units: Provide spun-aluminum discharge baffle to direct discharge air upward, with rain and snow drains.
  - 2. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.
- C. Fan Wheels: Aluminum hub and wheel with backward-inclined blades.
- D. Belt-Driven Drive Assembly: Resiliently mounted to the housing, with the following features:
  - 1. Fan Shaft: Turned, ground, and polished steel drive shaft; keyed to wheel hub.
  - 2. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
  - 3. Pulleys: Cast-iron, adjustable-pitch motor pulley.
  - 4. Fan and motor shall be isolated from the exhaust air stream.
- E. Accessories: The following items are required as indicated:
  - 1. Variable-Speed Controller: Solid-state controls to reduce speed from 100 percent to less than 50 percent for direct drive units.
  - 2. Disconnect Switch: NEMA 3R, non-fusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
  - 3. Bird Screens: Removable 1/2-inch mesh, aluminum.
  - 4. Dampers: Counterbalanced, parallel-blade, back draft dampers mounted in curb base; factory set to close when fan stops.
  - 5. Roof Curbs: Galvanized steel; mitered and welded corners; 2-inch- thick, rigid, fiberglass insulation adhered to inside walls; and 2-inch wood nailer. Size as required to suit roof opening and fan base.
    - a. Configuration: Self-flashing without a cant strip, with mounting flange. Provide manufacturer's standard rubber curb seal for connection between fan and curb.
    - b. Overall Height: 18 inches above roof.
  - 6. Vented Curb Extension: Galvanized steel;

2.5 SIDEWALL PROPELLER FANS – GENERAL SUPPLY/EXHAUST

- A. Description: Direct drive cast aluminum propeller fans, as indicated, consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, mounting hardware and accessories.
- B. General:
1. Fan arrangement shall be either supply or exhaust, see Fan Schedule
  2. Sidewall mounted applications
  3. Performance capabilities up to 47,000 cubic feet per minute (cfm) and static pressure to 2.45 inches of water gauge
  4. Fans are available in four sizes with nominal wheel diameters ranging from 20 inches through 48 inches (20 - 48 unit sizes)
  5. Maximum continuous operating temperature 130° Fahrenheit (54.4 Celsius)
  6. Minimum continuous operating temperature -10° F (-23° C)
  7. Each fan shall bear a permanently affixed manufacturer's engraved metal nameplate containing the model number and individual serial number
- C. Wheel:
1. Propeller constructed of cast aluminum tapered airfoil blades and cast aluminum hubs
  2. Securely attached to motor shaft with a standard square key, set screw and tapered bushing
  3. Statically and dynamically balanced in accordance with AMCA Standard 204-05
  4. The propeller and fan inlet will be matched and shall have precise running tolerances for maximum performance and operating efficiency
- D. Motors:
1. Motor enclosures: Totally Enclosed Fan Cooled (TEFC).
  2. Motors are permanently lubricated, heavy duty ball bearing type to match with the fan load and furnished at the specific voltage and phase.
  3. Accessible for maintenance.
- E. Drive Frame:
1. Frames and Panels shall be bolted construction
  2. Drive frame assemblies and fan panels shall be galvanized steel or painted steel
  3. Drive frame shall be formed steel and fan panels shall have pre-punched mounting holes, formed flanges, and a deep formed inserted venturi
- F. Accessories: The following items are required as indicated:
1. Disconnect Switch: NEMA 1, non-fusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
  2. Dampers: Motorized, balanced with Galvanized Damper Guards.
  3. Horizontal Mounting. Engineer to confirm motor orientation in submittal review.
  4. Wall Housing: Galvanized Steel, mounting flanges and pre-punched mounting holes.
  5. Motor Guard: OSHA approved.

2.6 MOTORS

- A. Motor Construction: NEMA MG 1, general purpose, continuous duty, Design B.

- B. Enclosure Type: The following features are required as indicated:
  - 1. Open drip proof motors where satisfactorily housed or remotely located during operation.
  - 2. Guarded drip proof motors where exposed to contact by employees or building occupants.

## 2.7 FACTORY FINISHES

- A. Exterior Surfaces: Baked-enamel finish coat after assembly.
- B. Aluminum Parts: No finish required.

## 2.8 SOURCE QUALITY CONTROL

- A. Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.
- B. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements of installation tolerances and other conditions affecting performance of the power ventilators. Do not proceed with installation until unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install power ventilators according to manufacturer's written instructions.
- B. Support units using the vibration-control devices indicated. Vibration-control devices are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
  - 1. Secure roof-mounted fans to roof curbs with cadmium-plated hardware.
  - 2. Secure laboratory exhaust fans to equipment supports and mount fans on vibration isolators, furnished by the fan manufacturer, in accordance with Division 23 specifications.
  - 3. Suspend inline units from structural steel support frame using threaded steel rods and vibration isolation springs.
- C. Install units with clearances for service and maintenance.
- D. Label units according to requirements specified in Division 23 Section "Identification for HVAC Piping and Equipment."

### 3.3 CONNECTIONS

- A. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate the general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors.
- B. Electrical: Conform to applicable requirements in Division 26 Sections.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

### 3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Provide services of a factory-authorized service representative to supervise the field assembly of components and installation of fans, including duct and electrical connections, and to report results in writing to Engineer.
- B. Perform the following field tests and inspections and prepare test reports:
  - 1. Verify that shipping, blocking, and bracing are removed.
  - 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
  - 3. Verify that cleaning and adjusting are complete.
  - 4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
  - 5. Adjust belt tension.
  - 6. Adjust damper linkages for proper damper operation.
  - 7. Verify lubrication for bearings and other moving parts.
  - 8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
  - 9. Disable automatic temperature-control operators, energize motor and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
  - 10. Shut unit down and reconnect automatic temperature-control operators.
  - 11. Remove and replace malfunctioning units and retest as specified above.
- C. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

### 3.5 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Adjust belt tension.
- C. Lubricate bearings.
- D. Refer to Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing procedures.

- E. Replace fan and motor pulleys as required to achieve design airflow.
- F. Lubricate bearings.

3.6 CLEANING

- A. After completion of installation, inspect exposed finish. Remove burrs, dirt, and construction debris, and repair damaged finishes including chips, scratches, and abrasions.
- B. Clean fan interiors to remove foreign material and construction debris. Vacuum clean fan wheel and cabinet.

3.7 DEMONSTRATION

- A. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance. Training for exhaust fans shall be included for a total of 1 hour.
- B. Schedule training with Owner through the Construction Manager; provide at least 7-days notice of training date.
- C. Demonstrate operation of power ventilators. Conduct walking tour of the Project. Briefly identify location and describe function, operation, and maintenance of each power ventilator.

END OF SECTION 233423

## SECTION 233713 DIFFUSERS, REGISTERS & GRILLES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes ceiling- and wall-mounted diffusers, registers, and grilles.
- B. Related Sections include the following:
  - 1. Division 8 Section "Fixed Louvers" for fixed and adjustable louvers and wall vents, whether or not they are connected to ducts.
  - 2. Division 23 Section "Duct Accessories" for fire dampers and volume-control dampers not integral to diffusers, registers, and grilles.
  - 3. Division 23 Section "Testing, Adjusting, and Balancing" for balancing diffusers, registers, and grilles.

#### 1.3 DEFINITIONS

- A. Diffuser: Circular, square, or rectangular air distribution outlet, generally located in the ceiling and comprised of deflecting members discharging supply air in various directions and planes and arranged to promote mixing of primary air with secondary room air.
- B. Grille: A louvered or perforated covering for an opening in an air passage, which can be located in a sidewall, ceiling, or floor.
- C. Register: A combination grille and damper assembly over an air opening.

#### 1.4 SUBMITTALS

- A. Product Data: For each product indicated, include the following:
  - 1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
  - 2. Diffuser, Register, and Grille Schedule: Indicate Drawing designation, room location, quantity, model number, size, and accessories furnished.
  - 3. Assembly Drawing: For each type of air outlet and inlet; indicate materials and methods of assembly of components.
- B. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

- C. Samples for Initial Selection: For diffusers, registers, and grilles with factory-applied color finishes.
- D. Samples for Verification: For diffusers, registers, and grilles, in manufacturer's standard sizes to verify color selected.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
  - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.

### 2.2 DIFFUSER SCHEDULE

- A. Square Diffuser <CD>.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Price.
    - b. Titus.
    - c. Carnes Co. Inc.
    - d. Krueger.
    - e. Or approved equal.
  - 2. Material: Aluminum.
  - 3. Finish: Baked enamel, color selected by Architect.
  - 4. Duct Connection: Round or square as required.
  - 5. Face Style: Square, panel. Refer to schedule for types that required adjustable pattern.
  - 6. Mounting: Flush. Nominal 24"x24" Lay in. Plaster frame where required and coordinate final frame with ceiling type.
  - 7. Pattern: 4 way or as indicated on drawings.
  - 8. Accessories: Include the following:
    - a. Equalizer deflectors.
    - b. Operating keys.
- B. Round Diffuser CD.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Price.
    - b. Titus.
    - c. Carnes Co. Inc.
    - d. Krueger.
    - e. Or approved equal.
  - 2. Material: Aluminum.
  - 3. Finish: Baked enamel, color selected by Architect.
  - 4. Duct Connection: Round as required.
  - 5. Face Style: Round, 3-cone.
  - 6. Mounting: Plaster frame or duct mounted as required.
  - 7. Pattern: Fixed.

8. Dampers: Aluminum opposed blade with adjusting screw.
9. Accessories: Include the following:
  - a. Equalizer deflectors.
  - b. Operating keys.

### 2.3 REGISTER or GRILLE SCHEDULE

#### A. Register or Grille SR, ER, RR, RG, TG.

1. Products: Subject to compliance with requirements, provide one of the following:
  - a. Price.
  - b. Titus
  - c. Carnes Co. Inc.
  - d. Krueger.
  - e. Or approved equal.
2. Material: Aluminum or Steel; refer to device schedule.
3. Finish: Baked enamel, color as selected by Architect.
4. Face Blade Arrangement: Fixed horizontal.
5. Rear Blade Arrangement: Fixed vertical.
6. Frame: 1 inch wide.
7. Mounting: Countersunk screw.
8. Damper Type: Adjustable opposed-blade assembly.
9. Accessories: Include plaster frame as applicable and damper operating key.

### 2.4 LINEAR SLOT DIFFUSER

#### A. Linear Slot Diffuser

1. Products: Subject to compliance with requirements, provide one of the following:
  - a. Price.
  - b. Titus.
  - c. Carnes Co. Inc.
  - d. Krueger.
  - e. Or approved equal.
2. Material: Extruded Aluminum
3. Finish: Baked enamel, color as selected by Architect.
4. Frame: Heavy duct extruded aluminum
5. Slots: Refer to device schedule for number and width.
6. Adjustable pattern damper.
7. Insulated sheet metal boot and plenum.

### 2.5 LINEAR JET-SLOT DIFFUSER

#### A. Linear Slot Diffuser

1. Products: Subject to compliance with requirements, provide one of the following:
  - a. Price.
  - b. Titus.
  - c. Carnes Co. Inc.
  - d. Krueger.

e. Or approved equal.

2. Material: Extruded Aluminum
3. Finish: Baked enamel, color as selected by Architect.
4. Frame: Heavy duct extruded aluminum.
5. Slots: Refer to device schedule for number and width.
6. Adjustable pattern damper.
7. Insulated sheet metal boot and plenum.

## 2.6 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install diffusers, registers, and grilles level and plumb.
- B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practicable. For units installed in lay-in ceiling panels, locate units in the center of panel. It is the responsibility of the contractor to review architectural drawings and provide applicable mounting frame for type of surface or ceiling indicated on architectural drawings. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.
- C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

### 3.3 ADJUSTING

- A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

### 3.4 CLEANING

- A. After installation of diffusers, registers, and grilles, inspect exposed finish. Clean exposed surfaces to remove burrs, dirt, and smudges. Replace diffusers, registers, and grilles that have damaged finishes.

END OF SECTION 233713

## SECTION 238126 – SPLIT SYSTEM AIR-CONDITIONING UNITS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes split-system air-conditioning and heat pump units consisting of separate evaporator-fan and compressor-condenser components. Units are designed for exposed or concealed mounting and may be connected to ducts. Refer to contract drawings for additional information.

#### 1.3 SUBMITTALS

- A. Product Data: Include rated capacities, furnished specialties, and accessories for each type of product indicated. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Samples for Initial Selection: For units with factory-applied color finishes.
- D. Field quality-control test reports.
- E. Operation and Maintenance Data: For split-system air-conditioning units to include in emergency, operation, and maintenance manuals.
- F. Warranty: Special warranty specified in this Section.

#### 1.4 QUALITY ASSURANCE

- A. Product Options: Drawings indicate size, profiles, and dimensional requirements of split-system units and are based on the specific system indicated. Refer to "Product Requirements."

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Energy-Efficiency Ratio: Equal to or greater than prescribed by ASHRAE 90.1, "Energy Efficient Design of New Buildings except Low-Rise Residential Buildings."
- D. Coefficient of Performance: Equal to or greater than prescribed by ASHRAE 90.1, "Energy Efficient Design of New Buildings except Low-Rise Residential Buildings."
- E. Units shall be designed to operate with HCFC-free refrigerants.

#### 1.5 COORDINATION

- A. Coordinate size and location of concrete bases for units. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Division 3 Section "Cast-in-Place Concrete."
- B. Coordinate size, location, and connection details with roof curbs, equipment supports, and roof penetrations specified in Division 7 Section "Roof Accessories."

#### 1.6 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split system air conditioning units that fails in materials or workmanship within the manufacturer's standard warranty period.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Daikin.
  - 2. Mitsubishi.
  - 3. LG.
  - 4. Samsung.
  - 5. Or approved equal.

2.2 WALL-MOUNTING, EVAPORATOR-FAN COMPONENTS

- A. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect, and discharge drain pans with drain connection.
- B. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with thermal-expansion valve.
- C. Fan: Direct drive, centrifugal fan.
- D. Fan Motors: Comply with requirements in Division 15 Section "Motors."
  - 1. Special Motor Features: Multitapped, multispeed with internal thermal protection and permanent lubrication.
- E. Filters: Permanent, cleanable.

2.3 CEILING-MOUNTING, EVAPORATOR-FAN COMPONENTS

- A. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect, and discharge drain pans with drain connection.
- B. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with thermal-expansion valve.
  - 1. Coils shall be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond.
  - 2. The coil shall be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance.
  - 3. The coil shall be a 2, or 3-row cross fin copper evaporator coil with up to 21 FPI design completely factory tested.
  - 4. The refrigerant connections shall be flare connections and the condensate will be 1 -1/4 inch outside diameter PVC.
  - 5. A condensate pan with antibacterial treatment shall be located under the coil.
  - 6. A thermistor will be located on the liquid and gas line.
- C. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements with refractory ceramic support bushings; automatic-reset thermal cutout; built-in magnetic contactors; manual-reset thermal cutout; airflow proving device; and one-time fuses in terminal box for overcurrent protection.
- D. Fan and Motor: Direct drive, multi-speed, ECM type fan and integral condensate pump.
- E. Filters: Permanent, cleanable.

2.4 CONCEALED CEILING DUCTED UNIT

- A. Cabinet: Cabinet shall allow for ducted supply and return. The cabinet shall be constructed with sound absorbing foamed polystyrene insulation.
- B. Refrigerant Coil:
  - 1. Coils shall be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond.
  - 2. The coil shall be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance.
  - 3. The coil shall be a 3 row cross fin copper evaporator coil with 15 fpi design completely factory tested.
  - 4. The refrigerant connections shall be flare connections and the condensate will be 1-1/4" outside diameter PVC.
  - 5. A condensate pan shall be located under the coil.
  - 6. A condensate pump with an 18-3/8" lift shall be located below the coil in the condensate pan with a built in safety alarm.
  - 7. A thermistor will be located on the liquid and gas line.
- C. Fan and Motor: Direct drive, multi-speed, ECM motor, statically and dynamically balanced impeller.
- D. Filters: Permanent, MERV13 filter kit.

2.5 AIR-COOLED, COMPRESSOR-CONDENSER COMPONENTS

- A. Casing: Steel, finished with baked enamel in color selected by Architect, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
- B. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
  - 1. Compressor Type: Reciprocating.
  - 2. Variable-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.
  - 3. Refrigerant Charge: R-410A.
- C. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with liquid subcooler.
- D. Heat Pump Components: Reversing valve and low-temperature air cut-off thermostat.
- E. Fan: Aluminum-propeller type, directly connected to motor.

- F. Motor: Permanently lubricated, with integral thermal-overload protection.
- G. Low Ambient Kit: Permits operation down to -4 deg F.
- H. Mounting Base: Polyethylene.

## 2.6 ACCESSORIES

- A. Thermostat: Hard-wired functioning to remotely control compressor and evaporator fan, with the following features:
  - 1. Compressor time delay.
  - 2. 24-hour time control of system stop and start.
  - 3. Liquid-crystal display indicating temperature, set-point temperature, time setting, operating mode, and fan speed.
  - 4. Fan-speed selection, including auto setting.
- B. Manufacturer supplied condensate pumps powered via indoor evaporator unit.
- C. Automatic-reset timer to prevent rapid cycling of compressor.
- D. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.
- E. Refrigerant Fittings for combination systems operating off of a single outdoor, air-cooled condensing unit.
- F. Fresh air intake kit including relay for open/close operation of motor operated damper.
- G. Ducted Zone Distribution kit.

## 2.7 CAPACITIES AND CHARACTERISTICS

- A. Refer to contract documents for capacities, characteristics and additional requirements.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Install unit's level and plumb.
- B. Install all split-systems whether stand-alone or variable refrigerant volume systems in strict accordance with the manufacturer's installation instructions. Only approved pipe joining methods and fittings may be utilized; no exceptions.
- C. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.
- D. Install ground-mounting, compressor-condenser components on 4-inch- thick, reinforced concrete base; 4 inches larger on each side than unit. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete." Coordinate anchor installation with concrete base.
- E. Install ground-mounting, compressor-condenser components on polyethylene mounting base; minimum 3-inches high.
- F. Install roof-mounting compressor-condenser components on equipment supports specified in Division 07 Section "Roof Accessories." Anchor units to supports with removable, cadmium-plated fasteners.
- G. Install and connect pre-charged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

#### **3.2 CONNECTIONS**

- A. Install piping adjacent to unit to allow service and maintenance.
- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- C. Electrical Connections: Comply with requirements in Division 26 Sections for power wiring, switches, and motor controls.
- D. Provide control wiring as required by the manufacturer for a complete installation. Wire type shall be 18 AWG, 2 wire, non-polarity, non-shielded, stranded.

### 3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. Perform the following field tests and inspections and prepare test reports:
  - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace malfunctioning units and retest as specified above.

### 3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.

### 3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain units in accordance with Section 01820.

END OF SECTION 238126

## SECTION 238239 UNIT HEATERS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Propeller unit heaters with electric-resistance heating coils.
  - 2. Propeller unit heaters with hot-water heating coils.
  - 3. Wall and ceiling heaters with propeller fans and electric-resistance heating coils.

#### 1.3 DEFINITIONS

- A. BAS: Building automation system.
- B. CWP: Cold working pressure.
- C. PTFE: Polytetrafluoroethylene plastic.
- D. TFE: Tetrafluoroethylene plastic.

#### 1.4 SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each product indicated.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 1. Plans, elevations, sections, and details.
  - 2. Location and size of each field connection.
  - 3. Details of anchorages and attachments to structure and to supported equipment.
  - 4. Equipment schedules to include rated capacities, operating characteristics, furnished specialties, and accessories.
  - 5. Location and arrangement of integral controls.
  - 6. Wiring Diagrams: Power, signal, and control wiring.
- C. Samples for Initial Selection: Finish colors for units with factory-applied color finishes.
- D. Samples for Verification: Finish colors for each type of cabinet unit heater and wall and ceiling heaters indicated with factory-applied color finishes.

- E. Field quality-control test reports.
- F. Operation and Maintenance Data: For cabinet unit heaters to include in emergency, operation, and maintenance manuals.

#### 1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. ASHRAE/IESNA 90.1-2010 Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2010, Section 6 - "Heating, Ventilating, and Air-Conditioning."

### PART 2 - PRODUCTS

#### 2.1 PROPELLER UNIT HEATERS - ELECTRIC

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Berko.
  - 2. Indeeco.
  - 3. QMark Electric Heating; a division of Marley Engineered Products.
  - 4. Or approved equivalent.
- B. Description: An assembly including casing, coil, fan, and motor in vertical and horizontal discharge configuration with adjustable discharge louvers.
- C. Comply with UL 2021.
- D. Comply with UL 823.
- E. Cabinet: Removable panels for maintenance access to controls.
- F. Cabinet Finish: Manufacturer's standard baked enamel applied to factory-assembled and -tested propeller unit heater before shipping.
- G. Discharge Louver: Adjustable fin diffuser for horizontal units and conical diffuser for vertical units.
- H. Electric-Resistance Heating Elements: Nickel-chromium heating wire, free from expansion noise and 60-Hz hum, embedded in magnesium oxide refractory and sealed in steel or corrosion-resistant metallic sheath with fins no closer than 0.16 inch. Element ends shall be enclosed in terminal box. Fin surface temperature shall not exceed 550 deg F at any point during normal operation.
  - 1. Circuit Protection: One-time fuses in terminal box for overcurrent protection and limit controls for high-temperature protection of heaters.
  - 2. Wiring Terminations: Stainless-steel or corrosion-resistant material.
- I. Fan: Propeller type with aluminum wheel directly mounted on motor shaft in the fan venturi.

- J. Fan Motors: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
  - 1. Motor Type: Permanently lubricated, multispeed.
- K. Control Devices:
  - 1. Unit-mounted, variable fan-speed switch.
  - 2. Wall low voltage thermostat.
- L. Accessories:
  - 1. Provide manufacturer's universal mounting bracket.
- M. Capacities and Characteristics
  - 1. Refer to equipment schedules contained in contract documents for schedule equipment capacities and characteristics.

## 2.2 WALL AND CEILING HEATERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Berko.
  - 2. Indeeco.
  - 3. QMark Electric Heating; a division of Marley Engineered Products.
  - 4. Or approved equivalent.
- B. Description: An assembly including chassis, electric heating coil, fan, motor, and controls. Comply with UL 2021.
- C. Cabinet:
  - 1. Front Panel: Stamped-steel louver, with removable panels fastened with tamperproof fasteners.
  - 2. Finish: Baked enamel over baked-on primer with manufacturer's standard color selected by Architect, applied to factory-assembled and -tested wall and ceiling heaters before shipping.
- D. Surface-Mounting Cabinet Enclosure: Steel with finish to match cabinet.
- E. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and hum, embedded in magnesium oxide refractory and sealed in corrosion-resistant metallic sheath. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware, and limit controls for high temperature protection.
- F. Fan: Aluminum propeller directly connected to motor.
  - 1. Motor: Permanently lubricated, multispeed. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
- G. Control Devices: Unit-mounted low voltage thermostat.
- H. Accessories:

1. Provide manufacturer recessed mounting enclosure for heater.
  2. Provide manufacture trim-ring for mounting in ceiling.
- I. Electrical Connection: Factory wire motors and controls for a single field connection with disconnect switch.
- J. Capacities and Characteristics:
1. Refer to equipment schedules contained in contract documents for schedule equipment capacities and characteristics.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine areas to receive unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for electrical connections to verify actual locations before unit heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 INSTALLATION

- A. Install wall boxes in finished wall assembly, seal and weatherproof. Joint-sealant materials and applications are specified in Division 07 Section "Joint Sealants."
- B. Install cabinet unit heaters to comply with NFPA 90A.
- C. Install propeller unit heaters level and plumb.
- D. Suspend propeller unit heaters from structure with all-thread hanger rods and elastomeric hangers.
- E. Install wall-mounting thermostats and switch controls in electrical outlet boxes at 48" above finished floor. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

#### 3.3 CONNECTIONS

- A. Connect supply and return ducts to cabinet unit heaters with flexible duct connectors specified in Division 23 Section "Air Duct Accessories."
- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Contractor shall perform the following field tests and inspections and prepare test reports:
  - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  - 2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
  - 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- B. Remove and replace malfunctioning units and retest as specified above.

3.5 ADJUSTING

- A. Adjust initial temperature set points.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain boilers. Training shall be included for a total of 1 hours; (1) 1-hour session. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 238239

## SECTION 260500 COMMON WORK RESULTS FOR ELECTRICAL

### PART 1 - GENERAL

#### 1.1 WORK COVERED BY CONTRACT DOCUMENTS

- 1) Electrical Drawings
- 2) Project Specifications

#### 1.2 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.3 SUMMARY

- A. Section Includes:
  1. Electrical equipment coordination and installation.
  2. Sleeves for raceways and cables.
  3. Sleeve seals.
  4. Grout.
  5. Common electrical installation requirements.

#### 1.4 DEFINITIONS

- A. EPDM: Ethylene-propylene-diene terpolymer rubber.
- B. NBR: Acrylonitrile-butadiene rubber.

#### 1.5 SUBMITTALS

- A. Product Data: For sleeve seals.

#### 1.6 COORDINATION

- A. Coordinate arrangement, mounting, and support of electrical equipment:
  1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
  2. To provide for ease of disconnecting the equipment with minimum interference to other installations.

3. To allow right of way for piping and conduit installed at required slope.
  4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- C. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."
- D. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."

## PART 2 - PRODUCTS

### 2.1 SLEEVES FOR RACEWAYS AND CABLES

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Sleeves for Rectangular Openings: Galvanized sheet steel.
1. Minimum Metal Thickness:
    - a. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and no side more than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
    - b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches (1270 mm) and 1 or more sides equal to, or more than, 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

### 2.2 SLEEVE SEALS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Advance Products & Systems, Inc.
    - b. Calpico, Inc.
    - c. Metraflex Co.
    - d. Pipeline Seal and Insulator, Inc.
    - e. Or approved equal.

2. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
3. Pressure Plates: Plastic. Include two for each sealing element.
4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

## 2.3 GROUT

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

## PART 3 - EXECUTION

### 3.1 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION

- A. Comply with NECA 1.
- B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
- C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
- D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- E. Right of Way: Give to piping systems installed at a required slope.

### 3.2 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
- B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
- C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- E. Cut sleeves to length for mounting flush with both surfaces of walls.

- F. Extend sleeves installed in floors 2 inches (50 mm) above finished floor level.
- G. Size pipe sleeves to provide 1/4-inch (6.4-mm) annular clear space between sleeve and raceway or cable, unless indicated otherwise.
- H. Seal space outside of sleeves with grout for penetrations of concrete and masonry
  - 1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
- I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants."
- J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping."
- K. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- L. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- M. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between raceway or cable and sleeve for installing mechanical sleeve seals.

### 3.3 SLEEVE-SEAL INSTALLATION

- A. Install to seal exterior wall penetrations.
- B. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

### 3.4 FIRESTOPPING

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

END OF SECTION 260500

## SECTION 260519 LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Building wires and cables rated 600 V and less.
  - 2. Connectors, splices, and terminations rated 600 V and less.

#### 1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Qualification Data: For testing agency.

#### 1.4 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.

#### 1.5 COORDINATION

- A. Set cable/conduit sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

### PART 2 - PRODUCTS

#### 2.1 CONDUCTORS AND CABLES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Alcan Products Corporation; Alcan Cable Division.
2. American Insulated Wire Corp.; a Leviton Company.
3. General Cable Corporation.
4. Senator Wire & Cable Company.
5. Southwire Company.
6. Or approved equal.

B. Copper Conductors: Comply with NEMA WC 70.

C. Conductor Insulation: Comply with NEMA WC 70 for Types THW, THHN, THWN, XHHW, UF, USE, and SO.

D. Multi-conductor Cable: Comply with NEMA WC 70 for metal-clad cable, Type MC nonmetallic-sheathed cable, Type NM Type SO and Type USE with ground wire.

## 2.2 CONNECTORS AND SPLICES

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. AFC Cable Systems, Inc.
2. Hubbell Power Systems, Inc.
3. O-Z/Gedney; EGS Electrical Group LLC.
4. 3M; Electrical Products Division.
5. Tyco Electronics Corp.
6. Or approved equal.

B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

## PART 3 - EXECUTION

### 3.1 CONDUCTOR MATERIAL APPLICATIONS

A. Feeders: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

B. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

### 3.2 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

A. Service Entrance: Type THHN-THWN, single conductors in raceway or Type XHHW, single conductors in raceway or Type SE or USE multi-conductor cable as per project plans.

- B. Exposed Feeders: Type THHN-THWN, single conductors in raceway or Metal-clad cable, Type MC.
- C. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspace: Type THHN-THWN, single conductors in raceway or Metal-clad cable, Type MC.
- D. Feeders Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-THWN, single conductors in raceway.
- E. Feeders Installed below Raised Flooring: Type THHN-THWN, single conductors in raceway or Metal-clad cable, Type MC.
- F. Feeders in Cable Tray: Type TC, single conductors (#1/0 or larger) or multi-conductor cables or Metal-clad cable, Type MC.
- G. Exposed Branch Circuits, Including in Crawlspace: Type THHN-THWN, single conductors in raceway or Metal-clad cable, Type MC.
- H. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN-THWN, single conductors in raceway or Metal-clad cable, Type MC.
- I. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-THWN, single conductors in raceway.
- J. Branch Circuits Installed below Raised Flooring: Type THHN-THWN, single conductors in raceway or Metal-clad cable, Type MC.
- K. Branch Circuits in Cable Tray: Type TC, multi-conductor tray cables or Metal-clad cable, Type MC.
- L. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless-steel, wire-mesh, strain relief device at terminations to suit application.
- M. Class 1 Control Circuits: Type THHN-THWN, in raceway.
- N. Class 2 Control Circuits: Type THHN-THWN, in raceway or Power-limited cable, concealed in building finishes or Power-limited tray cable, in cable tray.

### 3.3 INSTALLATION OF CONDUCTORS AND CABLES

- A. Conceal cables in finished walls, ceilings, and floors, unless otherwise indicated.
- B. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
- C. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.

- D. Install exposed cables parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.
- E. Support cables according to Division 26 Section "Hangers and Supports for Electrical Systems."
- F. Identify and color-code conductors and cables according to Division 26 Section "Identification for Electrical Systems."

### 3.4 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- B. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than un-spliced conductors.
- C. Wiring at Outlets: Install conductors at each outlet, with at least 6 inches (150 mm) of slack.

### 3.5 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
- B. Tests and Inspections:
  - 1. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors, for compliance with requirements.
  - 2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
- C. Test Reports: Prepare a written report to record the following:
  - 1. Test procedures used.
  - 2. Test results that comply with requirements.
  - 3. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- D. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 260519

## SECTION 260526 GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes methods and materials for grounding systems and equipment, plus the following special applications:
  - 1. Equipment grounding.

#### 1.3 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Field quality-control test reports.
- C. Operation and Maintenance Data: For grounding to include the following in emergency, operation, and maintenance manuals:
  - 1. Instructions for periodic testing and inspection of grounding features at test wells, ground rings, grounding connections for separately derived systems based on NETA MTS.
    - a. Tests shall be to determine if ground resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if they do not.
    - b. Include recommended testing intervals.

#### 1.4 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with UL 467 for grounding and bonding materials and equipment.

## PART 2 - PRODUCTS

### 2.1 CONDUCTORS

- A. Insulated Conductors: Copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.
- B. Bare Copper Conductors:
  - 1. Solid Conductors: ASTM B 3.
  - 2. Stranded Conductors: ASTM B 8.
  - 3. Tinned Conductors: ASTM B 33.
  - 4. Bonding Cable: No.4 AWG conductor.
  - 5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
  - 6. Bonding Jumper: Copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.
  - 7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.
- C. Grounding Bus: Rectangular bars of annealed copper, 1/4 by 2 inches in cross section, unless otherwise indicated; with insulators.

### 2.2 CONNECTORS

- A. Listed and labeled by a nationally recognized testing laboratory acceptable to authorities having jurisdiction for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.
- B. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, bolted pressure-type, with at least two bolts.
  - 1. Pipe Connectors: Clamp type, sized for pipe.
- C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

## PART 3 - EXECUTION

### 3.1 APPLICATIONS

- A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger, unless otherwise indicated.
- B. Conductor Terminations and Connections:
  - 1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.

2. Underground Connections: Welded connectors, except at test wells and as otherwise indicated.
3. Connections to Structural Steel: Welded connectors.

### 3.2 EQUIPMENT GROUNDING

- A. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:
  1. Feeders and branch circuits.
  2. Lighting circuits.
  3. Receptacle circuits.
  4. Single-phase motor and appliance branch circuits.
  5. Three-phase motor and appliance branch circuits.
  6. Flexible raceway runs.
- B. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.

### 3.3 INSTALLATION

- A. Grounding Conductors: Route along shortest and straightest paths possible, unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
- B. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.
  1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
  2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install so vibration is not transmitted to rigidly mounted equipment.
  3. Use exothermic-welded connectors for outdoor locations, but if a disconnect-type connection is required, use a bolted clamp.

### 3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections and prepare test reports:
  1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
  2. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, at ground test wells, and at individual ground rods. Make tests at ground rods before any conductors are connected.

- a. Measure ground resistance not less than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
- b. Perform tests by fall-of-potential method according to IEEE 81.

END OF SECTION 260526

## SECTION 260529 HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Hangers and supports for electrical equipment and systems.
  - 2. Construction requirements for concrete bases.
- B. Related Sections include the following:
  - 1. Division 26 Section "Vibration And Seismic Controls For Electrical Systems" for products and installation requirements necessary for compliance with seismic criteria.

#### 1.3 DEFINITIONS

- A. EMT: Electrical metallic tubing.
- B. IMC: Intermediate metal conduit.
- C. RMC: Rigid metal conduit.

#### 1.4 PERFORMANCE REQUIREMENTS

- A. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.
- B. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

#### 1.5 SUBMITTALS

- A. Product Data: For the following:
  - 1. Steel slotted support systems.
  - 2. Nonmetallic slotted support systems.

1.6 QUALITY ASSURANCE

- A. Comply with NFPA 70.

1.7 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

PART 2 - PRODUCTS

2.1 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

- A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.
  - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Allied Tube & Conduit.
    - b. Cooper B-Line, Inc.; a division of Cooper Industries.
    - c. ERICO International Corporation.
    - d. GS Metals Corp.
    - e. Thomas & Betts Corporation.
    - f. Unistrut; Tyco International, Ltd.
    - g. Or approved equal.
  - 2. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
  - 3. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
  - 4. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
  - 5. Channel Dimensions: Selected for applicable load criteria.
- B. Nonmetallic Slotted Support Systems: Structural-grade, factory-formed, glass-fiber-resin channels and angles with 9/16-inch- diameter holes at a maximum of 8 inches o.c., in at least 1 surface.
  - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. Allied Tube & Conduit.
  - b. Cooper B-Line, Inc.; a division of Cooper Industries.
  - c. Fabco Plastics Wholesale Limited.
  - d. Seasafe, Inc.
  - e. Or approved equal
2. Fittings and Accessories: Products of channel and angle manufacturer and designed for use with those items.
  3. Fitting and Accessory Materials: Same as channels and angles, except metal items may be stainless steel.
  4. Rated Strength: Selected to suit applicable load criteria.
- C. Raceway and Cable Supports: As described in NECA 1 and NECA 101.
- D. Conduit and Cable Support Devices: Steel and malleable-iron hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.
- E. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.
- F. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
- G. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
    - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      - 1) Hilti Inc.
      - 2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      - 3) MKT Fastening, LLC.
      - 4) Simpson Strong-Tie Co., Inc.; Masterset Fastening Systems Unit.
      - 5) Or approved equal
  2. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.
    - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- 1) Cooper B-Line, Inc.; a division of Cooper Industries.
  - 2) Empire Tool and Manufacturing Co., Inc.
  - 3) Hilti Inc.
  - 4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
  - 5) MKT Fastening, LLC.
  - 6) Or approved equal
3. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
  4. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
  5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.
  6. Toggle Bolts: All-steel springhead type.
  7. Hanger Rods: Threaded steel.

## 2.2 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

- A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.
- B. Materials: Comply with requirements in Division 05 Section "Metal Fabrications" for steel shapes and plates.

## PART 3 - EXECUTION

### 3.1 APPLICATION

- A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.
- B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, IMC, and RMC as required by NFPA 70. Minimum rod size shall be 1/4 inch in diameter.
- C. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
  1. Secure raceways and cables to these supports with single-bolt conduit clamps using spring friction action for retention in support channel.
- D. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

### 3.2 SUPPORT INSTALLATION

- A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.
- B. Raceway Support Methods: In addition to methods described in NECA 1, EMT, IMC, and RMC may be supported by openings through structure members, as permitted in NFPA 70.
- C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.
- D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
  - 1. To Wood: Fasten with lag screws or through bolts.
  - 2. To New Concrete: Bolt to concrete inserts.
  - 3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
  - 4. To Existing Concrete: Expansion anchor fasteners.
  - 5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches thick.
  - 6. To Steel: Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69.
  - 7. To Light Steel: Sheet metal screws.
  - 8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate by means that meet seismic-restraint strength and anchorage requirements.
- E. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

### 3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

- A. Where applicable, comply with installation requirements in Division 05 Section "Metal Fabrications" for site-fabricated metal supports.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
- C. Field Welding: Comply with AWS D1.1/D1.1M.

### 3.4 CONCRETE BASES

- A. Construct concrete bases of dimensions indicated but not less than 4 inches larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
- B. Use 3000-psi, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- C. Anchor equipment to concrete base.
  - 1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 2. Install anchor bolts to elevations required for proper attachment to supported equipment.
  - 3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

### 3.5 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
  - 1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.
- B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

END OF SECTION 260529

## SECTION 260533 RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.

#### 1.3 DEFINITIONS

- A. EMT: Electrical metallic tubing.
- B. ENT: Electrical nonmetallic tubing.
- C. EPDM: Ethylene-propylene-diene terpolymer rubber.
- D. FMC: Flexible metal conduit.
- E. IMC: Intermediate metal conduit.
- F. LFMC: Liquidtight flexible metal conduit.
- G. LFNC: Liquidtight flexible nonmetallic conduit.
- H. NBR: Acrylonitrile-butadiene rubber.
- I. RNC: Rigid nonmetallic conduit.

#### 1.4 SUBMITTALS

- A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.
- B. Shop Drawings: For the following raceway components. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Custom enclosures and cabinets.
  - 2. For handholes and boxes for underground wiring, including the following:
    - a. Duct entry provisions, including locations and duct sizes.

- b. Frame and cover design.
  - c. Grounding details.
  - d. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons.
  - e. Joint details.
- C. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
- 1. Structural members in the paths of conduit groups with common supports.
  - 2. HVAC and plumbing items and architectural features in the paths of conduit groups with common supports.
- D. Source quality-control test reports.

#### 1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.

### PART 2 - PRODUCTS

#### 2.1 METAL CONDUIT AND TUBING

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. AFC Cable Systems, Inc.
  - 2. Allied Tube & Conduit; a Tyco International Ltd. Co.
  - 3. Anamet Electrical, Inc.; Anaconda Metal Hose.
  - 4. Electri-Flex Co.
  - 5. O-Z Gedney; a unit of General Signal.
  - 6. Wheatland Tube Company.
  - 7. Or approved equal
- B. Rigid Steel Conduit: ANSI C80.1.
- C. Aluminum Rigid Conduit: ANSI C80.5.
- D. IMC: ANSI C80.6.
- E. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit.
  - 1. Comply with NEMA RN 1.
  - 2. Coating Thickness: 0.040 inch, minimum.

- F. EMT: ANSI C80.3.
- G. FMC: Zinc-coated steel or aluminum.
- H. LFMC: Flexible steel conduit with PVC jacket.
- I. Fittings for Conduit (Including all Types and Flexible and Liquidtight), EMT, and Cable: NEMA FB 1; listed for type and size raceway with which used, and for application and environment in which installed.
  - 1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886.
  - 2. Fittings for EMT: Steel or die-cast, compression type.
  - 3. Coating for Fittings for PVC-Coated Conduit: Minimum thickness, 0.040 inch, with overlapping sleeves protecting threaded joints.
- J. Joint Compound for Rigid Steel Conduit or IMC: Listed for use in cable connector assemblies, and compounded for use to lubricate and protect threaded raceway joints from corrosion and enhance their conductivity.

## 2.2 NONMETALLIC CONDUIT AND TUBING

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. AFC Cable Systems, Inc.
  - 2. Anamet Electrical, Inc.; Anaconda Metal Hose.
  - 3. Electri-Flex Co.
  - 4. Lamson & Sessions; Carlon Electrical Products.
  - 5. RACO; a Hubbell Company.
  - 6. Thomas & Betts Corporation.
  - 7. Or approved equal
- B. ENT: NEMA TC 13.
- C. RNC: NEMA TC 2, Type EPC-40-PVC, unless otherwise indicated.
- D. LFNC: UL 1660.
- E. Fittings for ENT and RNC: NEMA TC 3; match to conduit or tubing type and material.
- F. Fittings for LFNC: UL 514B.

## 2.3 METAL WIREWAYS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. Cooper B-Line, Inc.

2. Hoffman.
3. Square D; Schneider Electric.
4. Or approved equal

- B. Description: Sheet metal sized and shaped as indicated, NEMA 250, Type for indoor applications and Type 3R for outdoor applications, unless otherwise indicated.
- C. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
- D. Wireway Covers: Screw-cover type or flanged-and-gasketed type as indicated for the application.
- E. Finish: Manufacturer's standard enamel finish.

#### 2.4 SURFACE RACEWAYS

- A. Surface Metal Raceways: Galvanized steel with snap-on covers.
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Hubbell Incorporated; Wiring Device-Kellems Division.
    - b. Wiremold Company (The); Electrical Sales Division.
    - c. MonoSystems
    - d. Or approved equal

#### 2.5 BOXES, ENCLOSURES, AND CABINETS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Cooper Crouse-Hinds; Div. of Cooper Industries, Inc.
  2. Hoffman.
  3. Hubbell Incorporated; Killark Electric Manufacturing Co. Division.
  4. O-Z/Gedney; a unit of General Signal.
  5. RACO; a Hubbell Company.
  6. Thomas & Betts Corporation.
  7. Walker Systems, Inc.; Wiremold Company (The).
  8. Woodhead, Daniel Company; Woodhead Industries, Inc. Subsidiary.
  9. Or approved equal
- B. Sheet Metal Outlet and Device Boxes: NEMA OS 1.
- C. Cast-Metal Outlet and Device Boxes: NEMA FB 1, ferrous alloy or aluminum, with gasketed cover.

- D. Nonmetallic Outlet and Device Boxes: NEMA OS 2.
- E. Metal Floor Boxes: Cast or sheet metal, fully adjustable, rectangular.
- F. Nonmetallic Floor Boxes: Nonadjustable, round.
- G. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
- H. Cast-Metal Access, Pull, and Junction Boxes: NEMA FB 1, cast aluminum with gasketed cover.
- I. Hinged-Cover Enclosures: NEMA 250, Type 1, with continuous-hinge cover with flush latch, unless otherwise indicated.
  - 1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
  - 2. Nonmetallic Enclosures: Plastic, finished inside with radio-frequency-resistant paint.
- J. Cabinets:
  - 1. NEMA 250, Type 1, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
  - 2. Hinged door in front cover with flush latch and concealed hinge.
  - 3. Key latch to match panelboards.
  - 4. Metal barriers to separate wiring of different systems and voltage.
  - 5. Accessory feet where required for freestanding equipment.

## 2.6 SLEEVES FOR RACEWAYS

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- C. Sleeves for Rectangular Openings: Galvanized sheet steel with minimum 0.052- or 0.138-inch thickness as indicated and of length to suit application.
- D. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."

## 2.7 SLEEVE SEALS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. Advance Products & Systems, Inc.
  - 2. Calpico, Inc.
  - 3. Metraflex Co.

4. Pipeline Seal and Insulator, Inc.
  5. Or approved equal
- B. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and cable.
1. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
  2. Pressure Plates: Stainless steel. Include two for each sealing element.
  3. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

### PART 3 - EXECUTION

#### 3.1 RACEWAY APPLICATION

- A. Outdoors: Apply raceway products as specified below, unless otherwise indicated:
1. Exposed Conduit: Rigid steel conduit.
  2. Concealed Conduit, Aboveground: Rigid steel conduit.
  3. Underground Conduit: RNC, Type EPC-40-PVC, direct buried.
  4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
  5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.
- B. Comply with the following indoor applications, unless otherwise indicated:
1. Exposed, Not Subject to Physical Damage: EMT or RNC identified for such use.
  2. Exposed and Subject to Severe Physical Damage: Rigid steel conduit or IMC. Includes raceways in the following locations:
    - a. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
    - b. Mechanical rooms.
  3. Concealed in Ceilings and Interior Walls and Partitions: EMT or RNC, Type EPC-40-PVC.
  4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
  5. Damp or Wet Locations: Rigid steel conduit or IMC.
  6. Raceways for Optical Fiber or Communications Cable in Spaces Used for Environmental Air: Plenum-type, optical fiber/communications cable raceway or EMT.
  7. Raceways for Optical Fiber or Communications Cable Risers in Vertical Shafts: Riser-type, optical fiber/communications cable raceway or EMT.
  8. Raceways for Concealed General Purpose Distribution of Optical Fiber or Communications Cable: General-use, optical fiber/communications cable raceway or EMT.

9. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4, stainless steel or nonmetallic in damp or wet locations.
- C. Minimum Raceway Size: 3/4-inch trade size.
- D. Raceway Fittings: Compatible with raceways and suitable for use and location.
  1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.
  2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with that material. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer.
- E. Do not install aluminum conduits in contact with concrete.

### 3.2 INSTALLATION

- A. Comply with NECA 1 for installation requirements applicable to products specified in Part 2 except where requirements on Drawings or in this Article are stricter.
- B. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.
- C. Complete raceway installation before starting conductor installation.
- D. Support raceways as specified in Division 26 Section "Hangers and Supports for Electrical Systems."
- E. Arrange stub-ups so curved portions of bends are not visible above the finished slab.
- F. Conceal conduit and EMT within finished walls, ceilings, and floors, unless otherwise indicated.
- G. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.
- H. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors, including conductors smaller than No. 4 AWG.
- I. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire.
- J. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
  2. Where otherwise required by NFPA 70.
- K. Expansion-Joint Fittings for RNC: Install in each run of aboveground conduit that is located where environmental temperature change may exceed 30 deg F, and that has straight-run length that exceeds 25 feet.
1. Install expansion-joint fittings for each of the following locations, and provide type and quantity of fittings that accommodate temperature change listed for location:
    - a. Indoor Spaces: Connected with the Outdoors without Physical Separation: 125 deg F temperature change.
    - b. Attics: 135 deg F temperature change.
  2. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at the time of installation.
- L. Flexible Conduit Connections: Use maximum of 72 inches of flexible conduit for equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
1. Use LFMC in damp or wet locations subject to severe physical damage.
  2. Use LFMC or LFNC in damp or wet locations not subject to severe physical damage.

### 3.3 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."
- B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
- C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- D. Rectangular Sleeve Minimum Metal Thickness:
1. For sleeve cross-section rectangle perimeter less than 50 inches and no side greater than 16 inches, thickness shall be 0.052 inch.
  2. For sleeve cross-section rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, thickness shall be 0.138 inch.
- E. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- F. Cut sleeves to length for mounting flush with both surfaces of walls.
- G. Extend sleeves installed in floors 2 inches above finished floor level.

- H. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway unless sleeve seal is to be installed.
- I. Seal space outside of sleeves with grout for penetrations of concrete and masonry and with approved joint compound for gypsum board assemblies.
- J. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway, using joint sealant appropriate for size, depth, and location of joint. Refer to Division 07 Section "Joint Sealants" for materials and installation.
- K. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway penetrations. Install sleeves and seal with firestop materials. Comply with Division 07 Section "Penetration Firestopping."
- L. Roof-Penetration Sleeves: Seal penetration of individual raceways with flexible, boot-type flashing units applied in coordination with roofing work.
- M. Aboveground, Exterior-Wall Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- N. Underground, Exterior-Wall Penetrations: Install cast-iron "wall pipes" for sleeves. Size sleeves to allow for 1-inch annular clear space between raceway and sleeve for installing mechanical sleeve seals.

### 3.4 SLEEVE-SEAL INSTALLATION

- A. Install to seal underground, exterior wall penetrations.
- B. Use type and number of sealing elements recommended by manufacturer for raceway material and size. Position raceway in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

### 3.5 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

### 3.6 PROTECTION

- A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.
  - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.

June 4, 2021  
Issue for Bid

Parking Deck  
Union County Justice Complex  
Elizabeth, New Jersey

2. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 260533

## SECTION 230533 HEAT TRACING FOR HVAC PIPING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes heat tracing with the following electric heating cables:
  - 1. Self-regulating, parallel resistance.

#### 1.3 SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
  - 1. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
- B. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.
  - 1. Wiring Diagrams: Power, signal, and control wiring.
- C. Field quality-control test reports.
- D. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.
- E. Warranty: Special warranty specified in this Section.

#### 1.4 RELATED SECTIONS INCLUDE THE FOLLOWING:

- A. Division 01 Section "Construction Waste Management."

#### 1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

- B. All heating-cable components shall be UL Listed, CSA Certified, or FM Approved for use as part of the system to provide pipe freeze protection.

#### 1.6 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within specified warranty period.
  - 1. Warranty Period: 10 years from date of Substantial Completion.
  - 2. Warranty Period Commencement: This period shall be upon written approval by Owner when recommended by Engineer. "Acceptance by Owner" is defined as written approval by the Owner that the equipment has been operating free from defects in manufacturer assembly and shipping. Warranty period will begin immediately after startup is "satisfactory" completed and units are running reliably, not when delivered or installed. "Satisfactory" completed is after air balancing, water balancing and control interlocks are checked by the Engineer.

### PART 2 - PRODUCTS

#### 2.1 SELF-REGULATING, PARALLEL-RESISTANCE HEATING CABLES

- A. Basis-of-Design Product: Subject to compliance with requirements, provide a comparable product by one of the following:
  - 1. Raychem; a division of Tyco Thermal Controls.
  - 2. Chromalox, Inc.; Wiegard Industrial Division; Emerson Electric Company.
  - 3. Delta-Therm Corporation.
  - 4. Or approved equivalent.
- B. Heating Element: Pair of parallel No. 16 AWG, nickel-coated stranded copper bus wires embedded in cross-linked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled non-heating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.
- C. Self Regulating Control: The heating cable shall have a self-regulating factor of at least 90 percent. The self-regulation factor is defined as the percentage reduction, without thermostatic control, of the heating cable output going from 40 deg F pipe temperature operation to 150 deg F pipe temperature operation.
- D. Electrical Insulating Jacket: Flame-retardant polyolefin.
- E. Cable Cover: Tinned-copper braid, and polyolefin outer jacket with UV inhibitor.
- F. Capacities and Characteristics:

1. The heating cable for metal –pipe freeze protection shall be sized according to the table shown below. The required heating cable output rating is in watts per foot at 50 deg F.

Pipe Size (Inches)	Minimum Ambient Temperature (0 deg F)
3 or less	5 Watts
4	5 Watts
6	5 Watts
8	8 Watts
10	2 strips – 5 Watts

2. Coordinate electrical power requirements and line voltages with electrical contractor and electrical contract drawings.

## 2.2 CONTROLS

- A. Remote bulb unit with adjustable temperature range from 30 to 50 deg F.
- B. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
- C. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
- D. Corrosion-resistant, waterproof control enclosure.

## 2.3 ACCESSORIES

- A. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
- B. Warning Labels: Refer to Division 23 Section "Identification for HVAC Piping and Equipment."
- C. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
  1. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches: 3/4 inch minimum.
  2. Width for Markers on Pipes with OD, Including Insulation, 6 Inches or Larger: 1-1/2 inches minimum.

## PART 3 - EXECUTION

### 3.1 CONSTRUCTION WASTE MANAGEMENT (LEED)

- A. The contractor, subcontractors, and their personnel shall follow the procedures and practices for waste separation, collection and transport as defined in the contractor's "Waste Management Plan" as required by Division 01 Section "Construction Waste Management."

### 3.2 EXAMINATION

- A. Examine surfaces and substrates to receive electric heating cables for compliance with requirements for installation tolerances and other conditions affecting performance.
  - 1. Ensure surfaces and pipes in contact with electric heating cables are free of burrs and sharp protrusions.
  - 2. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Install electric heating cable across expansion joints according to manufacturer's written recommendations using slack cable to allow movement without damage to cable.
- B. Install electric heating cables after piping has been tested and before insulation is installed.
- C. Install electric heating cables according to IEEE 515.1.
- D. Install insulation over piping with electric cables according to Division 23 Section "Piping Insulation."
- E. Install warning tape on piping insulation where piping is equipped with electric heating cables.
- F. Set field-adjustable switches and circuit-breaker trip ranges.
- G. Protect installed heating cables, including non-heating leads, from damage.

### 3.4 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

### 3.5 FIELD QUALITY CONTROL

- A. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
  - 1. Test cables for electrical continuity and insulation integrity before energizing.
  - 2. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.

June 4, 2021  
Issue for Bid

Parking Deck  
Union County Justice Complex  
Elizabeth, New Jersey

- B. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables.
- C. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 230533

## SECTION 260544 SLEEVES & SLEEVE SEALS FOR ELECTRICAL RACEWAYS & CABLING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

- 1. Sleeves for raceway and cable penetration of non-fire-rated construction walls and floors.
- 2. Sleeve-seal systems.
- 3. Sleeve-seal fittings.
- 4. Grout.
- 5. Silicone sealants.

- B. Related Requirements:

- 1. Section 078413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

### PART 2 - PRODUCTS

#### 2.1 SLEEVES

- A. Wall Sleeves:

- 1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.

- B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies: Galvanized-steel sheet; 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.

- C. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.

- D. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.
- E. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
- F. Sleeves for Rectangular Openings:
  - 1. Material: Galvanized sheet steel.
  - 2. Minimum Metal Thickness:
    - a. For sleeve cross-section rectangle perimeter less than 50 inches and with no side larger than 16 inches, thickness shall be 0.052 inch.
    - b. For sleeve cross-section rectangle perimeter 50 inches or more and one or more sides larger than 16 inches, thickness shall be 0.138 inch.

## 2.2 SLEEVE-SEAL SYSTEMS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Advance Products & Systems, Inc.
    - b. CALPICO, Inc.
    - c. Metraflex Company (The).
    - d. Pipeline Seal and Insulator, Inc.
    - e. Proco Products, Inc.
    - f. Or approved equal.
  - 2. Sealing Elements: EPDM rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
  - 3. Pressure Plates: Carbon steel.
  - 4. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

## 2.3 SLEEVE-SEAL FITTINGS

- A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. HOLDRITE.
    - b. Or approved equal.

## 2.4 GROUT

- A. Description: Nonshrink; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.
- B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

## 2.5 SILICONE SEALANTS

- A. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below.
  - 1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.
- B. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

## PART 3 - EXECUTION

### 3.1 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

- A. Comply with NECA 1.
- B. Comply with NEMA VE 2 for cable tray and cable penetrations.
- C. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:
  - 1. Interior Penetrations of Non-Fire-Rated Walls and Floors:
    - a. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079200 "Joint Sealants."
    - b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.
  - 2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
  - 3. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed or unless seismic criteria require different clearance.

4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.
5. Install sleeves for floor penetrations. Extend sleeves installed in floors 2 inches above finished floor level. Install sleeves during erection of floors.

D. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:

1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.

E. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

F. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

G. Underground, Exterior-Wall and Floor Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing sleeve-seal system.

### 3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at raceway entries into building.
- B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

### 3.3 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

END OF SECTION 260544

## SECTION 260553 IDENTIFICATION FOR ELECTRICAL SYSTEMS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Identification for raceway and metal-clad cable.
  - 2. Identification for conductors and communication and control cable.
  - 3. Underground-line warning tape.
  - 4. Warning labels and signs.
  - 5. Instruction signs.
  - 6. Equipment identification labels.
  - 7. Miscellaneous identification products.

#### 1.3 SUBMITTALS

- A. Product Data: For each electrical identification product indicated.

#### 1.4 QUALITY ASSURANCE

- A. Comply with ANSI A13.1 and ANSI C2.
- B. Comply with NFPA 70.
- C. Comply with 29 CFR 1910.145.

#### 1.5 COORDINATION

- A. Coordinate identification names, abbreviations, colors, and other features with requirements in the Contract Documents, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual, and with those required by codes, standards, and 29 CFR 1910.145. Use consistent designations throughout Project.
- B. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- C. Coordinate installation of identifying devices with location of access panels and doors.

- D. Install identifying devices before installing acoustical ceilings and similar concealment.

## PART 2 - PRODUCTS

### 2.1 CONDUCTOR AND COMMUNICATION- AND CONTROL-CABLE IDENTIFICATION MATERIALS

- A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils thick by 1 to 2 inches wide.
- B. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

### 2.2 WARNING LABELS AND SIGNS

- A. Comply with NFPA 70 and 29 CFR 1910.145.
- B. Self-Adhesive Warning Labels: Factory printed, multicolor, pressure-sensitive adhesive labels, configured for display on front cover, door, or other access to equipment, unless otherwise indicated.
- C. Baked-Enamel Warning Signs: Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for application. 1/4-inch grommets in corners for mounting. Nominal size, 7 by 10 inches.
- D. Metal-Backed, Butyrate Warning Signs: Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396-inch galvanized-steel backing; and with colors, legend, and size required for application. 1/4-inch grommets in corners for mounting. Nominal size, 10 by 14 inches.
- E. Warning label and sign shall include, but are not limited to, the following legends:
  - 1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
  - 2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES."

### 2.3 INSTRUCTION SIGNS

- A. Engraved, laminated acrylic or melamine plastic, minimum 1/16 inch thick for signs up to 20 sq. in. and 1/8 inch thick for larger sizes.
  - 1. Engraved legend with black letters on white face.
  - 2. Punched or drilled for mechanical fasteners.
  - 3. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

## 2.4 EQUIPMENT IDENTIFICATION LABELS

- A. Engraved, Laminated Acrylic or Melamine Label: Punched or drilled for screw mounting. White letters on a dark-gray background. Minimum letter height shall be 3/8 inch.

## 2.5 MISCELLANEOUS IDENTIFICATION PRODUCTS

- A. Cable Ties: Fungus-inert, self-extinguishing, 1-piece, self-locking, Type 6/6 nylon cable ties.
  - 1. Minimum Width: 3/16 inch.
  - 2. Tensile Strength: 50 lb, minimum.
  - 3. Temperature Range: Minus 40 to plus 185 deg F.
  - 4. Color: Black, except where used for color-coding.
- B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

## PART 3 - EXECUTION

### 3.1 APPLICATION

- A. Raceways More Than 600 V Concealed within Buildings: 4-inch- wide black stripes on 10-inch centers over orange background that extends full length of raceway or duct and is 12 inches wide. Stencil legend "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch-high black letters on 20-inch centers. Stop stripes at legends. Apply to the following finished surfaces:
  - 1. Wall surfaces directly external to raceways concealed within wall.
  - 2. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in the building, or concealed above suspended ceilings.
- B. Accessible Raceways and Metal-Clad Cables More Than 600 V: Identify with "DANGER-HIGH VOLTAGE" in black letters at least 2 inches high, with self-adhesive vinyl labels. Repeat legend at 10-foot maximum intervals.
- C. Power-Circuit Conductor Identification: For primary and secondary conductors No. 1/0 AWG and larger in pull and junction boxes use color-coding conductor tape and write-on tags. Identify source and circuit number of each multi-conductor cable. For single conductor cables, identify phase with color coded tapes in addition to the circuit information on tags .
- D. Branch-Circuit Conductor Identification: Where there are conductors for more than three branch circuits in same junction or pull box, use write-on tags. Identify each ungrounded conductor according to source and circuit number.
- E. Conductors to Be Extended in the Future: Attach write-on tags or marker tape to conductors and list source and circuit number.

- F. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, signal, sound, intercommunications, voice, and data connections.
1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
  2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.
  3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and Operation and Maintenance Manual.
- G. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Comply with 29 CFR 1910.145 and apply self-adhesive warning labels. Identify system voltage with black letters on an orange background. Apply to exterior of door, cover, or other access.
1. Equipment with Multiple Power or Control Sources: Apply to door or cover of equipment including, but not limited to, the following:
    - a. Power transfer switches.
    - b. Controls with external control power connections.
  2. Equipment Requiring Workspace Clearance According to NFPA 70: Unless otherwise indicated, apply to door or cover of equipment but not on flush panelboards and similar equipment in finished spaces.
- H. Instruction Signs:
1. Operating Instructions: Install instruction signs to facilitate proper operation and maintenance of electrical systems and items to which they connect. Install instruction signs with approved legend where instructions are needed for system or equipment operation.
  2. Emergency Operating Instructions: Install instruction signs with white legend on a red background with minimum 3/8-inch- high letters for emergency instructions at equipment used for power transfer or load shedding or other emergency operations.
- I. Equipment Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and Operation and Maintenance Manual. Apply labels to disconnect switches and protection equipment, central or master units, control panels, control stations, terminal cabinets, and racks of each system. Systems include power, lighting, control, communication, signal, monitoring, and alarm systems unless equipment is provided with its own identification.
1. Labeling Instructions:
    - a. Indoor Equipment: Engraved, laminated acrylic or melamine label. Unless otherwise indicated, provide a single line of text with 1/2-inch- high letters on 1-1/2-inch- high label; where 2 lines of text are required, use labels 2 inches.
    - b. Outdoor Equipment: Engraved, laminated acrylic or melamine label.
    - c. Elevated Components: Increase sizes of labels and letters to those appropriate for viewing from the floor.

2. Equipment to Be Labeled:
  - a. Panelboards, electrical cabinets, and enclosures.
  - b. Access doors and panels for concealed electrical items.
  - c. Electrical switchgear and switchboards.
  - d. Transformers.
  - e. Emergency system boxes and enclosures.
  - f. Motor-control centers.
  - g. Disconnect switches.
  - h. Enclosed circuit breakers.
  - i. Motor starters.

### 3.2 INSTALLATION

- A. Verify identity of each item before installing identification products.
- B. Location: Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment.
- C. Apply identification devices to surfaces that require finish after completing finish work.
- D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.
- E. Attach nonadhesive signs and plastic labels with screws and auxiliary hardware appropriate to the location and substrate.
- F. Color-Coding for Phase and Voltage Level Identification, 600 V and Less: Use the colors listed below for ungrounded service, feeder, and branch-circuit conductors.
  1. Colors for 208/120-V Circuits:
    - a. Phase A: Black.
    - b. Phase B: Red.
    - c. Phase C: Blue.
  2. Colors for 480/277-V Circuits:
    - a. Phase A: Brown.
    - b. Phase B: Orange.
    - c. Phase C: Yellow.
  3. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Locate tapes to avoid obscuring factory cable markings.
- G. Aluminum Wraparound Marker Labels and Metal Tags: Secure tight to surface of conductor or cable at a location with high visibility and accessibility.

END OF SECTION 260553

## SECTION 260573 ARC-FLASH HAZARD ANALYSIS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes a computer-based, arc-flash study to determine the arc-flash hazard distance and the incident energy to which personnel could be exposed during work on or near electrical equipment.

#### 1.3 DEFINITIONS

- A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.
- B. Field Adjusting Agency: An independent electrical testing agency with full-time employees and the capability to adjust devices and conduct testing indicated and that is a member company of NETA.
- C. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
- D. Power System Analysis Software Developer: An entity that commercially develops, maintains, and distributes computer software used for power system studies.
- E. Power Systems Analysis Specialist: Professional engineer in charge of performing the study and documenting recommendations, licensed in the state where Project is located.
- F. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion from the system.
- G. SCCR: Short-circuit current rating.
- H. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.
- I. Single-Line Diagram: See "One-Line Diagram."

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For computer software program to be used for studies.
- B. Study Submittals: Submit the following submittals after the approval of system protective devices submittals. Submittals shall be in digital form:
  - 1. Arc-flash study input data, including completed computer program input data sheets.
  - 2. Arc-flash study report; signed, dated, and sealed by Power Systems Analysis Specialist.
  - 3. Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data:
  - 1. For Power Systems Analysis Software Developer.
  - 2. For Power System Analysis Specialist.
  - 3. For Field Adjusting Agency.
- B. Product Certificates: For arc-flash hazard analysis software, certifying compliance with IEEE 1584 and NFPA 70E.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data:
  - 1. Provide maintenance procedures in equipment manuals according to requirements in NFPA 70E.
  - 2. Operation and Maintenance Procedures: In addition to items specified in Section 017823 "Operation and Maintenance Data," provide maintenance procedures for use by Owner's personnel that comply with requirements in NFPA 70E.

#### 1.7 QUALITY ASSURANCE

- A. Study shall be performed using commercially developed and distributed software designed specifically for power system analysis.
- B. Software algorithms shall comply with requirements of standards and guides specified in this Section.
- C. Manual calculations are unacceptable.
- D. Power System Analysis Software Qualifications: An entity that owns and markets computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.

1. Computer program shall be designed to perform arc-flash analysis or have a function, component, or add-on module designed to perform arc-flash analysis.
  2. Computer program shall be developed under the charge of a licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.
- E. Power Systems Analysis Specialist Qualifications: Professional engineer in charge of performing the arc-flash study, analyzing the arc flash, and documenting recommendations, licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional engineer.
- F. Arc-Flash Study Certification: Arc-Flash Study Report shall be signed and sealed by Power Systems Analysis Specialist.
- G. Field Adjusting Agency Qualifications:
1. Employer of a NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification responsible for all field adjusting of the Work.
  2. A member company of NETA.
  3. Acceptable to authorities having jurisdiction.

## PART 2 - PRODUCTS

### 2.1 COMPUTER SOFTWARE DEVELOPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. CGI CYME.
  2. EDSA Micro Corporation.
  3. ESA Inc.
  4. Operation Technology, Inc.
  5. Power Analytics, Corporation.
  6. SKM Systems Analysis, Inc.
  7. Or approved equal.
- B. Comply with IEEE 1584 and NFPA 70E.
- C. Analytical features of device coordination study computer software program shall have the capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

### 2.2 ARC-FLASH STUDY REPORT CONTENT

- A. Executive summary of study findings.
- B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

- C. One-line diagram, showing the following:
  - 1. Protective device designations and ampere ratings.
  - 2. Conductor types, sizes, and lengths.
  - 3. Transformer kilovolt ampere (kVA) and voltage ratings, including derating factors and environmental conditions.
  - 4. Motor and generator designations and kVA ratings.
  - 5. Switchgear, switchboard, motor-control center, panelboard designations, and ratings.
- D. Study Input Data: As described in "Power System Data" Article.
- E. Short-Circuit Study Output Data: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 260573.13 "Short-Circuit Studies."
- F. Protective Device Coordination Study Report Contents: As specified in "Coordination Study Report Contents" Article in Section 260573.16 "Coordination Studies."
- G. Arc-Flash Study Output Reports:
  - 1. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each equipment location included in the report:
    - a. Voltage.
    - b. Calculated symmetrical fault-current magnitude and angle.
    - c. Fault-point X/R ratio.
    - d. No AC Decrement (NACD) ratio.
    - e. Equivalent impedance.
    - f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
    - g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.
- H. Incident Energy and Flash Protection Boundary Calculations:
  - 1. Arcing fault magnitude.
  - 2. Protective device clearing time.
  - 3. Duration of arc.
  - 4. Arc-flash boundary.
  - 5. Restricted approach boundary.
  - 6. Limited approach boundary.
  - 7. Working distance.
  - 8. Incident energy.
  - 9. Hazard risk category.
  - 10. Recommendations for arc-flash energy reduction.
- I. Fault study input data, case descriptions, and fault-current calculations including a definition of terms and guide for interpretation of computer printout.

### 2.3 ARC-FLASH WARNING LABELS

- A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for self-adhesive equipment labels. Produce a 3.5-by-5-inch self-adhesive equipment label for each work location included in the analysis.
- B. Label shall have an orange header with the wording, "WARNING, ARC-FLASH HAZARD," and shall include the following information taken directly from the arc-flash hazard analysis:
  - 1. Location designation.
  - 2. Nominal voltage.
  - 3. Protection boundaries.
    - a. Arc-flash boundary.
    - b. Restricted approach boundary.
    - c. Limited approach boundary.
  - 4. Arc flash PPE category.
  - 5. Required minimum arc rating of PPE in Cal/cm squared.
  - 6. Available incident energy.
  - 7. Working distance.
  - 8. Engineering report number, revision number, and issue date.
- C. Labels shall be machine printed, with no field-applied markings.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine Project overcurrent protective device submittals. Proceed with arc-flash study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to arc-flash study may not be used in study.

### 3.2 ARC-FLASH HAZARD ANALYSIS

- A. Comply with NFPA 70E and its Annex D for hazard analysis study.
- B. Preparatory Studies: Perform the Short-Circuit and Protective Device Coordination studies prior to starting the Arc-Flash Hazard Analysis.
  - 1. Short-Circuit Study Output: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 260573.13 "Short-Circuit Studies."
  - 2. Coordination Study Report Contents: As specified in "Coordination Study Report Contents" Article in Section 260573.16 "Coordination Studies."
- C. Calculate maximum and minimum contributions of fault-current size.

1. Maximum calculation shall assume a maximum contribution from the utility and shall assume motors to be operating under full-load conditions.
  2. Calculate arc-flash energy at 85 percent of maximum short-circuit current according to IEEE 1584 recommendations.
  3. Calculate arc-flash energy at 38 percent of maximum short-circuit current according to NFPA 70E recommendations.
  4. Calculate arc-flash energy with the utility contribution at a minimum and assume no motor contribution.
- D. Calculate the arc-flash protection boundary and incident energy at locations in electrical distribution system where personnel could perform work on energized parts.
- E. Include medium- and low-voltage equipment locations, except equipment rated 240 V ac or less fed from transformers less than 125 kVA.
- F. Calculate the limited, restricted, and prohibited approach boundaries for each location.
- G. Incident energy calculations shall consider the accumulation of energy over time when performing arc-flash calculations on buses with multiple sources. Iterative calculations shall take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors and generators shall be decremented as follows:
1. Fault contribution from induction motors shall not be considered beyond three to five cycles.
  2. Fault contribution from synchronous motors and generators shall be decayed to match the actual decrement of each as closely as possible (for example, contributions from permanent magnet generators will typically decay from 10 per unit to three per unit after 10 cycles).
- H. Arc-flash energy shall generally be reported for the maximum of line or load side of a circuit breaker. However, arc-flash computation shall be performed and reported for both line and load side of a circuit breaker as follows:
1. When the circuit breaker is in a separate enclosure.
  2. When the line terminals of the circuit breaker are separate from the work location.
- I. Base arc-flash calculations on actual overcurrent protective device clearing time. Cap maximum clearing time at two seconds based on IEEE 1584, Section B.1.2.

### 3.3 POWER SYSTEM DATA

- A. Obtain all data necessary for conduct of the arc-flash hazard analysis.
1. Verify completeness of data supplied on one-line diagram on Drawings and under "Preparatory Studies" Paragraph in "Arc-Flash Hazard Analysis" Article. Call discrepancies to Architect's attention.
  2. For new equipment, use characteristics from approved submittals under provisions of action submittals and information submittals for this Project.

3. For existing equipment, whether or not relocated, obtain required electrical distribution system data by field investigation and surveys conducted by qualified technicians and engineers.
- B. Electrical Survey Data: Gather and tabulate the following input data to support study. Comply with recommendations in IEEE 1584 and NFPA 70E as to the amount of detail that is required to be acquired in the field. Field data gathering shall be under the direct supervision and control of the engineer in charge of performing the study, and shall be by the engineer or its representative who holds NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification. Data include, but are not limited to, the following:
1. Product Data for overcurrent protective devices specified in other Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
  2. Obtain electrical power utility impedance or available short circuit current at the service.
  3. Power sources and ties.
  4. Short-circuit current at each system bus (three phase and line to ground).
  5. Full-load current of all loads.
  6. Voltage level at each bus.
  7. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
  8. For reactors, provide manufacturer and model designation, voltage rating and impedance.
  9. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, SCCR, current rating, and breaker settings.
  10. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
  11. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.
  12. Busway manufacturer and model designation, current rating, impedance, lengths, size, and conductor material.
  13. Motor horsepower and NEMA MG 1 code letter designation.
  14. Low-voltage conductor sizes, lengths, number, conductor material and conduit material (magnetic or nonmagnetic).
  15. Medium-voltage conductor sizes, lengths, conductor material, conductor construction and metallic shield performance parameters, and conduit material (magnetic or nonmagnetic).

### 3.4 LABELING

- A. Apply one arc-flash label on the front cover of each section of the equipment and on side or rear covers with accessible live parts and hinged doors or removable plates for each equipment included in the study. Base arc-flash label data on highest values calculated at each location.
- B. Each piece of equipment listed below shall have an arc-flash label applied to it:
  1. Low voltage switchboard.
  2. Low voltage transformers.
  3. Panelboard and safety switch over 250 V.
  4. Applicable panelboard and safety switch under 250 V.

5. Control panel.

C. Note on record Drawings the location of equipment where the personnel could be exposed to arc-flash hazard during their work.

1. Indicate arc-flash energy.
2. Indicate protection level required.

### 3.5 APPLICATION OF WARNING LABELS

A. Install arc-flash warning labels under the direct supervision and control of Power System Analysis Specialist.

### 3.6 DEMONSTRATION

A. Engage Power Systems Analysis Specialist to train Owner's maintenance personnel in potential arc-flash hazards associated with working on energized equipment and the significance of arc-flash warning labels.

END OF SECTION 260573

## SECTION 260573.1 SHORT-CIRCUIT STUDIES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes a computer-based, fault-current study to determine the minimum interrupting capacity of circuit protective devices.

#### 1.3 DEFINITIONS

- A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed and salvaged, or removed and reinstalled. Existing to remain items shall remain functional throughout the construction period.
- B. Field Adjusting Agency: An independent electrical testing agency with full-time employees and the capability to adjust devices and conduct testing indicated and that is a member company of NETA.
- C. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
- D. Power System Analysis Software Developer: An entity that commercially develops, maintains, and distributes computer software used for power system studies.
- E. Power Systems Analysis Specialist: Professional engineer in charge of performing the study and documenting recommendations, licensed in the state where Project is located.
- F. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion of the circuit from the system.
- G. SCCR: Short-circuit current rating.
- H. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.
- I. Single-Line Diagram: See "One-Line Diagram."

#### 1.4 ACTION SUBMITTALS

- A. Product Data:

1. For computer software program to be used for studies.
2. Submit the following after the approval of system protective devices submittals. Submittals shall be in digital form.
  - a. Short-circuit study input data, including completed computer program input data sheets.
  - b. Short-circuit study and equipment evaluation report; signed, dated, and sealed by a qualified professional engineer.
    - 1) Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.
    - 2) Revised one-line diagram, reflecting field investigation results and results of short-circuit study.

#### 1.5 INFORMATIONAL SUBMITTALS

##### A. Qualification Data:

1. For Power Systems Analysis Software Developer.
2. For Power System Analysis Specialist.
3. For Field Adjusting Agency.

##### B. Product Certificates: For short-circuit study software, certifying compliance with IEEE 399.

#### 1.6 CLOSEOUT SUBMITTALS

##### A. Operation and Maintenance Data:

1. For overcurrent protective devices to include in emergency, operation, and maintenance manuals.
2. The following are from the Short-Circuit Study Report:
  - a. Final one-line diagram.
  - b. Final Short-Circuit Study Report.
  - c. Short-circuit study data files.
  - d. Power system data.

#### 1.7 QUALITY ASSURANCE

- A. Study shall be performed using commercially developed and distributed software designed specifically for power system analysis.
- B. Software algorithms shall comply with requirements of standards and guides specified in this Section.
- C. Manual calculations are unacceptable.

1. Power System Analysis Software Qualifications: Computer program shall be designed to perform short-circuit studies or have a function, component, or add-on module designed to perform short-circuit studies.
  2. Computer program shall be developed under the charge of a licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.
- D. Power Systems Analysis Specialist Qualifications: Professional engineer licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional engineer.
- E. Short-Circuit Study Certification: Short-Circuit Study Report shall be signed and sealed by Power Systems Analysis Specialist.
- F. Field Adjusting Agency Qualifications:
1. Employer of a NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification responsible for all field adjusting of the Work.
  2. A member company of NETA.
  3. Acceptable to authorities having jurisdiction.

## PART 2 - PRODUCTS

### 2.1 POWER SYSTEM ANALYSIS SOFTWARE DEVELOPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. CGI CYME.
  2. EDSA Micro Corporation.
  3. ESA Inc.
  4. Operation Technology, Inc.
  5. Power Analytics, Corporation.
  6. SKM Systems Analysis, Inc.
  7. Or approved equal
- B. Comply with IEEE 399 and IEEE 551.
1. Analytical features of power systems analysis software program shall have capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.
- C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output.

### 2.2 SHORT-CIRCUIT STUDY REPORT CONTENTS

- A. Executive summary of study findings.

- B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.
- C. One-line diagram of modeled power system, showing the following:
  - 1. Protective device designations and ampere ratings.
  - 2. Conductor types, sizes, and lengths.
  - 3. Transformer kilovolt ampere (kVA) and voltage ratings.
  - 4. Motor and generator designations and kVA ratings.
  - 5. Switchgear, switchboard, motor-control center, and panelboard designations and ratings.
  - 6. Derating factors and environmental conditions.
  - 7. Any revisions to electrical equipment required by the study.
- D. Comments and recommendations for system improvements or revisions in a written document, separate from one-line diagram.
- E. Protective Device Evaluation:
  - 1. Evaluate equipment and protective devices and compare to available short-circuit currents. Verify that equipment withstand ratings exceed available short-circuit current at equipment installation locations.
  - 2. Tabulations of circuit breaker, fuse, and other protective device ratings versus calculated short-circuit duties.
  - 3. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
  - 4. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in standards to 1/2-cycle symmetrical fault current.
  - 5. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
- F. Short-Circuit Study Input Data:
  - 1. One-line diagram of system being studied.
  - 2. Power sources available.
  - 3. Manufacturer, model, and interrupting rating of protective devices.
  - 4. Conductors.
  - 5. Transformer data.
- G. Short-Circuit Study Output Reports:
  - 1. Low-Voltage Fault Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
    - a. Voltage.
    - b. Calculated fault-current magnitude and angle.
    - c. Fault-point X/R ratio.
    - d. Equivalent impedance.
  - 2. Momentary Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:

- a. Voltage.
  - b. Calculated symmetrical fault-current magnitude and angle.
  - c. Fault-point X/R ratio.
  - d. Calculated asymmetrical fault currents:
    - 1) Based on fault-point X/R ratio.
    - 2) Based on calculated symmetrical value multiplied by 1.6.
    - 3) Based on calculated symmetrical value multiplied by 2.7.
3. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
- a. Voltage.
  - b. Calculated symmetrical fault-current magnitude and angle.
  - c. Fault-point X/R ratio.
  - d. No AC Decrement (NACD) ratio.
  - e. Equivalent impedance.
  - f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
  - g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.

### PART 3 - EXECUTION

#### 3.1 POWER SYSTEM DATA

- A. Obtain all data necessary for conduct of the study.
  1. Verify completeness of data supplied on one-line diagram. Call any discrepancies to Architect's attention.
  2. For equipment included as Work of this Project, use characteristics submitted under provisions of action submittals and information submittals for this Project.
  3. For relocated equipment and that which is existing to remain, obtain required electrical distribution system data by field investigation and surveys, conducted by qualified technicians and engineers. Qualifications of technicians and engineers shall be as defined by NFPA 70E.
- B. Gather and tabulate the required input data to support the short-circuit study. Comply with requirements in Section 017839 "Project Record Documents" for recording circuit protective device characteristics. Record data on a Record Document copy of one-line diagram. Comply with recommendations in IEEE 551 as to the amount of detail that is required to be acquired in the field. Field data gathering shall be under direct supervision and control of the engineer in charge of performing the study, and shall be by the engineer or its representative who holds NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification. Data include, but are not limited to, the following:
  1. Product Data for Project's overcurrent protective devices involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
  2. Obtain electrical power utility impedance at the service.

3. Power sources and ties.
4. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
5. For reactors, provide manufacturer and model designation, voltage rating, and impedance.
6. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip, SCCR, current rating, and breaker settings.
7. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
8. Busway manufacturer and model designation, current rating, impedance, lengths, and conductor material.
9. Motor horsepower and NEMA MG 1 code letter designation.
10. Conductor sizes, lengths, number, conductor material and conduit material (magnetic or nonmagnetic).
11. Derating factors.

### 3.2 SHORT-CIRCUIT STUDY

- A. Perform study following the general study procedures contained in IEEE 399.
- B. Calculate short-circuit currents according to IEEE 551.
- C. Base study on device characteristics supplied by device manufacturer.
- D. Extent of electrical power system to be studied is indicated on Drawings.
- E. Begin short-circuit current analysis at the service, extending down to system overcurrent protective devices as follows:
  1. To normal system low-voltage load buses where fault current is 10 kA or less.
  2. Exclude equipment rated 240 V ac or less when supplied by a single transformer rated less than 125 kVA..
- F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study all cases of system-switching configurations and alternate operations that could result in maximum fault conditions.
- G. Include the ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase ac systems. Also account for the fault-current dc decrement to address asymmetrical requirements of interrupting equipment.
- H. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault and a single line-to-ground fault at each equipment indicated on one-line diagram.
  1. For grounded systems, provide a bolted line-to-ground fault-current study for areas as defined for the three-phase bolted fault short-circuit study.
- I. Include in the report identification of any protective device applied outside its capacity.

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes computer-based, overcurrent protective device coordination studies to determine overcurrent protective devices and to determine overcurrent protective device settings for selective tripping.
  - 1. Study results shall be used to determine coordination of series-rated devices.

#### 1.3 DEFINITIONS

- A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled. Existing to remain items shall remain functional throughout the construction period.
- B. Field Adjusting Agency: An independent electrical testing agency with full-time employees and the capability to adjust devices and conduct testing indicated and that is a member company of NETA.
- C. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
- D. Power System Analysis Software Developer: An entity that commercially develops, maintains, and distributes computer software used for power system studies.
- E. Power System Analysis Specialist: Professional engineer in charge of performing the study and documenting recommendations, licensed in the state where Project is located.
- F. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion of the circuit from the system.
- G. SCCR: Short-circuit current rating.
- H. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.
- I. Single-Line Diagram: See "One-Line Diagram."

#### 1.4 ACTION SUBMITTALS

##### A. Product Data:

1. For computer software program to be used for studies.
2. Submit the following after the approval of system protective devices submittals. Submittals shall be in digital form.
  - a. Coordination-study input data, including completed computer program input data sheets.
  - b. Study and equipment evaluation reports.
3. Overcurrent protective device coordination study report; signed, dated, and sealed by a qualified professional engineer.
  - a. Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.

#### 1.5 INFORMATIONAL SUBMITTALS

##### A. Qualification Data:

1. For Power System Analysis Software Developer.
2. For Power Systems Analysis Specialist.
3. For Field Adjusting Agency.

##### B. Product Certificates: For overcurrent protective device coordination study software, certifying compliance with IEEE 399.

#### 1.6 CLOSEOUT SUBMITTALS

##### A. Operation and Maintenance Data: For overcurrent protective devices to include in emergency, operation, and maintenance manuals.

1. The following are from the Coordination Study Report:
  - a. Final one-line diagram.
  - b. Final protective device coordination study.
  - c. Coordination study data files.
  - d. List of all protective device settings.
  - e. Time-current coordination curves.
  - f. Power system data.

## 1.7 QUALITY ASSURANCE

- A. Studies shall be performed using commercially developed and distributed software designed specifically for power system analysis.
- B. Software algorithms shall comply with requirements of standards and guides specified in this Section.
- C. Manual calculations are unacceptable.
- D. Power System Analysis Software Qualifications:
  - 1. Computer program shall be designed to perform coordination studies or have a function, component, or add-on module designed to perform coordination studies.
  - 2. Computer program shall be developed under the charge of a licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.
- E. Power Systems Analysis Specialist Qualifications: Professional engineer licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional engineer.
- F. Field Adjusting Agency Qualifications:
  - 1. Employer of a NETA ETT-Certified Technician Level III responsible for all field adjusting of the Work.
  - 2. A member company of NETA.
  - 3. Acceptable to authorities having jurisdiction.

## PART 2 - PRODUCTS

### 2.1 POWER SYSTEM ANALYSIS SOFTWARE DEVELOPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. CGI CYME.
  - 2. EDSA Micro Corporation.
  - 3. ESA Inc.
  - 4. Operation Technology, Inc.
  - 5. Power Analytics, Corporation.
  - 6. SKM Systems Analysis, Inc.
  - 7. Or approved equal
- B. Comply with IEEE 242 and IEEE 399.
- C. Analytical features of device coordination study computer software program shall have the capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

- D. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.

1. Optional Features:
  - a. Arcing faults.
  - b. Simultaneous faults.
  - c. Explicit negative sequence.
  - d. Mutual coupling in zero sequence.

## 2.2 COORDINATION STUDY REPORT CONTENTS

- A. Executive summary of study findings.
- B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.
- C. One-line diagram of modeled power system, showing the following:
1. Protective device designations and ampere ratings.
  2. Conductor types, sizes, and lengths.
  3. Transformer kilovolt ampere (kVA) and voltage ratings.
  4. Motor and generator designations and kVA ratings.
  5. Switchgear, switchboard, motor-control center, and panelboard designations.
  6. Any revisions to electrical equipment required by the study.
  7. Study Input Data: As described in "Power System Data" Article.
    - a. Short-Circuit Study Output: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 260573.13 "Short-Circuit Studies."
- D. Protective Device Coordination Study:
1. Report recommended settings of protective devices, ready to be applied in the field. Use manufacturer's data sheets for recording the recommended setting of overcurrent protective devices when available.
    - a. Phase and Ground Relays:
      - 1) Device tag.
      - 2) Relay current transformer ratio and tap, time dial, and instantaneous pickup value.
      - 3) Recommendations on improved relaying systems, if applicable.
    - b. Circuit Breakers:
      - 1) Adjustable pickups and time delays (long time, short time, and ground).
      - 2) Adjustable time-current characteristic.

- 3) Adjustable instantaneous pickup.
  - 4) Recommendations on improved trip systems, if applicable.
- c. Fuses: Show current rating, voltage, and class.
- E. Time-Current Coordination Curves: Determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:
1. Device tag and title, one-line diagram with legend identifying the portion of the system covered.
  2. Terminate device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which the device is exposed.
  3. Identify the device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.
  4. Plot the following listed characteristic curves, as applicable:
    - a. Power utility's overcurrent protective device.
    - b. Medium-voltage equipment overcurrent relays.
    - c. Medium- and low-voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands.
    - d. Low-voltage equipment circuit-breaker trip devices, including manufacturer's tolerance bands.
    - e. Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection curves.
    - f. Cables and conductors damage curves.
    - g. Ground-fault protective devices.
    - h. Motor-starting characteristics and motor damage points.
    - i. Generator short-circuit decrement curve and generator damage point.
    - j. The largest feeder circuit breaker in each motor-control center and panelboard.
  5. Maintain selectivity for tripping currents caused by overloads.
  6. Maintain maximum achievable selectivity for tripping currents caused by overloads on series-rated devices.
  7. Provide adequate time margins between device characteristics such that selective operation is achieved.
  8. Comments and recommendations for system improvements.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance of the Work. Devices to be coordinated are indicated on Drawings.

1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

### 3.2 POWER SYSTEM DATA

#### A. Obtain all data necessary for conduct of the overcurrent protective device study.

1. Verify completeness of data supplied in one-line diagram on Drawings. Call any discrepancies to Architect's attention.
2. For equipment included as Work of this Project, use characteristics submitted under provisions of action submittals and information submittals for this Project.
3. For relocated equipment and that which is existing to remain, obtain required electrical distribution system data by field investigation and surveys, conducted by qualified technicians and engineers. Qualifications of technicians and engineers shall be as defined by NFPA 70E.

#### B. Gather and tabulate all required input data to support the coordination study. List below is a guide. Comply with recommendations in IEEE 551 for the amount of detail required to be acquired in the field. Field data gathering shall be under direct supervision and control of the engineer in charge of performing the study, and shall be by the engineer or its representative who holds NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification. Data include, but are not limited to, the following:

1. Product Data for overcurrent protective devices specified in other Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
2. Electrical power utility impedance at the service.
3. Power sources and ties.
4. Short-circuit current at each system bus (three phase and line to ground).
5. Full-load current of all loads.
6. Voltage level at each bus.
7. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
8. For reactors, provide manufacturer and model designation, voltage rating, and impedance.
9. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, SCCR, current rating, and breaker settings.
10. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
11. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.
12. Maximum demands from service meters.
13. Busway manufacturer and model designation, current rating, impedance, lengths, size, and conductor material.
14. Motor horsepower and NEMA MG 1 code letter designation.
15. Low-voltage cable sizes, lengths, number, conductor material, and conduit material (magnetic or nonmagnetic).

16. Medium-voltage cable sizes, lengths, conductor material, cable construction, metallic shield performance parameters, and conduit material (magnetic or nonmagnetic).
17. Data sheets to supplement electrical distribution system one-line diagram, cross-referenced with tag numbers on diagram, showing the following:
  - a. Special load considerations, including starting inrush currents and frequent starting and stopping.
  - b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
  - c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
  - d. Generator thermal-damage curve.
  - e. Ratings, types, and settings of utility company's overcurrent protective devices.
  - f. Special overcurrent protective device settings or types stipulated by utility company.
  - g. Time-current-characteristic curves of devices indicated to be coordinated.
  - h. Manufacturer, frame size, interrupting rating in amperes root mean square (rms) symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
  - i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
  - j. Switchgear, switchboards, motor-control centers, and panelboards ampacity, and SCCR in amperes rms symmetrical.
  - k. Identify series-rated interrupting devices for a condition where the available fault current is greater than the interrupting rating of downstream equipment. Obtain device data details to allow verification that series application of these devices complies with NFPA 70 and UL 489 requirements.

### 3.3 COORDINATION STUDY

- A. Comply with IEEE 242 for calculating short-circuit currents and determining coordination time intervals.
- B. Comply with IEEE 399 for general study procedures.
- C. Base study on device characteristics supplied by device manufacturer.
- D. Extent of electrical power system to be studied is indicated on Drawings.
- E. Begin analysis at the service, extending down to system overcurrent protective devices as follows:
  1. To normal system low-voltage load buses where fault current is 10 kA or less.
  2. Exclude equipment rated 240 V ac or less when supplied by a single transformer rated less than 125 kVA..
- F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study all cases of system-switching configurations and alternate operations that could result in maximum fault conditions.

- G. Transformer Primary Overcurrent Protective Devices:
1. Device shall not operate in response to the following:
    - a. Inrush current when first energized.
    - b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
    - c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
  2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.
- H. Motor Protection:
1. Select protection for low-voltage motors according to IEEE 242 and NFPA 70.
  2. Select protection for motors served at voltages more than 600 V according to IEEE 620.
- I. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and protection recommendations in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.
- J. Generator Protection: Select protection according to manufacturer's written instructions and to IEEE 242.
- K. Include the ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase ac systems. Also account for fault-current dc decrement, to address asymmetrical requirements of interrupting equipment.
- L. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault and a single line-to-ground fault at each equipment indicated on one-line diagram.
1. For grounded systems, provide a bolted line-to-ground fault-current study for areas as defined for the three-phase bolted fault short-circuit study.
- M. Protective Device Evaluation:
1. Evaluate equipment and protective devices and compare to short-circuit ratings.
  2. Adequacy of switchgear, motor-control centers, and panelboard bus bars to withstand short-circuit stresses.
  3. Any application of series-rated devices shall be recertified, complying with requirements in NFPA 70.
  4. Include in the report identification of any protective device applied outside its capacity.

### 3.4 LOAD-FLOW AND VOLTAGE-DROP STUDY

- A. Perform a load-flow and voltage-drop study to determine the steady-state loading profile of the system. Analyze power system performance two times as follows:
  - 1. Determine load flow and voltage drop based on full-load currents obtained in "Power System Data" Article.
  - 2. Determine load flow and voltage drop based on 80 percent of the design capacity of load buses.
  - 3. Prepare load-flow and voltage-drop analysis and report to show power system components that are overloaded, or might become overloaded; show bus voltages that are less than as prescribed by NFPA 70.

### 3.5 MOTOR-STARTING STUDY

- A. Perform a motor-starting study to analyze the transient effect of system's voltage profile during motor starting. Calculate significant motor-starting voltage profiles and analyze the effects of motor starting on the power system stability.
- B. Prepare the motor-starting study report, noting light flicker for limits proposed by IEEE 141, and voltage sags so as not to affect operation of other utilization equipment on system supplying the motor.

### 3.6 FIELD ADJUSTING

- A. Adjust relay and protective device settings according to recommended settings provided by the coordination study. Field adjustments shall be completed by the engineering service division of equipment manufacturer under the "Startup and Acceptance Testing" contract portion.
- B. Make minor modifications to equipment as required to accomplish compliance with short-circuit and protective device coordination studies.
- C. Testing and adjusting shall be by a full-time employee of the Field Adjusting Agency, who holds NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification.
  - 1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for all adjustable overcurrent protective devices.

### 3.7 DEMONSTRATION

- A. Engage Power Systems Analysis Specialist to train Owner's maintenance personnel in the following:
  - 1. Acquaint personnel in fundamentals of operating the power system in normal and emergency modes.

June 4, 2021  
Issue for Bid

Parking Deck  
Union County Justice Complex  
Elizabeth, New Jersey

2. Hand-out and explain the coordination study objectives, study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpreting time-current coordination curves.
3. For Owner's maintenance staff certified as NETA ETT-Certified Technicians Level III or NICET Electrical Power Testing Level III Technicians, teach how to adjust, operate, and maintain overcurrent protective device settings.

END OF SECTION 260573.16

## SECTION 262200 LOW-VOLTAGE TRANSFORMERS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes: Distribution, dry-type transformers rated 600 V and less, with capacities up to 1500 kVA.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type and size of transformer.
  - 2. Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer.
- B. Shop Drawings:
  - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
  - 3. Include diagrams for power, signal, and control wiring.
  - 4. Inrush current for each transformer and a manufacturer table indicating recommended circuit breaker and fuse types and sizes for DOE 2016 transformers.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For transformers, accessories, and components, from manufacturer.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- B. Qualification Data: For testing agency.
- C. Source quality-control reports.
- D. Field quality-control reports.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

#### 1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
  - 1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

#### 1.7 DELIVERY, STORAGE, AND HANDLING

- A. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Eaton.
  - 2. General Electric Company.
  - 3. Powersmiths International Corp.
  - 4. Siemens Power Transmission & Distribution, Inc.
  - 5. Square D; by Schneider Electric.
  - 6. Or approved equal.
- B. Source Limitations: Obtain each transformer type from single source from single manufacturer.

#### 2.2 GENERAL TRANSFORMER REQUIREMENTS

- A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. The transformers shall meet the applicable requirements of NEMA ST-20 and ANSI/IEEE C57.12.01 and C57.96, and shall be listed and labeled for conformance to UL 1561.
- D. Transformers must comply with the US DOE 2016 minimum requirement.
- E. Cores: Electrical grade, non-aging silicon steel with high permeability and low hysteresis losses.
- F. Coils: Continuous windings without splices except for taps.
  - 1. Internal Coil Connections: Brazed or pressure type.
  - 2. Coil Material: Copper.
- G. Encapsulation: Transformers smaller than 30 kVA shall have core and coils completely resin encapsulated.
- H. Shipping Restraints: Paint or otherwise color code bolts, wedges, blocks, and other restraints that are to be removed after installation and before energizing. Use fluorescent colors that are easily identifiable inside the transformer enclosure.

### 2.3 DISTRIBUTION TRANSFORMERS

- A. Comply with NFPA 70, and list and label as complying with UL 1561.
- B. Enclosure: Ventilated.
  - 1. NEMA 250, Type 2: Core and coil shall be encapsulated within resin compound to seal out moisture and air.
  - 2. KVA Ratings: Based on convection cooling only and not relying on auxiliary fans.
- C. Transformer Enclosure Finish: Comply with NEMA 250.
  - 1. Finish Color: Gray.
- D. Taps for Transformers 15 kVA and Larger: Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity.
- E. Insulation Class, Smaller than 30 kVA: 220 deg C, UL-component-recognized insulation system with a maximum of 115-deg C rise above 40-deg C ambient temperature.
- F. Insulation Class, 30 kVA and Larger: 220 deg C, UL-component-recognized insulation system with a maximum of 115-deg C rise above 40-deg C ambient temperature.
- G. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for nonsinusoidal load current-handling capability to the degree defined by designated K-factor.

1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor.
  2. Indicate value of K-factor on transformer nameplate.
  3. Unit shall meet requirements of NEMA TP 1 when tested according to NEMA TP 2 with a K-factor equal to one.
- H. Electrostatic Shielding: Each winding shall have an independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.
1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
  2. Include special terminal for grounding the shield.
- I. Neutral: Rated 200 percent of full load current for K-factor rated transformers.
- J. Wall Brackets: Wall brackets fabricated from design drawings signed and sealed by a licensed structural engineer.
- K. Fungus Proofing: Permanent fungicidal treatment for coil and core.
- L. Low-Sound-Level Requirements: Maximum sound levels when factory tested according to IEEE C57.12.91.

## 2.4 IDENTIFICATION DEVICES

- A. Nameplates: Engraved, laminated-plastic or metal nameplate for each distribution transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 260553 "Identification for Electrical Systems."

## 2.5 SOURCE QUALITY CONTROL

- A. Test and inspect transformers according to IEEE C57.12.01 and IEEE C57.12.91.
1. Resistance measurements of all windings at the rated voltage connections and at all tap connections.
  2. Ratio tests at the rated voltage connections and at all tap connections.
  3. Phase relation and polarity tests at the rated voltage connections.
  4. No load losses, and excitation current and rated voltage at the rated voltage connections.
  5. Impedance and load losses at rated current and rated frequency at the rated voltage connections.
  6. Applied and induced tensile tests.
  7. Regulation and efficiency at rated load and voltage.
  8. Insulation Resistance Tests:
    - a. High-voltage to ground.
    - b. Low-voltage to ground.
    - c. High-voltage to low-voltage.
  9. Temperature tests.

- B. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.
- B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.
- C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.
- D. Verify that ground connections are in place and requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.
- E. Environment: Enclosures shall be rated for the environment in which they are located. Covers for NEMA 250, Type 4X enclosures shall not cause accessibility problems.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 INSTALLATION

- A. Install wall-mounted transformers level and plumb with wall brackets fabricated from design drawings signed and sealed by a licensed structural engineer.
  - 1. Coordinate installation of wall-mounted and structure-hanging supports with actual transformer provided.
  - 2. Brace wall-mounted transformers as specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- B. Install transformers level and plumb on a concrete base with vibration-dampening supports. Locate transformers away from corners and not parallel to adjacent wall surface.
- C. Construct concrete bases according to Section 033000 "Cast-in-Place Concrete" and anchor floor-mounted transformers according to manufacturer's written instructions, seismic codes applicable to Project, and requirements in Section 260529 "Hangers and Supports for Electrical Systems."
  - 1. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
- D. Secure transformer to concrete base according to manufacturer's written instructions.

- E. Secure covers to enclosure and tighten all bolts to manufacturer-recommended torques to reduce noise generation.
- F. Remove shipping bolts, blocking, and wedges.

### 3.3 CONNECTIONS

- A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.
- D. Provide flexible connections at all conduit and conductor terminations and supports to eliminate sound and vibration transmission to the building structure.

### 3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
  - 1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS for dry-type, air-cooled, low-voltage transformers. Certify compliance with test parameters.
- C. Remove and replace units that do not pass tests or inspections and retest as specified above.
- D. Infrared Scanning: Two months after Substantial Completion, perform an infrared scan of transformer connections.
  - 1. Use an infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
  - 2. Perform two follow-up infrared scans of transformers, one at four months and the other at 11 months after Substantial Completion.
  - 3. Prepare a certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and scanning observations after remedial action.
- E. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.5 ADJUSTING

- A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 5 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.
- B. Connect buck-boost transformers to provide nameplate voltage of equipment being served, plus or minus 5 percent, at secondary terminals.
- C. Output Settings Report: Prepare a written report recording output voltages and tap settings.

3.6 CLEANING

- A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION 262200

## SECTION 262413 SWITCHBOARDS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

1. Service and distribution switchboards rated 600 V and less.
2. Surge protection devices.
3. Metering.
4. Disconnecting and overcurrent protective devices.
5. Instrumentation.
6. Control power.
7. Accessory components and features.
8. Identification.
9. Mimic Bus

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each switchboard, overcurrent protective device, surge protection device, ground-fault protector, accessory, and component.
  1. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.
- B. Shop Drawings: For each switchboard and related equipment.
  1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.
  2. Detail enclosure types for types other than NEMA 250, Type 1.
  3. Detail bus configuration, current, and voltage ratings.
  4. Detail short-circuit current rating of switchboards and overcurrent protective devices.
  5. Include descriptive documentation of optional barriers specified for electrical insulation and isolation.
  6. Detail utility company's metering provisions with indication of approval by utility company.
  7. Include evidence of NRTL listing for series rating of installed devices.

8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
  9. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.
  10. Include diagram and details of proposed mimic bus.
  11. Include schematic and wiring diagrams for power, signal, and control wiring.
- C. Samples: Representative portion of mimic bus with specified material and finish, for color selection.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer and testing agency.
- B. Seismic Qualification Certificates: For switchboards, overcurrent protective devices, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field Quality-Control Reports:
1. Test procedures used.
  2. Test results that comply with requirements.
  3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For switchboards and components to include in emergency, operation, and maintenance manuals.
1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
    - a. Routine maintenance requirements for switchboards and all installed components.
    - b. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
    - c. Time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

#### 1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Potential Transformer Fuses: Equal to 10 percent of quantity installed for each size and type but no fewer than two of each size and type.
  - 2. Control-Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
  - 3. Fuses and Fusible Devices for Fused Circuit Breakers: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
  - 4. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
  - 5. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
  - 6. Indicating Lights: Equal to 10 percent of quantity installed for each size and type but no less than one of each size and type.

#### 1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E.
- B. Testing Agency Qualifications: Member company of NETA or an NRTL.
  - 1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

#### 1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.
- B. Remove loose packing and flammable materials from inside switchboards and install temporary electric heating (250 W per section) to prevent condensation.
- C. Handle and prepare switchboards for installation according to NECA 400.

#### 1.9 FIELD CONDITIONS

- A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.
- B. Environmental Limitations:
  - 1. Do not deliver or install switchboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above switchboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

- a. Ambient Temperature: Not exceeding 104 deg F.
- b. Altitude: Not exceeding 6600 feet.

C. Unusual Service Conditions: NEMA PB 2, as follows:

- 1. Ambient temperatures within limits specified.
- 2. Altitude not exceeding 6600 feet.

D. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:

- 1. Notify Owner no fewer than seven days in advance of proposed interruption of electric service.
- 2. Indicate method of providing temporary electric service.
- 3. Do not proceed with interruption of electric service without Owner's written permission.
- 4. Comply with NFPA 70E.

#### 1.10 COORDINATION

- A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

#### 1.11 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace switchboard enclosures, buswork, overcurrent protective devices, accessories, and factory installed interconnection wiring that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Three years from date of Substantial Completion.
- B. Manufacturer's Warranty: Manufacturer's agrees to repair or replace surge protection devices that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Five years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Switchboards shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation. Shake-table testing shall comply with ICC-ES AC156.
  2. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

### 2.2 SWITCHBOARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Square D; by Schneider Electric. (design basis: QED switchboard)
  2. Eaton.
  3. General Electric Company.
  4. Siemens Power Transmission & Distribution, Inc.
  5. Or approved equal.
- B. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.
- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Comply with NEMA PB 2.
- F. Comply with NFPA 70.
- G. Comply with UL 891.
- H. Front-Connected, Front-Accessible Switchboards:
1. Main Devices: Fixed, individually mounted.
  2. Branch Devices: Panel mounted.
  3. Sections front and rear aligned.
- I. Nominal System Voltage: 480Y/277 V.
- J. Main-Bus Continuous: See drawings.

- K. Short Circuit Current Rating: Switchboards shall be rated with a minimum short circuit current rating of 100,000 rms symmetrical amperes at 480 VAC maximum.
- L. Provide fused switches to protect the feeders to the ATS' to achieve the desired short circuit ratings of the ATS' and the downstream busway.
- M. Future Provisions: All unused spaces provided, unless otherwise specified, shall be fully equipped for future devices, including all appropriate connectors and mounting hardware.
- N. Seismic Requirements: Fabricate and test switchboards according to IEEE 344 to withstand seismic forces.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation. Shake-table testing shall comply with ICC-ES AC156.
    - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
    - b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
- O. Indoor Enclosures: Steel, NEMA 250, Type 2.
- P. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard gray finish over a rust-inhibiting primer on treated metal surface.
- Q. Barriers: Between adjacent switchboard sections.
- R. Insulation and isolation for main bus of main section and main and vertical buses of feeder sections.
- S. Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point.
  - 1. Space-Heater Control: Thermostats to maintain temperature of each section above expected dew point.
  - 2. Space-Heater Power Source: Transformer, factory installed in switchboard.
- T. Service Entrance Rating: Switchboards intended for use as service entrance equipment shall contain from one to six service disconnecting means with overcurrent protection, a neutral bus with disconnecting link, a grounding electrode conductor terminal, and a main bonding jumper.
- U. Customer Metering Compartment: A separate customer metering compartment and section with front hinged door, and section with front hinged door, for indicated metering, and current transformers for each meter. Current transformer secondary wiring shall be terminated on shorting-type terminal blocks. Include potential transformers having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks.
- V. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.

- W. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.
- X. Pull Box on Top of Switchboard:
  - 1. Adequate ventilation to maintain temperature in pull box within same limits as switchboard.
  - 2. Set back from front to clear circuit-breaker removal mechanism.
  - 3. Removable covers shall form top, front, and sides. Top covers at rear shall be easily removable for drilling and cutting.
  - 4. Bottom shall be insulating, fire-resistive material with separate holes for cable drops into switchboard.
  - 5. Cable supports shall be arranged to facilitate cabling and adequate to support cables indicated, including those for future installation.
- Y. Buses and Connections: Three phase, four wire unless otherwise indicated.
  - 1. Provide phase bus arrangement A, B, C from front to back, top to bottom, and left to right when viewed from the front of the switchboard.
  - 2. Phase- and Neutral-Bus Material: Hard-drawn copper of 98 percent conductivity.
  - 3. Copper feeder circuit-breaker line connections.
  - 4. All power cable terminations shall be copper with compression type lugs, including all factory terminations
  - 5. Load Terminals: Insulated, rigidly braced, runback bus extensions, of same material as through buses, equipped with mechanical connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full-ampere rating of circuit-breaker position.
  - 6. Ground Bus: Ground Bus: Sized per NFPA70 and UL 891 Tables 25.1 and 25.2 and shall extend the entire length of the switchboard. Provisions for the addition of future sections shall be provided.
  - 7. Main-Phase Buses and Equipment-Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.
  - 8. Disconnect Links:
    - a. Isolate neutral bus from incoming neutral conductors.
    - b. Bond neutral bus to equipment-ground bus for switchboards utilized as service equipment or separately derived systems.
  - 9. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with mechanical connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
  - 10. Isolation Barrier Access Provisions: Permit checking of bus-bolt tightness.
- Z. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.
- AA. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.
- BB. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components including instruments and instrument transformers.

### 2.3 SURGE PROTECTION DEVICES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Advanced Protection Technologies Inc. (APT).
  2. Eaton.
  3. General Electric Company.
  4. Siemens Power Transmission & Distribution, Inc.
  5. Square D; by Schneider Electric.
- B. SPDs: Comply with UL 1449, Type 2.
1. SPDs with the following features and accessories:
    - a. Integral disconnect switch.
    - b. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
    - c. Indicator light display for protection status.
    - d. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
    - e. Surge counter.
- C. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 250kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual MOVs in a given mode.
- D. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V, three-phase, four-wire circuits shall not exceed the following:
1. Line to Neutral: 1200 V for 480Y/277 V.
  2. Line to Ground: 1200 V for 480Y/277 V.
  3. Line to Line: 2000 V for 480Y/277 V.
- E. SCCR: Equal or exceed 200 kA.
- F. Nominal Rating: 20 kA.

### 2.4 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

- A. Main breaker shall be electronic trip 2,500 amp drawout mounted 100% rated circuit breaker. The case of the circuit breaker shall be a polyester thermoset material providing high dielectric strength.
1. The case of the circuit breaker shall be a polyester thermoset material providing high dielectric strength.
  2. Circuit breaker operating mechanisms are to be two-step, fully- stored energy devices for quick-make, quick-break operation with a maximum of a five-cycle closing time. Open-

close-open (O-C-O) cycle shall be possible without recharging. Motor operator shall automatically charge when circuit breaker is closed. Actuation of the operating handle or an operation cycle of the circuit breaker motor is to charge the closing springs (step one) and operation of a local "close" button is to close the circuit breaker contact (step two). Closing the circuit breaker contacts shall automatically charge the opening springs.

3. Current-carrying components shall be completely isolated from the accessory mounting area and double insulated from the operator with accessory cover in place.
4. Each phase inside the circuit breaker shall be completely isolated from other phases and ground by polyester thermoset material.
5. Padlocking provisions shall be furnished to receive up to three padlocks when circuit breaker is in the disconnected position, positively preventing unauthorized closing of the circuit breaker contacts.
6. Circuit breaker must be equipped with an interlock to discharge the stored energy spring before the circuit breaker can be withdrawn from its cell.
7. Located on the face of the circuit breaker shall be buttons to open and close the circuit breaker and indicators to show the position of the circuit breaker contacts, status of the closing springs, and circuit breaker position in the cell. An indicator shall show "charged-not OK to close" if closing springs are charged but circuit breaker is not ready to close. Circuit breaker racking system must have positive stops at the connected, test, disconnected and withdrawn positions.
8. Ready-to-close contact must be available to indicate remotely that the circuit breaker is "ready to close." The circuit breaker is ready to close when it is open, spring mechanism is charged, a maintained closing order is not present, a maintained opening order is not present, and the circuit breaker is in an operational position.
9. Circuit breaker shall provide long service life. The 5000 A frames must be certified to 5,000 operations without maintenance.
10. Secondary wiring shall be front accessible and available in cage clamp or ring terminal connections. Secondary wiring must not be accessible when switchgear door is closed.
11. Circuit breaker shall be equipped with a visual contact wear indicator.
12. Low-voltage power circuit breaker arc chutes containing asbestos will NOT be accepted.
13. Mains breakers shall be key interlocked to prevent paralleling.
14. Switchboard shall be provided with 1 floor mounted portable breaker lifting crane

B. Trip System:

1. Circuit breaker trip system shall be an electronic trip unit.
2. Electronic trip unit shall be UL Listed as field-replaceable and upgradeable without special adjustments to the mechanism.
3. Electronic trip unit is to be true RMS current sensing.
4. Trip unit functions shall consist of adjustable long-time pickup and delay, short-time pickup and delay, instantaneous.
5. Adjustable long-time pickup ( $I_r$ ) and delay shall be available in an adjustable rating plug that is UL Listed as field-replaceable. Adjustable rating plug shall allow for nine long-time pickup settings from 0.4-1 times the sensor plug ( $I_n$ ). Other adjustable rating plugs shall be available for more precise settings to match the application. Long-time delay settings shall be in nine bands from 0.5-24 seconds at six times  $I_r$ .
6. Short-time pickup shall allow for nine settings from 1.5-10 times  $I_r$ . Short-time delay shall be in nine bands from 0.1-0.4  $I_2t$  ON and 0-0.4  $I_2t$  OFF.
7. Instantaneous settings on the trip units with LSI protection shall be available in nine bands from 2-15 times  $I_n$ . Instantaneous setting shall also have an OFF setting.

8. All trip units shall have the capability for the adjustments to be set and read locally by rotating a switch. Fine increments for pickup adjustments are to be one ampere. Fine increments for delay adjustments are to be one second.
  9. Trip unit shall provide local trip indication and capability to indicate local and remote reason for trip, e.g., overload, short circuit.
  10. Trip units shall provide additional protection by offering adjustable inverse definite minimum time lag (IDMTL). IDMTL provides optimized coordination by the adjustment of the slope of the long-time delay protection.
- C. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.
- D. Group mounted circuit breakers through 1200A
1. Circuit breakers shall be group mounted plug-on with mechanical restraint on a common pan or rail assembly.
  2. The interior shall have three flat bus bars stacked and aligned vertically with glass reinforced polyester insulators laminated between phases. The molded polyester insulators shall support and provide phase isolation to the entire length of bus.
  3. Circuit breakers equipped with line terminal jaws shall not require additional external mounting hardware. Circuit breakers shall be held in mounted position by a self-contained bracket secured to the mounting pan by fasteners. Circuit breakers of different frame sizes shall be capable of being mounted across from each other.
  4. Line-side circuit breaker connections are to be jaw type.
  5. All unused spaces provided, unless otherwise specified, shall be fully equipped for future devices, including all appropriate connectors and mounting hardware.
  6. All trip units shall be removable to allow for field upgrades.
    - a. Trip units shall incorporate “True RMS Sensing” and have LED long-time pickup indications.
    - b. Trip unit functions shall consist of adjustable long-time pickup and delay, optional short-time pickup and delay, instantaneous and ground-fault pickup and delay
    - c. Trip unit shall provide local trip indication for trip, i.e., overload, short circuit or ground fault.
    - d. Circuit breaker trip system shall be a microprocessor-based true rms sensing design with sensing accuracy through the thirteenth (13th) harmonic. Sensor ampere ratings shall be as indicated on the associated drawings.
    - e. The integral trip system shall be independent of any external power source and shall contain no less than industrial grade electronic components.
    - f. The ampere rating of the circuit breaker shall be determined by the combination of an interchangeable rating plug, the sensor size and the long-time pickup adjustment on the circuit breaker. The sensor size, rating plug and switch adjustments shall be clearly marked on the face of the circuit breaker.

## 2.5 INSTRUMENTATION

- A. Instrument Transformers: NEMA EI 21.1, and the following:

1. Potential Transformers: NEMA EI 21.1; 120 V, 60 Hz, disconnecting type with integral fuse mountings. Burden and accuracy shall be consistent with connected metering and relay devices.
  2. Current Transformers: NEMA EI 21.1; 5 A, 60 Hz, secondary. Burden and accuracy shall be consistent with connected metering and relay devices.
  3. Control-Power Transformers: Dry type, mounted in separate compartments for units larger than 3 kVA.
  4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker, ground-fault protection.
- B. Square D Model PM8000 meter (or approved equal) and local display unit with the following features:
1. Class 0.2S accuracy
  2. Net metering capability
  3. Cycle by cycle RMS measurements updated every ½ cycle.
  4. 512MB nonvolatile memory
  5. RMS 3 phase current voltage and power metering per ANSI C12.20 Class 0.2.
  6. RS485 port, dual Ethernet ports
  7. On-board data storage with 512 MB memory
  8. 4 analog inputs, 2 analog outputs, 10 digital inputs, 2 digital relay outputs, 1 KY pulse output.

## 2.6 ACCESSORY COMPONENTS AND FEATURES

- A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.
- B. Spare-Fuse Cabinet: Suitably identified, wall-mounted, lockable, compartmented steel box or cabinet. Arrange for wall mounting.
- C. Mounting Accessories: For anchors, mounting channels, bolts, washers, and other mounting accessories, comply with requirements in Section 260548.16 "Seismic Controls for Electrical Systems" or manufacturer's instructions.

## 2.7 IDENTIFICATION

- A. Mimic Bus: Entire single-line switchboard bus work, as depicted on factory record drawing, on a photoengraved nameplate.
1. Nameplate: At least 0.032-inch-thick anodized aluminum, located at eye level on front cover of the switchboard incoming service section.
- B. Coordinate mimic-bus segments with devices in switchboard sections to which they are applied. Produce a concise visual presentation of principal switchboard components and connections.
- C. Presentation Media: Painted graphics in color contrasting with background color to represent bus and components, complete with lettered designations.

- D. Service Equipment Label: NRTL labeled for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Receive, inspect, handle, and store switchboards according to NECA 400.
  - 1. Lift or move panelboards with spreader bars and manufacturer-supplied lifting straps following manufacturer's instructions.
  - 2. Use rollers, slings, or other manufacturer-approved methods if lifting straps are not furnished.
  - 3. Protect from moisture, dust, dirt, and debris during storage and installation.
  - 4. Install temporary heating during storage per manufacturer's instructions.
- B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.
- C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance of the Work or that affect the performance of the equipment.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 INSTALLATION

- A. Install switchboards and accessories according to NECA 400.
- B. Equipment Mounting: Install switchboards on concrete base, 4-inch nominal thickness. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."
  - 1. Install conduits entering underneath the switchboard, entering under the vertical section where the conductors will terminate. Install with couplings flush with the concrete base. Extend 2 inches above concrete base after switchboard is anchored in place.
  - 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
  - 3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  - 4. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 5. Install anchor bolts to elevations required for proper attachment to switchboards.
  - 6. Anchor switchboard to building structure at the top of the switchboard if required or recommended by the manufacturer.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, straps and brackets, and temporary blocking of moving parts from switchboard units and components.

- D. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- E. Operating Instructions: Frame and mount the printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.
- F. Install filler plates in unused spaces of panel-mounted sections.
- G. Install overcurrent protective devices, surge protection devices, and instrumentation.
  - 1. Set field-adjustable switches and circuit-breaker trip ranges.
- H. Install spare-fuse cabinet.
- I. Comply with NECA 1.

### 3.3 CONNECTIONS

- A. Bond conduits entering underneath the switchboard to the equipment ground bus with a bonding conductor sized per NFPA 70.
- B. Support and secure conductors within the switchboard according to NFPA 70.
- C. Extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.

### 3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Switchboard Nameplates: Label each switchboard compartment with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- C. Device Nameplates: Label each disconnecting and overcurrent protective device and each meter and control device mounted in compartment doors with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

### 3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Acceptance Testing:
    - a. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit. Open control and metering circuits within the switchboard, and remove neutral connection to surge protection and other electronic devices prior to insulation test. Reconnect after test.
    - b. Test continuity of each circuit.
  - 2. Test ground-fault protection of equipment for service equipment per NFPA 70.
  - 3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
  - 4. Correct malfunctioning units on-site where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
  - 5. Perform the following infrared scan tests and inspections, and prepare reports:
    - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switchboard. Remove front panels so joints and connections are accessible to portable scanner.
    - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchboard 11 months after date of Substantial Completion.
    - c. Instruments and Equipment:
      - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
  - 6. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Switchboard will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

### 3.6 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges as specified in Section 260573 "Overcurrent Protective Device Coordination Study."

3.7 PROTECTION

- A. Temporary Heating: Apply temporary heat, to maintain temperature according to manufacturer's written instructions, until switchboard is ready to be energized and placed into service.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories, and to use and reprogram microprocessor-based trip, monitoring, and communication units.

END OF SECTION 262413

## SECTION 262416 PANELBOARDS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Distribution panelboards.
  - 2. Lighting and appliance branch-circuit panelboards.
  - 3. Electronic grade panelboards.

#### 1.3 DEFINITIONS

- A. ATS: Acceptance testing specification.
- B. GFCI: Ground-fault circuit interrupter.
- C. GFEP: Ground-fault equipment protection.
- D. MCCB: Molded-case circuit breaker.
- E. SPD: Surge protective device.
- F. VPR: Voltage protection rating.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of panelboard.
  - 1. Include materials, switching and overcurrent protective devices, SPDs, accessories, and components indicated.
  - 2. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
- B. Shop Drawings: For each panelboard and related equipment.
  - 1. Include dimensioned plans, elevations, sections, and details.
  - 2. Show tabulations of installed devices with nameplates, conductor termination sizes, equipment features, and ratings.

3. Detail enclosure types including mounting and anchorage, environmental protection, knockouts, corner treatments, covers and doors, gaskets, hinges, and locks.
4. Detail bus configuration, current, and voltage ratings.
5. Short-circuit current rating of panelboards and overcurrent protective devices.
6. Include evidence of NRTL listing for series rating of installed devices.
7. Include evidence of NRTL listing for SPD as installed in panelboard.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
9. Include wiring diagrams for power, signal, and control wiring.
10. Key interlock scheme drawing and sequence of operations.
11. Provide time current curves showing the inrush currents for each transformer fed from the switchboard and the proposed circuit breaker trip curve. The time current curve shall demonstrate that the circuit breaker is suitable for use with the proposed transformer.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency.
- B. Panelboard Schedules: For installation in panelboards. Submit final versions after load balancing.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
  1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
  2. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

#### 1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  1. Keys: Two spares for each type of panelboard cabinet lock.
  2. Circuit Breakers Including GFCI and GFEP Types: Two spares for each panelboard.
  3. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
  4. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.

#### 1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications: ISO 9001 or 9002 certified.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.
- B. Handle and prepare panelboards for installation according to NEMA PB 1.

1.10 FIELD CONDITIONS

- A. Environmental Limitations:
  - 1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
  - 2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
    - a. Ambient Temperature: Not exceeding minus 22 deg F (fused) and 23 deg F(circuit breaker) to plus 104 deg F.
    - b. Altitude: Not exceeding 6600 feet.
- B. Service Conditions: NEMA PB 1, usual service conditions, as follows:
  - 1. Ambient temperatures within limits specified.
  - 2. Altitude not exceeding 6600 feet.
- C. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
  - 1. Notify Owner no fewer than seven days in advance of proposed interruption of electric service.
  - 2. Do not proceed with interruption of electric service without Owner's written permission.
  - 3. Comply with NFPA 70E.

1.11 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace panelboards that fail in materials or workmanship within specified warranty period.
  - 1. Panelboard Warranty Period: 18 months from date of Substantial Completion.
- B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace SPD that fails in materials or workmanship within specified warranty period.
  - 1. SPD Warranty Period: Five years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 PANELBOARDS AND LOAD CENTERS COMMON REQUIREMENTS

- A. Fabricate and test panelboards according to IEEE 344 to withstand seismic forces defined in Section 260548.16 "Seismic Controls for Electrical Systems."
- B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Circuit Breakers Feeding Transformers: Provide solid state circuit breakers to allow adjustment for DOE 2016 transformer inrush current. Provide time current curves showing the inrush currents for each transformer and the proposed circuit breaker trip curve.
- E. Comply with NEMA PB 1, UL 50, and UL 67.
- F. Comply with NFPA 70.
- G. Enclosures: Flush and Surface-mounted, dead-front cabinets.
  - 1. Rated for environmental conditions at installed location.
    - a. Indoor Dry and Clean Locations: NEMA 250, Type 1.
    - b. Outdoor Locations: NEMA 250, Type 3R.
    - c. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
  - 2. Height: 84 inches maximum.
  - 3. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover. Trims shall cover all live parts and shall have no exposed hardware.
  - 4. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.
  - 5. Finishes:
    - a. Panels and Trim: Steel and galvanized steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
    - b. Back Boxes: Galvanized steel.
    - c. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components.
- H. Incoming Mains:
  - 1. Location: Convertible between top and bottom.
  - 2. Main Breaker: Main lug interiors up to 400 amperes shall be field convertible to main breaker.

- I. Phase, Neutral, and Ground Buses:
  - 1. Material: Hard-drawn copper, 98 percent conductivity.
    - a. Plating shall run entire length of bus.
    - b. Bus shall be fully rated the entire length.
  - 2. Interiors shall be factory assembled into a unit. Replacing switching and protective devices shall not disturb adjacent units or require removing the main bus connectors.
  - 3. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.
  - 4. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.
  - 5. Full-Sized Neutral: Equipped with full-capacity bonding strap for service entrance applications. Mount electrically isolated from enclosure. Do not mount neutral bus in gutter.
  - 6. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and listed and labeled by an NRTL acceptable to authority having jurisdiction, as suitable for nonlinear loads in electronic-grade panelboards and others designated on Drawings. Connectors shall be sized for double-sized or parallel conductors as indicated on Drawings. Do not mount neutral bus in gutter.
- J. Conductor Connectors: Suitable for use with conductor material and sizes.
  - 1. Material: Hard-drawn copper, 98 percent conductivity.
  - 2. Terminations shall allow use of 75 deg C rated conductors without derating.
  - 3. Size: Lugs suitable for indicated conductor sizes, with additional gutter space, if required, for larger conductors.
  - 4. Main and Neutral Lugs: Mechanical type, with a lug on the neutral bar for each pole in the panelboard.
  - 5. Ground Lugs and Bus-Configured Terminators: Mechanical type, with a lug on the bar for each pole in the panelboard.
  - 6. Feed-Through Lugs: Mechanical type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
  - 7. Subfeed (Double) Lugs: Mechanical type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
  - 8. Gutter-Tap Lugs: Mechanical type suitable for use with conductor material and with matching insulating covers. Locate at same end of bus as incoming lugs or main device.
  - 9. Extra-Capacity Neutral Lugs: Rated 200 percent of phase lugs mounted on extra-capacity neutral bus.
- K. Future Devices: Panelboards or load centers shall have mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.
  - 1. Percentage of Future Space Capacity: 20 percent.
- L. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals. Assembly listed by an NRTL for 100 percent interrupting capacity.

1. Panelboards and overcurrent protective devices rated 240 V or less shall have short-circuit ratings as shown on Drawings.
2. Panelboards and overcurrent protective devices rated above 240 V and less than 600 V shall have short-circuit ratings as shown on Drawings.

## 2.2 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Panelboards shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
  1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
- B. Surge Suppression: Factory installed as an integral part of indicated panelboards, complying with UL 1449 SPD Type 2.

## 2.3 POWER PANELBOARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Square D; by Schneider Electric.
  2. Eaton.
  3. General Electric Company; GE Energy Management - Electrical Distribution.
  4. Siemens Energy.
  5. Or approved equal.
- B. Panelboards: NEMA PB 1, distribution type.
- C. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
  1. For doors more than 36 inches high, provide two latches, keyed alike.
- D. Mains: Circuit breaker, Fused switch, and Lugs only as indicated on schedules.
- E. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: Bolt-on circuit breakers.
- F. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers.
- G. Branch Overcurrent Protective Devices: Fused switches.

## 2.4 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Eaton.

2. General Electric Company; GE Energy Management - Electrical Distribution.
3. Siemens Energy.
4. Square D; by Schneider Electric.
5. Or approved equal.

- B. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.
- C. Mains: Circuit breaker or lugs only.
- D. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.
- E. Doors: Concealed hinges; secured with flush latch with tumbler lock; keyed alike.
- F. Doors: Door-in-door construction with concealed hinges; secured with multipoint latch with tumbler lock; keyed alike. Outer door shall permit full access to the panel interior. Inner door shall permit access to breaker operating handles and labeling, but current carrying terminals and bus shall remain concealed.

## 2.5 ELECTRONIC-GRADE PANELBOARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Eaton.
  2. General Electric Company; GE Energy Management - Electrical Distribution.
  3. Siemens Energy.
  4. Square D; by Schneider Electric.
  5. Or approved equal.
- B. Provide for all computer panelboards as indicated on the drawings.
- C. Panelboards: NEMA PB 1; with factory-installed, integral SPD; labeled by an NRTL for compliance with UL 67 and UL 1449 after installing SPD.
- D. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
- E. Main Overcurrent Protective Devices: Bolt-on thermal-magnetic circuit breakers.
- F. Branch Overcurrent Protective Devices: Bolt-on thermal-magnetic circuit breakers.
- G. SPD.
1. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 100 kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual MOVs in a given mode.
  2. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V and 208Y/120 V, three-phase, four-wire circuits shall not exceed the following:
    - a. Line to Neutral: 1200 V for 480Y/277 V and 700 V for 208Y/120 V.

- b. Line to Ground: 1200 V for 480Y/277 V and 700 V for 208Y/120 V.
  - c. Neutral to Ground: 1200 V for 480Y/277 V and 700 V for 208Y/120 V.
  - d. Line to Line: 2000 V for 480Y/277 V and 1200 V for 208Y/120 V.
3. SCCR: Equal to the SCCR of the panelboard in which installed.
  4. Inominal Rating: 20 kA.

H. Buses:

1. Copper phase and neutral buses; 200 percent capacity neutral bus and lugs.
2. Copper equipment and isolated ground buses.

2.6 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bussman.
2. Eaton.
3. General Electric Company; GE Energy Management - Electrical Distribution.
4. Siemens Energy.
5. Square D; by Schneider Electric.
6. Or approved equal.

B. MCCB: Comply with UL 489, with interrupting capacity to meet available fault currents.

1. Thermal-Magnetic Circuit Breakers:
  - a. Inverse time-current element for low-level overloads.
  - b. Instantaneous magnetic trip element for short circuits.
  - c. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
3. Electronic Trip Circuit Breakers:
  - a. RMS sensing.
  - b. Field-replaceable rating plug or electronic trip.
  - c. Digital display of settings, trip targets, and indicated metering displays.
  - d. Multi-button keypad to access programmable functions and monitored data.
  - e. Ten-event, trip-history log. Each trip event shall be recorded with type, phase, and magnitude of fault that caused the trip.
  - f. Integral test jack for connection to portable test set or laptop computer.
  - g. Field-Adjustable Settings:
    - 1) Instantaneous trip.
    - 2) Long- and short-time pickup levels.
    - 3) Long and short time adjustments.
    - 4) Ground-fault pickup level, time delay, and I squared T response.

4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
  5. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6-mA trip).
  6. GFPE Circuit Breakers: Class B ground-fault protection (30-mA trip).
  7. Arc-Fault Circuit Interrupter Circuit Breakers: Comply with UL 1699; 120/240-V, single-pole configuration.
  8. Subfeed Circuit Breakers: Vertically mounted.
  9. MCCB Features and Accessories:
    - a. Standard frame sizes, trip ratings, and number of poles.
    - b. Breaker handle indicates tripped status.
    - c. UL listed for reverse connection without restrictive line or load ratings.
    - d. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor materials.
    - e. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and HID lighting circuits.
    - f. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
    - g. Communication Capability: Circuit-breaker-mounted communication module with functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
    - h. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
    - i. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
    - j. Rating Plugs: Three-pole breakers with ampere ratings greater than 150 amperes shall have interchangeable rating plugs or electronic adjustable trip units.
    - k. Auxiliary Contacts: Two, SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts and "b" contacts operate in reverse of circuit-breaker contacts.
    - l. Alarm Switch: Single-pole, normally open contact that actuates only when circuit breaker trips.
    - m. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in on or off position.
    - n. Handle Clamp: Loose attachment, for holding circuit-breaker handle in on position.
- C. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.
1. Fuses and Spare-Fuse Cabinet: Comply with requirements specified in Section 262813 "Fuses."
  2. Fused Switch Features and Accessories:
    - a. Standard ampere ratings and number of poles.
    - b. Mechanical cover interlock with a manual interlock override, to prevent the opening of the cover when the switch is in the on position. The interlock shall prevent the switch from being turned on with the cover open. The operating handle shall have lock-off means with provisions for three padlocks.

- c. Auxiliary Contacts: Two normally open and normally closed contact(s) that operate with switch handle operation.

## 2.7 IDENTIFICATION

- A. Panelboard Label: Manufacturer's name and trademark, voltage, amperage, number of phases, and number of poles shall be located on the interior of the panelboard door.
- B. Breaker Labels: Faceplate shall list current rating, UL and IEC certification standards, and AIC rating.
- C. Circuit Directory: Directory card inside panelboard door, mounted in metal frame with transparent protective cover.
  1. Circuit directory shall identify specific purpose with detail sufficient to distinguish it from all other circuits.
- D. Circuit Directory: Computer-generated circuit directory mounted inside panelboard door with transparent plastic protective cover.
  1. Circuit directory shall identify specific purpose with detail sufficient to distinguish it from all other circuits.

## 2.8 ACCESSORY COMPONENTS AND FEATURES

- A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.
- B. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Verify actual conditions with field measurements prior to ordering panelboards to verify that equipment fits in allocated space in, and comply with, minimum required clearances specified in NFPA 70.
- B. Receive, inspect, handle, and store panelboards according to NEMA PB 1.1.
- C. Examine panelboards before installation. Reject panelboards that are damaged, rusted, or have been subjected to water saturation.
- D. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

- E. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 CONSTRUCTION WASTE MANAGEMENT

- A. The contractor, subcontractors, and their personnel shall follow the procedures and practices for waste separation, collection and transport as defined in the contractor's "Waste Management Plan" as required by Division 01 Section "Construction Waste Management."

### 3.3 INSTALLATION

- A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Comply with NECA 1.
- C. Install panelboards and accessories according to NEMA PB 1.1.
- D. Equipment Mounting:
  - 1. Attach panelboard to the vertical finished or structural surface behind the panelboard.
  - 2. Comply with requirements for seismic control devices specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.
- F. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- G. Mount top of trim 90 inches above finished floor unless otherwise indicated.
- H. Mount panelboard cabinet plumb and rigid without distortion of box.
- I. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
- J. Mounting panelboards with space behind is recommended for damp, wet, or dirty locations. The steel slotted supports in the following paragraph provide an even mounting surface and the recommended space behind to prevent moisture or dirt collection.
- K. Mount surface-mounted panelboards to steel slotted supports 1 1/4 inch in depth. Orient steel slotted supports vertically.
- L. Install overcurrent protective devices and controllers not already factory installed.
  - 1. Set field-adjustable, circuit-breaker trip ranges.

2. Tighten bolted connections and circuit breaker connections using calibrated torque wrench or torque screwdriver per manufacturer's written instructions.
- M. Make grounding connections and bond neutral for services and separately derived systems to ground. Make connections to grounding electrodes, separate grounds for isolated ground bars, and connections to separate ground bars.
- N. Install filler plates in unused spaces.
- O. Stub four 1-inch empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub four 1-inch empty conduits into raised floor space or below slab not on grade.
- P. Arrange conductors in gutters into groups and bundle and wrap with wire ties after completing load balancing.
- Q. Mount spare fuse cabinet in accessible location.

### 3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; install warning signs complying with requirements in Section 260553 "Identification for Electrical Systems."
- B. Create a directory to indicate installed circuit loads after balancing panelboard loads; incorporate Owner's final room designations. Obtain approval before installing. Handwritten directories are not acceptable. Install directory inside panelboard door.
- C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- D. Device Nameplates: Label each branch circuit device in power panelboards with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- E. Install warning signs complying with requirements in Section 260553 "Identification for Electrical Systems" identifying source of remote circuit.

### 3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
  1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Acceptance Testing Preparation:

1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

D. Tests and Inspections:

1. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
2. Perform the following infrared scan tests and inspections and prepare reports:
  - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
  - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.
  - c. Instruments and Equipment:
    - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

E. Panelboards will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results, with comparisons of the two scans. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

### 3.6 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges as specified in Section 260573 "Overcurrent Protective Device Coordination Study."
- C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes. Prior to making circuit changes to achieve load balancing, inform Architect of effect on phase color coding.
  1. Measure loads during period of normal facility operations.
  2. Perform circuit changes to achieve load balancing outside normal facility operation schedule or at times directed by the Architect. Avoid disrupting services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
  3. After changing circuits to achieve load balancing, recheck loads during normal facility operations. Record load readings before and after changing circuits to achieve load balancing.
  4. Tolerance: Maximum difference between phase loads, within a panelboard, shall not exceed 20 percent.

3.7 PROTECTION

- A. Temporary Heating: Prior to energizing panelboards, apply temporary heat to maintain temperature according to manufacturer's written instructions.

END OF SECTION 262416

## SECTION 262726 WIRING DEVICES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Receptacles, receptacles with integral GFCI, and associated device plates.
  - 2. Snap switches

#### 1.3 DEFINITIONS

- A. EMI: Electromagnetic interference.
- B. GFCI: Ground-fault circuit interrupter.
- C. Pigtail: Short lead used to connect a device to a branch-circuit conductor.
- D. RFI: Radio-frequency interference.
- E. TVSS: Transient voltage surge suppressor.
- F. UTP: Unshielded twisted pair.

#### 1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: List of legends and description of materials and process used for premarking wall plates.
- C. Field quality-control test reports.
- D. Operation and Maintenance Data: For wiring devices to include in all manufacturers' packing label warnings and instruction manuals that include labeling conditions.

## 1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of wiring device and associated wall plate through one source from a single manufacturer. Insofar as they are available, obtain all wiring devices and associated wall plates from a single manufacturer and one source.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NFPA 70.

## 1.6 COORDINATION

- A. Receptacles for Owner-Furnished Equipment: Match plug configurations.
  - 1. Cord and Plug Sets: Match equipment requirements.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Manufacturers' Names: Shortened versions (shown in parentheses) of the following manufacturers' names are used in other Part 2 articles:
  - 1. Hubbell Incorporated; Wiring Device-Kellems (Hubbell).
  - 2. Cooper Wiring Devices; a division of Cooper Industries, Inc. (Cooper).
  - 3. Leviton Mfg. Company Inc. (Leviton).
  - 4. Pass & Seymour/Legrand; Wiring Devices & Accessories (Pass & Seymour).
  - 5. STRAIGHT BLADE RECEPTACLES
  - 6. Or approved equal
- B. Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498.
  - 1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Cooper; 5351 (single), 5352 (duplex).
    - b. Hubbell; HBL5351 (single), CR5352 (duplex).
    - c. Leviton; 5891 (single), 5352 (duplex).
    - d. Pass & Seymour; 5381 (single), 5352 (duplex).
    - e. Or approved equal
- C. Hospital-Grade, Duplex Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498 Supplement SD.

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Cooper; 8300 (duplex).
  - b. Hubbell; HBL8310 (single), HBL8300H (duplex).
  - c. Leviton; 8310 (single), 8300 (duplex).
  - d. Pass & Seymour; 9301-HG (single), 9300-HG (duplex).
  - e. Or approved equal

## 2.2 GFCI RECEPTACLES

- A. General Description: Straight blade, feed-through type. Comply with NEMA WD 1, NEMA WD 6, UL 498, and UL 943, Class A, and include indicator light that is lighted when device is tripped.
- B. Duplex GFCI Convenience Receptacles, 125 V, 20 A:
  1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Cooper; GF20.
    - b. Pass & Seymour; 2084.
    - c. Or approved equal
- C. Hospital-Grade, Duplex GFCI Convenience Receptacles, 125 V, 20 A: Comply with UL 498 Supplement SD.
  1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Cooper; HGF20.
    - b. Hubbell; HGF8300.
    - c. Leviton; 6898-HG.
    - d. Pass & Seymour; 2091-SHG.
    - e. Or approved equal
- D. Hospital-Grade, Duplex Convenience Receptacles: Comply with UL 498 Supplement SD.
  1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Cooper; 8300BLS.
    - b. Hubbell; HBL8362SA.
    - c. Leviton; 8380.
    - d. Or approved equal
  2. Description: Straight blade, 125 V, 20 A; NEMA WD 6 configuration 5-20R.

## 2.3 WALL PLATES

- A. Single and combination types to match corresponding wiring devices.
  - 1. Plate-Securing Screws: Metal with head color to match plate finish.
  - 2. Material for Finished Spaces: satin-finished stainless steel 0.04-inch-thick.
  - 3. Material for Unfinished Spaces: Galvanized steel.
  - 4. Material for Damp Locations: Cast aluminum with spring-loaded lift cover, and listed and labeled for use in "wet locations."
- B. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with type 3R weather-resistant, die-cast aluminum with lockable cover.

## 2.4 FINISHES

- A. Color: Wiring device catalog numbers in Section Text do not designate device color.
  - 1. Wiring Devices Connected to Normal Power System: White or As selected by Owner, unless otherwise indicated or required by NFPA 70 or device listing.
  - 2. Wiring Devices Connected to Emergency Power System: Red.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Comply with NECA 1, including the mounting heights listed in that standard, unless otherwise noted.
- B. Coordination with Other Trades:
  - 1. Take steps to insure that devices and their boxes are protected. Do not place wall finish materials over device boxes and do not cut holes for boxes with routers that are guided by riding against outside of the boxes.
  - 2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
  - 3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
  - 4. Install wiring devices after all wall preparation, including painting, is complete.
- C. Conductors:
  - 1. Do not strip insulation from conductors until just before they are spliced or terminated on devices.
  - 2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.

3. The length of free conductors at outlets for devices shall meet provisions of NFPA 70, Article 300, without pigtails.
4. Existing Conductors:
  - a. Cut back and pigtail, or replace all damaged conductors.
  - b. Straighten conductors that remain and remove corrosion and foreign matter.
  - c. Pigtailing existing conductors is permitted provided the outlet box is large enough.

D. Device Installation:

1. Replace all devices that have been in temporary use during construction or that show signs that they were installed before building finishing operations were complete.
2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
4. Connect devices to branch circuits using pigtails that are not less than 6 inches (152 mm) in length.
5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, 2/3 to 3/4 of the way around terminal screw.
6. Use a torque screwdriver when a torque is recommended or required by the manufacturer.
7. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
8. Tighten unused terminal screws on the device.
9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device mounting screws in yokes, allowing metal-to-metal contact.

E. Receptacle Orientation:

1. Install ground pin of vertically mounted receptacles up, and on horizontally mounted receptacles to the left.
2. Install hospital-grade receptacles in patient-care areas with the ground pin or neutral blade at the top.

F. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.

G. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical and with grounding terminal of receptacles on top. Group adjacent switches under single, multigang wall plates.

### 3.2 IDENTIFICATION

A. Comply with Division 26 Section "Identification for Electrical Systems."

1. Receptacles: Identify panelboard and circuit number from which served. Use hot, stamped or engraved machine printing with black-filled lettering on inside face of plate, and durable wire markers or tags inside outlet boxes.

### 3.3 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
  - 1. In healthcare facilities, prepare reports that comply with recommendations in NFPA 99.
  - 2. Test Instruments: Use instruments that comply with UL 1436.
  - 3. Test Instrument for Convenience Receptacles: Digital wiring analyzer with digital readout or illuminated LED indicators of measurement.
  
- B. Tests for Convenience Receptacles:
  - 1. Line Voltage: Acceptable range is 105 to 132 V.
  - 2. Percent Voltage Drop under 15-A Load: A value of 6 percent or higher is not acceptable.
  - 3. Ground Impedance: Values of up to 2 ohms are acceptable.
  - 4. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.
  - 5. Using the test plug, verify that the device and its outlet box are securely mounted.
  - 6. The tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, or similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.

END OF SECTION 262726

## SECTION 262813 FUSES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following:
  - 1. Cartridge fuses rated 600 V and less for use in switches, panelboards, switchboards, controllers, and motor-control centers.

#### 1.3 SUBMITTALS

- A. Product Data: Include the following for each fuse type indicated:
  - 1. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
  - 2. Let-through current curves for fuses with current-limiting characteristics.
  - 3. Time-current curves, coordination charts and tables, and related data.
  - 4. Fuse size for elevator feeders and elevator disconnect switches.
- B. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals.
  - 1. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
    - a. Let-through current curves for fuses with current-limiting characteristics.
    - b. Time-current curves, coordination charts and tables, and related data.
    - c. Ambient temperature adjustment information.

#### 1.4 QUALITY ASSURANCE

- A. Source Limitations: Obtain fuses from a single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NEMA FU 1.

- D. Comply with NFPA 70.

#### 1.5 PROJECT CONDITIONS

- A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F (5 deg C) or more than 100 deg F (38 deg C), apply manufacturer's ambient temperature adjustment factors to fuse ratings.

#### 1.6 COORDINATION

- A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size.

#### 1.7 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Fuses: Quantity equal to 10 percent of each fuse type and size, but no fewer than 3 of each type and size.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. Cooper Bussman, Inc.
  - 2. Eagle Electric Mfg. Co., Inc.; Cooper Industries, Inc.
  - 3. Ferraz Shawmut, Inc.
  - 4. Tracor, Inc.; Littelfuse, Inc. Subsidiary.
  - 5. Or approved equal

#### 2.2 CARTRIDGE FUSES

- A. Characteristics: NEMA FU 1, nonrenewable cartridge fuse; class and current rating indicated; voltage rating consistent with circuit voltage.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.
- B. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 FUSE APPLICATIONS

- A. Service Entrance: Class L, fast acting or T, fast acting.
- B. Feeders: Class RK1, fast acting.
- C. Motor Branch Circuits: Class RK1, time delay.
- D. Other Branch Circuits: Class J, fast acting.

#### 3.3 INSTALLATION

- A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.
- B. Install spare-fuse cabinet(s).

#### 3.4 IDENTIFICATION

- A. Install labels indicating fuse replacement information on inside door of each fused switch.

END OF SECTION 262813

## SECTION 262816 ENCLOSED SWITCHES AND CIRCUIT BREAKERS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes the following individually mounted, enclosed switches and circuit breakers:
  - 1. Fusible switches.
  - 2. Nonfusible switches.
  - 3. Molded-case circuit breakers.
  - 4. Molded-case switches.
  - 5. Enclosures.

#### 1.3 DEFINITIONS

- A. GD: General duty.
- B. GFCI: Ground-fault circuit interrupter.
- C. HD: Heavy duty.
- D. RMS: Root mean square.
- E. SPDT: Single pole, double throw.

#### 1.4 SUBMITTALS

- A. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
  - 1. Enclosure types and details for types other than NEMA 250, Type 1.
  - 2. Current and voltage ratings.
  - 3. Short-circuit current rating.
  - 4. UL listing for series rating of installed devices.
  - 5. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Manufacturer Seismic Qualification Certification: When applicable, submit certification that enclosed switches and circuit breakers, accessories, and components will withstand seismic forces defined in Division 26 Section "Vibration and Seismic Controls for Electrical Systems" Include the following:
  - 1. Basis of Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
    - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Field quality-control test reports including the following:
  - 1. Test procedures used.
  - 2. Test results that comply with requirements.
  - 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- E. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
  - 1. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.
  - 2. Time-current curves, including selectable ranges for each type of circuit breaker.

#### 1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.
- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

## 1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions, unless otherwise indicated:
1. Ambient Temperature: Not less than minus 22 deg F (minus 30 deg C) and not exceeding 104 deg F (40 deg C).
  2. Altitude: Not exceeding 6600 feet.

## 1.7 COORDINATION

- A. Coordinate layout and installation of switches, circuit breakers, and components with other construction, including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

## 1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Spares: For the following:
    - a. Fuses and Fusible Devices for Fused Circuit Breakers: 3
    - b. Fuses for Fusible Switches: 3
  2. Spare Indicating Lights: Six of each type installed.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.

### 2.2 FUSIBLE AND NONFUSIBLE SWITCHES

- A. Manufacturers:
1. Eaton Corporation; Cutler-Hammer Products.
  2. General Electric Co.; Electrical Distribution & Control Division.
  3. Siemens Energy & Automation, Inc.
  4. Square D/Group Schneider.

5. Or approved equal
- B. Fusible Switch, 1200A and Smaller: NEMA KS 1, Type HD, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.
- C. Nonfusible Switch, 1200A and Smaller: NEMA KS 1, TypeHD, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.
- D. Accessories:
  1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
  2. Neutral Kit: Internally mounted; insulated, capable of being grounded, and bonded; and labeled for copper and aluminum neutral conductors.
  3. Auxiliary Contact Kit: Auxiliary set of contacts arranged to open before switch blades open.

### 2.3 MOLDED-CASE CIRCUIT BREAKERS AND SWITCHES

- A. Manufacturers:
  1. Eaton Corporation; Cutler-Hammer Products.
  2. General Electric Co.; Electrical Distribution & Control Division.
  3. Siemens Energy & Automation, Inc.
  4. Square D/Group Schneider.
  5. Or approved equal
- B. Molded-Case Circuit Breaker: NEMA AB 1, with interrupting capacity to meet available fault currents.
  1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
  2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
  3. Electronic Trip-Unit Circuit Breakers: RMS sensing; field-replaceable rating plug; with the following field-adjustable settings:
    - a. Instantaneous trip.
    - b. Long- and short-time pickup levels.
    - c. Long- and short-time time adjustments.
    - d. Ground-fault pickup level, time delay, and  $I^2t$  response.
  4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller and let-through ratings less than NEMA FU 1, RK-5.
  5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker and trip activation on fuse opening or on opening of fuse compartment door.

6. GFCI Circuit Breakers: Single- and two-pole configurations with 30-mA trip sensitivity.
  7. Circuit breaker interrupting ratings: minimum 65kAIC.
- C. Molded-Case Circuit-Breaker Features and Accessories: Refer to Drawings for applicability and requirements.
1. Standard frame sizes, trip ratings, and number of poles.
  2. Lugs: Mechanical style suitable for number, size, trip ratings, and conductor material.
  3. Application Listing: Type SWD for switching fluorescent lighting loads; Type HACR for heating, air-conditioning, and refrigerating equipment.
  4. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
  5. Communication Capability: Circuit-breaker-mounted communication module with functions and features compatible with power monitoring and control system specified in Division 26 Section "Electrical Power Monitoring and Control."
  6. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 55 percent of rated voltage.
  7. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
  8. Auxiliary Switch: One SPDT switch with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
  9. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
  10. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
- D. Molded-Case Switches: Molded-case circuit breaker with fixed, high-set instantaneous trip only, and short-circuit withstand rating equal to equivalent breaker frame size interrupting rating.
- E. Molded-Case Switch Accessories: Refer to Drawings for applicability and requirements.
1. Lugs: Mechanical style suitable for number, size, trip ratings, and material of conductors.
  2. Application Listing: Type HACR for heating, air-conditioning, and refrigerating equipment.
  3. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 55 percent of rated voltage. Provide "dummy" trip unit where required for proper operation.
  4. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay. Provide "dummy" trip unit where required for proper operation.
  5. Auxiliary Switch: One SPDT switch with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
  6. Key Interlock Kit: Externally mounted to prohibit operation; key shall be removable only when switch is in off position.

## 2.4 ENCLOSURES

- A. NEMA AB 1 and NEMA KS 1 to meet environmental conditions of installed location.

1. Outdoor Locations: NEMA 250, Type 3R.
2. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
3. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
4. Hazardous Areas Indicated on Drawings: NEMA 250, Type 7C.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 CONCRETE BASES

- A. Coordinate size and location of concrete bases. Verify structural requirements with structural engineer.

#### 3.3 INSTALLATION

- A. Comply with applicable portions of NECA 1, NEMA PB 1.1, and NEMA PB 2.1 for installation of enclosed switches and circuit breakers.
- B. Mount individual wall-mounting switches and circuit breakers with tops at uniform height, unless otherwise indicated. Anchor floor-mounting switches to concrete base.
- C. Comply as applicable with mounting and anchoring requirements specified in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

#### 3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- B. Enclosure Nameplates: Label each enclosure with engraved metal or laminated-plastic nameplate as specified in Division 26 Section "Identification for Electrical Systems."

#### 3.5 FIELD QUALITY CONTROL

- A. Prepare for acceptance testing as follows:

1. Inspect mechanical and electrical connections.
2. Verify switch and relay type and labeling verification.
3. Verify rating of installed fuses.
4. Inspect proper installation of type, size, quantity, and arrangement of mounting or anchorage devices complying with manufacturer's certification.

B. Perform the following field tests and inspections and prepare test reports:

1. As applicable, test mounting and anchorage devices according to requirements in Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
2. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.5 for switches and Section 7.6 for molded-case circuit breakers. Certify compliance with test parameters.
3. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
4. Infrared Scanning:
  - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each enclosed switch and circuit breaker. Open or remove doors or panels so connections are accessible to portable scanner.
  - b. Follow-Up Infrared Scanning: Perform an additional follow-up infrared scan of each unit 11 months after date of Substantial Completion.
  - c. Instruments, Equipment and Reports:
    - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
    - 2) Prepare a certified report that identifies enclosed switches and circuit breakers included and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 ADJUSTING

- A. Set field-adjustable switches and circuit-breaker trip ranges in accordance with setting obtained from the Engineer.

3.7 CLEANING

- A. On completion of installation, vacuum dirt and debris from interiors; do not use compressed air to assist in cleaning.
- B. Inspect exposed surfaces and repair damaged finishes.

END OF SECTION 262816

## SECTION 262923 VARIABLE-FREQUENCY MOTOR CONTROLLERS

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes separately enclosed, pre-assembled, combination variable frequency controllers (VFCs), rated 600 V and less, for speed control of three-phase, squirrel-cage induction motors.

#### 1.2 DEFINITIONS

- A. BAS: Building automation system.
- B. CPT: Control power transformer.
- C. EMI: Electromagnetic interference.
- D. IGBT: Insulated-gate bipolar transistor.
- E. LAN: Local area network.
- F. LED: Light-emitting diode.
- G. MCP: Motor-circuit protector.
- H. NC: Normally closed.
- I. NO: Normally open.
- J. OCPD: Overcurrent protective device.
- K. PCC: Point of common coupling.
- L. PID: Control action, proportional plus integral plus derivative.
- M. PWM: Pulse-width modulated.
- N. RFI: Radio-frequency interference.
- O. TDD: Total demand (harmonic current) distortion.
- P. THD(V): Total harmonic voltage demand.
- Q. VFC: Variable-frequency motor controller. Also, referenced as variable frequency drive (VFD) on the contract documents.

### 1.3 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: VFCs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type and rating of VFC indicated. Include features, performance, electrical ratings, operating characteristics, shipping and operating weights, and furnished specialties and accessories.
- B. Shop Drawings: For each VFC indicated. Include dimensioned plans, elevations, and sections; and conduit entry locations and sizes, mounting arrangements, and details, including required clearances and service space around equipment.
1. Show tabulations of installed devices, equipment features, and ratings. Include the following:
    - a. Each installed unit's type and details.
    - b. Factory-installed devices.
    - c. Enclosure types and details.
    - d. Nameplate legends.
    - e. Short-circuit current (withstand) rating of enclosed unit.
    - f. Features, characteristics, ratings, and factory settings of each VFC and installed devices.
    - g. Specified modifications.
  2. Schematic and Connection Wiring Diagrams: For power, signal, and control wiring.

### 1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around VFCs. Show VFC layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.
- B. Qualification Data: For qualified testing agency.
- C. Seismic Qualification Certificates: For VFCs, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  3. Detailed description of equipment anchorage devices on which the certification is based, and their installation requirements.
- D. Product Certificates: For each VFC, from manufacturer.
- E. Harmonic Analysis Study and Report: Comply with IEEE 399 and NETA Acceptance Testing Specification; identify the effects of nonlinear loads and their associated harmonic contributions on the voltages and currents throughout the electrical system. Analyze possible operating scenarios, including recommendations for VFC input filtering to limit TDD and THD(V) at each VFC to specified levels.
- F. Source quality-control reports.
- G. Field quality-control reports.
- H. Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate, full-load currents.
- I. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed and arrange to demonstrate that switch settings for motor-running overload protection suit actual motors to be protected.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For VFCs to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
1. Manufacturer's written instructions for testing and adjusting thermal-magnetic circuit breaker and MCP trip settings.
  2. Manufacturer's written instructions for setting field-adjustable overload relays.
  3. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
  4. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.

#### 1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
  2. Control Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
  3. Indicating Lights: Two of each type and color installed.

4. Auxiliary Contacts: Furnish one spare(s) for each size and type of magnetic controller installed.
5. Power Contacts: Furnish three spares for each size and type of magnetic contactor installed.

#### 1.8 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Member company of NETA or an NRTL.
  1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with NFPA 70.
- D. IEEE Compliance: Fabricate and test VFC according to IEEE 344 to withstand seismic forces.

#### 1.9 DELIVERY, STORAGE, AND HANDLING

- A. If stored in space that is not permanently enclosed and air conditioned, remove loose packing and flammable materials from inside controllers and install temporary electric heating, with at least 250 W per controller.

#### 1.10 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation, capable of driving full load without derating, under the following conditions unless otherwise indicated:
  1. Ambient Temperature: Not less than 14 deg F and not exceeding 104 deg F.
  2. Ambient Storage Temperature: Not less than minus 4 deg F and not exceeding 140 deg F
  3. Humidity: Less than 95 percent (noncondensing).
  4. Altitude: Not exceeding 3300 feet.
- B. Interruption of Existing Electrical Systems: Do not interrupt electrical systems in facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
  1. Notify Construction Manager no fewer than two days in advance of proposed interruption of electrical systems.
  2. Indicate method of providing temporary electrical service.
  3. Do not proceed with interruption of electrical systems without Construction Manager's written permission.
  4. Comply with NFPA 70E.

- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFCs, including clearances between VFCs, and adjacent surfaces and other items.

#### 1.11 COORDINATION

- A. Coordinate features of motors, load characteristics, installed units, and accessory devices to be compatible with the following:
  - 1. Torque, speed, and horsepower requirements of the load.
  - 2. Ratings and characteristics of supply circuit and required control sequence.
  - 3. Ambient and environmental conditions of installation location.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
- C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

#### 1.12 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace VFCs that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Five years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURED UNITS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Danfoss; VLT Series HVAC drives or comparable product by one of the following:
  - 1. ABB.
  - 2. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
  - 3. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
  - 4. Siemens Energy & Automation, Inc.
  - 5. Square D; a brand of Schneider Electric.
  - 6. Yaskawa.
  - 7. Or approved equivalent.
- B. General Requirements for VFCs: Comply with NEMA ICS 7, NEMA ICS 61800-2, and UL 508C.
- C. Application: Constant and Variable torque.
- D. VFC Description: Variable-frequency power converter (rectifier, dc bus, and IGBT, PWM inverter) factory packaged in an enclosure, with integral disconnecting means and overcurrent

and overload protection; listed and labeled by an NRTL as a complete unit; arranged to provide self-protection, protection, and variable-speed control of one or more three-phase induction motors by adjusting output voltage and frequency.

1. Units suitable for operation of NEMA MG 1, Design A and Design B motors as defined by NEMA MG 1, Section IV, Part 30, "Application Considerations for Constant Speed Motors Used on a Sinusoidal Bus with Harmonic Content and General Purpose Motors Used with Adjustable-Voltage or Adjustable-Frequency Controls or Both."
  2. Units suitable for operation of inverter-duty motors as defined by NEMA MG 1, Section IV, Part 31, "Definite-Purpose Inverter-Fed Polyphase Motors."
  3. Listed and labeled for integrated short-circuit current (withstand) rating by an NRTL acceptable to authorities having jurisdiction.
- E. Design and Rating: Match load type, such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.
- F. Output Rating: Three-phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range; maximum voltage equals input voltage.
- G. Unit Operating Requirements:
1. Input AC Voltage Tolerance: Plus 10 and minus 10 percent of VFC input voltage rating.
  2. Input AC Voltage Unbalance: Not exceeding 3 percent.
  3. Input Frequency Tolerance: Plus or minus 3 percent of VFC frequency rating.
  4. Minimum Efficiency: 97 percent at 60 Hz, full load.
  5. Minimum Displacement Primary-Side Power Factor: 98 percent under any load or speed condition.
  6. Minimum Short-Circuit Current (Withstand) Rating: 100 kA.
  7. Ambient Temperature Rating: Not less than 14 deg F and not exceeding 104 deg F.
  8. Ambient Storage Temperature Rating: Not less than minus 13 deg F and not exceeding 149 deg F
  9. Humidity Rating: Less than 95 percent (noncondensing).
  10. Altitude Rating: Not exceeding 3300 feet.
  11. Vibration Withstand: Comply with IEC 60068-2-6.
  12. Overload Capability: 1.5 times the base load current for 60 seconds.
  13. Starting Torque: Minimum 100 percent of rated torque from 3 to 60 Hz.
  14. Speed Regulation: Plus or minus 5 percent.
  15. Output Carrier Frequency: Selectable; 3 to 14 kHz.
  16. Stop Modes: Programmable; includes fast, free-wheel, and dc injection braking.
- H. Inverter Logic: Microprocessor based, 32 bit, isolated from all power circuits.
- I. Isolated Control Interface: Allows VFCs to follow remote-control signal over a minimum 40:1 speed range.
1. Signal: Electrical.
  2. Signal: Pneumatic.
- J. Internal Adjustability Capabilities:

1. Minimum Speed: 5 to 25 percent of maximum rpm.
2. Maximum Speed: 80 to 100 percent of maximum rpm.
3. Acceleration: 0.1 to 3,600 seconds.
4. Deceleration: 0.1 to 3,600 seconds.
5. Current Limit: 30 to minimum of 150 percent of maximum rating.

K. Self-Protection and Reliability Features:

1. Input transient protection by means of surge suppressors to provide three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
2. Loss of Input Signal Protection: Selectable response strategy, including speed default to a percent of the most recent speed, a preset speed, or stop; with alarm.
3. Under- and overvoltage trips.
4. Inverter overcurrent trips.
5. VFC and Motor Overload/Overtemperature Protection: Microprocessor-based thermal protection system for monitoring VFCs and motor thermal characteristics, and for providing VFC overtemperature and motor overload alarm and trip; settings selectable via the keypad; NRTL approved.
6. Critical frequency rejection, with three selectable, adjustable deadbands.
7. Instantaneous line-to-line and line-to-ground overcurrent trips.
8. Loss-of-phase protection.
9. Reverse-phase protection.
10. Short-circuit protection.
11. Motor overtemperature fault.

L. Automatic Reset/Restart: Attempt three restarts after drive fault or on return of power after an interruption and before shutting down for manual reset or fault correction; adjustable delay time between restart attempts.

M. Bidirectional Autospeed Search: Capable of starting VFC into rotating loads spinning in either direction and returning motor to set speed in proper direction, without causing damage to drive, motor, or load.

N. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.

O. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.

P. Integral Input Disconnecting Means and OCPD: NEMA AB 1, instantaneous-trip circuit breaker with pad-lockable, door-mounted handle mechanism.

1. Disconnect Rating: Not less than 115 percent of NFPA 70 motor full-load current rating or VFC input current rating, whichever is larger.
2. Auxiliary contacts "a" and "b" arranged to activate with circuit-breaker handle.
3. NC alarm contact that operates only when circuit breaker has tripped.

## 2.2 CONTROLS AND INDICATION

- A. Status Lights: Door-mounted LED indicators displaying the following conditions:
1. Power on.
  2. Run.
  3. Overvoltage.
  4. Line fault.
  5. Overcurrent.
  6. External fault.
- B. Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain-English language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.
1. Keypad: In addition to required programming and control keys, include keys for HAND, OFF, and AUTO modes.
  2. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: View only; view and operate; and view, operate, and service.
    - a. Control Authority: Supports at least four conditions: Off, local manual control at VFC, local automatic control at VFC, and automatic control through a remote source.
- C. Historical Logging Information and Displays:
1. Real-time clock with current time and date.
  2. Running log of total power versus time.
  3. Total run time.
  4. Fault log, maintaining last four faults with time and date stamp for each.
- D. Indicating Devices: Digital display and additional readout devices as required, mounted flush in VFC door and connected to display VFC parameters including, but not limited to:
1. Output frequency (Hz).
  2. Motor speed (rpm).
  3. Motor status (running, stop, fault).
  4. Motor current (amperes).
  5. Motor torque (percent).
  6. Fault or alarming status (code).
  7. PID feedback signal (percent).
  8. DC-link voltage (V dc).
  9. Set point frequency (Hz).
  10. Motor output voltage (V ac).
- E. Control Signal Interfaces:
1. Electric Input Signal Interface:

- a. A minimum of two programmable analog inputs: 0- to 10-V dc.
  - b. A minimum of six multifunction programmable digital inputs.
2. Pneumatic Input Signal Interface: 3 to 15 psig.
  3. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the BAS or other control systems:
    - a. 0- to 10-V dc.
    - b. 4- to 20-mA dc.
    - c. Potentiometer using up/down digital inputs.
    - d. Fixed frequencies using digital inputs.
  4. Output Signal Interface: A minimum of two programmable analog output signal(s) (0- to 10-V dc), which can be configured for any of the following:
    - a. Output frequency (Hz).
    - b. Output current (load).
    - c. DC-link voltage (V dc).
    - d. Motor torque (percent).
    - e. Motor speed (rpm).
    - f. Set point frequency (Hz).
  5. Remote Indication Interface: A minimum of two programmable dry-circuit relay outputs (120-V ac, 1 A) for remote indication of the following:
    - a. Motor running.
    - b. Set point speed reached.
    - c. Fault and warning indication (overtemperature or overcurrent).
    - d. PID high- or low-speed limits reached.
- F. PID Control Interface: Provides closed-loop set point, differential feedback control in response to dual feedback signals. Allows for closed-loop control of fans and pumps for pressure, flow, or temperature regulation.
1. Number of Loops: Two.
- G. BAS Interface: Factory-installed hardware and software to enable the BAS to monitor, control, and display VFC status and alarms and energy usage. Allows VFC to be used with an external system within a multidrop LAN configuration; settings retained within VFC's nonvolatile memory.
1. Network Communications Ports: Ethernet and RS-422/485.
  2. Embedded BAS Protocols for Network Communications: BACnet, Modbus RTU, Johnson Controls Metasys N2, Siemens Apogee FLN or LON accessible via additional communication card. Contractor to coordinate with controls vendor and equipment vendor shall supply project specific communication card.

## 2.3 LINE CONDITIONING AND FILTERING

- A. Input Line Conditioning: Provide 5 percent dual DC link reactors.
- B. EMI/RFI Filtering: CE marked; certify compliance with IEC 61800-3 for Category C2.

## 2.4 BYPASS SYSTEMS

- A. Bypass Operation: Safely transfers motor between power converter output and bypass circuit, manually, automatically, or both. Selector switches set modes and indicator lights indicate mode selected. Unit is capable of stable operation (starting, stopping, and running) with motor completely disconnected from power converter.
- B. Bypass Mode: Manual operation only; requires local operator selection at VFC. Transfer between power converter and bypass contactor and retransfer shall only be allowed with the motor at zero speed.
- C. Bypass Controller: Three-contactor-style bypass allows motor operation via the power converter or the bypass controller; with input isolating switch and barrier arranged to isolate the power converter input and output and permit safe testing and troubleshooting of the power converter, both energized and de-energized, while motor is operating in bypass mode.
  - 1. Bypass Contactor: Load-break, NEMA-rated contactor.
  - 2. Input and Output Isolating Contactors: Non-load-break, NEMA-rated contactors.
  - 3. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.
- D. Bypass Contactor Configuration: Full-voltage (autotransformer) type.
  - 1. NORMAL/BYPASS selector switch.
  - 2. HAND/OFF/AUTO selector switch.
  - 3. NORMAL/TEST Selector Switch: Allows testing and adjusting of VFC while the motor is running in the bypass mode.
  - 4. Contactor Coils: Pressure-encapsulated type with coil transient suppressors.
    - a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
    - b. Power Contacts: Totally enclosed, double break, and silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
  - 5. Control Circuits: 120-V ac; obtained from integral CPT, with primary and secondary fuses, with control power source of sufficient capacity to operate all integral devices and remotely located pilot, indicating, and control devices.
    - a. CPT Spare Capacity: 100 VA.

6. Overload Relays: NEMA ICS 2.
  - a. Solid-State Overload Relays:
    - 1) Switch or dial selectable for motor-running overload protection.
    - 2) Sensors in each phase.
    - 3) Class 10 tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
    - 4) Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
    - 5) Analog communication module.
  - b. NO isolated overload alarm contact.
  - c. External overload reset push button.

## 2.5 OPTIONAL FEATURES

- A. Damper control circuit with end of travel feedback capability.
- B. Sleep Function: Senses a minimal deviation of a feedback signal and stops the motor. On an increase in speed-command signal deviation, VFC resumes normal operation.
- C. Motor Preheat Function: Preheats motor when idle to prevent moisture accumulation in the motor.
- D. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.
- E. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer and a notebook computer.

## 2.6 ENCLOSURES

- A. VFC Enclosures: NEMA 250, to comply with environmental conditions at installed location.
  1. Dry and Clean Indoor Locations: Type 1.
  2. Outdoor Locations: Type 3R.
  3. Kitchen and Wash-Down Areas: Type 3R.
  4. Other Wet or Damp Indoor Locations: Type 3R.
  5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.
- B. Plenum Rating: UL 1995; NRTL certification label on enclosure, clearly identifying VFC as "Plenum Rated."

## 2.7 ACCESSORIES

- A. General Requirements for Control-Circuit and Pilot Devices: NEMA ICS 5; factory installed in VFC enclosure cover unless otherwise indicated.
  - 1. Push Buttons, Pilot Lights, and Selector Switches: Heavy-duty, type.
    - a. Push Buttons: Covered types; maintained.
    - b. Pilot Lights: LED types; push to test.
    - c. Selector Switches: Rotary type.
    - d. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.
- B. NO bypass contactor auxiliary contact(s).
- C. Control Relays: Auxiliary and adjustable solid-state time-delay relays.
- D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable undervoltage, overvoltage, and time-delay settings.
  - 1. Current Transformers: Continuous current rating, basic impulse insulating level (BIL) rating, burden, and accuracy class suitable for connected circuitry. Comply with IEEE C57.13.
- E. Supplemental Digital Meters:
  - 1. Elapsed-time meter.
  - 2. Kilowatt meter.
  - 3. Kilowatt-hour meter.
- F. Space heaters, with NC auxiliary contacts, to mitigate condensation in NEMA 250, Type 3R or Type 12 enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- G. Cooling Fan and Exhaust System: For NEMA 250, Type 1 or Type 12; UL 508 component recognized: Supply fan, with stainless steel intake and exhaust grills and filters; 120 -V ac; obtained from integral CPT.

## 2.8 SOURCE QUALITY CONTROL

- A. Testing: Test and inspect VFCs according to requirements in NEMA ICS 61800-2.
  - 1. Test each VFC while connected to its specified motor.
  - 2. Verification of Performance: Rate VFCs according to operation of functions and features specified.
- B. VFCs will be considered defective if they do not pass tests and inspections.

- C. Prepare test and inspection reports.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine areas, surfaces, and substrates to receive VFCs, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine VFC before installation. Reject VFCs that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for conduit systems to verify actual locations of conduit connections before VFC installation.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 HARMONIC ANALYSIS STUDY

- A. Perform a harmonic analysis study to identify the effects of nonlinear loads and their associated harmonic contributions on the voltages and currents throughout the electrical system. Analyze designated operating scenarios, including recommendations for VFC input filtering to limit TDD and THD(V) at each VFC to specified levels.
- B. Prepare a harmonic analysis study and report complying with IEEE 399 and NETA Acceptance Testing Specification.

#### 3.3 INSTALLATION

- A. Coordinate layout and installation of VFCs with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Wall-Mounting Controllers: Install VFCs on walls with tops at uniform height and with disconnect operating handles not higher than 79 inches above finished floor unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."
- C. Floor-Mounting Controllers: Install VFCs on 4-inch nominal thickness concrete base.
  - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
  - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- E. Install fuses in control circuits if not factory installed.
- F. Install heaters in thermal-overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.
- G. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.
- H. Comply with NECA 1.

### 3.4 IDENTIFICATION

- A. Identify VFCs, components, and control wiring.
1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
  2. Label each VFC with engraved nameplate.
  3. Label each enclosure-mounted control and pilot device.
- B. Operating Instructions: Frame printed operating instructions for VFCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of VFC units.

### 3.5 CONTROL WIRING INSTALLATION

- A. Install wiring between VFCs and remote devices.
- B. Bundle, train, and support wiring in enclosures.
- C. Connect selector switches and other automatic control devices where applicable.
1. Connect selector switches to bypass only those manual- and automatic control devices that have no safety functions when switches are in manual-control position.
  2. Connect selector switches with control circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

### 3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Acceptance Testing Preparation:
  - 1. Test insulation resistance for each VFC element, bus, component, connecting supply, feeder, and control circuit.
  - 2. Test continuity of each circuit.
- E. Tests and Inspections:
  - 1. Inspect VFC, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
  - 2. Test insulation resistance for each VFC element, component, connecting motor supply, feeder, and control circuits.
  - 3. Test continuity of each circuit.
  - 4. Verify that voltages at VFC locations are within 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify Construction Manager before starting the motor(s).
  - 5. Test each motor for proper phase rotation.
  - 6. Perform each electrical test and visual and mechanical inspection stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
  - 7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
  - 8. Perform the following infrared (thermographic) scan tests and inspections and prepare reports:
    - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each VFC. Remove front panels so joints and connections are accessible to portable scanner.
    - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each VFC 11 months after date of Substantial Completion.
    - c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
  - 9. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
- F. VFCs will be considered defective if they do not pass tests and inspections.
- G. Prepare test and inspection reports, including a certified report that identifies the VFC and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

### 3.7 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.

### 3.8 ADJUSTING

- A. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.
- B. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.
- C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to six times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify Construction Manager before increasing settings.
- D. Set the taps on reduced-voltage autotransformer controllers.
- E. Set field-adjustable circuit-breaker trip ranges.
- F. Set field-adjustable pressure switches.

### 3.9 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until controllers are ready to be energized and placed into service.
- B. Replace VFCs whose interiors have been exposed to water or other liquids prior to Substantial Completion.

### 3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance. Training for VFCs shall be included for a total of 4 hours; (4) 1-hour sessions.

END OF SECTION 262923

## SECTION 262933 - CONTROLLERS FOR FIRE PUMP DRIVERS

### PART 1 - GENERAL

#### 1.1 SUMMARY

##### A. Section Includes:

1. Full-service, reduced-voltage controllers rated 600 V and less.
2. Controllers for pressure-maintenance pumps.

#### 1.2 DEFINITIONS

- A. ATS: Automatic transfer switch(es).
- B. ECM: Electronic control module.
- C. MCCB: Molded-case circuit breaker.
- D. NO: Normally open.

#### 1.3 ACTION SUBMITTALS

##### A. Product Data: For each type of product.

##### B. Shop Drawings: For each type of product indicated.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Show tabulations of the following:
  - a. Each installed unit's type and details.
  - b. Enclosure types and details for types other than NEMA 250, Type 2.
  - c. Factory-installed devices.
  - d. Nameplate legends.
  - e. Short-circuit current (withstand) rating of integrated unit.
  - f. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices.
  - g. Specified modifications.
4. Include diagrams for power, signal, alarm, control wiring, and pressure-sensing tubing.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For each type of product indicated, from manufacturer.
- B. Source quality-control reports.
- C. Field quality-control reports.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

#### 1.6 FIELD CONDITIONS

- A. Environmental Limitations:
  - 1. Ambient Temperature Rating: Not less than 40 deg F and not exceeding 122 deg F unless otherwise indicated.
  - 2. Altitude Rating: Not exceeding 6600 feet unless otherwise indicated.

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Comply with NFPA 20 and NFPA 70.
- B. IEEE Compliance: Fabricate and test enclosed controllers according to IEEE 344 to withstand seismic forces defined in Section 260548.16 "Seismic Controls for Electrical Systems."
- C. Seismic Performance: Fire-pump controllers and alarm panels shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
  - 1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

#### 2.2 FULL-SERVICE CONTROLLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Eaton.
  - 2. Joslyn Clark Corporation.

3. Tornatech.
  4. Or approved equal.
- B. General Requirements for Full-Service Controllers:
1. Comply with NFPA 20 and UL 218.
  2. Combined automatic and nonautomatic operation.
  3. Combined with automatic transfer switch.
  4. Factory assembled, wired, and tested; continuous duty rated.
- C. Method of Starting:
1. Pressure-switch actuated.
    - a. Water-pressure-actuated switch and pressure transducer with independent high- and low-calibrated adjustments responsive to water pressure in fire-suppression piping.
    - b. System pressure recorder, electric ac driven, with spring backup.
    - c. Programmable minimum-run-time relay to prevent short cycling.
    - d. Programmable timer for weekly tests.
  2. Solid-State Controller: Reduced-voltage type.
  3. Emergency Start: Mechanically operated start handle that closes and retains the motor RUN contactor independent of all electric or pressure actuators.
- D. Method of Stopping: Automatic and nonautomatic shutdown after automatic starting.
- E. Capacity: Rated for fire-pump-driver horsepower and short-circuit-current (withstand) rating equal to or greater than short-circuit current available at controller location.
- F. Method of Isolation and Overcurrent Protection: Interlocked isolating switch and nonthermal MCCB; with a common, externally mounted operating handle, and providing locked-rotor protection.
- G. Door-Mounted Operator Interface and Controls:
1. Monitor, display, and control the devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.
  2. Method of Control and Indication:
    - a. Microprocessor-based logic controller, with multiline digital readout.
    - b. Touchscreen keypad.
    - c. LED alarm and status indicating lights.
  3. Local and Remote Alarm and Status Indications:
    - a. Controller power on.
    - b. Motor running condition.
    - c. Loss-of-line power.
    - d. Line-power phase reversal.

- e. Line-power single-phase condition.
  4. Audible alarm, with silence push button.
  5. Nonautomatic START and STOP push buttons or switches.
- H. Optional Features:
1. Extra Output Contacts:
    - a. One NO contact(s) for motor running condition.
  2. Local alarm bell.
  3. Door-mounted thermal or impact printer for alarm and status logs.
  4. Operator Interface Communications Ports: USB, Ethernet, and RS485.
- I. ATS:
1. Complies with NFPA 20, UL 218, and UL 1008.
  2. Integral with controller as a listed combination fire-pump controller and power transfer switch.
  3. Automatically transfers fire-pump controller from normal power supply to alternate power supply in event of power failure.
  4. Allows manual transfer from one source to the other.
  5. Alternate-Source Isolating and Disconnecting Means: Integral molded-case switch, with an externally mounted operating handle.
  6. Alternate-Source Isolating and Disconnecting Means: Mechanically interlocked isolation switch and circuit breaker rated at a minimum of 115 percent of rated motor full-load current, with an externally mounted operating handle; circuit breaker shall be provided with nonthermal sensing, instantaneous-only short-circuit overcurrent protection to comply with available fault currents.
  7. Local and Remote Alarm and Status Indications:
    - a. Normal source available.
    - b. Alternate source available.
    - c. In normal position.
    - d. In alternate position.
    - e. Isolating means open.
  8. Audible alarm, with silence push button.
  9. Nonautomatic (manual, nonelectric) means of transfer.
  10. Engine test push button.
  11. Start generator output contacts.
  12. Timer for weekly generator tests.

## 2.3 CONTROLLERS FOR PRESSURE-MAINTENANCE PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton.
2. Joslyn Clark Corporation.
3. Tornatech.
4. Or approved equal

B. General Requirements for Pressure-Maintenance-Pump Controllers:

1. Type: UL 508, factory-assembled, -wired, and -tested, across-the-line controller; for combined automatic and manual operation.
2. Enclosure: UL 508 and NEMA 250, Type 2 for wall-mounting.
3. Factory assembled, wired, and tested.
4. Finish: Manufacturer's standard color paint.

C. Rate controller for scheduled horsepower and include the following:

1. Fusible disconnect switch.
2. Pressure switch.
3. Hand-off-auto selector switch.
4. Pilot light.
5. Running period timer.

## 2.4 ENCLOSURES

A. Fire-Pump Controllers, ATS, Remote Alarm Panels, and Low-Suction-Shutdown Panels: NEMA 250, to comply with environmental conditions at installed locations and NFPA 20.

1. Indoor Locations Subject to Dripping Noncorrosive Liquids: Type 2 (IEC IP11).

B. Enclosure Color: Manufacturer's standard "fire-pump-controller red".

C. Nameplates: Comply with NFPA 20; complete with capacity, characteristics, approvals, listings, and other pertinent data.

D. Optional Features:

1. Floor stands, 12 inches high, for floor-mounted controllers.

## 2.5 SOURCE QUALITY CONTROL

A. Testing: Test and inspect fire-pump controllers according to requirements in NFPA 20 and UL 218.

1. Verification of Performance: Rate controllers according to operation of functions and features specified.

B. Fire-pump controllers will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

### PART 3 - EXECUTION

#### 3.1 CONTROLLER INSTALLATION

- A. Coordinate installation of controllers with other construction including conduit, piping, fire-pump equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels. Ensure that controllers are within sight of fire-pump drivers.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided.
- C. Install controllers within sight of their respective drivers.
- D. Connect controllers to their dedicated pressure-sensing lines.
- E. Wall-Mounting Controllers: Install controllers on walls with disconnect operating handles not higher than 79 inches above finished floor, and bottom of enclosure not less than 12 inches above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."
- F. Floor-Mounting Controllers: Install controllers on concrete base(s), using floor stands high enough so that the bottom of enclosure cabinet is not less than 12 inches above finished floor. Comply with requirements for concrete bases specified in Section 033000 "Cast-in-Place Concrete."
  - 1. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
  - 2. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 3. Install anchor bolts to elevations required for proper attachment to supported equipment.
- G. Seismic Bracing: Comply with requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
- H. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- I. Comply with NEMA ICS 15.

#### 3.2 REMOTE ALARM PANEL INSTALLATION

- A. Install panels on walls with tops not higher than 72 inches above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For ATS not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

### 3.3 POWER WIRING INSTALLATION

- A. Install power wiring between controllers and their services or sources, and between controllers and their drivers. Comply with requirements in NFPA 20, NFPA 70, and Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

### 3.4 CONTROL AND ALARM WIRING INSTALLATION

- A. Install wiring between controllers and remote devices and facility's central monitoring system. Comply with requirements in NFPA 20, NFPA 70, and Section 260523 "Control-Voltage Electrical Power Cables."
- B. Install wiring between remote alarm panels and controllers. Comply with requirements in NFPA 20, NFPA 70, and Section 260523 "Control-Voltage Electrical Power Cables."
- C. Install wiring between controllers and the building's fire-alarm system. Comply with requirements specified in Section 284621.11 "Addressable Fire-Alarm Systems."
- D. Bundle, train, and support wiring in enclosures.
- E. Connect remote manual and automatic activation devices where applicable.

### 3.5 IDENTIFICATION

- A. Comply with requirements in NFPA 20 for marking fire-pump controllers.
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification in NFPA 20 and as specified in Section 260553 "Identification for Electrical Systems."

### 3.6 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
- B. Acceptance Testing Preparation:
  - 1. Inspect and Test Each Component:
    - a. Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.
    - b. Test insulation resistance for each element, component, connecting supply, feeder, and control circuits.
    - c. Test continuity of each circuit.
  - 2. Verify and Test Each Electric-Drive Controller:

- a. Verify that voltages at controller locations are within plus 10 or minus 1 percent of motor nameplate rated voltages, with motors off. If outside this range for any motor, notify Construction Manager before starting the motor(s).
  - b. Test each motor for proper phase rotation.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
  4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Field Acceptance Tests:
1. Do not begin field acceptance testing until suction piping has been flushed and hydrostatically tested and the certificate for flushing and testing has been submitted to Construction Manager and authorities having jurisdiction.
  2. Prior to starting, notify authorities having jurisdiction of the time and place of the acceptance testing.
  3. Engage manufacturer's factory-authorized service representative to be present during the testing.
  4. Perform field acceptance tests as outlined in NFPA 20.
- D. Controllers will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.
- 3.7 STARTUP SERVICE
- A. Engage a factory-authorized service representative to perform startup service.
    1. Complete installation and startup checks according to manufacturer's written instructions.
- 3.8 ADJUSTING
- A. Adjust controllers to function smoothly and as recommended by manufacturer.
  - B. Set field-adjustable switches, auxiliary relays, time-delay relays, and timers.
  - C. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.
  - D. Set field-adjustable pressure switches.
- 3.9 DEMONSTRATION
- A. Train Owner's maintenance personnel to adjust, operate, and maintain controllers and remote alarm panels.

END OF SECTION 262933

## SECTION 263213 -NATURAL GAS EMERGENCY GENERATORS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes packaged engine-generator sets for emergency power supply with the following features:
  - 1. Natural gas engine.
  - 2. Unit mounted cooling system.
  - 3. Unit mounted control and monitoring.
  - 4. Load banks.
  - 5. Outdoor enclosure.
- B. Related Sections include the following:
  - 1. Section 26360 "Transfer Switches" for transfer switches including sensors and relays to initiate automatic-starting and -stopping signals for engine-generator sets.

#### 1.3 DEFINITIONS

- A. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.

#### 1.4 SUBMITTALS

- A. Product Data: For each type of packaged engine generator indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. In addition, include the following:
  - 1. Thermal damage curve for generator.
  - 2. Time-current characteristic curves for generator protective device.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Dimensioned outline plan and elevation drawings of engine-generator set and other components specified.
  2. Design Calculations: Signed and sealed by a qualified professional engineer. Calculate requirements for selecting vibration isolators and seismic restraints, designing vibration isolation bases and roof curbing.
  3. Vibration Isolation Base Details: Signed and sealed by a qualified professional engineer. Detail fabrication, including anchorages and attachment of dunnage or roof curb to structure and to supported equipment. Include base weights.
  4. Wiring Diagrams: Power, signal, and control wiring.
- C. Manufacturer Seismic Qualification Certification: Submit certification that engine-generator set, batteries, battery racks, accessories, and components will withstand seismic forces as defined in the New Jersey adopted 2018 International Building Code. Include the following:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
    - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
  2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Qualification Data: For installer and manufacturer.
- E. Source quality-control test reports.
1. Certified summary of prototype-unit test report.
  2. Certified Test Reports: For components and accessories that are equivalent, but not identical, to those tested on prototype unit.
  3. Certified Summary of Performance Tests: Certify compliance with specified requirement to meet performance criteria for sensitive loads.
  4. Report of factory test on units to be shipped for this Project, showing evidence of compliance with specified requirements.
  5. Report of sound generation.
  6. Report of exhaust emissions showing compliance with applicable regulations.
  7. Certified Torsional Vibration Compatibility: Comply with NFPA 110.
- F. Field quality-control test reports.
- G. Warranty: Special warranty specified in this Section.
- H. Operation and Maintenance Data: For packaged engine generators to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 1 Specification Sections for Operation and Maintenance Data, include the following:

1. List of tools and replacement items recommended to be stored at Project for ready access. Include part and drawing numbers, current unit prices, and source of supply.
  - I. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
    1. Fuses: One for every 10 of each type and rating, but no fewer than one of each.
    2. Indicator Lamps: Two for every six of each type used, but no fewer than two of each.
    3. Filters: One set each of lubricating oil, fuel, and combustion-air filters.
- 1.5 FACTORY TESTING
- A. Prior to shipping, all factory assembled packaged equipment, including generators and automatic transfer switches (ATS), shall be factory tested, and run testing of the completed unit. A certified factory Run test report shall be provided for each unit. **The "Run Test Report" shall be submitted to Owner for approval, prior to acceptance of unit for payment.**
- 1.6 QUALITY ASSURANCE
- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
    1. Maintenance Proximity: Not more than two (2) hours' normal travel time from Installer's place of business to Project site.
    2. Engineering Responsibility: Preparation of data for vibration isolators and seismic restraints of engine skid mounts, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
  - B. Manufacturer Qualifications: A qualified manufacturer. Maintain, within 120 miles of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.
  - C. Source Limitations: Obtain packaged generator sets and auxiliary components through one source from a single manufacturer.
  - D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
  - E. Comply with ASME B15.1.
  - F. Comply with NFPA 37.
  - G. Comply with NFPA 70.
  - H. Comply with NFPA 99.
  - I. Comply with NFPA 110 requirements for emergency power supply system.

- J. Comply with UL 2200.
- K. Engine Exhaust Emissions: Comply with applicable state and local government requirements.
- L. Noise Emission: Comply with all applicable state and local government requirements for maximum noise level at adjacent property boundaries due to sound emitted by generator set including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation. Generator's silencer shall be a critical grade silencer.

#### 1.7 PROJECT CONDITIONS

- A. Environmental Conditions: Engine-generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:
  - 1. Ambient Temperature: 0 to 110 degrees F.
  - 2. Relative Humidity: 0 to 95 percent.
  - 3. Altitude: Sea level to 1000 feet.
- B. Unusual Service Conditions: Engine-generator equipment and installation are required to operate under the following conditions:
  - 1. High salt-dust content and high humidity in the air due to sea-spray evaporation from close proximity to ocean and bays.

#### 1.8 COORDINATION

- A. Coordinate size and location of concrete bases for package engine generators. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

#### 1.9 WARRANTY

- A. Special Warranty: Manufacturer's full parts and labor warranty in which manufacturer agrees to repair or replace components of packaged engine generators and associated auxiliary components that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Five (5) years from date of Substantial Completion.

#### 1.10 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide twelve (12) months of full maintenance by skilled employees of manufacturer's designated service organization. Include quarterly exercising to check for proper starting, load transfer, and running under load. Include routine preventive maintenance as recommended by manufacturer and adjusting as

required for proper operation. Provide parts and supplies same as those used in the manufacture and installation of original equipment.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements indicated on drawings and within project's technical specifications. Basis of design is a natural gas fired emergency generator as manufactured by Kohler Power Systems or Approved Equal.

### 2.2 NATURAL GAS ENGINE-GENERATOR SET

- A. The engine-generator set and its components shall be prototype-tested, factory-built, and factory production-tested before shipping.
- B. Factory-assembled and -tested, engine-generator set.
- C. Mounting Frame: Maintain alignment of mounted components without depending on concrete foundation; and have lifting attachments.
  - 1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and generator-set center of gravity.
- D. Provide one-source responsibility for the generating system, automatic transfer switches and accessories.
- E. The 60 Hz generator set shall be provided with a UL 2200 listing.
- F. Provide generator with IBC seismic certification.
- G. The generator set shall be capable of accepting rated load in a single step.
- H. The 60 Hz generator set shall meet NFPA 110, Level 1 standards. Furnish with all necessary accessories installed per NFPA standards.
- I. Alternator standard features include the following:
  - 1. Pilot-excited, permanent magnet (PM) alternator.
  - 2. The brushless, rotating-field alternator shall have broad range reconnectability.
- J. Alternator Specifications:
  - 1. NEMA MG1, IEEE and ANSI standards compliance for temperature rise and motor starting.
  - 2. Sustained short-circuit current of up to 300% of the rated current for up to 10 seconds.

3. Sustained short-circuit current enabling downstream circuit breakers to trip without collapsing the alternator field.
4. Self-ventilated and dripproof construction.
5. Voltage waveform from a two-thirds pitch stator and skewed rotor.
6. Digital solid state, volts-per-hertz voltage regulator with +/-0.25% no-load to full-load regulation.
7. Brushless alternator with brushless pilot exciter.
8. 4-pole, rotating field type alternator.
9. Solid state voltage regulator.
10. Insulation – NEMA MG1, Class H, 150°C, Standby temperature rise.
11. 1 sealed bearing.
12. Flexible disc coupling.
13. Full amortisseur windings.
14. Voltage regulation, no-load to full-load, shall be controller dependent.
15. One-step load acceptance shall be 100% of alternator rating.
16. Unbalanced load capability shall be 100% of rated standby current.

K. Engine Specifications:

1. Natural gas fired, 4-cycle, turbocharged, charged air-cooled engine.
2. V-12 cylinder arrangement.
3. Compression ratio of 10.5:1.
4. Piston speed of 1677 ft./min.
5. Main bearings – 12 precision half-shell.
6. 1800 rpm.
7. Cast iron cylinder head.
8. Forged steel crankshaft.
9. Electronic governor.
10. Isochronous frequency regulation, no-load to full-load.
11. Fixed frequency (60 HZ).
12. Dry air cleaner.

L. Exhaust Specifications:

1. Wet exhaust manifold type.
2. Flanged outlet at catalyst.
3. Maximum allowable back pressure of 3 in. Hg.
4. Exhaust flow at rated KW of 2011 cfm.
5. Exhaust temperature at rated KW, dry exhaust, of 1112°F.

M. Muffler/Silencer: Critical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

1. Minimum sound attenuation of 25 dB at 500 Hz.
2. Sound level measured at a distance of 10 feet from exhaust discharge after installation is complete shall be 75 dBA or less.

N. Engine Electrical Specifications:

1. Battery charging alternator:
  - a. Negative ground.
  - b. 24 volts (DC).
  - c. 45 ampere rating.
2. Starter motor rated voltage of 24 volts (DC).
3. Battery minimum cold cranking amps – (2) at 1000 CCA each.
4. Battery voltage of 12 volts (DC).

O. Fuel Specifications:

1. Natural Gas.
2. Fuel supply line inlet of 3.0 NPTF.
3. Natural gas fuel supply pressure between 7.0 and 11.0 in. wg.
4. Secondary Gas Regulators.
5. Fuel-Shutoff Solenoid Valves.
6. Flexible Fuel Connectors.
7. Maximum natural gas consumption at 100% Standby 3984 cfh.

P. Lubrication Specifications:

1. Full pressure type.
2. 44.5 quart oil pan capacity with filter.
3. Two (2) cartridge oil filters per engine.
4. Water-cooled oil cooler.
5. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
6. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.

Q. Cooling Specifications:

1. Maximum ambient temperature of 122°F.
2. Engine jacket water capacity of 11 gallons.
3. Radiator system capacity (including engine) of 43 gallons.
4. Engine jacket water flow rate of 174 gpm
5. Heat rejected to cooling water at rated KW, dry exhaust, of 20,400 Btu/min.
6. Heat rejected to air charge cooler at rated KS, dry exhaust, of 1300 Btu/min.
7. Centrifugal water pump.
8. 52 inch diameter fan (including blades).
9. 28 HP fan.
10. Maximum restriction of cooling air, intake and discharge side of radiator, of 0.5 in. wg.
11. Radiator-cooled cooling air 19,500 scfm.
12. Combustion air 664 cfm
13. Total heat rejected to ambient air 4316 Btu/minute.
14. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.

15. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
16. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
17. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.
  - a. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.

R. Controller Specifications:

1. Generator to be provided with integral controller equal to Kohler Decision-Maker 550 Controller which provides advanced control, system monitoring and system diagnostics with remote monitoring capabilities. At minimum, controller shall be furnished with the following:
  - a. Digital display and keypad which shall provide easy local data access.
  - b. Remote communication thru a PC via network or modem configuration.
  - c. Measurements shall be selectable in metric or English units.
  - d. Controller shall support Modbus® protocol.
  - e. Integrated voltage regulator with  $\pm 0.25\%$  regulation.
  - f. Built-in alternator thermal overload protection.
  - g. NFPA 110 Level 1 capability.

- S. Air-Intake Filter: Heavy-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.

T. Standard Features to be provided:

1. Alternator Protection.
2. Battery Rack and Cables.
3. Closed Crankcase Ventilation.
4. Integral Vibration Isolation.
5. Local Emergency Stop Switch.
6. Low Coolant Level Shutdown.
7. Oil Drain Extension.
8. Operation and Installation Literature.
9. Three-Way Exhaust Catalyst.

U. Optional Features to be provided:

1. UL 2200 Listing.
2. IBC Seismic Certification.
3. Unit Sound & Weather Enclosure with Internal Silencer (Steel).
4. Critical Grade Silencer.
5. Gas Filter.
6. Secondary Gas Solenoid Valve.
7. Customer Connection.

8. Dry Contact Kit (isolated alarm).
9. Prime Power Switch.
10. Remote Audiovisual Alarm Panel.
11. Remote Emergency Stop
12. Block Heater; 6000 Watt, 208 Volt, 1ø.
13. Alternator Strip Heater
14. Batteries
15. Battery Charger, Equalize/Float Type
16. Battery Heater
17. Line Circuit Breaker.
18. Air Cleaner Restriction Indicator.
19. Certified Test Report.
20. Engine Fluids Added.
21. Rated Power Factor Testing.
22. Rodent Guards.
23. Manufacturer's Service Representative's General Maintenance literature.
24. Generator set's NFPA 110 literature.
25. 5-Year Comprehensive full parts and labor warranty.

V. Additional Capacities and Characteristics as specified on Contract Drawings.

1. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.

W. Generator Circuit Breaker: Insulated-case, electronic-trip type; 100 percent rated; complying with UL 489.

1. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
2. Trip Settings: Selected to coordinate with generator thermal damage curve.
3. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
4. Mounting: Adjacent to or integrated with control and monitoring panel.

X. Generator Protector: Microprocessor-based unit shall continuously monitor current level in each phase of generator output, integrate generator heating effect over time, and predict when thermal damage of alternator will occur. When signaled by generator protector or other generator-set protective devices, a shunt-trip device in the generator disconnect switch shall open the switch to disconnect the generator from load circuits. Protector shall perform the following functions:

1. Initiates a generator overload alarm when generator has operated at an overload equivalent to 110 percent of full-rated load for 60 seconds. Indication for this alarm is integrated with other generator-set malfunction alarms.
2. Under single or three-phase fault conditions, regulates generator to 300 percent of rated full-load current for up to 10 seconds.
3. As overcurrent heating effect on the generator approaches the thermal damage point of the unit, protector switches the excitation system off, opens the generator disconnect device, and shuts down the generator set.
4. Senses clearing of a fault by other overcurrent devices and controls recovery of rated voltage to avoid overshoot.

- Y. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications.

## 2.3 OUTDOOR NATURAL GAS GENERATOR-SET ENCLOSURE

- A. Description: Vandal-resistant, Sound attenuated, weatherproof aluminum housing, wind resistant up to 150 mph. Multiple panels shall be lockable and provide adequate access to components requiring maintenance. Panels shall be removable by one person without tools. Instruments and control shall be mounted within enclosure. Enclosure shall be provided by generator manufacturer as a prefabricated packaged unit.
- B. Description: Prefabricated enclosure with the following features:
  - 1. Construction: Aluminum clad, integral structural-steel-framed enclosure, fully enclosing generator, which shall be mounted on a concrete foundation. Provide sound enclosure features including the addition of sound attenuation acoustic insulation that meets UL 94 HF1 flammability classifications and repels moisture absorption. Provide optional seashore grade paint finish providing a minimum 6000 hour salt spray test rating. Final coating shall be a dipped process.
  - 2. Structural Design and Anchorage: Comply with ASCE 7 for wind loads. Provide high-wind (150 mph) bracing.
  - 3. Louvers: Equipped with bird screen and filters excluding exterior dust, birds, and rodents.
  - 4. Hinged Doors: With padlocking provisions and automatic door holders to keep doors open during maintenance.
  - 5. Thermal Insulation: Manufacturer's standard materials and thickness selected in coordination with space heater to maintain winter interior temperature within operating limits required by engine-generator-set components.
  - 6. Muffler Location: Critical grade silencer installed within generator enclosure. Provide flexible exhaust connector and rain cap.
- C. Engine Cooling Airflow through Enclosure: Maintain temperature rise of system components within required limits when unit operates at 110 percent of rated load for 2 hours with ambient temperature at top of range specified in system service conditions.
  - 1. Louvers: Fixed-engine, cooling-air inlet and discharge. Storm-proof and drainable louvers prevent entry of rain and snow.
  - 2. Automatic Dampers: At engine cooling-air inlet and discharge. Dampers shall be closed to reduce enclosure heat loss in cold weather when unit is not operating.
- D. Convenience Outlets: Factory wired, GFCI. Arrange for external electrical connection.
- E. Mounting Frame: Maintain alignment of mounted components without depending on concrete foundation; and have lifting attachments.
  - 1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and generator-set center of gravity.

- F. Provide one-source responsibility for the generating system, automatic transfer switches and accessories.
- G. The 60 Hz generator set shall be provided with a UL 2200 listing.
- H. The generator set shall be capable of accepting rated load in multiple steps. See Mechanical Drawings for step delays specified for building's mechanical systems.
- I. The 60 Hz generator set shall meet NFPA 110, Level 1 standards. Furnish with all necessary accessories installed per NFPA standards.
- J. Provide generator with IBC seismic certification.
- K. Alternator standard features include the following:
  - 1. Pilot-excited, permanent magnet (PM) alternator.
  - 2. The brushless, rotating-field alternator shall have broad range reconnectability.
- L. Alternator Specifications:
  - 1. NEMA MG1, IEEE and ANSI standards compliance for temperature rise and motor starting.
  - 2. Sustained short-circuit current of up to 300% of the rated current for up to 10 seconds.
  - 3. Sustained short-circuit current enabling downstream circuit breakers to trip without collapsing the alternator field.
  - 4. Self-ventilated and drip-proof construction.
  - 5. Voltage waveform from a two-thirds pitch stator and skewed rotor.
  - 6. Digital solid state, volts-per-hertz voltage regulator with +/-0.25% no-load to full-load regulation.
  - 7. Brushless alternator with brushless pilot exciter.
  - 8. 4-pole, rotating field type alternator.
  - 9. Solid state voltage regulator.
  - 10. Insulation – NEMA MG1, Class H, 150°C, Standby temperature rise.
  - 11. 1 sealed bearing.
  - 12. Flexible disc coupling.
  - 13. Full amortisseur windings.
  - 14. Voltage regulation, no-load to full-load, shall be controller dependent.
  - 15. One-step load acceptance shall be 100% of alternator rating.
  - 16. Unbalanced load capability shall be 100% of rated standby current.
- M. Engine Specifications:
  - 1. Natural gas, turbocharged, charged air-cooled engine.
  - 2. 6 cylinder inline arrangement.
  - 3. Compression ratio of 16.0:1.
  - 4. Piston speed of 1950 ft./min.
  - 5. Main bearings – 7, replaceable insert.
  - 6. 1800 rpm.
  - 7. Nickel-chromium head, nickel-silicone stem.
  - 8. Forged steel crankshaft.

9. Electronic governor.
10. Isochronous frequency regulation, no-load to full-load.
11. Fixed frequency (60 HZ).
12. Dry air cleaner.

N. Exhaust Specifications:

1. Dry exhaust manifold type.
2. Flanged outlet at catalyst.
3. Maximum allowable back pressure of 1.2 in. Hg. minimum, 3 in. Hg. maximum.
4. Exhaust flow at rated KW of 2649 cfm.
5. Exhaust temperature at rated KW, dry exhaust, of 835°F.

O. Muffler/Silencer: Critical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

1. Minimum sound attenuation of 25 dB at 500 Hz.
2. Sound level measured at a distance of 10 feet from exhaust discharge after installation is complete shall be 75 dBA or less.

P. Engine Electrical Specifications:

1. Battery charging alternator:
  - a. Negative ground.
  - b. 24 volts (DC).
  - c. 24 ampere rating.
2. Starter motor rated voltage of 24 volts (DC).
3. Battery minimum cold cranking amps – (2) at 950 CCA each.
4. Battery voltage of 12 volts (DC).

Q. Fuel Specifications:

1. Natural gas.

R. Lubrication Specifications:

1. Full pressure type.
2. 44.4 quart oil pan capacity with filter.
3. One (1) cartridge oil filters per engine.
4. Water-cooled oil cooler.
5. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
6. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.

S. Cooling Specifications:

1. Maximum ambient temperature of 122°F.
2. Engine jacket water capacity of 4.8 gallons.
3. Radiator system capacity (including engine) of 17.8 gallons.
4. Engine jacket water flow rate of 124 gpm
5. Heat rejected to cooling water at rated KW, dry exhaust, of 11,042 Btu/min.
6. Heat rejected to air charge cooler at rated KS, dry exhaust, of 6033 Btu/min.
7. Centrifugal water pump.
8. 38 inch diameter fan (including blades).
9. 24 HP fan.
10. Radiator-cooled cooling air 23,000 scfm.
11. Maximum restriction of cooling air, intake and discharge side of radiator, of 0.5 in. wg.
12. Combustion air 1165 cfm
13. Total heat rejected to ambient air 6806 Btu/minute.
14. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
15. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
16. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
17. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.
  - a. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.

T. Controller Specifications:

1. Generator to be provided with integral controller equal to Kohler Decision-Maker 550 Controller which provides advanced control, system monitoring and system diagnostics with remote monitoring capabilities. At minimum, controller shall be furnished with the following:
  - a. Digital display and keypad which shall provide easy local data access.
  - b. Remote communication thru a PC via network or modem configuration.
  - c. Measurements shall be selectable in metric or English units.
  - d. Controller shall support Modbus® protocol.
  - e. Integrated voltage regulator with  $\pm 0.25\%$  regulation.
  - f. Built-in alternator thermal overload protection.
  - g. NFPA 110 Level 1 capability.

U. Air-Intake Filter: Heavy-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.

V. Standard Features to be provided:

1. Alternator Protection.
2. Battery Rack and Cables.

3. Local Emergency Stop Switch.
4. Oil Drain Extension.
5. Operation and Installation Literature.

W. Optional Features to be provided:

1. UL 2200 Listing.
2. IBC Seismic Certification.
3. Unit Weather & Sound Enclosure with Internal Silencer (Salt grade Aluminum).
4. Critical Grade Silencer.
5. Customer Connection.
6. Dry Contact Kit (isolated alarm).
7. Remote Audiovisual Alarm Panel. (coordinate panel location with owner)
8. Remote Emergency Stop. (coordinate panel location with owner)
9. Remote Serial Annunciator Panel. (coordinate panel location with owner)
10. Block Heater; 2500 Watt, 208 Volt, 1ø.
11. Alternator Strip Heater
12. Batteries
13. Battery Charger, Equalize/Float Type
14. Battery Heater
15. Line Circuit Breaker (400A, 100% rated).
16. Heavy Duty Air Cleaner.
17. Crankcase Emissions Canister.
18. Air Cleaner Restriction Indicator.
19. Rated Power Factor Testing.
20. Engine Fluids Added.
21. Rodent Guards.
22. Manufacturer's Service Representative's General Maintenance literature.
23. Generator set's NFPA 110 literature.
24. 5-Year Comprehensive full parts and labor warranty.

X. Additional Capacities and Characteristics as specified on Contract Drawings.

1. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.

Y. Generator Circuit Breaker: Insulated-case, electronic-trip type; 100 percent rated; complying with UL 489.

1. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
2. Trip Settings: Selected to coordinate with generator thermal damage curve.
3. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
4. Mounting: Adjacent to or integrated with control and monitoring panel.

Z. Generator Protector: Microprocessor-based unit shall continuously monitor current level in each phase of generator output, integrate generator heating effect over time, and predict when thermal damage of alternator will occur. When signaled by generator protector or other generator-set protective devices, a shunt-trip device in the generator disconnect switch shall

open the switch to disconnect the generator from load circuits. Protector shall perform the following functions:

1. Initiates a generator overload alarm when generator has operated at an overload equivalent to 110 percent of full-rated load for 60 seconds. Indication for this alarm is integrated with other generator-set malfunction alarms.
2. Under single or three-phase fault conditions, regulates generator to 300 percent of rated full-load current for up to 10 seconds.
3. As overcurrent heating effect on the generator approaches the thermal damage point of the unit, protector switches the excitation system off, opens the generator disconnect device, and shuts down the generator set.
4. Senses clearing of a fault by other overcurrent devices and controls recovery of rated voltage to avoid overshoot.

- AA. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications.

#### 2.4 OUTDOOR GENERATOR-SET ENCLOSURE

- A. Description: Vandal-resistant, weatherproof aluminum housing, wind resistant up to 150 mph with subbase fuel tank package. Multiple panels shall be lockable and provide adequate access to components requiring maintenance. Panels shall be removable by one person without tools. Instruments and control shall be mounted within enclosure. Enclosure shall be provided by generator manufacturer as a prefabricated packaged unit.
- B. Description: Prefabricated enclosure with the following features:
1. Construction: Aluminum clad, integral structural-steel-framed enclosure, fully enclosing generator, which shall be mounted on a concrete foundation. Provide sound enclosure features including the addition of sound attenuation acoustic insulation that meets UL 94 HF1 flammability classifications and repels moisture absorption. Provide optional seashore grade paint finish providing a minimum 6000 hour salt spray test rating. Final coating shall be a dipped process.
  2. Structural Design and Anchorage: Comply with ASCE 7 for wind loads. Provide high-wind (150 mph) bracing.
  3. Louvers: Equipped with bird screen and filters excluding exterior dust, birds, and rodents.
  4. Hinged Doors: With padlocking provisions and automatic door holders to keep doors open during maintenance.
  5. Thermal Insulation: Manufacturer's standard materials and thickness selected in coordination with space heater to maintain winter interior temperature within operating limits required by engine-generator-set components.
  6. Muffler Location: Critical grade silencer installed within generator enclosure. Provide flexible exhaust connector and rain cap.
- C. Engine Cooling Airflow through Enclosure: Maintain temperature rise of system components within required limits when unit operates at 110 percent of rated load for 2 hours with ambient temperature at top of range specified in system service conditions.

1. Louvers: Fixed-engine, cooling-air inlet and discharge. Storm-proof and drainable louvers prevent entry of rain and snow.
2. Automatic Dampers: At engine cooling-air inlet and discharge. Dampers shall be closed to reduce enclosure heat loss in cold weather when unit is not operating.

D. Convenience Outlets: Factory wired, GFCI. Arrange for external electrical connection.

## 2.5 VIBRATION ISOLATION DEVICES

A. Elastomeric Isolation Pads:

1. Fabrication: Single or multiple layers of sufficient durometer stiffness for uniform loading over pad area.
2. Size: Factory or field cut to match requirements of supported equipment.
3. Pad Material: Oil and water resistant with elastomeric properties.
4. Infused nonwoven cotton or synthetic fibers.
5. Load-bearing metal plates adhered to pads.
6. Sandwich-Core Material: Resilient and elastomeric.
  - a. Infused nonwoven cotton or synthetic fibers.

## 2.6 FINISHES

A. Outdoor Enclosures and Exterior Exposed Components: Special seashore finish over corrosion-resistant pretreatment and compatible primer. Final coat to have a minimum 6000 hours salt spray test rating. Final coating shall be a dipped process.

## 2.7 SOURCE QUALITY CONTROL

A. Prototype Testing: Factory test engine-generator set using same engine model, constructed of identical or equivalent components and equipped with identical or equivalent accessories.

1. Tests: Comply with NFPA 110, Level 1 Energy Converters and with IEEE 115.

B. Project-Specific Equipment Tests: Before shipment, factory test engine-generator set and other system components and accessories manufactured specifically for this Project. Perform tests at rated load and power factor. Include the following tests:

1. Test components and accessories furnished with installed unit that are not identical to those on tested prototype to demonstrate compatibility and reliability.
2. Full load run.
3. Maximum power.
4. Voltage regulation.
5. Transient and steady-state governing.
6. Single-step load pickup.
7. Safety shutdown.

8. Provide 14 days' advance notice of tests and opportunity for observation of tests by Owner's representative.
9. Report factory test results within 10 days of completion of test.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine-generator performance.
- B. Examine roughing-in of piping systems and electrical connections. Verify actual locations of connections before packaged engine-generator installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 PREPARATION

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
  1. Notify County no fewer than two (2) weeks in advance of proposed interruption of electrical service.
  2. Do not proceed with interruption of electrical service without County's written permission.

#### 3.3 INSTALLATION

- A. Comply with packaged engine-generator manufacturers' written installation and alignment instructions and with NFPA 110.
- B. Equipment Mounting:
  1. Install packaged engine generators on cast-in-place concrete equipment bases.
  2. Coordinate size and location of concrete bases for packaged engine generator on grade. Cast anchor-bolt inserts into bases.
- C. Install packaged engine-generator to provide access, without removing connections or accessories, for periodic maintenance.
- D. Install engine-generator in a walk-in enclosure with elastomeric isolator pads having a minimum deflection of 1 inch on contractor furnished roof dunnage or curb. Secure enclosure to roof dunnage or curb per hurricane ti-down requirements.

1. Comply with requirements for seismic control devices specified in the New Jersey edition of the 2015 International Building Code.
  2. Comply with requirements for vibration isolation devices specified in this section.
- E. Install Schedule 40, black steel piping with welded joints and connect to engine muffler. Piping shall be same diameter as muffler outlet.
- F. Install condensate drain piping to muffler drain outlet full size of drain connection with a shutoff valve, stainless-steel flexible connector, and Schedule 40, black steel pipe with welded joints.
- G. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

### 3.4 CONNECTIONS

- A. Connect fuel, cooling-system, and exhaust-system piping adjacent to packaged engine-generator to allow service and maintenance.
- B. Connect cooling-system water piping to engine-generator set with flexible connectors.
- C. Connect engine exhaust pipe to engine with flexible connector.
- D. Connect fuel piping to engines with a gate valve and union and flexible connector.
- E. Vent gas pressure regulators outside generator's enclosure a minimum of 60 inches from enclosure's openings.
- F. Ground equipment according to other Division 16 Specification Sections for grounding and bonding for electrical systems.
- G. Connect wiring according to other Division 26 Specification for electrical power conductors and cables.
- H. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- I. Balance single-phase loads to obtain a maximum of 10 percent unbalance between any two phases.

### 3.5 IDENTIFICATION

- A. Identify all electrical system components.

### 3.6 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- B. Perform tests and inspections and prepare test reports.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
  - 1. Perform tests recommended by manufacturer and each electrical test and visual and mechanical inspection for "AC Generators and for Emergency Systems" specified in NETA Acceptance Testing Specification. Certify compliance with test parameters.
  - 2. NFPA 110 Acceptance Tests: Perform tests required by NFPA 110 that are additional to those specified here including, but not limited to, single-step full-load pickup test. Contractor shall provide portable load bank required for generator's performance test.
  - 3. Battery Tests: Equalize charging of battery cells according to manufacturer's written instructions. Record individual cell voltages.
    - a. Measure charging voltage and voltages between available battery terminals for full-charging and float-charging conditions. Check electrolyte level and specific gravity under both conditions.
    - b. Test for contact integrity of all connectors. Perform an integrity load test of the generator and a capacity load test for the battery.
    - c. Verify acceptance of charge for each element of the battery after discharge.
    - d. Verify that measurements are within manufacturer's specifications.
  - 4. Battery-Charger Tests: Verify specified rates of charge for both equalizing and float-charging conditions.
  - 5. System Integrity Tests: Methodically verify proper installation, connection, and integrity of each element of engine-generator system before and during system operation. Check for air, exhaust, and fluid leaks.
  - 6. Exhaust-System Back-Pressure Test: Use a manometer with a scale exceeding 40-inch wg. Connect to exhaust line close to engine exhaust manifold. Verify that back pressure at full-rated load is within manufacturer's written allowable limits for the engine.
  - 7. Exhaust Emissions Test: Comply with applicable government test criteria.
  - 8. Voltage and Frequency Transient Stability Tests: Use recording oscilloscope to measure voltage and frequency transients for 50 and 100 percent step-load increases and decreases, and verify that performance is as specified.
  - 9. Harmonic-Content Tests: Measure harmonic content of output voltage under 25 percent and at 100 percent of rated linear load. Verify that harmonic content is within specified limits.
  - 10. Noise Level Tests: Measure A-weighted level of noise emanating from generator-set installation, including engine exhaust and cooling-air intake and discharge, at four (4) locations along the adjacent building, and compare measured levels with required values.

- D. Coordinate tests with tests for transfer switches and run them concurrently.
- E. Test instruments shall have been calibrated within the last 12 months, traceable to standards of NIST, and adequate for making positive observation of test results. Make calibration records available for examination on request.
- F. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
- G. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
- H. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- I. Remove and replace malfunctioning units and retest as specified above.
- J. Retest: Correct deficiencies identified by tests and observations and retest until specified requirements are met.
- K. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation resistances, time delays, and other values and observations. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- L. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each power wiring termination and each bus connection. Remove all access panels so terminations and connections are accessible to portable scanner.
  - 1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan 11 months after date of Substantial Completion.
  - 2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
  - 3. Record of Infrared Scanning: Prepare a certified report that identifies terminations and connections checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

### 3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain packaged engine generators.

END OF SECTION 26321

## SECTION 26 36 00 - TRANSFER SWITCHES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes transfer switches rated 600 V and less, including the following:
  - 1. Automatic transfer switches.
  - 2. Bypass/isolation switches.
  - 3. Remote annunciation systems.

#### 1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, weights, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Dimensioned plans, elevations, sections, and details showing minimum clearances, conductor entry provisions, gutter space, installed features and devices, and material lists for each switch specified.
  - 1. Single-Line Diagram: Show connections between transfer switch, bypass/isolation switch, power sources, and load; and show interlocking provisions for each combined transfer switch and bypass/isolation switch.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Qualification Data: For manufacturer and testing agency.
- D. Field quality-control test reports.
- E. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:

1. Features and operating sequences, both automatic and manual.
2. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.

#### 1.4 QUALITY ASSURANCE

- A. **Manufacturer Qualifications:** Maintain a service center capable of providing training, parts, and emergency maintenance repairs within a response period of less than eight hours from time of notification.
- B. **Testing Agency Qualifications:** An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
  1. **Testing Agency's Field Supervisor:** Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- C. **Source Limitations:** Obtain bypass/isolation switches, through one source from a single manufacturer. All equipment shall be obtained from its original manufacturer or an authorized distributor thereof. Re-labeled or repackaged OEM equipment shall not be accepted.
- D. **Electrical Components, Devices, and Accessories:** Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Comply with NEMA ICS 1.
- F. Comply with NFPA 70.
- G. Comply with NFPA 99.
- H. Comply with NFPA 110.
- I. Comply with UL 1008 unless requirements of these Specifications are stricter.

#### 1.5 PROJECT CONDITIONS

- A. **Interruption of Existing Electrical Service:** Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service:
  1. Notify Architect, Construction Manager, and Owner no fewer than

fourteen (14) days in advance of proposed interruption of electrical service.

2. Do not proceed with interruption of electrical service without Construction Manager's written permission.

## 1.6 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Contactor Transfer Switches:
    - a. ASCO Power Technologies, LP.
    - b. Or approved equal

### 2.2 GENERAL TRANSFER-SWITCH PRODUCT REQUIREMENTS

- A. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.
- B. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008, without the use of specific fuse or breaker protection (any breaker rating).
  1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.
- C. Solid-State Controls: Repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.
- D. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.

- E. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.
- F. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.
  - 1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are not acceptable.
  - 2. Switch Action: Double throw; mechanically held in both directions.
  - 3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.
- G. Neutral Switching. Where four-pole switches are indicated, provide neutral pole switched simultaneously with phase poles.
- H. Neutral Terminal: Solid and fully rated, unless otherwise indicated.
- I. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.
- J. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color-code or by numbered or lettered wire and cable tape markers at terminations. Color-coding and wire and cable tape markers are specified in Division 26 Section "Identification for Electrical Systems."
  - 1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
  - 2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.
  - 3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.
- K. Enclosures: General-purpose NEMA 250, Type 1 complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

### 2.3 AUTOMATIC TRANSFER SWITCHES

- A. Comply with Level 1 equipment according to NFPA 110.
- B. Switching Arrangement: Double-throw type, incapable of pauses or intermediate

position stops during normal functioning, unless otherwise indicated.

- C. Manual Switch Operation: Under load, with door closed and with either or both sources energized. Transfer time is same as for electrical operation. Control circuit automatically disconnects from electrical operator during manual operation.
- D. Manual Switch Operation: Unloaded. Control circuit automatically disconnects from electrical operator during manual operation.
- E. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval is adjustable from 1 to 30 seconds.
- F. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.
  - 1. Shall be able to monitor transfer switch and generator system state, metering, health, active timers, historical logs, transfer statistics, and past activity.
  - 2. Shall be able to see configured settings.
  - 3. Shall be able to interface with email server for notices and alerts.
  - 4. Shall have 128-bit encryption for enhanced data security.
  - 5. Retrieve information using standard open protocols.
  - 6. Remotely transfer between sources with proper authentication.
- G. In-Phase Monitor: Factory-wired, internal relay controls transfer so it occurs only when the two sources are synchronized in phase. Relay compares phase relationship and frequency difference between normal and emergency sources and initiates transfer when both sources are within 15 electrical degrees, and only if transfer can be completed within 60 electrical degrees. Transfer is initiated only if both sources are within 2 Hz of nominal frequency and 70 percent or more of nominal voltage.
- H. Motor Disconnect and Timing Relay: Controls designate starters so they disconnect motors before transfer and reconnect them selectively at an adjustable time interval after transfer. Control connection to motor starters is through wiring external to automatic transfer switch. Time delay for reconnecting individual motor loads is adjustable between 1 and 60 seconds, and settings are as indicated. Relay contacts handling motor-control circuit inrush and seal currents are rated for actual currents to be encountered.
- I. Automatic Transfer-Switch Features:

1. Under-voltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.
2. Adjustable Time Delay: For override of normal-source voltage sensing to delay transfer and engine start signals. Adjustable from zero to six seconds, and factory set for one second.
3. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.
4. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes to automatically defeat delay on loss of voltage or sustained under-voltage of emergency source, provided normal supply has been restored.
5. Test Switch: Simulate normal-source failure.
6. Switch-Position Pilot Lights: Indicate source to which load is connected.
7. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.
  - a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
  - b. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."
8. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.
9. Transfer Override Switch: Overrides automatic retransfer control so automatic transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.
10. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open; rated 10 A at 32-V dc minimum.
11. Engine Shutdown Contacts: Time delay adjustable from zero to five minutes, and factory set for five minutes. Contacts shall initiate shutdown at remote engine-generator controls after retransfer of load to normal

source.

12. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods are adjustable from 10 to 30 minutes. Factory settings are for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:
  - a. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.
  - b. Push-button programming control with digital display of settings.
  - c. Integral battery operation of time switch when normal control power is not available.
13. Provide an engine control wiring system that monitors conditions, annunciates faults and starts the engine.
14. Provide a load shed module for all non-priority 1 transfer switches.

J. Digital Power Meter:

1. Furnish Digital Power Managers for each ATS to monitor all functions specified below.
  - a. The meter shall be listed to UL 61010-1, CSA-C22.2 No. 61001-1, 2<sup>nd</sup> Edition, 2004-07.
  - b. The meter shall be accurate to 0.25% Current, Voltage, Power, and Frequency. 1.0% Energy, Power Factor and Demand.
  - c. The meter shall be capable of operating without modification at nominal frequencies of 45 to 65 Hz and over a control power input range of 9–36VDC.
  - d. Each meter shall be capable of interfacing with a communications module to permit information to be sent to central location for display, analysis, and logging.
  - e. The meter shall accept inputs from industry standard instrument trans-formers (120 VAC secondary PTs and 5A secondary CTs.) Direct phase voltage connections, 600 VAC and under, shall be possible without the use of PTs.
  - f. The meter shall be applied in single, 3-phase, or three & four wire circuits. A fourth CT input shall be available to measure neutral or ground current.
  - g. All setup parameters required by the meter shall be stored in non-volatile memory and retained in the event of a control power interruption.

- h. The meter shall be equipped with a continuous duty, long-life, 4 line x 20 character LCD backlit display to provide local access to the following metered quantities:
  - 1) Current, per phase RMS and neutral (if applicable)
  - 2) Current Unbalance %
  - 3) Voltage, phase-to-phase and phase-to-neutral
  - 4) Voltage Unbalance %
  - 5) kW
  - 6) kVA
  - 7) kVAR
  - 8) Power Factor
  - 9) kWh
  - 10) kVAh
  - 11) kVARh
  - 12) Total Harmonic Distortion
  - 13) Utilization
  - 14) kW Demand
  - 15) Engine Run Time
  - 16) Min/Max Historical Values

#### 2.4 BYPASS/ISOLATION SWITCHES

- A. Comply with requirements for Level 1 equipment according to NFPA 110.
- B. Description: Manual type, arranged to select and connect either source of power directly to load, isolating transfer switch from load and from both power sources without breaking the load.
- C. Include the following features for each combined automatic transfer switch and bypass/isolation switch:
  - 1. Means to lock bypass/isolation switch in the position that isolates transfer switch with an arrangement that permits complete electrical testing of transfer switch while isolated. While isolated, interlocks prevent transfer-switch operation, except for testing or maintenance.
  - 2. Drawout Arrangement for Transfer Switch: Provide physical separation from live parts and accessibility for testing and maintenance operations.
  - 3. Bypass/Isolation Switch Current, Voltage, Closing, and Short-Circuit Withstand Ratings: Equal to or greater than those of associated automatic transfer switch, and with same phase arrangement and number of poles.
  - 4. Contact temperatures of bypass/isolation switches shall not exceed those of automatic transfer-switch contacts when they are carrying rated load.

5. Operability: Constructed so load bypass and transfer-switch isolation can be performed by 1 person in no more than 2 operations in 15 seconds or less.
  6. Legend: Manufacturer's standard legend for control labels and instruction signs shall describe operating instructions.
  7. Maintainability: Fabricate to allow convenient removal of major components from front without removing other parts or main power conductors.
- D. Interconnection of Bypass/Isolation Switches with Automatic Transfer Switches: Factory-installed copper bus bars; plated at connection points and braced for the indicated available short-circuit current.

## 2.5 SOURCE QUALITY CONTROL

- A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details. See Division 26 Section "Vibration and Seismic Controls for Electrical Systems."
- B. Floor-Mounting Switch: Anchor to floor by bolting.
  1. Concrete Bases: 4 inches high, reinforced, with chamfered edges. Extend base no more than 4 inches in all directions beyond the maximum dimensions of switch, unless otherwise indicated or unless required for seismic support. Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems."
- C. Annunciator and Control Panel Mounting: Flush in wall, unless otherwise indicated.
- D. Identify components according to Division 26 Section "Identification for Electrical Systems."
- E. Set field-adjustable intervals and delays, relays, and engine exerciser clock.

### 3.2 CONNECTIONS

- A. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to Owner if necessary to accommodate required wiring.
- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

### 3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform tests and inspections and prepare test reports.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- C. Perform tests and inspections and prepare test reports.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installation, including connections, and to assist in testing.
  - 2. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
  - 3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
  - 4. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
    - a. Check for electrical continuity of circuits and for short circuits.
    - b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
    - c. Verify that manual transfer warnings are properly placed.
    - d. Perform manual transfer operation.
  - 5. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
    - a. Simulate power failures of normal source to automatic transfer

- switches and of emergency source with normal source available.
    - b. Simulate loss of phase-to-ground voltage for each phase of normal source.
    - c. Verify time-delay settings.
    - d. Verify pickup and dropout voltages by data readout or inspection of control settings.
    - e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
    - f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
    - g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.
  - 6. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
    - a. Verify grounding connections and locations and ratings of sensors.
- D. Testing Agency's Tests and Inspections:
- 1. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
  - 2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
  - 3. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
    - a. Check for electrical continuity of circuits and for short circuits.
    - b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
    - c. Verify that manual transfer warnings are properly placed.
    - d. Perform manual transfer operation.
  - 4. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
    - a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
    - b. Simulate loss of phase-to-ground voltage for each phase of normal source.

- c. Verify time-delay settings.
  - d. Verify pickup and dropout voltages by data readout or inspection of control settings.
  - e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
  - f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
  - g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.
5. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
- a. Verify grounding connections and locations and ratings of sensors.
- E. Coordinate tests with tests of generator and run them concurrently.
- F. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- G. Remove and replace malfunctioning units and retest as specified above.
- H. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.
- 1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.
  - 2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
  - 3. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

### 3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain transfer switches and related equipment as specified below. Refer to Division 01 Section "Demonstration and Training."
- B. Coordinate this training with that for generator equipment.

## SECTION 264113 LIGHTNING PROTECTION FOR STRUCTURES

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes:
  - 1. Provide all labor, materials, and equipment as necessary to complete all work as indicated on the drawings, and as specified herein.
  - 2. The Contractor shall furnish and install a complete lightning protection system with all necessary components for a complete and operational system.

#### 1.3 SYSTEM DESCRIPTION

- A. The entire lightning protection system shall be manufactured and installed in accordance with Underwriters Laboratories, Inc. Pamphlet no. UL96A Master Labeled Lightning Protection Systems.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
  - 1. Isometric and plan views showing layout and connections to the required metal surfaces.
  - 2. Show the methods of mounting the system to the adjacent construction.
  - 3. Qualifications: Submit proof that the installer of the lightning protection system has had suitable and adequate experience installing other lightning protection systems, and is capable of installing the system as recommended by the manufacturer of the equipment.
  - 4. Certification: Two weeks prior to final inspection, submit four copies of the following certifications to the Resident Engineer:
    - a. Certification that the lightning protection system has been properly installed and tested.
    - b. Certification that the lightning protection system has been inspected by a UL representative and has been approved by UL without variation
    - c. Include layouts of the lightning protection system, with details of the components to be used in the installation.
    - d. Include raceway locations needed for the installation of conductors.

- e. Details of air terminals, ground rods, ground rings, conductor supports, splices, and terminations, including concealment requirements.
- f. Include roof attachment details, coordinated with roof installation.
- g. Calculations required by NFPA 780 for bonding of metal bodies.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Lightning protection system Shop Drawings, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Lightning protection cabling attachments to roofing systems and accessories.
  - 2. Lightning protection strike termination device attachment to roofing systems, coordinated with the roofing system manufacturer.
  - 3. Lightning protection system components penetrating roofing and moisture protection systems and system components, coordinated with the roofing system manufacturer.
  - 4. Lightning protection system coordination with the building grounding system.
- B. Qualification Data: For Installer.
- C. Product Certificates: For each type of roof adhesive for attaching the roof-mounted air terminal assemblies, approved by the roofing-material manufacturer.
- D. Field quality-control reports.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For lightning protection system to include in maintenance manuals.
  - 1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
    - a. Dimensioned site plan showing dimensioned route of the ground loop conductor and the ground rod locations. Comply with requirements of Section 017839 "Project Record Documents."
    - b. A system testing and inspection record, listing the results of inspections and ground resistance tests, as recommended by NFPA 780, Annex D.
- B. Completion Certificate:
  - 1. UL Master Label Certificate.

#### 1.7 QUALITY ASSURANCE

- A. Installer Qualifications: LPI Master Installer.

- B. The design of the systems shall be performed by fully qualified personnel having a minimum of five years experience designing these types of systems. They shall have been certified for design by a recognized lightning protection school such as the Lightning Protection Institute.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Warren Lightning Rod Company (design basis)
  2. Advanced Lightning Technology, LTD.
  3. East Coast Lightning Equipment Inc.
  4. ERICO International Corporation.
  5. Harger Lightning & Grounding.
  6. Preferred Lightning Protection.
  7. Thompson Lightning Protection, Inc.
  8. Or approved equal.

### 2.2 PERFORMANCE REQUIREMENTS

- A. NFPA Lightning Protection Standard: Comply with NFPA 780 requirements for Class I buildings.
- B. Lightning Protection Components, Devices, and Accessories: Listed and labeled by a qualified testing agency as complying with UL 96, and marked for intended location and application.

### 2.3 MATERIALS

- A. Air Terminals:
  1. Copper unless otherwise indicated.
  2. 5/8-inch diameter with 10" minimum but not more than 24" length.
  3. Pointed tip.
  4. Integral base support.
  5. Wherever materials come in direct contact with aluminum surfaces, the air terminals shall be solid aluminum, 1/2 inch in diameter.
- B. Air Terminal Bracing:
  1. Copper.
  2. 1/4-inch diameter rod.
- C. Class 1 Main Conductors:
  1. Stranded Copper: 57,400 circular mils in diameter. Coordinate with final lightning protection system installer shop drawings.

- D. Secondary Conductors:
  - 1. Stranded Copper: 26,240 circular mils in diameter. Coordinate with final lightning protection system installer shop drawings.
- E. Ground Loop Conductor: Stranded copper.
- F. Attachments: Fasteners shall be of suitable configuration for the intended application and of the same material as the conductor. Nails, screws, or bolts employed to secure the fasteners shall be of the same material as the fasteners or of material which is as resistant to corrosion as that of the fasteners. (Galvanized or plated steel nails, screws, or bolts are not acceptable).
- G. Connections and Splices: Connectors and splices shall be of suitable configuration and type for the intended application and of the same material as the conductor.
- H. Ground Rods:
  - 1. Material: Copper-clad steel.
  - 2. Diameter: 3/4 inch.
  - 3. Rods shall be not less than 120 inches long.
- I. Conductor Splices and Connectors: Compression fittings that are installed with hydraulically operated tools, or exothermic welds, approved for use with the class type.
- J. Surge Arresters: Provide surge protection/suppression for all incoming utility services including electrical service, telecommunications service, and cable service in accordance with NFPA 780 requirements.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Install lightning protection components and systems according to NFPA 780.
- B. Install conductors with direct paths from air terminals to ground connections. Avoid bends less than 90 degrees and 8 inches in radius and narrow loops.
- C. Conceal conductors within normal view from exterior locations at grade within 200 feet of building. Comply with requirements for concealed systems in NFPA 780.
  - 1. Roof penetrations required for down conductors and connections to structural-steel framework shall be made using listed through-roof fitting and connector assemblies with solid rods and appropriate roof flashings. Use materials approved by the roofing manufacturer for the purpose. Conform to the methods and materials required at roofing penetrations of the lightning protection components to ensure compatibility with the roofing specifications and warranty.
  - 2. Install conduit where necessary to comply with conductor concealment requirements.
  - 3. Air Terminals on Single-Ply Membrane Roofing: Comply with adhesive manufacturer's written instructions.

- D. Ground Ring Electrode: The conductor shall be not less than the main-size lightning conductor.

### 3.2 CONNECTIONS

- A. Aboveground concealed connections, and connections in earth or concrete, shall be done by exothermic welds or by high-compression fittings listed for the purpose.
- B. Aboveground exposed connections shall be done using the following types of connectors, listed and labeled for the purpose: exothermic weld.
- C. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.
  - 1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
  - 2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.

### 3.3 CORROSION PROTECTION

- A. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture unless moisture is permanently excluded from junction of such materials.
- B. Use conductors with protective coatings where conditions would cause deterioration or corrosion of conductors.

### 3.4 FIELD QUALITY CONTROL

- A. Special Inspections: Engage a qualified special inspector to perform the following special inspections:
  - 1. Perform inspections as required to obtain a UL Master Label for system.
- B. Prepare test and inspection reports and certificates.

END OF SECTION 264113

## SECTION 264313 SURGE PROTECTION FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section includes field-mounted SPDs for low-voltage (120 to 600 V) power distribution and control equipment.
- B. Related Requirements:
  - 1. Section 262413 "Switchboards" for factory-installed SPDs.
  - 2. Section 262416 "Panelboards" for factory-installed SPDs.

#### 1.3 DEFINITIONS

- A. Inominal: Nominal discharge current.
- B. MCOV: Maximum continuous operating voltage.
- C. Mode(s), also Modes of Protection: The pair of electrical connections where the VPR applies.
- D. MOV: Metal-oxide varistor; an electronic component with a significant non-ohmic current-voltage characteristic.
- E. OCPD: Overcurrent protective device.
- F. SCCR: Short-circuit current rating.
- G. SPD: Surge protective device.
- H. VPR: Voltage protection rating.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
2. Copy of UL Category Code VZCA certification, as a minimum, listing the tested values for VPRs, Inominal ratings, MCOVs, type designations, OCPD requirements, model numbers, system voltages, and modes of protection.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Sample Warranty: For manufacturer's special warranty.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For SPDs to include in maintenance manuals.

#### 1.7 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to replace or replace SPDs that fail in materials or workmanship within specified warranty period.
  1. Warranty Period: Five years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 GENERAL SPD REQUIREMENTS

- A. SPD with Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with NFPA 70.
- C. Comply with UL 1449.
- D. MCOV of the SPD shall be the nominal system voltage.

#### 2.2 SERVICE ENTRANCE AND TRANSFER SWITCH SUPPRESSOR

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Advanced Protection Technologies Inc. (APT).
  2. Current Technology Inc.
  3. Eaton.

4. General Electric Company.
  5. Leviton Manufacturing Co., Inc.
  6. Liebert; a brand of Emerson Electric Co.
  7. Siemens Industry, Inc.
  8. Square D; by Schneider Electric.
  9. Or approved equal.
- B. SPDs: Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 1449, Type .
1. SPDs with the following features and accessories:
    - a. Integral disconnect switch.
    - b. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
    - c. Indicator light display for protection status.
    - d. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
    - e. Surge counter.
- C. Comply with UL 1283.
- D. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 240kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual MOVs in a given mode.
- E. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V, three-phase, four-wire circuits shall not exceed the following:
1. Line to Neutral: 1200 V for 480Y/277 V.
  2. Line to Ground: 1200 V for 480Y/277 V.
  3. Line to Line: 2000 V for 480Y/277 V.
- F. SCCR: Equal or exceed 200 kA.
- G. Inominal Rating: 20 kA.
- 2.3 PANEL SUPPRESSORS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Advanced Protection Technologies Inc. (APT).
  2. Current Technology Inc.
  3. Eaton.
  4. General Electric Company.
  5. Leviton Manufacturing Co., Inc.

6. Liebert; a brand of Emerson Electric Co.
7. Schneider Electric USA, Inc.
8. Siemens Industry, Inc.
9. Square D; by Schneider Electric.
10. Or approved equal.

B. SPDs: Comply with UL 1449, Type 1.

1. Include LED indicator lights for power and protection status.
2. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
3. Include Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.

C. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 100 kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual MOVs in a given mode.

D. Comply with UL 1283.

E. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V and 208Y/120 V, three-phase, four-wire circuits shall not exceed the following:

1. Line to Neutral: 1200 V for 480Y/277 V and 700 V for 208Y/120 V.
2. Line to Ground: 1200 V for 480Y/277 V and 700 V for 208Y/120 V.
3. Neutral to Ground: 1200 V for 480Y/277 V and 700 V for 208Y/120 V.
4. Line to Line: 2000 V for 480Y/277 V and 1200 V for 208Y/120 V

F. SCCR: Equal or exceed 100 kA.

G. Inominal Rating: 20 kA.

## 2.4 ENCLOSURES

A. Indoor Enclosures: NEMA 250, Type 1.

## 2.5 CONDUCTORS AND CABLES

A. Power Wiring: Same size as SPD leads, complying with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Class 2 Control Cables: Multiconductor cable with copper conductors not smaller than No. 18 AWG, complying with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

- C. Class 1 Control Cables: Multiconductor cable with copper conductors not smaller than No. 14 AWG, complying with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Comply with NECA 1.
- B. Install an OCPD or disconnect as required to comply with the UL listing of the SPD.
- C. Install SPDs with conductors between suppressor and points of attachment as short and straight as possible, and adjust circuit-breaker positions to achieve shortest and straightest leads. Do not splice and extend SPD leads unless specifically permitted by manufacturer. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.
- D. Use crimped connectors and splices only. Wire nuts are unacceptable.
- E. Wiring:
  - 1. Power Wiring: Comply with wiring methods in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
  - 2. Controls: Comply with wiring methods in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

#### 3.2 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative.
  - 1. Compare equipment nameplate data for compliance with Drawings and Specifications.
  - 2. Inspect anchorage, alignment, grounding, and clearances.
  - 3. Verify that electrical wiring installation complies with manufacturer's written installation requirements.
- B. An SPD will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

#### 3.3 STARTUP SERVICE

- A. Complete startup checks according to manufacturer's written instructions.

- B. Do not perform insulation-resistance tests of the distribution wiring equipment with SPDs installed. Disconnect SPDs before conducting insulation-resistance tests, and reconnect them immediately after the testing is over.
- C. Energize SPDs after power system has been energized, stabilized, and tested.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate and maintain SPDs.

END OF SECTION 264313

## SECTION 280500 BASIC MATERIALS & METHODS FOR ELECTRONIC SYSTEMS

### PART 1 – GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Requirements of Drawings, General and Supplementary Conditions, Divisions 00 and 01 apply to this section.

#### 1.2 SUMMARY

- A. Related sections:

- 1. Electrical Requirements: Division 26
  - 2. Mechanical Requirements: Division 23

- B. Drawings use and interpretation:

- 1. Drawings are diagrammatic and indicate general arrangement of systems and equipment, except when specifically dimensioned or detailed.
  - 2. For exact locations of building elements, refer to dimensioned architectural/structural drawings.
  - 3. Field measurements take precedence over dimensioned drawings.
  - 4. Intention is to show size, capacity, approximate location, direction and general relationship of one work phase to another, but not exact detail or arrangement.

- C. Installation of all electronic systems and equipment is subject to clarification as indicated in reviewed shop drawings and field coordination drawings.

- D. Dimensions indicated are limiting dimensions.

- E. Do not use equipment exceeding dimensions indicated or equipment or arrangements that reduce required clearances or exceed specified maximum dimensions.

- F. Description of systems:

- 1. Provide materials to provide functioning systems in compliance with performance requirements specified.
  - 2. Provide modifications required by reviewed shop drawings and field coordinated drawings.

- G. The work of this division shall consist of, but shall not be limited to, the providing of the following systems:

- 1. Video Surveillance System: Section 282300
  - 2. Security Management System: Section 285000

### 1.3 SUBMITTALS

#### A. Shop drawings:

1. As indicated in each Division 28 section and as indicated herein.
2. Submit for review by the Architect/Engineer, complete engineering data for each system for evaluation of the proposed system with respect to specification requirements. Submittals for each system shall consist of engineering data sheets, schedules, and manufacturer's descriptive catalog sheets for each system component and manufacturer prepared shop drawings to indicate conformance with the contract documents.
  - a. Provide complete floor plans. Each plan shall show proposed device locations.
    - 1) Show actual device nomenclature as illustrated on riser and single line diagrams.
    - 2) Show pullboxes, equipment enclosures and terminal cabinets.
    - 3) Show conduits and fill (optional if lateral conduits are shown with size and fill on the riser).
  - b. Riser diagram:
    - 1) Illustrate conduit relationships between devices shown on the floor plans.
    - 2) (Lateral conduits are optional if shown on the plans).
    - 3) Show actual device nomenclature as illustrated on the plans and breaker number where the power will be sourced.
  - c. Single-line diagrams:
    - 1) Show signal relationships of devices within the system.
    - 2) Show actual device nomenclature as illustrated on the riser and plans.
    - 3) Show wire numbers.
  - d. Equipment enclosure wiring diagrams:
    - 1) Show a pictorial illustration of each equipment enclosure and/or terminal cabinet.
    - 2) Show the device nomenclatures exactly as shown on the single line diagrams.
    - 3) Show the terminations including the wire numbers as shown on the single line diagrams.
    - 4) Show wire colors for each terminal.
    - 5) For each wire exiting the enclosure, show the destination of the wire by floor, room number and the drawing number of the panel where the wire terminates.
  - e. Free standing device wiring diagrams:
    - 1) For each free standing device, such as a computer, printer or the like, show the rear elevation of the device as a pictorial.
    - 2) Show the termination connectors on the device.
    - 3) Show the wire numbers attached to the connectors.
    - 4) Schedule the wire colors connected to the pins on each device connector.
  - f. Custom assembly diagrams:
    - 1) For each custom assembly such as a receptacle assembly, control panel or the like, provide an assembly drawing illustrating the appearance of the assembled device including dimensions, assembly components and functional attributes (momentary or alternate action switch, lens color, panel finish and the like).

g. Specification comparison:

- 1) Copy of specification annotated on line by line basis where proposed product or system differs from specified product or system. Any differences to be explained.
3. When application engineering and submittals have been prepared, a meeting shall be set up with the Architect/Engineer and Owner for preliminary shop drawing review. The project superintendent for the work of this division shall explain the entire system operation, equipment and other items as called for in the specification. Any drawings required shall be submitted one week in advance of proposed meeting date and preliminarily reviewed at this meeting. This meeting will be held in the Owner's jobsite office.
4. Each individual submittal item for materials and equipment shall be marked to show specification section and paragraph number which pertains to the item. Manufacturer description sheets shall have an arrow stamp pointing to each item on the sheet that is intended for review. Each operational feature of the systems included shall be addressed in narrative form and relate to specific system requirements described in the plans and specifications. All drawing submittals shall be submitted on same size sheets, identified by system, and sequentially numbered throughout the entire set.
5. Submittals shall be made for each of the systems being supplied for the project.
6. All shop drawings required shall be submitted at the same time in one packaged submittal.
7. Provide on drawings 30" x 42" size.

B. Product data:

1. Product list for Division 28 equipment.
2. As indicated in each Division 28 section and as indicated herein.
3. Description of system operation indicating overall system operation and purpose and capabilities of each component within system.
4. Cross reference data sheets to components shown on system/riser diagrams.

C. Samples:

1. As indicated in each Division 28 section.

D. Project information:

1. As indicated in each Division 28 section.

E. Contract closeout information:

1. As indicated in each Division 28 section.

F. Record drawings:

1. Keep a complete set of all electronic systems drawings in job site office for showing actual installation of electronic systems and equipment.

Drawings shall show location and routing of conduit and cable.

2. Use this set of drawings for no other purpose.
3. Where any material, equipment, or system components are installed differently from that shown, indicate differences clearly and neatly using ink or indelible pencil.
4. At project completion, submit record set of drawings to Construction Manager for review and distribution to the Owner.

#### 1.4 OPERATION AND MAINTENANCE DATA

- A. At the time of final inspection, provide four sets of complete data on electronic security and communication equipment used in this project. This data shall be in bound form and shall include all shop drawings required for this project.
- B. Operation and Maintenance Data for the electronic systems shall include layout drawings of each panel with each item of equipment identified and cross referenced with equipment data sheet. Operation and Maintenance Data shall include complete terminal block schedule for each panel with the following data for each point:
  1. Type of point, i.e., input, output, etc.
  2. Schedule relating points, terminal block numbers, and signal source or destination.
  3. Input and output schedule.
  4. Location and type of input source device.
  5. Location and type of output device controlled.
  6. Project-specific, illustrated user's manual.
  7. Provide detailed electrical schematics for all electrical/electronic components.
- C. All Operation and Maintenance Data shall include "record drawing" system interconnection diagrams with major components identified and number and type of interconnecting conductors. Submit two copies and one sepia of each record drawing.
  1. Floor plan drawings shall be provided showing location of equipment and routing of conduit and cable.
- D. Maintenance and operating instructions on all systems.
- E. Control wiring diagrams for all locking systems with each system identified.
- F. Certification from system manufacturers that systems are installed in accordance with manufacturer's recommendations and are functioning

correctly at the time of final inspection.

## 1.5 QUALITY ASSURANCE

- A. Perform all work in accord with following codes:
1. Federal, state and local codes, regulations and ordinances
  2. Underwriter's (UL) code requirements
  3. NFPA 70 National Electrical Code (NEC) (Latest Edition).
  4. Occupational Safety and Health Act (OSHA).
  5. All authorities having jurisdiction
  6. Factory Mutual System (FM) requirements
  7. NFPA 101: Life safety code.
  8. ANSI-A117.1: Handicap code, Chapter 553- Part V
  9. International Building Code, New Jersey Edition (Latest adopted Edition)
  10. American's with Disabilities Act (ADA)
- B. The intent of these specifications is to ensure the systems described in this division are provided and installed by a technically experienced installer and, further, that the work is fully coordinated between the various systems by a single installer who is technically qualified as described herein.
- C. Where the installer is a branch office or other division of a larger organization, the qualifications of the branch office or other division shall meet the requirements of the Contract Documents. The installer incorporated under the same name, shall have successfully completed a minimum of three similar correctional construction projects, both in scope and system types.
- D. The work of this division shall be managed and supervised by a full-time site project superintendent who shall have the following qualifications:
1. Experience in the applications engineering, installation, and supervision of similar construction projects both in scope and system type for a minimum of 5 years.
  2. Full time employee of the installer.
  3. Have a working knowledge of all systems installed under this division.
  4. Project superintendent shall be on site full time through duration of construction.
- E. Acceptable installers: Subject to their adherence to these specifications, the following are pre-qualified to perform the access control systems installation/integration work of this section:
1. Siemens
  2. Kratos

F. Project Conditions:

1. Examine Contract Documents to determine how other work will affect execution of electronic systems work.
2. Make arrangements for and pay for necessary permits, licenses, and inspections.
3. Determine and verify locations of all existing utilities on or near site.
4. Provide covering and shielding for all equipment to protect from damage.
5. Repair, restore or replace damaged, corroded and rejected items.
6. Include provisions for inclusion of prevailing wage requirements

1.6 OWNER'S TRAINING

A. Include all costs required to:

1. Train operation and maintenance personnel in use and maintenance of systems provided under this section.
2. Train maintenance staff in troubleshooting and maintenance of each system
3. Provide copies of technical manuals, including functional/operational circuit characteristics and schematic diagrams, for each system and system component.

B. Training sessions shall be conducted by instructors certified in writing by manufacturer of specific system.

1. Conduct sessions for not less than four hour periods during normal working hours, i.e., Monday through Friday, 8:00AM to 5:00PM.
2. Training session schedules shall conform to requirements of Owner.
3. Submit schedules to Owner for approval not less than two weeks prior to training session.
4. Do not schedule training sessions for different systems concurrently.
5. Training hours shall be cumulative of hours specified in each section.
6. Provide a minimum of 40 hours of training to be apportioned between systems.

C. Instruct operating staff in proper operation, including hands-on training.

D. Video record all training sessions including but not limited to classroom training, operational training and hands on training.

1. Provide two interactive DVD copies of recorded training material to Owner.

1.7 EXTRA MATERIALS

- A. Furnish spare parts as required in each section.
- B. All spare parts shall be new and in original packaging from manufacturer.
- C. Insure parts are package to protect from damage and to allow for easy storage.
- D. Provide inventory of all spare parts.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Acceptable manufacturers:
  - 1. Individual items:
    - a. Base:
      - 1) As noted in each Division 28 section.
    - b. Optional: As noted in each Division 28 section.
- B. Use only prime quality, new materials, apparatus and equipment.
- C. Use UL labeled electrical materials where listing has been established for materials or devices in question.
- D. Structural steel for supports: ASTM-A36/A36M.
  - 1. Galvanize members installed in areas of high humidity or condensation.
  - 2. Furnish other members with shop coat of rust inhibiting primer.
  - 3. Shop fabricate for field assembly using bolts.
  - 4. Minimize field welding.
  - 5. Retouch primer and galvanizing after field welding.
- E. Access doors, panels and frames.
  - 1. Style and type required for material in which installed.
  - 2. Provide in walls, floors, and ceilings to permit access to all equipment requiring service, adjustment or inspection. Include any location where splicing occurs.

### 2.2 WEATHER PROOF EQUIPMENT

- A. Use weatherproof (WP) enclosures for all exterior devices and equipment

### 2.3 LIGHTNING PROTECTION (TRANSIENT VOLTAGE SURGE SUPPRESSION-TVSS)

- A. Acceptable manufacturers:
  - 1. Transient voltage surge protection:
    - a. Base:
      - 1) Northern Technologies
    - b. Optional:
      - 1) Transtector systems
      - 2) Leviton

- c. Indicate on shop drawings locations of all transient voltage surge protection devices.
  2. All TVSS devices shall be provided by one manufacturer.
  3. TVSS manufacturer shall have a company-wide quality program and be ISO 9001 certified by an accredited organization.
- B. Protect all communication, video, and data equipment against surges induced on all control, communication, video, sensor and data cables. All cables and conductors which serve as control, sensor, audio, or data conductors which leave the building (including devices mounted on building exterior) shall have surge protection circuits installed that meet the IEEE 472 surge withstand capability test and the electrical transient tests as established in UL 365-1985. Fuses shall not be used for surge protection.
- C. Lightning protection devices for protection of control, sensor, audio, and data cabling shall be located as recommended by the manufacturer.
- D. All control, communications, video, sensor, and data cables connected to lightning protection devices shall be isolated from all other building internal and external wiring, and shall not occupy the same raceway, junction boxes, or wireways.
- E. All systems and components as specified herein shall be equipped with lightning protection devices, installed as described herein.
- F. All power connections, including 24VDC and 24VAC power supplies and direct wired or plug-in 120VAC power connections, for all systems and components as specified herein, shall be equipped with lightning suppression devices. All communication, data and power lightning protection devices shall be bonded to building grounding system in accordance with Article 250 of the National Electrical Code.
- G. Communication, data and signal:
  1. Shall incorporate Silicon Avalanche Diode devices as the primary protection means.
  2. Shall have a surge life of at least 10 operations for 10,000 amps, 8 x 20 microsecond wave.
  3. Shall have an initial clamping voltage suitable to the application and shall not exceed 200 percent of the peak signal voltage rating of the circuit.
  4. Shall have a peak clamping voltage suitable to the application and shall not exceed 300 percent of the peak signal voltage rating of the circuit.
  5. Shall be selected as required for the particular data frequencies and signal level characteristics of the application.
- H. Branch power circuits:
  1. Shall incorporate Silicon Avalanche Diode devices as the primary protection means.
  2. Shall have a surge life of at least 200 operations for 3,000 amps, 8 x 20 microsecond wave for 120V single phase application.
  3. Shall have a maximum single surge capacity of at least 19,000 amps for 8 x 20 microsecond wave.
  4. Shall have an initial clamping voltage of no greater than 250V (location category B, 500A) for 120V single phase application.

5. Shall have a peak clamping voltage of not greater than 500V (location category B, 500A) for 120V single phase application
- I. Video coaxial lines:
1. Shall incorporate silicon avalanche diode devices as the primary protection means.
  2. Shall have a surge life of at least 10 operations for 10,000 amps, 8 x 20 microsecond wave.
  3. Shall have an initial clamping voltage suitable to the application and shall not exceed 200 percent of the peak signal voltage rating of the circuit.
  4. Shall have a peak clamping voltage suitable to the application and shall not exceed 30V.
  5. Shall be selected as required for the particular data frequency and signal level characteristics of the application.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Use only thorough, highly skilled, and experienced workers.
- B. When changes in location of any work are required, obtain approval of Architect/Engineer prior to making change.
1. Make changes at no extra cost to Owner.
- C. Provide access panels (detention and non-detention) in any area where equipment is located which requires accessibility for service and/or maintenance.
- D. Do not change indicated sizes or configuration without written approval of Architect/Engineer.
- E. Provide to Division 26 subcontractor all non-standard electrical boxes related to Division 28 scope of work.
- F. Work provided by Division 26.
1. Complete conduit/ raceway system from the main head end equipment to the end field device, including any necessary standard size backboxes, equipment room wireways, system pullboxes and access panels.
  2. 208 volt AC wiring and connections to UPS equipment.
  3. Division 28: subcontractor shall submit conduit requirements and special backboxes for work to be performed by Division 26 subcontractor in a timely manner so as not to impede the progress of the work.
  4. Division 28: subcontractor shall provide information to Division 26 subcontractor for any additional conduits required or increase in size of conduit to effect the installation of the electronic systems contained herein. Costs of additional conduits or size increase shall be the responsibility of the Division 28 subcontractor.
  5. Division 28: subcontractor shall be responsible for 120 volt AC wiring and connections from the output of UPS distribution panel to all required Division 28 equipment including required connections.

- G. Fill percentage: Conduit fill shall not exceed 40 percent.
- H. Conduit verification:
  - 1. Verify that all conduit is clear of foreign matter and substances prior to pulling of wire or cable.
  - 2. Apply a chemically inert conduit lubricant to all wire and cable prior to pulling. Do not subject wire and cable to tension greater than recommended by the manufacturer. Under no circumstances shall wire or cable be "jerked", "yanked" or attached to any mechanical pulling device which exerts excessive force; shear or tensile.
  - 3. Secure all wire and cable runs vertically in conduit for continuous distances greater than thirty (30) feet at the vertical run terminations. Non-coaxial cables shall be secured by screw-flange nylon cable ties or similar devices. Symmetrical clamping devices with split, circular or other wire conforming, non-metallic bushings shall be provided for all other cables.
- I. Provide conductors, control and communications cables, coaxial cables, etc., for the work of this division.
- J. Division 28 systems (i.e., communications, door control, CCTV, access control, power) shall not occupy the same conduit/raceway.
- K. Provide installation, including electrical connections, cable pulling, testing and interfacing of systems.
- L. Deliver materials and equipment to project and store in original containers or cartons, properly protected from elements.
- M. Store items subject to moisture or temperature damage in dry, temperature controlled spaces.
- N. Execute all work described in this specification and shown on drawings and all work dependent upon, and necessary to, complete finish of the work so described or shown, in a workmanlike manner using materials best adapted to purposes where such work or material is not specifically mentioned.

### 3.2 CUTTING AND PATCHING

- A. Provide cutting, fitting, repairing, patching and finishing of installed work.
  - 1. Include installed work of other sections where it is necessary to disturb such work to permit installation of electronic systems work.
  - 2. Repair or replace existing or new work disturbed.
- B. Avoid cutting, where possible, by setting sleeves or frames, and by requesting openings in advance.
- C. Before cutting, obtain approval of Architect/Engineer.
  - 1. Use only approved methods.

2. Cut all holes neatly and as small as possible to admit work.
  3. Do not weaken walls or floors; locate holes in concrete to miss structural sections.
- D. Locate openings and sleeves to permit neat installation of conduits and equipment.
- E. Do not remove or damage fireproofing materials.
1. Install hangers, inserts, supports, and anchors prior to installation of fireproofing.
  2. Repair or replace fireproofing removed or damaged, at no extra cost.

### 3.3 COORDINATION

A. General:

1. Coordinate the work with the other trades to assure that where this work interfaces to other trades, those interfaces are provided, complete and functional.
2. Verify all field conditions.
3. Positioning Members: Provide additional support or positioning members as required for the proper installation and operation of equipment, materials and devices provided as part of this work as approved by the Architect or Owner without additional expense.
4. Interface Devices: Provide all items necessary to complete this work in conformance with the Contract Documents or the satisfaction of the Owner without any additional expense.

### 3.4 INSTALLATION OF EQUIPMENT

- A. Install all equipment in accord with manufacturer's recommendations.
- B. Provide all necessary anchoring devices and supports.
1. Use structural supports suitable for equipment.
  2. Check loadings and dimensions of equipment with shop drawings.
  3. Do not cut, or weld to, building structural members.
- C. Verify that equipment will fit support layouts indicated.
1. Where substitute equipment is used, revise indicated supports to fit at no additional cost
- D. Installation of security electronics headend equipment shall not proceed until the progress of construction has reached the following status in the area of installation:
1. Temperature and humidity are controlled.
  2. Finished ceiling, if any, is installed.
  3. Walls are finish coated with final paint treatment.
  4. Floors are finished and sealed.
- E. Installation of security electronics control room equipment shall not proceed until the progress of construction has reached the following status in the area of installation:

1. Temperature and humidity are controlled.
  2. Finished ceiling, if any, is installed.
  3. Walls are finish coated with final paint treatment.
  4. Floors are finished and sealed.
  5. Millwork is completely installed, approved and signed off.
- F. Equipment installed in areas where the previously described conditions have not been met and maintained after equipment installation shall be removed and either cleaned or replaced at the Architect/Engineer's discretion.
- G. Install equipment to permit easy access for normal maintenance.
1. Maintain easy access to switches, pull boxes, panels, receptacles, etc.
  2. Relocate items which interfere with access.

### 3.5 WIRING

- A. All wiring:
1. Point to point with appropriate terminal connections for every wire and component termination.
  2. All connections mechanically secure.
  3. Clearly identify, label and tag all wiring and terminals at each junction box and each terminal end to facilitate installation and maintenance, as well as cross referenced to O&M manuals.
  4. Terminate all stranded wire with solderless, crimp on, insulated terminals properly sized for gauge and type wire and screw terminal.
    - a. Identify all wire and cable clearly with permanent labels (wire tags) wrapped around the full circumference at least twice within 1 IN of each connection. Indicate the number designated on the associated shop or field drawings or run sheet, as applies. Assign wire or cable designations consistently throughout a given system. Each wire or cable shall carry the same labeled designation over its entire run, regardless of intermediate terminations.
  5. All wiring shall be color coded. Power circuits shall be color coded in accordance with NEC requirements. Lock wiring shall be color coded to match locking device color code where possible.
  6. Wiring of different systems shall not be placed in the same conduit.
- B. All cable and wire:
1. Standard type available from more than one cable manufacturer.
  2. Manufacturer and installer are responsible for system performance.
- C. All cabling, wiring, conduits/raceways and equipment housings: In strict accordance with recommendations of equipment manufacturer; finish and color of all face plates as directed by Architect/Engineer.
- D. Furnish and install all wiring and cable for electronic systems, and perform all

connections and equipment terminations.

1. Check each cabling system run thoroughly for opens, shorts, faults, and other discontinuities.
  2. Test each system receptacle for continuity, ground condition, and voltage level prior to allowing plug-in of system equipment.
  3. All conductors from outgoing terminal blocks in control consoles, panels and/or systems equipment cabinets to devices controlled to be continuous.
    - a. No splicing of conductors allowed.
  4. Field device terminations to be per manufacturer's requirements.
    - a. Conductor to conductor connections to be fully insulated crimp on male/female tab type or pin and sleeve type.
    - b. No conical spring connectors to be used.
- E. Install electronic systems wiring in conduit 3/4 IN minimum, unless otherwise indicated.
- F. Conductors:
1. All conductors to be stranded.
  2. 120 VAC and power supply connections: Minimum 12 GA, 600V insulation.
  3. 120 VAC and 24 VAC door power circuits: Minimum 14 GA, 600V insulation.
  4. Class 1, remote control and signaling circuits: Minimum 18 GA, 600 volt insulation.
  5. Class 2, remote control and signaling circuits: Minimum 20 GA, 300 volt insulation.
  6. Use larger wire size when recommended by equipment manufacturer or required for voltage drop.
  7. All communications wire to be rated for minimum 300 volt.
  8. Provide ground wire to all electric motor driven or solenoid locks with a rated voltage greater than 30 volts.
  9. All audio cable shielded.
  10. All data cable shielded.
- G. Wire lacing and dressing:
1. Lace, tie or harness wire and cable vertically, horizontally and at right angles to the enclosure surfaces as required herein and in accordance with accepted professional practice. Provide service loops where harnesses of different classes cross or where hinged panels are to be interconnected.
  2. Dress, lace or harness all wire and cable to prevent mechanical stress on electrical connections. No wire or cable shall be supported by a connection point.
- H. Boxes: Provide a 6 IN loop for all wire and cable routed through pull boxes or distribution panels. Cable loops and bends shall not be at a radius smaller than that recommended by the manufacturer. Enlarge pull boxes as necessary to accommodate this requirement.
- I. Wiring practices:
1. Non-coaxial connections: Make all non-coaxial connections (except microphone or line level) to screw-type barrier blocks with insulated crimp-type spade lugs or Kulka 3700 type barrier blocks. Use of rail mount compression terminals is

allowable. Size all lugs properly to assure high electrical integrity, i.e., low resistance connections. Connect only one (1) wire per spade lug and not more than two (2) lugs per screw terminal. No "free" (i.e., stak-on) splices are acceptable. Wire nuts and/or electrical tape connection are absolutely forbidden.

### 3.6 FIELD QUALITY CONTROL

- A. Perform indicated tests to demonstrate workmanship, operation, and performance.
  - 1. Conduct tests in presence of Architect/Engineer, Owner and, if required inspectors of agencies having jurisdiction.
  - 2. Arrange date of tests in advance with Architect/Engineer, manufacturer and installer.
  - 3. Give minimum of 1 week notice to all inspectors.
  - 4. Furnish or arrange for use of electrical energy, steam, water, diesel fuel, or gas required for tests.
- B. Repair or replace equipment and systems found inoperative or defective and retest.
  - 1. If equipment or system fails retest, replace it with products conforming with Contract Documents.
  - 2. Continue remedial measures and retests until satisfactory results are obtained.
- C. Test equipment and systems as indicated for each item, unless otherwise recommended by manufacturer.

### 3.7 SYSTEMS OPERATIONAL TESTS

- A. Prior to the time of substantial completion, an operational test, witnessed by a representative of the Architect/Engineer and Owner, shall be held of each system comprising the total electronic system to determine full compliance with the contract drawings. Provide all personnel, equipment, instrumentation and communication equipment and include all costs of testing in the contract.
- B. The installer/integrator shall certify in writing that the systems are installed in compliance with the manufacturer's recommendations, comply with the requirements of the contract documents and are operating correctly. These written certifications shall be submitted to the Architect/Engineer and shall signify that the total electronic system is operationally tested and ready for final acceptance testing by the Architect/Engineer.
- C. Final acceptance tests of the total electronic systems shall be conducted as directed by the Architect/Engineer but generally described as follows:
  - 1. Locking system shall be tested by operation of each individual locking device with status visual display observed.
  - 2. Remote control and emergency release of locking systems shall also be tested.
  - 3. Intercom system shall be tested by operation of all individual features and stations.
  - 4. Each individual alarm system and each group of alarm systems operating both individually and collectively shall be tested for alarm signal initiation, tamper signal initiation and loss of power signal initiation as directed by the Architect/Engineer.

- D. It shall be the responsibility of the Integrator to submit for the Architect/Engineer's approval, a proposed systems check list for use in final acceptance testing. This checklist shall consist of a list of individual tasks on a device-by-device basis, organized into logical groups per system being supplied. The checklist shall be submitted not later than 90 days prior to the scheduled start of acceptance testing. Acceptance testing may not begin until the Architect/Engineer has approved the form and content of the acceptance checklist.

### 3.8 ADJUST AND CLEAN

- A. Inspect all equipment and put in good working order
- B. Clean all exposed and concealed items.
- C. All equipment shall be clean and dust free.

### 3.9 PUTTING SYSTEMS IN OPERATION- START UP

- A. Put all systems into satisfactory operation prior to final acceptance, at time agreed to by Owner and Architect/Engineer.
- B. Operate all systems in good working order for period of 10 working days prior to final acceptance testing.

### 3.10 DEVICE MOUNTING SCHEDULE

- A. Dimensions are to center of device unless otherwise indicated. Coordinate outlet locations with all architectural millwork, hollow metal and/or casework elevations. Coordinate device mounting height with wainscoting where provided. Where top of wainscot and device mounting height overlaps, shift device down to provide 2 IN gap between top of device and top of wainscot.
- B. Mounting heights as indicated below:
  - 1. Speaker volume control: 48 IN, AFF
  - 2. Duress pushbutton (wall mounted): 48 IN, AFF
  - 3. Intercom call button: 48 IN, AFF or as noted
  - 4. Door control release pushbutton: 48 IN, AFF or as noted
  - 5. Intercom flush wall station: 48 IN, AFF

### 3.11 LABELING

- A. Labeling:
  - 1. Engraved phenolic nameplates for security equipment cabinets, and enclosures.
  - 2. Label all junction boxes using black permanent ink with type of system wiring installed in junction box, i.e., access control, detention door controls, intercom, CCTV, etc.

END OF SECTION 280500

## SECTION 280513 - CONDUCTORS AND CABLES FOR ELECTRONIC SAFETY AND SECURITY

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

1. UTP cabling.
2. 62.5/125-micrometer, multimode optical fiber cabling.
3. RS-232 cabling.
4. RS-485 cabling.
5. Low-voltage control cabling.
6. Control-circuit conductors.
7. Fire alarm wire and cable.
8. Identification products.

#### 1.3 DEFINITIONS

- A. BICSI: Building Industry Consulting Service International.
- B. EMI: Electromagnetic interference.
- C. IDC: Insulation displacement connector.
- D. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.
- E. Open Cabling: Passing telecommunications cabling through open space (e.g., between the studs of a wall cavity).
- F. RCDD: Registered Communications Distribution Designer.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  1. For coaxial cable, include the following installation data for each type used:

- a. Nominal OD.
- b. Minimum bending radius.
- c. Maximum pulling tension.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified layout technician, installation supervisor, and field inspector.
- B. Source quality-control reports.
- C. Field quality-control reports.

#### 1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An NRTL.
  1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

#### 1.7 DELIVERY, STORAGE, AND HANDLING

- A. Test cables upon receipt at Project site.
  1. Test optical fiber cable to determine the continuity of the strand end to end. Use optical loss test set.
  2. Test optical fiber cable on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector; include the loss value of each. Retain test data and include the record in maintenance data.
  3. Test each pair of UTP cable for open and short circuits.

#### 1.8 FIELD CONDITIONS

- A. Do not install conductors and cables that are wet, moisture damaged, or mold damaged.
  1. Indications that wire and cables are wet or moisture damaged include, but are not limited to, discoloration and sagging of factory packing materials.
- B. Environmental Limitations: Do not deliver or install UTP, optical fiber, and coaxial cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Flame-Spread Index: 25 or less.
  - 2. Smoke-Developed Index: 50 or less.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

### 2.2 BACKBOARDS

- A. Backboards: Plywood, fire-retardant treated, with fire retardant black paint: 3/4 by 48 by 96 inches.

### 2.3 UTP CABLE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Superior Essex Inc.
  - 2. Berk-Tek; a Nexans company.
  - 3. SYSTIMAX Solutions; a CommScope, Inc. brand.
  - 4. Or Approved Equal.
- B. Description: 100-ohm, four-pair UTP, covered with a blue thermoplastic jacket.
  - 1. Comply with ICEA S-90-661 for mechanical properties.
  - 2. Comply with ANSI/TIA-568-C.1 for performance specifications.
  - 3. Comply with ANSI/TIA-568-C.2, Category 6.
  - 4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444 and NFPA 70 for the following types:
    - a. Communications, Plenum Rated: Type CMP, complying with NFPA 262.
      - 1) Superior Essex DataGain® Category 6+ or Approved Equal
        - a. Part # 66-246-XB (X=Color)

### 2.4 UTP CABLE HARDWARE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Leviton Network Solutions

2. Ortronics
  3. SYSTIMAX Solutions; a CommScope, Inc. brand.
  4. Or Approved Equal.
- B. General Requirements for Cable Connecting Hardware: Comply with ANSI/TIA-568-C.2, IDC type, with modules designed for punch-down caps or tools. Cables shall be terminated with connecting hardware of same category or higher.
- C. Patch Panel: Modular panels housing multiple-numbered jack units with IDC-type connectors at each jack for permanent termination of pair groups of installed cable
1. Leviton 110 Style Flat Panels or Approved Equal
    - (a) 24 Port - Part # 69586-U24
    - (b) 48 Port - Part # 69586-U48
- D. Jacks and Jack Assemblies: Modular, color-coded, eight-position modular receptacle units with integral IDC-type terminals.
1. Leviton extreme® 6+ CAT 6 Connector with / RFT or Approved equal.  
Part # 61110-R\*6 (\*=Color)
- E. Patch Cords: Factory-made, four-pair cables in 48-inch lengths; terminated with eight-position modular plug at each end.
1. Patch cords shall have bend-relief-compliant boots and color-coded icons to ensure Category 6 performance. Patch cords shall have latch guards to protect against snagging.
  2. Patch cords shall have color-coded boots for circuit identification.
    - a. Leviton SlimLine UTP Patch Cord with Matching Boot or Approved equal  
Part # 6D460-xx\* (xx=Length,\*=Color)

## 2.5 OPTICAL FIBER CABLE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Superior Essex Inc.
  2. Berk-Tek; a Nexans company.
  3. SYSTIMAX Solutions; a CommScope, Inc. brand.
  4. Or Approved Equal.
- B. Description: Multimode, 62.5/125-micrometer, 24-fiber,tight buffer, optical fiber cable.
1. Comply with ICEA S-83-596 for mechanical properties.

2. Comply with ANSI/TIA-568-C.3 for performance specifications.
  3. Comply with TIA-492AAAC for detailed specifications.
  4. Conductive cable shall be steel armored type.
  5. Maximum attenuation dB/Km @ 850/1300 nm: 3.5/1.5
  6. Minimum overfilled modal bandwidth: 500 MHz-km @ 850 nm.
  7. Minimum overfilled modal bandwidth: 500 MHz-km @ 1300 nm
- 
8. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444, UL 1651, and NFPA 70 for the following types:
    - a. Plenum Rated, Nonconductive: Type OFNP, complying with NFPA 262.
      - 1) Superior Essex OM3 Plenum Armored Fiber  
Part # LXXXB401 (XXX=Strand Count)

C. Jacket:

1. Jacket Color: Aqua for 50/125-micrometer cable.
2. Cable cordage jacket, fiber, unit, and group color shall be according to TIA-598-C.
3. Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed 40 inches.

## 2.6 OPTICAL FIBER CABLE HARDWARE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Leviton Network Solutions.
  2. Berk-Tek; a Nexans company.
  3. SYSTIMAX Solutions; a CommScope, Inc. brand.
  4. Or Approved equal.
- B. Cable Connecting Hardware: Meet the Optical Fiber Connector Intermateability Standards (FOCIS) specifications of TIA-604-2-B, TIA-604-3-B, and TIA-604-12. Comply with ANSI/TIA-568-C.3.
  1. Comply with Optical Fiber Connector Intermateability Standards (FOCIS) specifications of TIA-604-2-B, TIA-604-3-B, and TIA-604-12. Comply with ANSI/TIA-568-C.3.
  2. Quick-connect, simplex and duplex, Type LC connectors. Insertion loss not more than 0.75 dB.
    - a. Leviton FASTCAM LC LOMM Connector Aqua or Approved Equal  
Part #49991-5LC

## 2.7 RS-232 CABLE

- A. Standard Cable: NFPA 70, Type CM.

1. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Polypropylene insulation.
3. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
4. PVC jacket.
5. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
6. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Plastic insulation.
3. Individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage.
4. Plastic jacket.
5. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
6. Flame Resistance: Comply with NFPA 262.

2.8 RS-485 CABLE

A. Standard Cable: NFPA 70, Type CM.

1. Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated Cable: NFPA 70, Type CMP.

1. Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
2. Fluorinated ethylene propylene insulation.
3. Unshielded.
4. Fluorinated ethylene propylene jacket.
5. Flame Resistance: NFPA 262, Flame Test.

2.9 LOW-VOLTAGE CONTROL CABLE

A. Paired Cable: NFPA 70, Type CMG.

1. One pair, twisted, No. 16 AWG, stranded (19x29) and No. 18 AWG, stranded (19x30) tinned copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated, Paired Cable: NFPA 70, Type CMP.

1. One pair, twisted, No. 16 AWG, stranded (19x29) and No. 18 AWG, stranded (19x30) tinned copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with NFPA 262.

## 2.10 CONTROL-CIRCUIT CONDUCTORS

- A. Class 1 Control Circuits: Stranded copper, Type THHN-THWN, complying with UL 83, in raceway.
- B. Class 2 Control Circuits: Stranded copper, Type THHN-THWN, complying with UL 83, in raceway.
- C. Class 3 Remote-Control and Signal Circuits: Stranded copper, Type TW or TF, complying with UL 83.

## 2.11 FIRE ALARM WIRE AND CABLE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Comtran Corporation.
  2. Genesis Cable Products; Honeywell International, Inc.
  3. West Penn Wire.
  4. Or approved equal.
- B. General Wire and Cable Requirements: NRTL listed and labeled as complying with NFPA 70, Article 760.
- C. Signaling Line Circuits: Twisted, shielded pair, size as recommended by system manufacturer.
  1. Circuit Integrity Cable: Twisted shielded pair, NFPA 70, Article 760, Classification CI, for power-limited fire alarm signal service Type FPL. NRTL listed and labeled as complying with UL 1424 and UL 2196 for a 2-hour rating.
- D. Non-Power-Limited Circuits: Solid-copper conductors with 600-V rated, 75 deg C, color-coded insulation.
  1. Low-Voltage Circuits: No. 16 AWG, minimum.
  2. Line-Voltage Circuits: No. 12 AWG, minimum.
  3. Multiconductor Armored Cable: NFPA 70, Type MC, copper conductors, Type TFN/THHN conductor insulation, copper drain wire, copper armor with outer jacket with red identifier stripe, NRTL listed for fire alarm and cable tray installation, plenum rated, and complying with requirements in UL 2196 for a 2-hour rating.

## 2.12 IDENTIFICATION PRODUCTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Brady Worldwide, Inc.
  - 2. HellermannTyton North America.
  - 3. Kroy LLC.
  - 4. Or approved equal.
- B. Comply with UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
- C. Comply with requirements in Section 260553 "Identification for Electrical Systems."

## 2.13 SOURCE QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to evaluate cables.
- B. Factory test UTP and optical fiber cables on reels according to ANSI/TIA-568-C.1.
- C. Factory test UTP cables according to ANSI/TIA-568-C.2.
- D. Factory test multimode optical fiber cables according to TIA-526-14-A and ANSI/TIA-568-C.3.
- E. Factory sweep test coaxial cables at frequencies from 5 MHz to 1 GHz. Sweep test shall test the frequency response, or attenuation over frequency, of a cable by generating a voltage whose frequency is varied through the specified frequency range and graphing the results.
- F. Cable will be considered defective if it does not pass tests and inspections.
- G. Prepare test and inspection reports.

## PART 3 - EXECUTION

### 3.1 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for installation of supports for cables.

### 3.2 WIRING METHOD

- A. Install wiring in metal pathways and wireways.
  - 1. Minimum conduit size shall be 3/4 inch. Control and data transmission wiring shall not share conduit with other building wiring systems.

2. Comply with requirements in Section 280528 "Pathways for Electronic Safety and Security."
- B. Install cable, concealed in accessible ceilings, walls, and floors when possible.
- C. Wiring within Enclosures:
1. Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.
  2. Install lacing bars and distribution spools.
  3. Separate power-limited and non-power-limited conductors as recommended in writing by manufacturer.
  4. Install conductors parallel with or at right angles to sides and back of enclosure.
  5. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with intrusion system to terminal blocks.
  6. Mark each terminal according to system's wiring diagrams.
  7. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.

### 3.3 INSTALLATION OF CONDUCTORS AND CABLES

- A. Comply with NECA 1.
- B. Conductors: Size according to system manufacturer's written instructions unless otherwise indicated.
- C. General Requirements for Cabling:
1. Comply with ANSI/TIA-568-C.1.
  2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
  3. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
  4. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
  5. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
  6. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
  7. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
  8. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
- D. UTP Cable Installation: Install using techniques, practices, and methods that are consistent with Category 6 rating of components and that ensure Category 6 performance of completed and linked signal paths, end to end.

1. Comply with ANSI/TIA-568-C.2.
2. Install 110-style IDC termination hardware unless otherwise indicated.
3. Do not untwist UTP cables more than 1/2 inch from the point of termination to maintain cable geometry.

E. Optical Fiber Cable Installation:

1. Comply with ANSI/TIA-568-C.3.
2. Cable shall be terminated on connecting hardware that is rack or cabinet mounted.

F. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Suspend copper cable not in a wireway or pathway a minimum of 8 inches above ceilings by cable supports not more than 60 inches apart.
3. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

G. Separation from EMI Sources:

1. Comply with BICSI TDMM and TIA-569-B recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
  - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches.
  - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches.
  - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches.
3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
  - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches.
  - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches.
  - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches.
4. Separation between cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
  - a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
  - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches.
  - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches.
5. Separation between Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches.
6. Separation between Cables and Fluorescent Fixtures: A minimum of 5 inches.

### 3.4 FIRE ALARM WIRING INSTALLATION

- A. Comply with NECA 1 and NFPA 72.
- B. Wiring Method: Install wiring in metal raceway according to Section 260533 "Raceways and Boxes for Electrical Systems."
  - 1. Install plenum cable in environmental air spaces, including plenum ceilings.
  - 2. Fire alarm circuits and equipment control wiring associated with the fire alarm system shall be installed in a dedicated raceway system. This system shall not be used for any other wire or cable.
- C. Wiring Method:
  - 1. Cables and raceways used for fire alarm circuits, and equipment control wiring associated with the fire alarm system, may not contain any other wire or cable.
  - 2. Fire-Rated Cables: Use of 2-hour, fire-rated fire alarm cables, NFPA 70, Types MI and CI, is[ **not**] permitted.
  - 3. Signaling Line Circuits: Power-limited fire alarm cables may be installed in the same cable or raceway as signaling line circuits.
- D. Wiring within Enclosures: Separate power-limited and non-power-limited conductors as recommended by manufacturer. Install conductors parallel with or at right angles to sides and back of the enclosure. Bundle, lace, and train conductors to terminal points with no excess. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with the fire alarm system to terminal blocks. Mark each terminal according to the system's wiring diagrams. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.
- E. Cable Taps: Use numbered terminal strips in junction, pull, and outlet boxes, cabinets, or equipment enclosures where circuit connections are made.
- F. Color-Coding: Color-code fire alarm conductors differently from the normal building power wiring. Use one color-code for alarm circuit wiring and another for supervisory circuits. Color-code audible alarm-indicating circuits differently from alarm-initiating circuits. Use different colors for visible alarm-indicating devices. Paint fire alarm system junction boxes and covers red.
- G. Risers: Install at least two vertical cable risers to serve the fire alarm system. Separate risers in close proximity to each other with a minimum one-hour-rated wall, so the loss of one riser does not prevent the receipt or transmission of signals from other floors or zones.
- H. Wiring to Remote Alarm Transmitting Device: 1-inch conduit between the fire alarm control panel and the transmitter. Install number of conductors and electrical supervision for connecting wiring as needed to suit monitoring function.

### 3.5 POWER AND CONTROL-CIRCUIT CONDUCTORS

- A. 120-V Power Wiring: Install according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables" unless otherwise indicated.
- B. Minimum Conductor Sizes:
  - 1. Class 1 remote-control and signal circuits, No. 14 AWG.
  - 2. Class 2 low-energy, remote-control and signal circuits, No. 16 AWG.
  - 3. Class 3 low-energy, remote-control, alarm and signal circuits, No. 12 AWG.

### 3.6 CONNECTIONS

- A. Comply with requirements in Section 281300 "Access Control" for connecting, terminating, and identifying wires and cables.
- B. Comply with requirements in Section 282300 "Video Surveillance" for connecting, terminating, and identifying wires and cables.
- C. Comply with requirements in Section 285000 "Security Management Systems" for connecting, terminating, and identifying wires and cables.

### 3.7 FIRESTOPPING

- A. Comply with requirements in Section 078413 "Penetration Firestopping."
- B. Comply with TIA-569-B, "Firestopping" Annex A.
- C. Comply with BICSI TDMM, "Firestopping Systems" Article.

### 3.8 GROUNDING

- A. For communications wiring, comply with J-STD-607-B and with BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
- B. For low-voltage wiring and cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

### 3.9 IDENTIFICATION

- A. Identify system components, wiring, and cabling complying with ANSI-TIA-606-A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

### 3.10 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Visually inspect UTP and optical fiber cable jacket materials for NRTL certification markings. Inspect cabling terminations to confirm color-coding for pin assignments, and inspect cabling connections to confirm compliance with ANSI/TIA-568-C.1.
  - 2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
  - 3. Test UTP cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross connection.
    - a. Test instruments shall meet or exceed applicable requirements in ANSI/TIA-568-C.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
  - 4. Optical Fiber Cable Tests:
    - a. Test instruments shall meet or exceed applicable requirements in ANSI/TIA-568-C.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
    - b. Link End-to-End Attenuation Tests:
      - 1) Multimode Link Measurements: Test at 850 or 1300 nm in one direction according to TIA-526-14-A, Method B, One Reference Jumper.
      - 2) Attenuation test results for links shall be less than 2.0 dB. Attenuation test results shall be less than that calculated according to equation in ANSI/TIA-568-C.1.
- D. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.
- E. End-to-end cabling will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

END OF SECTION 280513

## SECTION 280526 - GROUNDING AND BONDING FOR ELECTRONIC SAFETY AND SECURITY

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:
  - 1. Grounding conductors.
  - 2. Grounding connectors.
  - 3. Grounding busbars.

#### 1.3 DEFINITIONS

- A. Signal Ground: The ground reference point designated by manufacturer of the system that is considered to have zero voltage.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

### PART 2 - PRODUCTS

#### 2.1 CONDUCTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Harger Lightning and Grounding.
  - 2. Panduit Corp.
  - 3. Tyco Electronics Corp.
  - 4. Or approved Equal.
- B. Comply with UL 486A-486B.
- C. Insulated Conductors: Stranded copper wire, green or green with yellow stripe insulation, insulated for 600 V, and complying with UL 83.
  - 1. Ground wire for custom-length equipment ground jumpers shall be No. 6 AWG, 19-strand, UL-listed, Type THHN wire.
- D. Bare Copper Conductors:
  - 1. Solid Conductors: ASTM B 3.

2. Stranded Conductors: ASTM B 8.
3. Tinned Conductors: ASTM B 33.
4. Bonding Cable: 28 kmils, 14 strands of No. 17 AWG conductor, and 1/4 inch in diameter.
5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
6. Bonding Jumper: Tinned-copper tape, braided conductors terminated with two-hole copper ferrules; 1-5/8 inches wide and 1/16 inch thick.

## 2.2 CONNECTORS

- A. Irreversible connectors listed for the purpose. Listed by an NRTL as complying with NFPA 70 for specific types, sizes, and combinations of conductors and other items connected. Comply with UL 486A-486B.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Burndy; Part of Hubbell Electrical Systems.
  2. Chatsworth Products, Inc.
  3. Harger Lightning and Grounding.
  4. Panduit Corp.
  5. Tyco Electronics Corp.
  6. Or approved equal.
- C. Compression Wire Connectors: Crimp-and-compress connectors that bond to the conductor when the connector is compressed around the conductor. Comply with UL 467.
  1. Electroplated tinned copper, C and H shaped.
- D. Busbar Connectors: Cast silicon bronze, solderless compression or exothermic-type mechanical connector; with a long barrel and two holes spaced on 5/8- or 1-inch centers for a two-bolt connection to the busbar.
- E. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

## 2.3 GROUNDING BUSBARS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Chatsworth Products, Inc.
  2. Harger Lightning and Grounding.
  3. Panduit Corp.
  4. Or approved equal
- B. Grounding Busbars: Predrilled rectangular bars of hard-drawn solid copper, 1/4 by 2 inches in cross section, length as indicated on Drawings. The busbar shall be for wall mounting, shall be NRTL listed as complying with UL 467, and shall comply with J-STD-607-A.

1. Predrilling shall be with holes for use with lugs specified in this Section.
  2. Mounting Hardware: Stand-off brackets that provide at least a 2-inch separation from wall.
  3. Stand-off insulators for mounting shall be Lexan or PVC. Comply with UL 891 for use in 600 V switchboards, impulse tested at 5000 V.
- C. Rack and Cabinet Grounding Busbars: Rectangular bars of hard-drawn solid copper, accepting conductors ranging from No. 14 to No. 2/0 AWG, NRTL listed as complying with UL 467, and complying with J-STD-607-A. Predrilling shall be with holes for use with lugs specified in this Section.
1. Cabinet-Mounted Busbar: Terminal block, with stainless-steel or copper-plated hardware for attachment to the cabinet.
  2. Rack-Mounted Horizontal Busbar: Designed for mounting in 19- or 23-inch equipment racks. Include a copper splice bar for transitioning to an adjoining rack, and stainless-steel or copper-plated hardware for attachment to the rack.
  3. Rack-Mounted Vertical Busbar: 72 or 36 inches stainless-steel or copper-plated hardware for attachment to the rack.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION

- A. Comply with IEEE 1100, "Recommended Practice for Power and Grounding Electronic Equipment."
1. Ground cable shields, drain conductors, and equipment to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.
  2. Bond shields and drain conductors to ground at only one point in each circuit.
- B. Signal Ground:
1. For each system, establish the signal ground and label that location as such.
  2. Bond the signal ground to the alternating-current (ac) power system service by connecting to one of the following listed locations, using insulated No. 6 AWG, stranded, Type THHN wire:
    - a. Grounding bar in an electrical power panelboard if located in the same room or space as the signal ground.
    - b. Telecommunications grounding busbar.
- C. Comply with NECA 1.

#### 3.2 APPLICATION

- A. Conductors: Install solid conductor for No. 8 AWG and smaller and stranded conductors for No. 6 AWG and larger unless otherwise indicated.
- B. Grounding and Bonding Conductors:

1. Install in the straightest and shortest route between the origination and termination point, and no longer than required. The bend radius shall not be smaller than eight times the diameter of the conductor. No one bend may exceed 90 degrees.
2. Install without splices.
3. Support at not more than 36-inch intervals.

### 3.3 CONNECTIONS

- A. Stacking of conductors under a single bolt is not permitted when connecting to busbars.
- B. Assemble the wire connector to the conductor, complying with manufacturer's written instructions and as follows:
  1. Use crimping tool and the die specific to the connector.
  2. Pretwist the conductor.
  3. Apply an antioxidant compound to all bolted and compression connections.
- C. Shielded Cable: Bond the shield of shielded cable to the signal ground. Comply with TIA/EIA-568-B.1 and TIA/EIA-568-B.2 when grounding screened, balanced, twisted-pair cables.
- D. Rack- and Cabinet-Mounted Equipment: Bond powered equipment chassis to the cabinet or rack grounding bar. Power connection shall comply with NFPA 70; the equipment grounding conductor in the power cord of cord- and plug-connected equipment shall be considered as a supplement to bonding requirements in this Section.

### 3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
  1. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
- C. Grounding system will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

END OF SECTION 280526

## SECTION 280528 - PATHWAYS FOR ELECTRONIC SAFETY AND SECURITY

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

1. Metal conduits, tubing, and fittings.
2. Optical-fiber-cable pathways and fittings.
3. Metal wireways and auxiliary gutters.
4. Surface pathways.
5. Boxes, enclosures, and cabinets.
6. Handholes and boxes for exterior underground cabling.

- B. Related Requirements:

1. Section 260533 "Raceways and Boxes for Electrical Systems" for conduits, wireways, surface raceways, boxes, enclosures, cabinets, handholes, and faceplate adapters serving electrical systems.
2. Section 270528 "Pathways for Communications Systems" for conduits, surface pathways, innerduct, boxes, and faceplate adapters serving communications systems.

#### 1.3 DEFINITIONS

- A. GRC: Galvanized rigid steel conduit.
- B. IMC: Intermediate metal conduit.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For surface pathways, wireways and fittings, hinged-cover enclosures, and cabinets.
- B. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.
- C. Samples: For wireways and surface pathways and for each color and texture specified, 12 inches long.

## 1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Pathway routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:
  - 1. Structural members in paths of pathway groups with common supports.
  - 2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.
- B. Qualification Data: For professional engineer.
- C. Seismic Qualification Certificates: For pathway racks, enclosures, cabinets, and equipment racks and their mounting provisions, including those for internal components, from manufacturer.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which certification is based and their installation requirements.
  - 4. Detailed description of conduit support devices and interconnections on which certification is based and their installation requirements.
- D. Source quality-control reports.

## PART 2 - PRODUCTS

### 2.1 METAL CONDUITS, TUBING, AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Allied Tube & Conduit.
  - 2. Anamet Electrical, Inc.
  - 3. O-Z/Gedney.
  - 4. Republic Conduit.
  - 5. Robroy Industries.
  - 6. Southwire Company.
  - 7. Thomas & Betts Corporation.
  - 8. Wheatland Tube Company.
  - 9. Or approved equal.
- B. General Requirements for Metal Conduits and Fittings:
  - 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 2. Comply with TIA-569-B.

- C. GRC: Comply with ANSI C80.1 and UL 6.
- D. IMC: Comply with ANSI C80.6 and UL 1242.
- E. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit.
  - 1. Comply with NEMA RN 1.
  - 2. Coating Thickness: 0.040 inch, minimum.
- F. EMT: Comply with ANSI C80.3 and UL 797.
- G. FMC: Comply with UL 1; zinc-coated steel.
- H. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.
- I. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.
  - 1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886 and NFPA 70.
  - 2. Fittings for EMT:
    - a. Material: Steel or die cast.
    - b. Type: Compression.
  - 3. Expansion Fittings: PVC or steel to match conduit type, complying with UL 467, rated for environmental conditions where installed, and including flexible external bonding jumper.
  - 4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch, with overlapping sleeves protecting threaded joints.
- J. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

## 2.2 OPTICAL-FIBER-CABLE PATHWAYS AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Alpha Wire Company.
  - 2. Arnco Corporation.
  - 3. Endot Industries Inc.
  - 4. IPEX.
  - 5. Lamson & Sessions; Carlon Electrical Products.
  - 6. Or approved equal.
- B. Description: Comply with UL 2024; flexible-type pathway, approved for plenum installation unless otherwise indicated.

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with TIA-569-B.

### 2.3 METAL WIREWAYS AND AUXILIARY GUTTERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Cooper B-Line, Inc.
  2. Hoffman.
  3. Mono-Systems, Inc.
  4. Square D.
  5. Or approved equal.
- B. Description: Sheet metal, complying with UL 870 and NEMA 250, Type 1 or Type 3R unless otherwise indicated, and sized according to NFPA 70.
1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  2. Comply with TIA-569-B.
- C. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
- D. Wireway Covers: Hinged type unless otherwise indicated.
- E. Finish: Manufacturer's standard enamel finish.

### 2.4 SURFACE PATHWAYS

- A. General Requirements for Surface Pathways:
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  2. Comply with TIA-569-B.
- B. Surface Metal Pathways: Galvanized steel with snap-on covers complying with UL 5. Manufacturer's standard enamel finish in color selected by Architect.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Mono-Systems, Inc.
    - b. Niedax-Kleinhuis USA, Inc.
    - c. Panduit Corp.
    - d. Wiremold / Legrand.

e. Or approved equal.

C. Tele-Power Poles:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Mono-Systems, Inc.
  - b. Panduit Corp.
  - c. Wiremold / Legrand.
  - d. Or approved equal.
2. Material: Galvanized steel with ivory baked-enamel finish.
3. Fittings and Accessories: Dividers, end caps, covers, cutouts, wiring harnesses, devices, mounting materials, and other fittings shall match and mate with tele-power pole as required for complete system.

2.5 BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper Technologies Company; Cooper Crouse-Hinds.
2. EGS/Appleton Electric.
3. Hoffman.
4. Lamson & Sessions; Carlon Electrical Products.
5. O-Z/Gedney.
6. RACO; Hubbell.
7. Robroy Industries.
8. Spring City Electrical Manufacturing Company.
9. Thomas & Betts Corporation.
10. Wiremold / Legrand.
11. Or approved equal

B. General Requirements for Boxes, Enclosures, and Cabinets:

1. Comply with TIA-569-B.
2. Boxes, enclosures and cabinets installed in wet locations shall be listed for use in wet locations.

C. Sheet-Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

D. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.

E. Box extensions used to accommodate new building finishes shall be of same material as recessed box.

F. Metal Floor Boxes:

1. Material: Cast metal.
  2. Type: Fully adjustable.
  3. Shape: Rectangular.
  4. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- G. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
- H. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, cast aluminum with gasketed cover.
- I. Device Box Dimensions: 4-inches square by 2-1/8 inches deep.
- J. Gangable boxes are allowed.
- K. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.
- L. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 1 or Type 3R with continuous-hinge cover with flush latch unless otherwise indicated.
1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
  2. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.
- M. Cabinets:
1. NEMA 250, Type 1 or Type 3R, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
  2. Hinged door in front cover with flush latch and concealed hinge.
  3. Key latch.
  4. Metal barriers to separate wiring of different systems and voltage.
  5. Accessory feet where required for freestanding equipment.
  6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- 2.6 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND CABLING
- A. General Requirements for Handholes and Boxes:
1. Boxes and handholes for use in underground systems shall be designed and identified as defined in NFPA 70, for intended location and application.
  2. Boxes installed in wet areas shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  3. Comply with TIA-569-B.
- B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel, fiberglass or a combination of the two.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Carson Industries LLC.
  - b. Oldcastle Precast, Inc; Christy Concrete Products.
  - c. Quazite: Hubbell Power System, Inc; Hubbell Power Systems.
  - d. Synertech Moulded Products.
  - e. Or approved equal.
2. Standard: Comply with SCTE 77.
3. Configuration: Designed for flush burial with open bottom unless otherwise indicated.
4. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
5. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
6. Cover Legend: Molded lettering, "SECURITY".
7. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
8. Handholes 12 Inches Wide by 24 Inches Long and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

## 2.7 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

- A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
  1. Tests of materials shall be performed by an independent testing agency.
  2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
  3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

## PART 3 - EXECUTION

### 3.1 PATHWAY APPLICATION

- A. Outdoors: Apply pathway products as specified below unless otherwise indicated:
  1. Exposed Conduit: GRC.
  2. Concealed Conduit, Aboveground: GRC.
  3. Underground Conduit: RNC, Type EPC-80-PVC, direct buried.
  4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
  5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.
- B. Indoors: Apply pathway products as specified below unless otherwise indicated:

1. Exposed, Not Subject to Physical Damage: EMT.
  2. Exposed, Not Subject to Severe Physical Damage: EMT.
  3. Exposed and Subject to Severe Physical Damage: GRC. Pathway locations include the following:
    - a. Loading area.
    - b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
    - c. Mechanical rooms.
  4. Concealed in Ceilings and Interior Walls and Partitions: EMT.
  5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric-Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
  6. Damp or Wet Locations: IMC.
  7. Pathways for Optical-Fiber or Communications Cable in Spaces Used for Environmental Air: Plenum-type, optical-fiber-cable pathway.
  8. Pathways for Concealed General Purpose Distribution of Optical-Fiber or Communications Cable: General-use, optical-fiber-cable pathway.
  9. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 stainless steel in institutional and commercial kitchens and damp or wet locations.
- C. Minimum Pathway Size: 3/4-inch trade size. Minimum size for optical-fiber cables is 1 inch.
- D. Pathway Fittings: Compatible with pathways and suitable for use and location.
1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
  2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
  3. EMT: Use compression, steel fittings. Comply with NEMA FB 2.10.
  4. Flexible Conduit: Use only fittings listed for use with flexible conduit. Comply with NEMA FB 2.20.
- E. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.
- F. Install surface pathways only where indicated on Drawings.
- 3.2 INSTALLATION
- A. Comply with NECA 1, NECA 101, and TIA-569-B for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum pathways. Comply with NFPA 70 limitations for types of pathways allowed in specific occupancies and number of floors.
  - B. Keep pathways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal pathway runs above water and steam piping.

- C. Complete pathway installation before starting conductor installation.
- D. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.
- E. Arrange stub-ups so curved portions of bends are not visible above finished slab.
- F. Install no more than the equivalent of three 90-degree bends in any conduit run except for communications wiring conduits for which only two 90-degree bends are allowed. Support within 12 inches of changes in direction.
- G. Conceal conduit and EMT within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
- H. Support conduit within 12 inches of enclosures to which attached.
- I. Stub-ups to Above Recessed Ceilings:
  - 1. Use EMT, IMC, or RMC for pathways.
  - 2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.
- J. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of pathway and fittings before making up joints. Follow compound manufacturer's written instructions.
- K. Coat field-cut threads on PVC-coated pathway with a corrosion-preventing conductive compound prior to assembly.
- L. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install insulated bushings on conduits terminated with locknuts.
- M. Install pathways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.
- N. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to conduit assembly to assure a continuous ground path.
- O. Cut conduit perpendicular to the length. For conduits of 2-inch trade size and larger, use roll cutter or a guide to ensure cut is straight and perpendicular to the length.
- P. Install pull wires in empty pathways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire. Cap underground pathways designated as spare above grade alongside pathways in use.
- Q. Surface Pathways:
  - 1. Install surface pathway for surface electrical outlet boxes only where indicated on Drawings.
  - 2. Install surface pathway with a minimum 2-inch radius control at bend points.

3. Secure surface pathway with screws or other anchor-type devices at intervals not exceeding 48 inches and with no less than two supports per straight pathway section. Support surface pathway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.
- R. Pathways for Optical-Fiber and Communications Cable: Install pathways, metal and nonmetallic, rigid and flexible, as follows:
1. 3/4-Inch Trade Size and Smaller: Install pathways in maximum lengths of 50 feet.
  2. 1-Inch Trade Size and Larger: Install pathways in maximum lengths of 75 feet.
  3. Install with a maximum of two 90-degree bends or equivalent for each length of pathway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.
- S. Install pathway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed pathways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install pathway sealing fittings according to NFPA 70.
- T. Install devices to seal pathway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all pathways at the following points:
1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
  2. Where an underground service pathway enters a building or structure.
  3. Where otherwise required by NFPA 70.
- U. Comply with manufacturer's written instructions for solvent welding PVC conduit and fittings.
- V. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center of box unless otherwise indicated.
- W. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.
- X. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.
- Y. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.
- Z. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.
- 3.3 INSTALLATION OF UNDERGROUND CONDUIT
- A. Direct-Buried Conduit:

1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Section 312000 "Earth Moving" for pipe less than 6 inches in nominal diameter.
2. Install backfill as specified in Section 312000 "Earth Moving."
3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Section 312000 "Earth Moving."
4. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through floor unless otherwise indicated. Encase elbows for stub-up ducts throughout the length of elbow.
5. Install manufactured rigid steel conduit elbows for stub-ups at poles.
  - a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete for a minimum of 12 inches on each side of the coupling.
  - b. For stub-ups at equipment mounted on outdoor concrete bases and where conduits penetrate building foundations, extend steel conduit horizontally a minimum of 60 inches from edge of foundation or equipment base. Install insulated grounding bushings on terminations at equipment.
6. Underground Warning Tape: Comply with requirements in Section 260553 "Identification for Electrical Systems."

### 3.4 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

- A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.
- B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.
- C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch above finished grade.
- D. Install handholes with bottom below frost line.
- E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.
- F. Field cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3.5 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRONIC SAFETY AND SECURITY PENETRATIONS

- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electronic Safety and Security Pathways and Cabling."

3.6 FIRESTOPPING

- A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.7 PROTECTION

- A. Protect coatings, finishes, and cabinets from damage and deterioration.
  - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
  - 2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 280528

## SECTION 28 13 00 SECURITY AND COMMUNICATION SYSTEM

### PART 1 GENERAL

#### 1.1 SECTION INCLUDES

- A. Integrated security and communication system.

#### 1.2 REFERENCES

- A. ISO 9001:2008 – Quality Management Systems – Requirements.
- B. TIA/EIA 568 – Commercial Building Telecommunications Cabling Standard.

#### 1.3 SYSTEM DESCRIPTION

- A. Components:
  - 1. Door stations.
  - 2. Master Stations: Connect a maximum of seven 16-call add-on selectors Model AX- 16SW.
  - 3. Central Exchange Units (CEU): Connect a maximum of 3 add-on exchange units Model AX-320C.
  - 4. Power supply.
  - 5. Other External Connections:
    - a. Access control system.
    - b. CCTV system.
    - c. CO line adaptor.
    - d. Video output.
    - e. PC.
- B. Capacities:
  - 1. Door Stations: Maximum 120 stations with 1 CEU Model AX-248C and 3 add-on exchange units Model AX-320C.
  - 2. Master Stations:
    - a. Maximum 4 stations with CEU Model AX-084C.
    - b. Maximum 8 stations with CEU Model AX-248C.
  - 3. Power Supply:
    - a. Model PS-2420UL: 24 V DC, 2 A.
    - b. For Audio: 1.
    - c. For Video: 2.
  - 4. Number of Talk Paths: 2.
  - 5. Number of Video Paths: 2.
  - 6. All Call: 1, to master stations only.
  - 7. Video Monitor: 2, same as talk paths and video paths.
  - 8. Scan Monitor: 1.
- C. Calling Master Station from Door Station and Communicating:
  - 1. Priority Levels for Calls from Door Stations:

- a. Normal.
  - b. Priority.
2. Press door station CALL button.
  3. Calling tone rings on master station (for normal call, intermittent tremolo sound; for priority call, rapid intermittent tremolo sound) and selector button LED for individual door station flashes (double-flash for priority call). If door station has camera, video from door station shall be displayed on master station monitor. Call tone continues to ring until answered or is timed out (based on setting). You can stop calling tone by pressing OFF button.
  4. If you press individual door station selector button, LED stops flashing and stays lit and you can talk hands-free to that station. If only TALK button is pressed to answer call, hands-free communication initiates with door station at highest priority call. Talk LED lights when you talk and goes off as you listen to caller.
  5. Press OFF button again to end communication. Call also ends automatically when set talk limit is reached.
  6. If you hold down TALK button for a minimum of 1 second, communication switches to press-to-talk mode. Hold down TALK button to talk and release to listen to caller. You cannot switch back from press-to-talk communication to hands-free communication.
  7. If other master station presses selector button of in-use door station or in-use master station, busy signal is heard at master station.
  8. Microphone is muted while you hold down privacy button on master station while in communication.
  9. You can connect footswitch and use it the same manner as TALK button.
  10. Master station can display calls up to 8 stations at the same time. If there are more than 8 incoming calls, they will be displayed in order of priority and time of call.
  11. You can adjust calling tone, transmit volume, and receive volume with volume controls at bottom of master station.
  12. You can use a headset (not included in system) instead of built-in master station's speaker and microphone.
- D. Calling Master Station from Another Master Station and Communicating:
1. Press individual selector button of master station.
  2. Pre-tone sounds both master stations and starts hands-free communication. Talk LED lights when you talk and goes off as you listen to caller.
  3. Press OFF button to end communication. You can end call from either master station. Call also ends automatically when set communication end time is reached.
  4. If called master station has privacy mode set (privacy settings button is lit), communication is only 1-way, from calling master station to called master station, and nothing can be heard from called master side. Press TALK button on called master station for a minimum of 1 second. Press-to-talk communication starts. Hold down TALK button to talk and release to listen to caller.
  5. You cannot call master station while it is communicating. You will hear a busy signal.
- E. Privacy (PRIV) Function:
1. To make master into privacy mode (prevent monitoring from other stations), press privacy button (LED lights up).
  2. To cancel privacy mode, press privacy button again (LED goes out).
  3. Privacy setting cannot be changed while in communication.
- F. CO Line Call from Door Station and Communication:
1. If CALL button is pressed at door station while CO Transfer feature is set (with CO

Transfer button lit), call tone rings on master station (for normal call, intermittent tremolo sound; for priority call, rapid intermittent tremolo sound) and selector button LED for individual door station flashes (double-flash for priority call). At same time, telephone call is placed to programmed CO line number.

2. You can communicate with door station from telephone.
3. You can end communication at telephone. Communication also ends automatically when set talk time limit is reached. About 10 seconds before end of call, you will hear alarm sound on telephone.
4. Maximum duration for CO line call is 300 seconds, even if call timer is set to "Infinite".
5. Using this function requires Viking Electronics, Inc. "K-1900-5 Hot-Line Pulse Dialer".
6. If there are multiple calls, call from door station with highest call priority is transferred.
7. Answering at any master station during CO transfer feature will stop CO transfer.
8. There are no functions, such as for door release and dial-in, from telephone.

G. All Call (Normal Master Station Paging):

1. When you press ALL CALL button on master station, all individual master station selector button LEDs flash slowly. You can clear undesired master station from All Call by pressing individual master station selector button with flashing LED, which will turn off LED. Pressing that button again makes that master station part of All Call again and makes LED flash.
2. If you press TALK button, send LED lights up and all individual master station selector buttons stop flashing and stay lit. Pre-tone sounds on target master stations and they can be talked to. At this time, you cannot hear audio from other master stations.
3. Press OFF button to end. You can end call for individual master station by pressing its OFF button.
4. All Call announcements do not go to master stations that are in use.
5. During All Call, if you press individual master station selector button on calling master station or press individual master station selector button or TALK button on 1 of the other master stations, communications switch to hands-free between master stations.
6. There is no function for hands-free reply from called master station during All Call mode.
7. If you press down ALL CALL button but do not start talking within 30 seconds, system goes back to standby mode. You can also return to standby by pressing OFF button.

H. All Call (Priority Master Station Paging):

1. When you press ALL CALL button on master station, all individual master station selector button LEDs flash slowly.
2. If you press ALL CALL button again, flash rate increases. You can clear undesired master station from All Call by pressing individual master station selector button with flashing LED, which will turn off LED. Pressing that button again makes that master station part of All Call again and makes LED flash.
3. If you press TALK button, TALK LED lights up and all individual master station selector buttons stop flashing and stay lit. Pre-tone sounds on all master stations and all can be called. At this time, you cannot hear audio from other master stations.
4. Press OFF button to end. You can end call for individual master station by pressing its OFF button.
5. Communication of master station being used is cancelled and All Call takes priority. Before communication of master station being used is cancelled, you hear cancel warning sound.
6. During All Call, if you press an individual master station selector button on calling master station or press individual master station selector button or TALK button on one of the other master stations, communications switch to hands-free between those two master stations. There is no function for talk back from

master station receiving an All Call announcement.

7. If you press down ALL CALL button but do not start talking within 30 seconds, system goes back to standby mode. You can also return to standby by pressing OFF button.

I. Monitor:

1. If you press individual door station selector button, you can hear audio and if that door station has a camera, you can see image.
2. Press OFF button to end. Call also ends automatically when set communication end time is reached.
3. While door station is communicating with or monitored by a master station, you cannot monitor that door station from another master station.
4. If you press TALK button while monitoring, hands-free communication mode starts with that door station.

J. Scan Monitor:

1. When scan monitor button is pressed, door stations that have been enabled for "Scan Monitor" in programming can be monitored sequentially for a specified time interval (configured in programming).
2. Monitoring always initiates from target door station with lowest number.
3. If you press scan monitor button while individually monitoring target door station, monitoring starts with the next door station in line.
4. If you press scan monitor button while monitoring non-target door station, monitoring starts with the first door station enabled for scan monitoring.
5. Press OFF button to end.
6. Communication/video channel 2 is always used for scan monitoring. During scan monitoring, video signal is always outputted from video output port 2 (V2). Scan monitoring is not possible when communication/video channel 2 is being used, even if busy LED is not illuminated.
7. Only one master station at a time can perform scan monitoring.
8. If you press TALK button during scan monitoring, hands-free communication mode starts with that door station.
9. If you press individual door station selector button or scan monitor button during scan monitoring, monitoring switches to monitoring individual door station.
10. If master station receives call from door station during scan monitoring, scan monitor function ends automatically and shall be restarted manually.
11. Scan monitoring continues without limit until it is cancelled, but master station LCD monitor goes out after 10 minutes. Outside video output continues even with LCD off. If you press scan monitor button with LCD off, LCD lights up again.
12. If you press TALK button during scan monitoring, communication mode starts with door station being monitored.

K. Activating Door Release:

1. Press door release button during communication or monitoring with door station.
2. Door release function will be activated, releasing door lock.
3. You cannot operate door from outside telephone.
4. LED stays lit while door release function is activated.
5. Door release contacts can be set to Normally Open or Normally Closed via program configuration.

L. Priority:

1. Calls have priority based on the time the call was initiated. (Earlier call has priority over later call).
2. Communication Priority, from Highest to Lowest:
  - a. Door station, telephone line communication.
  - b. Priority All Call.
  - c. Door station to master station communication.
  - d. Master station to master station communication.
  - e. Normal All Call.
  - f. Monitor.
  - g. Scan monitor.

#### 1.4 SUBMITTALS

- A. Comply with Section 01330 (01 33 00) – Submittal Procedures.
- B. Product Data: Submit manufacturer's product data, including installation instructions.
- C. Shop Drawings: Submit the following:
  1. Wiring Diagrams: Indicate wiring for each item of equipment and interconnections between items of equipment.
  2. Include manufacturer's names, model numbers, ratings, power requirements, equipment layout, device arrangement, complete wiring point-to-point diagrams, and conduit layouts.
- D. Installation and Operation Manuals:
  1. Submit manufacturer's installation and operation manual, including operation instructions and component wiring diagrams.
  2. Provide detailed information required for Owner to properly operate equipment.
- E. Warranty: Submit manufacturer's standard warranty.

#### 1.5 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: ISO 9001:2008 certified company.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.
- B. Storage: Store materials in clean, dry area indoors in accordance with manufacturer's instructions.
- C. Handling: Protect materials during handling and installation to prevent damage.

#### 1.7 WARRANTY

- A. Warranty Period: Two years from date of Substantial Completion.

### PART 2 PRODUCTS

## 2.1 MANUFACTURER

- A. Aiphone Corporation, 1700 130th Avenue NE, Bellevue, Washington 98005. Toll Free (800) 692-0200. Phone (425) 455-0510. Fax (425) 455-0071. Website www.aiphone.com. E- mail info@aiphone.com.

## 2.2 SECURITY AND COMMUNICATION SYSTEM

- A. Integrated Security and Communication System: Aiphone “AX Series”.
1. Power Source:
    - a. 24 V DC, 2 A.
    - b. Two PS-2420UL (110 V AC) per video system. One PS-2420UL (110 V AC) per audio system.
  2. Door Station Calling:
    - a. Tremolo call tone programmable from 10 to 600 seconds or infinite.
    - b. LCD monitor remains on for duration of call-in and communication up to a maximum of 10 minutes.
  3. Master Station Calling: Select station to call, pre-tone sounds, then speak hands-free or push-to-talk.
  4. Communication:
    - a. Auto: VOX.
    - b. Manual: Press-to-talk, release-to-listen.
  5. Camera: CCD 250,000 pixels.
  6. Video Monitor:
    - a. 3.5-inch direct view TFT color LCD.
    - b. Scanning Lines: 525.
  7. Door Release: N/O or N/C, programmable per station.
  8. Door Release Contact: 24 V AC/DC, 0.5 A.
  9. Wiring: CAT-5e UTP-4 homerun from each station to CEU.
  10. Distance:
    - a. Door Station to CEU: 980 feet maximum.
    - b. Master Station to CEU: 980 feet maximum.
  11. CO Line Transfer Adaptor: Viking Electronics, Inc. “K-1900-5 Hot-Line Pulse Dialer”.
- B. Central Exchange Unit:
1. Expanded Central Exchange Unit: Model AX-248C.
    - a. Connect: Maximum of 8 master stations and 24 door stations.
    - b. Current Consumption:
      - 1) Video: 1100 mA maximum.
      - 2) Audio: 1250 mA maximum.
    - c. Video Output:
      - 1) NTSC standard 1 Vpp (0.7 to 1.4 Vpp).
      - 2) Two BNC.
    - d. Video Output Trigger:
      - 1) Open collector output.
      - 2) 24 V DC, 30 mA.
      - 3) Two RJ-45.
    - e. Master and door stations homerun to CEU for connection and programming.
    - f. RJ-45 Input Jacks: Station connection, add-on CEU connection, and CO line output.

- g. Quick Release: Dry contact terminals for door release functions and power supply connection.
- h. RS-232 Connection:
  - 1) Input: Programming.
  - 2) Output: Event logging and CCTV/access control interface. Software as specified in Section 28500.
- i. Composite video output (BNC).
- j. Selective door release programmable to N/O or N/C.
- k. CCTV and access integration.
- l. Programmable by PC.
- m. Rack mountable (2U).
- n. Operating Temperature: 32 degrees F to 104 degrees F (0 degrees C to 40 degrees C).
- o. Power switch.
- p. Power/Communications Error Display LED:
  - 1) Off: Power off.
  - 2) Lit: Power on.
  - 3) Flashing: Error in device or wiring.
- q. Ports:
  - 1) Door station ports.
  - 2) Master station ports.
  - 3) Add-on exchange unit ports.
  - 4) CO line port.
  - 5) Setting/log port.
  - 6) Video output ports.
  - 7) Video output trigger ports.
  - 8) Door release relay ports.
  - 9) Power supply ports.

C. Master Stations:

- 1. Master Stations: Audio/Color Video Model AX-8MV
  - a. CAT-5e homerun wired to CEU.
  - b. Buttons:
    - 1) 8 individual door station selector buttons with LED.
    - 2) 8 individual master station selector buttons with LED.
    - 3) Door release button with LED.
    - 4) Scan monitor button with LED.
    - 5) CO line transfer button with LED.
    - 6) Privacy button with LED.
    - 7) Oversized TALK button with LED to activate VOX or PTT style communication.
    - 8) ALL CALL button.
    - 9) OFF button.
  - c. Occupied LED.
  - d. Speaker.
  - e. Microphone.
  - f. Volume Controls:
    - 1) Receive Switch: Low, medium, high.
    - 2) Transmit Switch: Low, medium, high.
    - 3) Call tone.
  - g. LCD brightness control.

- h. Jacks:
    - 1) Headset receiver.
    - 2) Headset microphone.
  - i. Headset Volume Controls:
    - 1) Receiver.
    - 2) Microphone.
  - j. Directory Cards and Covers:
    - 1) Master station.
    - 2) Door station.
  - k. Reset switch.
  - l. RJ-45 jack for connection to CEU.
  - m. Connector for add-on selector on master station.
  - n. Door call-in indicator.
  - o. Hands-free or push-to-talk communication.
  - p. All Call to master stations.
  - q. Scan monitoring.
  - r. Selective door release.
  - s. Privacy and mute functions.
  - t. Wall or desk mount. Metal bracket included for wall mounting.
  - u. Multi-Pin Connector:
    - 1) Video output from master station.
    - 2) External signaling of call tones (through IER-2 or activation of TAR-3).
    - 3) Footswitch activation for TALK function.
  - v. Operating Temperature: 32 degrees F to 104 degrees F (0 degrees C to 40 degrees C).
  - w. Monitor: 3.5-inch color LCD, master station Model AX-8MV.
  - x. Outside Video Output: NTSC standard 1 Vpp (0.7 to 1.4 Vpp), master station Model AX-8MV.
- D. Door Stations:
- 1. Audio Door Station: Model AX-DM.
    - a. Cover: ABS Plastic.
    - b. Mullion surface mount.
    - c. Call button.
    - d. Speaker.
    - e. Microphone.
    - f. Locator LED: Red.
    - g. CAT-5e homerun wired to CEU.
    - h. Weather resistant.
    - i. Operating Temperature: 14 degrees F to 140 degrees F (minus 10 degrees C to 60 degrees C).
    - j. Vandal resistant.
  - 2. Fixed Color Video Door Station: Model AX-DVF.
    - a. Faceplate: Stainless steel.
    - b. Flush mount.
    - c. Call Button: Metal.
    - d. Camera.
    - e. Camera Protection: Clear Lexan lens cover.
    - f. RJ-45 jack.
    - g. Speaker.

- h. Microphone.
  - i. Directory card.
  - j. White Illumination LEDs: Automatically turn on in low-light conditions.
  - k. CAT-5e homerun wired to CEU.
  - l. Operating Temperature: 14 degrees F to 140 degrees F (minus 10 degrees C to 60 degrees C).
  - m. Vandal resistant.
3. Fixed Color Video Door Station: Model AX-DVF-P.
- a. Proximity Card Reader: Embedded "HID ProxPoint Plus".
  - b. Faceplate: Stainless steel.
  - c. Flush mount.
  - d. Call Button: Metal.
  - e. Camera.
  - f. Camera Protection: Clear Lexan lens cover.
  - g. RJ-45 jack.
  - h. Speaker.
  - i. Microphone.
  - j. Directory card.
  - k. White Illumination LEDs: Automatically turn on in low-light conditions.
  - l. CAT-5e homerun wired to CEU.
  - m. Operating Temperature: 14 degrees F to 140 degrees F (minus 10 degrees C to 60 degrees C).
  - n. Vandal resistant.

### PART 3 EXECUTION

#### 3.1 EXAMINATION

- A. Examine areas to receive integrated security and communication system.
- B. Notify Architect of conditions that would adversely affect installation or subsequent use.
- C. Do not begin installation until unacceptable conditions are corrected.

#### 3.2 INSTALLATION

- A. Install integrated security and communication system in accordance with manufacturer's instructions at locations indicated on the Drawings.
- B. Mount equipment plumb, level, square, and secure.
- C. CAT-5e Cables:
  - 1. Run cables from and homerun to one central location where CEU will be installed.
  - 2. Maximum Cable Runs: Keep each cable run to a maximum of 980 feet from communication device to CEU.
  - 3. Maintain twists of cable pairs to point of termination or no more than 0.5-inch untwisted.
  - 4. Do not remove more than 1 inch of jacket when terminating cables.
  - 5. Cable Bends:
    - a. Make gradual bends of cable, where necessary.

- b. Do not make bends of cable sharper than 1-inch radius.
    - c. Do not allow cable to be sharply bent or kinked at any time.
  6. Cable Ties: Dress cables neatly with cable ties using low to moderate pressure.
  7. Cross-connect cables, where necessary, using CAT-5e rated punch blocks and components.
  8. Do not splice or bridge cables.
  9. Cable Pulling:
    - a. Pull cable with low to moderate force.
    - b. Do not use oil or other lubricants not specifically designed for cable pulling.
  10. Keep cables as far away from potential sources of EMI as possible.
  11. Do not tie cables to electrical conduits or lay cables on electrical fixtures.
  12. Cable Supports:
    - a. Install proper cable supports a maximum of 5 feet apart.
    - b. Do not support cables by ceiling tiles.
  13. Label Cable Termination Points: Use unique number for each cable segment.
  14. Testing Cables: Test installed cable segments with cable tester.
  15. Jacks: Install jacks to prevent dust and other contaminants from settling on contacts.
  16. Cable Slack:
    - a. Leave extra slack on cables, neatly coiled-up in ceiling or nearest concealed place.
    - b. Leave a minimum of 1 foot of cable slack at door station side and a minimum of 10 feet of cable slack at CEU side.
  17. Do not install cables taught.
  18. Grommets: Protect cables with grommets where passing through metal studs or other items that could damage cables.
  19. Do not mix TIA/EIA 568A and 568B wiring on same installation. Use TIA/EIA 568B wiring throughout installation.
  20. Staples:
    - a. Do not use staples that crimp cables tightly.
    - b. Do not use T-18 and T-25 cable staples.
  21. Use firestop cables that penetrate firewalls.
  22. Use plenum-rated cables where mandated.

### **3.3 ADJUSTING**

- A. Adjust integrated security and communication system for proper operation in accordance with manufacturer's instructions.

### **3.4 DEMONSTRATION AND TRAINING**

- A. Demonstration:
  1. Demonstrate that integrated security and communication system functions properly.
  2. Perform demonstration at final system inspection by qualified representative of manufacturer.
- B. Instruction and Training:
  1. Provide instruction and training of Owner's personnel as required for operation of integrated security and communication system.
  2. Provide hands-on demonstration of operation of system components and complete system, including user-level program changes and functions.
  3. Provide instruction and training by qualified representative of manufacturer.

**3.5** PROTECTION

- A. Protect installed integrated security and communication system from damage during construction.

END OF SECTION

## SECTION 282300 - VIDEO SURVEILLANCE SYSTEM

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Requirements of Drawings, General and Supplementary Conditions, Divisions 00 and 01 apply to this section.

#### 1.2 SUMMARY

Contractor shall provide the CCTV equipment and meet the minimum specification noted in the basis of design. Contractor shall be responsible for connectivity from the camera to the fiber connection at each building interface. Fiber infrastructure from the building to building will be provided by owner. All connectors, cable and power required will be by the contractor. Cameras will be connected to existing Genetec CCTV platform located at the engineering building. Camera Licenses and storage will be provided under a separate contract.

All cameras will be IP based POE cameras, exterior cameras noted will require additional power in addition to POE. The following cameras are meant to establish a minimum specification and will be the contractors' responsibility to confirm that alternates meet specification and compatibility with Genetec recording platform.

- A. Related Sections:

- 1. Basic Material and Methods for Electronic Systems: Section 280500
- 2. Security Management System: Section 285000

#### 1.3 SUBMITTALS

- A. Shop drawings:

- 1. Submit for review by the Architect/Engineer, complete engineering data for each system for evaluation of the proposed system with respect to specification requirements. Submittals for each system shall consist of engineering data sheets, schedules, and manufacturer's descriptive catalog sheets for each system component and manufacturer prepared shop drawings to indicate conformance with the contract documents.
  - a. Provide complete floor plans. Each plan shall show proposed device locations.
    - 1) Show actual device nomenclature as illustrated on riser and single line diagrams
    - 2) Show pullboxes, equipment enclosures and terminal cabinets.
    - 3) Show conduits and fill (optional if lateral conduits are shown with size and fill on the riser).
  - b. Riser diagram:
    - 1) Illustrate conduit relationships between devices shown on the floor plans.
    - 2) (Lateral conduits are optional if shown on the plans).
    - 3) Show actual device nomenclature as illustrated on the plans and breaker number where the power will be sourced.
  - c. Single-line diagrams:

- 1) Show signal relationships of devices within the system.
- 2) Show actual device nomenclature as illustrated on the riser and plans.
- 3) Show wire numbers.
- d. Equipment enclosure wiring diagrams:
  - 1) Show a pictorial illustration of each equipment enclosure and/or terminal cabinet.
  - 2) Show the device nomenclatures exactly as shown on the single line diagrams.
  - 3) Show the terminations including the wire numbers as shown on the single line diagrams.
  - 4) Show wire colors for each terminal.
  - 5) For each wire exiting the enclosure, show the destination of the wire by floor, room number and the drawing number of the panel where the wire terminates.
- e. Free standing device wiring diagrams:
  - 1) For each free standing device, such as a computer, printer or the like, show the rear elevation of the device as a pictorial.
  - 2) Show the termination connectors on the device.
  - 3) Show the wire numbers attached to the connectors.
  - 4) Schedule the wire colors connected to the pins on each device connector.
- f. Custom assembly diagrams:
  - 1) For each custom assembly such as a receptacle assembly, control panel or the like, provide an assembly drawing illustrating the appearance of the assembled device including dimensions, assembly components and functional attributes (momentary or alternate action switch, lens color, panel finish and the like).
- g. Specification comparison:
  - 1) Copy of specification annotated on line by line basis where proposed product or system differs from specified product or system. Any differences to be explained.
2. When application engineering and submittals have been prepared, a meeting shall be set up with the Architect/Engineer and Owner for preliminary shop drawing review. The project superintendent for the work of this division shall explain the entire system operation, equipment and other items as called for in the specification. Any drawings required shall be submitted one week in advance of proposed meeting date and preliminarily reviewed at this meeting. This meeting will be held in the Owner's jobsite office.
3. Each individual submittal item for materials and equipment shall be marked to show specification section and paragraph number which pertains to the item. Manufacturer description sheets shall have an arrow stamp pointing to each item on the sheet that is intended for review. Each operational feature of the systems included shall be addressed in narrative form and relate to specific system requirements described in the plans and specifications. All drawing submittals shall be submitted on same size sheets, identified by system, and sequentially numbered throughout the entire set.
4. Submittals shall be made for each of the systems being supplied for the project.
5. All shop drawings required shall be submitted at the same time in one packaged submittal.
6. Provide on drawings 30" x 42" size.

B. Product data:

1. Product list for Division 28 equipment.
2. As indicated in each Division 28 section and as indicated herein
3. Description of system operation indicating overall system operation and purpose and capabilities of each component within system.

4. Cross reference data sheets to components shown on system/riser diagrams.
  5. Record drawings:
    - a. Keep a complete set of all electronic systems drawings in job site office for showing actual installation of electronic systems and equipment. Drawings shall show location and routing of conduit and cable.
    - b. Use this set of drawings for no other purpose.
    - c. Where any material, equipment, or system components are installed differently from that shown, indicate differences clearly and neatly using ink or indelible pencil.
    - d. At project completion, submit record set of drawings to Construction Manager for review and distribution to the
- C. Shop drawing/Schedule, detailing system equipment such as, but not limited to, the following:
1. Main equipment racks and cabinets.
  2. Master Intercom, Intercom Switches and Control Systems/Amplifiers.
  3. Monitor panels.
  4. Intercom master stations and intercom stations.
  5. Corridor/Ceiling/Wall-mounted Speakers & Speaker-Microphones.
  6. Exterior Speakers and associated mounting equipment.
  7. Housing for Loudspeaker assemblies.
- D. Provide three (3) operation and maintenance manuals upon completion of system installation. The manuals shall contain complete system block diagram, component data sheets, voltage charts, and schematic diagrams as well as complete operation instructions.
- E. Product Certificates: Signed by manufacturers authorized distributor of proposed equipment certifying that products furnished comply with specified requirements.
- F. Field Test Reports: Indicate and interpret test results for compliance with performance requirements. Include record of final matching transformer-tap settings, and signal ground-resistance measurement certified by installer.
- G. Maintenance Data: For equipment to include in maintenance manuals specified in Division 01. Include record of Owners equipment-programming option decisions.

#### 1.4 WARRANTY

- A. Manufacturer's standard form in which manufacturer agrees to repair and/or replace equipment that fails in materials or workmanship within specified warranty period.
- B. Manufacturer Warranty: Provide 3 year warranty from date of substantial completion.

#### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who is an authorized representative of equipment manufacturer for both installation and maintenance of equipment required for this Section.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.
- C. Underwriter's Laboratories under UL Standard 1459 shall list the communication system supplied. A copy of the UL listing card for the proposed system shall be included with the contractor's submittal.

#### 1.6 OWNER'S TRAINING

- A. Train Owner's maintenance personnel in procedures and schedules involved in operating, troubleshooting, servicing, and preventing maintenance of the system. Provide a minimum of eight hours training.
- B. Schedule training with Owner, with at least seven days advance notice.
- C. Occupancy Adjustments: When requested by the Owner within one year of date of Substantial Completion, provide on-site assistance in adjusting sound levels, resetting matching transformer taps, adjusting controls and reprogramming to suit actual occupied conditions. Provide up to three visits to the site for this purpose.
- D. Acceptance: The Contractor shall provide the Owner with a written certification indicating the following:
  - 1. The name of the factory trained person(s) that performed the testing.
  - 2. A copy of that trained person's certification from the manufacturer.
  - 3. A statement certifying that all systems were properly tested and are functioning as specified.
  - 4. A statement certifying warranty requirements in accordance with specification requirements.
- E. The Contractor shall submit the above documentation through the proper channels for acceptance.
- F. The Owner and/or his representative shall conduct a detailed inspection/test of the system(s). In the event the system(s) does not function as specified, the Contractor, at no additional cost to the Owner, shall remove and system and furnish and install the specified system(s).
- G. Only after the above has been executed, shall the system(s) be accepted. The system(s) warranty period shall begin on the same day acceptance is granted.

#### 1.7 EXTRA MATERIALS

- A. Provide the following spare parts.
  - 1. Camera: One complete assembly (Housing, Camera, Lens and Mount) of each type installed.
  - 2. Connectors: Five of each type installed.

### PART 2 - PRODUCTS

#### 2.1 GENERAL

- A. Acceptable manufacturers:

1. Video surveillance equipment:
  - a. Base: AXIS
  - b. Optional: Panasonic, Vicon and Bosch
2. Lens:
  - a. Base: AXIS
  - b. Optional: Panasonic, Vicon and Bosch
3. Housings:
  - a. Base: AXIS
  - b. Optional: Panasonic, Vicon and Bosch
4. Mounts:
  - a. Base: AXIS
  - b. Optional: Panasonic, Vicon, and Bosch
5. Video switcher/control system:
  - a. Base: Milestone
  - b. Optional: Axis, Panasonic, Vicon, and Bosch
6. Wire and cable:
  - a. Base: Belden
  - b. Optional: West Penn
7. Other manufacturers desiring approval comply with Division 01 sections.
8. Or approved equal.

B. System operation:

1. Provide complete system for viewing of remote scene including control of equipment accessories.
2. Provide automatic call-up of scene to selected monitors on operation of intercom icon associated with camera viewing intercom scene. At movement doors with cameras on both sides of door, the camera on each side of door shall be called up to associated monitors adjacent to touchscreen.
3. Provide control interface with PLC system.

## 2.2 CAMERAS AND ACCESSORIES

- A. Camera type: Interior or exterior fixed high resolution color IP camera mounted in dome housing.

Basis of Design – AXIS P3245-VE or approved equal – Provide all accessories necessary for a complete installation including but not limited to mounting brackets, drop ceiling kits, etc...

1. CMOS image sensor: 1/2.8"
2. Resolution: 1920x1080
3. UL listed, CSA certified.
4. WDR.
5. Vari-focal lens: 3.4-8.9 mm.
6. Auto iris.
7. Remote Focus/Zoom
8. Operating temperature range -40 deg C to 50 deg C.
9. ONVIF certified.
10. IP Based POE – Power of Ethernet.

11. Vandal Resistant.

B. Camera type: Elevator corner mount fixed high resolution color IP camera.

Basis of Design – AXIS P9106-V or approved equal – Provide all accessories necessary for a complete installation including but not limited to mounting brackets, drop ceiling kits, etc...

1. CMOS image sensor: 1/3”.
2. Resolution: 2016x1512, 1920x1080
3. UL listed, CSA certified.
4. WDR.
5. Vari-focal lens: 3.4-8.9 mm.
6. Auto iris.
7. Remote Focus/Zoom
8. Operating temperature range -15 deg C to 50 deg C.
9. ONVIF certified.
10. IP Based POE – Power of Ethernet.
11. Vandal Resistant.

C. Camera type: Exterior fixed multi-imager 180 degree IP camera.

Basis of Design – AXIS Q3708-PVE or approved equal – Provide all accessories necessary for a complete installation including but not limited to mounting brackets, back box kits, etc...

1. CMOS image sensor: 3 x 1/1.8”
2. Resolution: 3x 2560x1440
3. UL listed, CSA certified.
4. WDR.
5. Vari-focal lens: 3.4-8.9 mm.
6. Auto iris.
7. Remote Focus/Zoom
8. Operating temperature range -40 deg C to 55 deg C.
9. ONVIF certified.
10. IP Based POE – Power of Ethernet.
11. Vandal Resistant.

## 2.3 MOUNTS

- A. Provide mounts and hardware as required for installation of cameras and enclosures as indicated on drawings and installation details.
- B. Provide wall/corner adapters for installation as indicated on drawings and installation details.
- C. C. Provide mounting hardware for comer/wall type mounts for exterior building installations as indicated on drawings and details.

## 2.4 VIDEO WIRING SYSTEMS

- A. Video signal cable: Category 6
  - 1. Temperature range: -30 to +75 degC.
  - 2. AWG: 20 GA solid copper
  - 3. Nominal impedance: 75 ohms.
  - 4. Nominal capacitance: 17.3 picofarads per FT.
  - 5. Dielectric strength: 5000V RMS, 60Hz.
  - 6. Nominal attenuation: 2.7 dB/100 FT at 200 MHz.
  - 7. Shield: Bare and copper braid, 95 percent coverage.
  - 8. Belden 1426A
- B. Power via POE for distribution to cameras:
- C. PoE over Coax for elevator cameras.
  - 1. Basis of Design: Axis T8640

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Install all equipment in accordance with manufacturer's recommendations.
- B. Install all wiring in metallic conduit in exposed locations, minimum size 3/4 IN, dedicated for intercom and paging speaker wiring only. Wiring shall be installed without splices.
- C. Install all wiring along J-Hooks above accessible security ceilings – plenum rated cable dedicated for intercom and paging speaker wiring only. Wiring shall be installed without splices.
- D. Make all connections to video equipment with approved connectors for cable used.

### 3.2 WIRING

- A. Coordinate with division 26 contractor for 120 volt power requirements for all equipment and accessories. Connect systems head-end equipment to UPS system.

### 3.3 TESTING

- A. Test all system components and connections using methods as recommended by the equipment manufacturer.

END OF SECTION 282300

SECTION 283111 ADDRESSABLE FIRE ALARM SYSTEM – NON VOICE

PART 1 - GENERAL

1.01 Work covered by this section includes the furnishing of labor, equipment, and materials for installation of the fire alarm system as indicated on the schematic design drawings and related construction documents including General and Supplementary Conditions and Division 01 General Requirements, shall be included in and made part of this Section.

1.02 DESCRIPTION OF WORK

- A. This section of the specifications includes the furnishing, installation, and connection of the fire alarm equipment to form a complete coordinated system ready for operation. It shall include, but not be limited to, alarm initiating devices, alarm notification appliances, Fire Alarm Control Panel (FACP), auxiliary control devices, annunciators, and wiring as shown on the drawings and specified herein.
  - 1. The system shall be a new addressable fire detection and non-voice signaling system in accordance with the schematic design drawings. It shall utilize control panels with digital communications to provide optimal fault-tolerance and support future modification and expansion with a minimum of future wiring and hardware additions, in full compliance with all applicable codes and standards. The features and capacities described in this specification are required as a minimum for this project and shall be furnished by the successful contractor.
    - a. This fire alarm design is for monitoring of the enclosed parking basement dry sprinkler system and providing elevator life safety interface. Alarm notification and appliances have been located only on the level protected by fire sprinklers, per minimum state code requirements. A single smoke detector shall be installed above the fire alarm control panel and manual pull located next to the panel.
    - b. The system provided shall have the capacity and expansion capability to support future tenant improvement fitouts, in compliance with relevant codes and modify the fire alarm based on the improved layout and specific occupancy type prior to any fitout construction.
  - 2. The system shall include all necessary hardware, software and peripheral devices to perform the following functions, but not limited to:
    - a. Fire and smoke detection
    - b. Manual alarm activation
    - c. Occupant audible, visual and auxiliary notification
    - d. Life safety functions to include:
      - 1) Elevator Service
    - e. Report system events to the Listed Supervising Station via the approved means.
    - f. System programming and re-programming of all changes as necessary to accommodate the phased construction, alteration and demolition activities.

3. The system shall be installed per the Engineer of Record's schematic design drawings, project specifications and installed in full compliance with National, State and local Codes. These published editions of following reference standards shall be used in system design, installation, operation and maintenance unless the applicable legally referenced standard provides more stringent requirements:
  - a. New Jersey Uniform Construction Code - International Building Code 2018 Edition
  - b. New Jersey Electrical Code – National Electric Code 2018 edition.
  - c. Underwriters Laboratories (UL) Listings.
  - d. City of Elizabeth Fire Department Regulations
  - e. Americans with Disabilities Act (ADA), the Architectural Barriers Act (ABA), and Accessibility Regulations of the local jurisdiction.
  - f. Applicable FM Global (Factory Mutual) Property Loss Data sheets.
4. The system shall include all required hardware, raceways, interconnecting wiring and software to accomplish the requirements of this specification and the schematic design drawings, whether or not specifically itemized herein. All devices installed outdoors or within areas exposed to unconditioned spaces or wet locations shall be listed for "outdoor use". Electrical raceway, fittings and enclosures shall be NEMA Type 4.
5. All equipment furnished shall be new and the latest state-of-the-art products of a single manufacturer, engaged in the manufacturing and sale of analog fire detection devices for over 20 years.
6. Provide the services of qualified system designers to generate shop drawings, and field technicians to provide installation oversight during construction and system startup. Technicians shall inspect, program, test and make any necessary adjustments to the completed system, to ensure compliance with the manufacturer's recommended practices and the approved shop drawings.
7. The system as specified shall be supplied, installed, tested and approved by the local Authority Having Jurisdiction, and turned over to the owner in an operational condition.
8. In the interest of job coordination and responsibilities the installing contractor shall contract with a single supplier for fire alarm equipment, engineering, programming, inspection and tests. All control panel assemblies and connected field appliances shall be provided by the same system supplier, and shall be designed and tested to ensure that the system operates as specified.
9. The manufacturers listed within this specification have been preselected for use on this project. Being listed as an acceptable Manufacturer in no way relieves obligation to provide all equipment and features in accordance with these specifications. No submittal will be accepted from a manufacturer other than those specified. All system components shall be the products of one manufacturer, except where otherwise dictated or permitted. In such instances, equipment by multiple manufacturers must be recognized compatible by both manufacturers. Approved Manufacturer Suppliers:
  - a. Siemens Building Technology – Factory Office
  - b. Simplex JCI – Factory Office
  - c. UTC/Edwards System Technology (EST) – Strategic Partner
  - d. Or approved equal.
10. Strict conformance to this specification is required to ensure that the installed and programmed system will function as design, and will accommodate the future

requirements and operations of the building owner. All specified operational features must be met without exception.

11. All programming and scope of work shall be coordinated with the County's current Vendor:

DavEd Fire Systems, Inc.  
307 West Pleasantview Ave  
Hackensack, NJ 07006  
201-342-7800  
[sales@davedfire.com](mailto:sales@davedfire.com)

### 1.03 DEFINITIONS AND ACRONYMS

- A. AHJ: Authority Having Jurisdiction, the individual or agency that has legal responsibility for reviewing the design for conformance with local codes and regulations.
- B. ASME: American Society of Mechanical Engineers.
- C. EoR: The Engineer of Record responsible for the Schematic Design drawings and project specifications
- D. ERRCS: Emergency Responder Radio Communications System also known as a Public Safety or First Responder DAS (Distributed Antenna System).
- E. FACP: Fire alarm control panel.
- F. FM: FM Global (Factory Mutual).
- G. Furnish: To supply the stated equipment or materials.
- H. Install: To set in position and connect or adjust for use.
- I. LED: Light-emitting diode.
- J. NAC Booster: Notification Appliance Circuit audio and/or visual auxiliary power supply controlled and supervised by the FACP
- K. NFPA: National Fire Protection Association. Definitions in NFPA 72 apply to fire alarm terms used in this Section.
- L. NICET: National Institute for Certification in Engineering Technologies.
- M. Schematic design drawings: drawings which establish the objectives and design criteria of the system along with locations of fire alarm equipment, a system concept riser diagram, identification of interface(s) required with fire safety functions, and identification of all initiating device and notification appliance locations.
- N. Provide: To furnish and install the stated equipment or materials.
- O. UL: Underwriters Laboratories.

### 1.04 PERFORMANCE-BASED DESIGN REQUIREMENTS

- A. Fire alarm technicians must be able to perform comprehensive tests on the system with minimum disruption to occupants. Fire alarm system control must originate from the control panel and/or programmable field devices. Individual bypass switches located at the main control panel must provide system wide bypass for each type of output to accommodate testing with minimal disruption.

- B. Field located transponders, NAC power booster panels, and terminal cabinets as required to support the project, if locations not specifically provided on the design drawings. Good access must be provided for testing and maintenance requirements.
- C. NFPA 72 10.4.4 require smoke detection coverage above critical fire alarm components. The quantity of required NAC booster panels vary between manufactures and their installation location(s) are determined by the Installation Contractor. If area smoke detection is not provided in the vendor-selected NAC booster panel location, then a dedicated smoke detector shall be provided above the panel. These locations shall be shown on the installation shop drawings and approved by the EoR and AHJ prior to installation.
- D. SLC Circuit Design: Ground Fault Detection
  - 1. For addressable loops, ground fault detection shall be employed which can detect a ground fault on both the positive and negative side of each circuit. The ground fault detector shall operate the general trouble devices as specified but shall not cause an alarm to be sounded. Ground faults shall not interfere with normal operation, such as alarm, or other trouble conditions.
  - 2. In compliance with NFPA 72, section 23.6.1, provide fault isolation for every 50 devices on any SLC, limited to a maximum area of a floor or fire/smoke barrier compartment boundaries. Provide separate ground gault detection for each floor/ level.
  - 3. A single fault on a pathway connected to the addressable devices shall not cause the loss of the devices in more than one zone or area. If a floor of the building is subdivided into multiple zones by fire or smoke barriers and the fire plan for the protected premises allows relocation of occupants from the zone of origin to another zone on the same floor, each zone on the floor shall be considered a separate zone.
  - 4. Dedicated isolator modules or ground fault detection integrated into an addressable device may be used to ensure
  - 5. Acceptable wiring designs
    - a. Install SLC loops with no more than 50 addressable devices circuit, homeran back to the panel. Each SLC must be internally isolated from shorts.
    - b. Provide field circuit isolation with loop isolator devices installed as the first device and keeping the isolated legs of the circuit to fewer than 50 devices.
- E. Initiating Device Installation
  - 1. Coordinate smoke detector locations with ceiling diffusers; none maybe closer than 3 feet.
  - 2. For ceiling tile applications, center detectors in the tile, inline with other ceiling fixtures.

## 1.05 SEQUENCE OF OPERATIONS

### A. Alarm Sequence of Operation:

- 1. Activation of a manual fire alarm box, automatic detector, or fire suppression system shall causes system to enter "alarm" mode including the following operations:
  - a. Provide local English language annunciation of device location, address and condition, and audible and visual alarm signal at control panel and remote annunciators.

- b. Provide manual "acknowledge" function at control panel to silence audible alarm signal, visual signal remains displayed until initiating alarm is cleared.
- c. Transmit "alarm" signal to off-premises equipment, i.e., to the Project Representative's selected vendor. Provide necessary connections to digital alarm communicator transmitter.
- d. Activate fire alarm notification appliances.
- e. Alarm functions shall override trouble or supervisory functions. Supervisory functions shall override trouble functions.

B. Supervisory Sequence of Operation:

1. Activation of gas detection, fire sprinkler tamper, pressure switch, duct mounted smoke detector or residential smoke detector with local audible base causes system to enter "supervisory" mode including the following operations:
  - a. Provide local English language annunciation of device location, address and condition, and audible and visual supervisory signal at control panel and remote annunciators.
  - b. Provide manual "acknowledge" function at control panel and remote annunciators to silence audible supervisory signal, visual signal remains displayed until initiating supervisory is cleared. If AHJ approved, a supervisory condition may be programmed as self-restoring.
  - c. Transmit "supervisory" signal to off-premises equipment.
  - d. For HVAC applications: transmit signal to shut down air associated air handling unit and close associated fire/smoke dampers.

C. Trouble Sequence of Operation:

1. System trouble, including single ground or open of supervised circuit, or power or system failure, causes system to enter "trouble" mode including the following operations:
  - a. Provide local English language annunciation of device location, address and condition, and audible and visual trouble signal at control panel and remote annunciators.
  - b. Provide manual "acknowledge" function at control panel and remote annunciators to silence audible trouble signal, visual signal remains displayed until initiating trouble is cleared.
  - c. Transmit "trouble" signal to off-premises equipment.

## 1.06 SEQUENCE OF INSTALLATION

- A. This new system is being installed as part of a complete building construction project and shall be coordinated with the other trades and any construction phasing schedules. No existing fire alarm components shall be reused.

## 1.07 FIRE CONTROL PANEL – The system shall be a complete, electrically supervised fire detection and notification system, with a microprocessor based operating system having the following capabilities, features, and capacities:

- A. Minimum 252 point addressable capacity with the ability to provide networking over dedicated copper or fiber for future connection to other county buildings.
  - a. The system shall support up to 252 addressable devices, which may be divided in any ratio on one, two, three, or four separate, isolated Class B circuits.
  - b. The system shall support two loops of 252 addressable devices, each of which may be divided in any ratio on one, or two, isolated Class A circuits.
  - c. The system shall be expandable and capable of providing a peer-to-peer network. Each panel shall have the ability to display either local panel activity or global network activity.
- B. All control equipment shall be listed to the latest edition of UL Standard 864 (9<sup>th</sup> Edition }
- C. The FACP and auxiliary power panels shall provide power, annunciation, supervision and control for the system.
- D. Audibles and visual notification signals shall be synchronized throughout the entire building.
- E. Provide electrical supervision of the primary power (AC) supply, presence of the battery, battery voltage, and placement of system modules within the control panel.
- F. The system shall be capable of remote monitoring via Windows Explorer, which provides a graphical representation of the fire alarm control panel at a remote PC when connected via Ethernet to the system. The display will show the exact state of the panel, including blinking LEDs, and with menu buttons for control.
- G. Support of single-person test system and capable of providing point test reports in NFPA standard format without manual report entries.
  - 1. The system shall provide a field test function where one person can test the complete system or a specific area while maintaining full operational function of other areas not being tested. Alarms, supervisory signals, trouble signals shall be logged in system history during the walk-test.
  - 2. The control panel shall allow control and monitoring from a wireless handheld display device during maintenance, inspection and troubleshooting tasks
  - 3. The control panel shall allow complete control and monitoring from a wireless handheld display device during one-man testing of the system
  - 4. Testing supported should be real smoke testing of devices, automatically logged and made available in NFPA format reports. Manual test entries will not be accepted.
- H. System shall provide an output port for monitoring purposes by external systems. Communications to an external system shall be RS-232 or RS-485 communications.
- I. The local system shall provide status indicators and control switches for all of the following functions:
  - 1. Remote Alarm Transmission By-pass Switch: Shall prevent transmission of all signals to the main fire alarm control unit when in the "off" position. A system trouble signal shall be energized when switch is in the off position.

2. Drill Switch: Shall activate all notification devices without tripping the remote alarm transmitter. This switch is required only for general evacuation systems specified herein.
3. Door Holder By-Pass Switch: Shall prevent doors from releasing during fire alarm tests. A system trouble alarm shall be energized when switch is in the abnormal position.
4. Elevator recall By-Pass Switch: Shall prevent the elevators from recalling upon operation of any of the devices installed to perform that function. A system trouble alarm shall be energized when the switch is in the abnormal position.
5. HVAC/Smoke Damper By-Pass: Provide a means to disable HVAC fans from shutting down and/or smoke dampers from closing upon operation of an initiating device designed to interconnect with these devices.
6. Any additional status or control functions as indicated on the schematic design drawings, including but not limited to: emergency generator functions, fire pump functions, door unlocking and security with bypass capabilities.

J. The system shall be UL 1076 listed for monitoring and reporting security System Zoning.

K. The system shall be compliant with the requirements of NFPA 720 as a Carbon Monoxide Detection Control Unit and shall meet the UL 2075 listing requirements. All inputs from CO sensors shall be indicated visually and audibly at the control panel. CO sensor inputs shall be distinct and descriptively annunciated from other signals.

L. Each intelligent addressable device or conventional zone on the system shall be displayed at the main fire alarm panel and each local fire alarm remote annunciator by a unique alphanumeric label identifying its location.

#### 1.08 PERFORMANCE REQUIREMENTS

A. Comply with NFPA 72 installation methods, all contract documents and specification requirements.

1. The FACP and auxiliary power panels shall provide power, annunciation, supervision and control for the system.
2. Strobes shall be synchronized throughout the entire building.
3. Provide electrical supervision of the primary power (AC) supply, presence of the battery, battery voltage, and placement of system modules within the control panel.
4. Incorporate firefighter emergency communication systems, as specified.

B. Circuits and Pathways

1. Network Communications and vertical trunk wiring: all data wiring and audio risers shall be Class A, circuits as defined in NFPA 72, utilizing physically separated outgoing and return loops and Level 2 survivability (minimum).
2. Addressable Signaling Line Circuit (SLC) wiring shall be configured as Class B circuits, with a minimum Level 1.
  - a. SLC wiring shall utilize fault isolation modules so that a single wiring fault on the conductors serving one floor or evacuation signaling zone will not affect the operation of devices serving any other zone.
  - b. SLCs shall not exceed 75% of the number of each type of device the circuit is capable of supporting.
3. Notification Appliance Circuit (NAC) wiring shall be configured as Class B circuits.

- a. The system shall be provided with a minimum of two (2) NACs for each floor, evacuation zone or smoke compartment; whichever is greater. Arrange circuits to allow individual, selective, and visual notification by zone. The actual number of circuits to be installed shall be coordinated with the supplier's shop drawings. Appliance circuits shall be zoned to correspond with the building fire barriers and other building features.
- C. Alarm functions shall override trouble or supervisory functions. Supervisory functions shall override trouble functions.
- D. The system shall provide a field test function where one person can test the complete system or a specific area while maintaining full operational function of other areas not being tested. Alarms, supervisory signals and trouble signals shall be logged on the system printer and in system history during the walktest.
- E. Alarm functions shall override trouble or supervisory functions. Supervisory functions shall override trouble functions.
- F. An Emergency Responder Radio Communications System (ERRCS), also known as a Public Safety or First Responder DAS (Distributed Antenna System), has become a mandated in-building requirement for many municipalities around the country and may be required per site conditions to boost weak emergency responder radio signal strength signals, as specified in Section 275319. It shall be a separate communication system from the FACP, but shall provide the ability to add the required monitoring points for general status conditions per NFPA 72 requirements.

#### 1.09 SUBMITTALS

- A. The equipment supplier responsibilities will include the selection of equipment, devices and materials based on the schematic design drawings and project requirements, and their proper application based on the manufacturer's limitations, operating characteristics and recommended practices.
  1. Equipment quantities and locations shown on the schematic design drawing floorplans shall not be altered or modified without written approval of the Engineer of Record. Any deviation from the Engineer's coordinated layout or design intent will constitute the submission as incomplete and shop drawings will not be approved.
  2. Minor deviations, variations, changes, and corrections from layouts shown on the drawings (based on coordination, conditions, manufacturer's instructions, codes and standards, shop drawings, and verification of measurements and conditions) are permitted to facilitate construction provided the changes do not represent potential changes in scope of work and provided the changes are acceptable to the owner, architect, and engineer.
  3. The equipment supplier shall coordinate the installation and system operation with the work of related trades.
- B. Catalog manufacturer's product data sheets for all equipment, accessories and wiring with all applicable components being submitted for this project clearly noted. All equipment shall be subject to approval and no equipment shall be ordered without prior approval.
  1. Data Sheets with multiple product shall highlight or identify the specific products utilized for this project.
- C. System Calculations - Circuit calculations shall use the end-loading or point-to-point method described in NFPA recommended practices including both standby and active conditions.

Complete calculations shall be provided which show the electrical load for all equipment and field circuits. (identify all mathematical formulas, variables, and constants used in all calculations) on the following system components:

1. Horn/ strobe 24VDC loads and spare capacity.
    - a. NAC circuit (audible and visual) design shall incorporate a 20% spare capacity for future expansion.
  2. Show wire size, estimated circuit length, and maximum allowable wiring distance as designed. Voltage drop calculations for wiring runs demonstrating worst-case condition.
  3. Power supply rating justification showing power requirements for each of the system power supplies. Power supplies shall be sized to furnish the total connected load in a worst-case condition plus 25% spare capacity.
- D. The shop drawing submittal shall clearly indicate all proposed equipment and devices (type and quantity), with wiring diagrams, detailed operational sequences, and interfaces to related systems. They shall be prepared in accordance with NFPA 72 recommended practices and include the following:
1. Floor plans showing all devices and equipment to be installed with corresponding field settings, circuit, and device designations noted. Settings shall include the device address and candela rating as applicable. Circuit identifiers, device numbers and symbols used shall be clearly defined and consistent between all related documents.
    - a. Floor plans at a scale of 1/8"=1'-0"
    - b. When candela ratings are not shown on the schematic design drawings, utilize NFPA 72 visual coverage area tables to select coverage.
  2. Complete point-to-point riser diagrams showing all equipment including size, type, number and reference designations for all circuits and devices. Each device shall be shown with address numbers or any other required field device settings including candela rating of notification appliances.
    - a. For multiple panel configurations, provide a separate block diagram to show the overall network system architecture with interconnection network circuits.
  3. System panel drawings showing cabinet dimensions, internal module placement, field wiring terminations with spare capacity allowances, and any applicable operator's display and panel switch label assignments. Where multiple equipment cabinets are used in a single location these shall be shown together in elevation for coordination of equipment installation and wireways, and to ensure proper space allocation.
  4. Provide a complete sequence of operation in the form of an NFPA Input/Output programming matrix for the entire system as shown in NFPA 72. The matrix shall reflect each unique programmed sequence, whether the sequence is initiated by an individual or common group of similar devices. Matrix shall illustrate alarm input/out events in association with initiation devices. Matrix summary shall include system supervisory and trouble output functions.
  5. Installation drawings shop drawings, and as-built drawings shall be prepared by a NICET II or higher individual experienced with the work specified herein.
  6. Incomplete submittals shall be returned without review, unless with prior approval of the Engineer.

- a. Disposition of shop drawings shall not relieve the Contractor from responsibility for deviations from drawings and specifications, unless the deviations are specifically noted in writing at the time of submission, and written acknowledgement has been received from the Engineer or Record. The disposition of shop drawings shall not relieve the Contractor from responsibility for errors in shop drawings or schedules.
  - b. Copies of the approved shop drawings shall be maintained on-site to serve as working documents during installation for preparing as-builts.
- E. Delegated Design Review of Shop Drawings: As required per the AHJ, in addition to items listed above, provide a compliance and code review by an individual with the required credentials and submit documentation, including any evaluation analysis of the shop drawing submittal. Provide the required review's credentials and seal/ signature by the qualified professional engineer responsible for the preparation, as required. The equipment supplier's shop drawings shall not be stamped or sealed by an Engineer unless the work is performed under their direct supervision and control.

#### 1.10 QUALITY ASSURANCE

A. The following shall be adhered:

1. State and Local Building Codes as adopted and/or amended by The Authority Having Jurisdiction, ADA, and/or State and local equivalency standards as adopted by The Authority Having Jurisdiction.
2. Owner's best practices for fire alarm installations/ operations including compliance with site standard operating procedures (SOP's).

B. Equipment Supplier Qualifications

1. The supplied products must utilize multi-channel product distribution on a national basis to be considered for this bid. The distribution shall be from factory branches as well as independent distributors to allow the end user with the ability to utilize factory trained and authorized competitive service providers after system installation and commissioning. Single source system suppliers are not acceptable. The initial installation and commissioning shall be provided by a factory direct branch to ensure a high level of quality for the customer.
2. A service office must be within 50 miles of the project site.
3. The manufacturer shall provide evidence of successfully installed similar fire detection and notification systems on comparable size and scope. The owner reserves the right to reject any installer's bid for which evidence of a successful prior installation by the contractor cannot be provided.
  - a. The equipment and service provider shall have a minimum of 10 years experience in the fire protective signaling systems industry.
4. Shall be licensed in the jurisdiction, if required.
5. The equipment supplier shall have a licensed fire protection engineer on staff to assist with all aspects of the installation including interfacing with the local AHJ and code consulting.
6. The technician shall supervise installation, software documentation, adjustment, preliminary testing, final testing and certification of the system. The technician shall

provide the required instruction to the owner's personnel in the system operation and maintenance.

7. The Equipment Supplier shall have in-house engineering and project management capability consistent with the requirements of this project. Factory trained representatives of the system manufacturer shall perform the detailed engineering of the system.

C. Installer Qualifications:

1. Before commencing work, submit data showing that the manufacturer has successfully installed fire alarm systems of the same scope, type and design as specified.
2. The contractor shall submit copies of all required licenses and bonds as required in the State having jurisdiction.
3. The system installer shall work with the system supplier/designers to ensure all equipment is installed as shown in the Shop Drawings and manufacturer's requirements, and programmed to comply with the project requirements.
4. The installing contractor is responsible for coordination with related trades, and complete (1st party) testing of the system as installed, to include verification that the system performs as intended, and all devices and fault conditions are properly supervised and reported as specified herein.

D. Testing Agency Qualifications: Qualified for testing indicated.

E. Source Limitations for fire alarm equipment: Obtain fire alarm equipment from single source.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products to project site in original, unopened packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, and shelf life if applicable.
- B. Store materials inside, under cover, above ground, and kept dry and protected from physical damage until ready for use. Remove from site and discard wet or damaged materials.

1.12 PROJECT CONDITIONS

- A. Installed products or materials shall be free from any damage including, but not limited to, physical insult, dirt and debris, moisture, and mold damage.
- B. Environmental Limitations: Do not deliver or install products or materials until spaces are enclosed and weather-tight, wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.13 WARRANTY

- A. The equipment and wiring shall be warranted to be free from electrical, mechanical and performance defects, within the specified warranty period. Equipment and components that fail in materials or workmanship must be repaired or replaced. It shall include all labor/travel time, parts and programming. The warranty also provides for the adjustment of smoke detector sensitivities due to unwarranted or nuisance detector activations.

1. Warranty Period: One year.

2. Warranty Initiation: Commencing with start-up and owners beneficial use of any portion of the system.
  3. The warranty does not cover cases involving component failure due to abuse, misuse, and/or "Acts of God" including but not limited to lightning strikes, flooding, power surges, and fire.
  4. This warranty is void if the product is altered, repaired, or serviced by anyone other than original equipment installer.
  5. A copy of the manufacturer's warranty shall be provided with closeout documentation and included with the operation and installation manuals.
- B. All labor for administering and servicing the warranty, including actual replacement of parts, will be the responsibility of the Installer for the warranty period.
- C. This Warranty does not apply to the replacement of consumable parts such as internal standby batteries. These components are designed to diminish over time unless failure has occurred due to a defect in materials, equipment malfunction, or expose to ambient conditions beyond their UL listing. As with all batteries, the maximum capacity and performance of the battery will decrease with time and use; this is not a defect. The expected lifespan of a fire alarm battery under normal conditions is 3 years. Only defective batteries and batteries that leak are covered by this warranty.
- D. The Owner reserves the right to make changes to the fire alarm system during the Warranty Period. Such changes do not constitute a waiver of warranty. Contractor shall warrant parts and installation work regardless of any such changes made by Owner, unless the Contractor provides clear and convincing evidence that a specific problem is the result of such changes to the fire alarm system.

#### 1.14 SERVICE AGREEMENT

- A. Technical Support: Beginning with Substantial Completion, provide software support for 1 year.
- B. Upgrade Service: Update software, firmware, to latest version at project completion. Install and program software upgrades that become available within one year from date of substantial completion. Upgrading software, firmware shall include operating system. Upgrade shall include new or revised licenses for use of software.
1. Provide 30 days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

#### 1.15 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
- B. The following spare devices shall be supplied (minimum of one each) consistent with the project:
1. Two (2) percent smoke detectors device(s).
  2. Two (2) percent heat detectors device(s).
  3. Two (2) percent pull stations device(s).
  4. Two (2) percent standard notification appliance(s) (speaker, strobe & combination).

### PART 2 - PRODUCTS

#### 2.01 MANUFACTURERS

- A. The equipment and service described in this specification are those supplied and supported by Siemens Industry and represent the base bid for the equipment.
  - 1. Being listed as an acceptable Manufacturer in no way relieves obligation to provide all equipment and features in accordance with these specifications.
- B. Must have multi-channel distribution for both products and equipment service. The owner shall have the ability change service provider or sales outlets. Proprietary manufactures such as single-channel suppliers are not acceptable.
  - 1. The initial installation shall be completed by a factory direct office.

## 2.02 CONTROL PANEL

- A. The fire alarm control panel shall be microprocessor-based using multiple microprocessors throughout the system, providing rapid processing of smoke detector and other initiation device information to control system output functions. The System Periphery board shall be capable of a minimum of 252 intelligent devices distributed between one, two, three, or four Class B SLC circuits. Any trouble on one circuit shall not affect the other circuit. The on board microprocessor provides the periphery board with the ability to function even if the main microprocessor fails. LED's on the board shall provide annunciation for the following; Power, Gnd. Fault, Alarm, Trouble.
- B. There shall be a watchdog circuit, which shall verify the system processors and the software program. Problems with either the processors or the system program the panel shall activate a trouble signal and reset the panel.
- C. The Signal Line Circuits (SLC) shall be tested for opens, shorts and communications with all addressable devices installed before connection to the control panel. Systems without this capability shall have a test panel installed for initial testing to eliminate any possible damage short term or long term to the control panel. After initial testing replace the test panel and proceed with complete testing.
  - 1. The signal line circuits (SLC) shall be polarity insensitive for all addressable devices. This permits the fire detection devices to operate even when detector and module wiring polarity are inverted on the wrong screw terminals.
- D. The primary control panel interface shall have the ability to view events, acknowledge, silence, and reset the system and any networked Fire control panels, when configured as a global PMI. The standard operator interface can acknowledge, silence, and reset panels via Global PMI.
- E. System response time from alarm to output shall be an average of three (3) seconds.
- F. To expedite system troubleshooting, the system cards shall have ground fault detection and diagnostic LEDs by card.
- G. All system cards and modules shall have Flash memory for downloading the latest module firmware.
- H. Passwords:
  - 1. Maintenance/Control Password - There shall be a 5 character password that a user must enter into the control panel in order to perform such maintenance- and control-related functions.

I. Networking – Command and Control:

1. A bidirectional data communications network transmitting multiplexed input and output signals, which shall be electronically supervised, shall connect all control panel nodes on a dedicated fire alarm network. The communication network shall consist of a communication circuits transmitting all system operations in a digitally encoded format.
2. Digital two-way communication capabilities supporting Style 4 (Class B) or Style 7 (Class A) communications using either hard-wired copper or fiber optics technologies or combinations of both as required for the control panels to communicate.
3. The system shall be designed such that in the event of a network communications failure, any remaining interconnected panels will operate as a sub-network and any isolated panels will operate in standalone mode. Upon communications failure, a trouble condition will be reported across the network and the disconnected panel shall continue to function in standalone mode.
4. Capability shall exist within the system to extend the network at any node. The system shall support a maximum of two network extension circuits in series on any system branch, extending the inherent distance limitations for network communications.
5. Communication protocol shall be of the CSMA/CD (carrier sense, multiple access, collision detect) type, eliminating delays incorporated into other protocols. Communication techniques using token passing and requiring sensing of delays and re-generation of the token to re-establish network communications in the event of a fault shall not be acceptable.
6. Network Fiber Modules
  - a. Capability to support multimode and single mode networks with the ability to switch between fiber types and copper networks between panel nodes.
  - b. The network fiber interface modules shall be used to transmit RS-485 communications between the fire alarm control panels. Each module shall have power, transmit and receive status LEDs. The module can act as a repeater or end- point unit, in a daisy chain or star configuration. It shall be possible to connect the fiber interface modules directly to a fire alarm workstation without the need for additional interface devices or control equipment.
    - 1) The connection between the D2300CPS multimode fiber interface modules shall use 2 high quality duplex 50/125 or 62.5/125 fiber optic cables and ST style fiber connectors. Each segment of the fiber network can be up to 1.9 miles. The fiber module shall have a minimum operating power output budget of -13dB for 62.5/125 cable and -9 dB for 50/125 cable.
    - 2) The connection between the D2325CPS single mode fiber interface modules shall use 2 high quality duplex 9/125 fiber optic cables and ST style fiber connectors. Each segment of the fiber network can be up to 20 miles. The fiber module shall have a minimum operating power output budget of -16dB for 9/125 cable.

J. Networking – Monitoring:

1. TCP/ IP based, network communication for one-way supervision of fire alarm status data.

- a. Ability to remotely monitor the fire alarm network activity from a single console or mobile device.
  - b. Ability to support multiple network topologies (ring, star, bus and bridged rings) for enhanced design and installation flexibility.
- K. Software Modifications: The system structure and software shall place no limit on the type or extent of software modifications on-site. Modification of software shall not require power-down of the system or loss of system fire protection while modifications are being made. Systems that require the use of external programmers or change of EPROMs are not acceptable.
- L. Logic: The fire alarm system shall support generic functions that deal with binary states (True/False, high/low), and produce desired outputs from one or more binary inputs (for example, alarm outputs from spot detectors, VESDA detectors, monitor modules or manual station inputs). AND, OR, NOT, Any N, D Latch, RS Latch, Time Base Control, Start Timer, Restart Timer are generic functions. Generic functions can be used as inputs to other function. The system shall support 2500 logic functions.
- M. History: The system shall store 5000 events in history while in straight mode and 4500 in circular mode. In straight mode, trouble warnings will occur at 4000 and 4500 events. In circular mode, the control panels shall maintain a 2000 event Alarm History buffer, which consists of the 2000 most recent alarm events from the 4500 event history file.

#### 2.03 PRIMARY POWER SUPPLY

- A. The control panels, NAC power booster panels, system workstation, and any other fire alarm equipment shall receive their primary power from a dedicated 120VAC disconnect circuit.
- 1. The circuit must be properly sized and protected in accordance with NEC requirements.
  - 2. This requirement does not limit that one dedicated branch circuit to serving only one power supply within a system. The dedicated branch circuit could supply several fire alarm power supplies within a control unit or within multiple interconnected control units that serve the signaling system.
    - a. The dedicated circuit can be supplied from any properly installed electrical panel board or sub-panel.
    - b. Minimum capacity of 6-amp that provides 24VDC power for system operation.
    - c. Ability to expand the power supply without adding additional cabinets.
  - 3. The circuit disconnecting means shall be labeled 'FIRE ALARM' and any other local identification requirements. Its location must be listed at the point of connection to the fire alarm control equipment. Provide a dedicated breaker lock unless the breaker is located in locked panel board or if it is in a locked electrical room.
  - 4. Transfer from AC to battery power shall be instantaneous when AC voltage drops less than 90% or brown out conditions it is not sufficient for normal operation.
- B. Loss of primary AC power shall sound a trouble signal at the FACP. The FACP shall indicate when the system is operating on an alternate power supply.

#### 2.04 SECONDARY POWER SUPPLY

- A. When the primary AC power is lost, the system shall automatically switch to the secondary power supply.

- B. The control panels, transponders, and NAC power booster panels shall receive their secondary power from batteries.
  - 1. Battery shall be of the sealed lead-acid, maintenance free type, 24-volt nominal, suitable for life safety application.
  - 2. Provide sufficient capacity to operate the complete alarm system in quiescent standby load (system operating in a non alarm condition) for a period of 24 hours and shall have sufficient capacity to operate all alarm notification appliances and all other connected loads for a period of 5 minutes.
  - 3. The battery charger shall be able to charge the system batteries up to 100 AH batteries. Battery charging shall be microprocessor controlled and programmed to select battery sizes.
  - 4. Transfer from AC to battery power shall be instantaneous when AC voltage drops to a point where it is not sufficient for normal operation.
  - 5. Batteries shall be secured in seismic areas 2B, 3, or 4 as defined by the Building Code.

#### 2.05 SYSTEM ENCLOSURE

- A. The control unit shall be housed in a cabinet suitable for both recessed and surface mounting. Cabinet and front shall be corrosion protected, given a rust resistant prime coat, and manufacturer's standard finish. The outer doors shall be capable of being a left hand open or a right hand open. The inner door shall have a left hand opening. System enclosure doors shall provide where required ventilation for the modules or cards in the enclosure.
- B. Enclosure needed to hold all the cards and modules as specified with at least 25% spare capacity for extra cards.
- C. Provide system enclosure for all amplifiers. Where required by the manufacturer, provide means for venting heat from the enclosure either by having enclosure sides and top vented or the doors vented.

#### 2.06 DOCUMENT STORAGE BOX

- 1. With every new system, a documentation cabinet shall be installed at the system control unit or at another approved location at the protected premises. Where the documentation cabinet is not in the same location as the system control unit, its location shall be identified at the system control unit. It shall meet NFPA 72's record maintenance requirements and the following criteria:
  - a. Enclosure to accommodate standard 8-1/2-by-11 inch and loose document records. Legend sheet will be permanently attached to door for system required documentation, key contacts, and system information.
  - b. Provide two key ring holders with location to mount standard business cards for key contact personnel.
  - c. Material and Finish: 18-gauge cold-rolled steel; four mounting holes.
  - d. Color: Red powder-coat epoxy finish.
  - e. Labeling: Permanently screened with 1 inch high lettering "SYSTEM RECORD DOCUMENTS" with white indelible ink.
  - f. Security: Locked with 3/4 inch barrel lock. Provide solid 12 inch stainless steel piano hinge.

#### 2.07 SYSTEM PRINTERS

- A. A system printer is not required.

## 2.08 INITIATING DEVICES

### A. General

1. The initiating device shall provide an alarm indication within less than four (4) seconds.
2. All initiation devices shall be insensitive to initiating loop polarity. Specifically, the devices shall be insensitive to plus/minus voltage connections.
3. Operating Voltage: 24 VDC, nominal.

### B. Multi-criteria Smoke Detectors – Addressable

1. The multi-criteria fire detectors shall be an intelligent digital photoelectric detector with a programmable heat detector. Detectors shall be listed for use as open area protective coverage, in-duct installation and sampling assembly installation and shall be insensitive to air velocity changes. The detectors' communications shall allow the detectors to provide alarm input to the system and alarm output from the system within four (4) seconds. So as to minimize the effort required by the installing and maintenance technician to appropriately configure the detector to ensure optimal system design, the detectors shall be programmable as application specific. Application settings shall be selected in software for a minimum of 19 environmental fire profiles unique to the devices installed location.
  - a. UL Listed as "direct in-duct" mounting.
2. The detector shall be guaranteed in writing not to false alarm when configured by the factory trained certified technician. The detector must provide different environmental algorithms that allow the detector to provide superior false alarm immunity without the need for additional alarm verification delays.
3. Smoke detectors shall be analog sensors that utilize photoelectric-type sensing principles mounted within a smoke chamber to detect particles of combustion.
4. The control panel shall continually analyze the analog signal from each sensor to determine calibration, sensitivity and environmental changes that may affect sensor operation. The analog values from each device shall be displayed (in terms of percent of obscuration) at the control panel upon command.
5. The detectors shall have a tri-color LED to streamline system maintenance/inspection by plainly indicating detector status as follows: green for normal operation, amber for maintenance required, red for alarm. Each detector shall include an LED that will flash periodically to indicate an active polling cycle. When the sensor reaches a predetermine alarm threshold (2% obscuration unless otherwise directed), the detector shall latch in LED shall flash continuously until reset at the control panel.
  - a. The system shall have the ability to disable the detector's LED.
6. The detectors shall be UL listed for operation in a 95% relative humidity (RH) environment.
7. The detector shall be designed to eliminate the possibility of false indications caused by dust, moisture, RFI/EMI, chemical fumes, and air movement while factoring in conditions of ambient temperature rise, obscuration rate changes and hot/cold smoke phenomenon into the alarm decision to give the earliest possible real alarm condition report.
8. The detectors shall support the use of a relay, or LED remote indicator without requiring an additional software address.
9. The intelligent smoke detector shall be capable of providing three distinct outputs from the control panel. The outputs shall be from an input of smoke obscuration, a thermal condition or a combination of obscuration and thermal conditions. The detector shall be designed to eliminate calibration errors associated with field cleaning of the chamber.

10. Where indicated on the schematic design drawings, provide remote indicator lamps and identification plates for detectors concealed from view. Each indicator will illuminate when the detector is in alarm. Locate the remote indicator lamps and identification plates flush mounted on walls so they can be observed from a normal standing position in the nearest common corridor or otherwise designated on the floorplans.
11. When required, the detectors shall incorporate an addressable Carbon Monoxide (CO) sensor. The CO sensor shall be selectable as an input to the multi-criteria fire detector algorithm and as an independent life-safety CO gas detector (in compliance with NFPA 720).
  - a. The multi-criteria detector with CO input shall be UL 2075 compliant as a gas and vapor detector.
12. The detectors shall be RoHS-compliant: it shall meet standards for Reduction of Hazardous Substances (RoHS) by reduction in lead content and other restricted substances.

C. Heat Detectors – Addressable

1. Thermal Detectors shall be analog/addressable sensors individually programmable for either fixed temperature, rate-of-rise or combined operation, except where otherwise dictated. The thermal detector shall be Model FDT421 and have the following temperature settings:
  - a. Fixed temperature at 135°F, 145°F, 155°F, 165°F, 174°F
  - b. Rate of Rise at 15°F/ min at 135°F
  - c. Rate of Rise at 15°F/ min at 174°F
2. The detectors shall have a tri-color LED to streamline system maintenance/inspection by plainly indicating detector status as follows: green for normal operation, amber for maintenance required, red for alarm. Each detector shall include an LED that will flash periodically to indicate an active polling cycle.
3. Analog sensors will also provide a low temperature warning (Supervisory condition) when the ambient temperature in a protected area reaches 40 degrees F.
4. Where ambient conditions dictate, provide conventional fixed temperature, weatherproof or explosion-proof heat detectors in lieu of analog detectors. Conventional devices shall be individually addressable via a dedicated addressable monitor module which shall be installed in an appropriately heated, ventilated location.
5. The detectors furnished shall have a listed spacing for coverage on smooth ceiling rating of up to 2,500 square feet and shall be installed according to the requirements of NFPA 72 for open area coverage.

D. Detector Bases – Addressable

1. The plug-in detector bases shall be UL compatible with the selected detector head. They shall utilize screw clamp terminals and field circuits shall terminate directly to the base. Bases shall be installed directly on an industry standard 3 1/2-inch, 4-inch octagon boxes, and 4-inch square boxes (with or without plaster). Position decorative ring around the base as required per the manufacture. Provide the ability to make the detector base tamperproof to prevent the removal of the detector head without the use of a tool.
  - a. The standard DB-11 base shall be - 6” version.

E. Manual Pull Stations – Addressable

1. Provide single-action addressable manual stations where shown on the schematic design drawings, to be flush or surface mounted as required. Manual stations shall contain the intelligence for reporting unique numeric address, identity, alarm and trouble to the fire alarm control panel.
    - a. Station will mechanically latch upon operation and remain so until manually reset by opening with a supplied alien wrench.
    - b. Stations shall be of single action pull down type with suitable operating instructions provided on front in raised or depressed letters, and clearly labeled "FIRE".
    - c. The manual station shall be equipped with terminal strip and pressure style screw terminals for the connection of field wiring. Flying lead terminals are not permitted.
    - d. Surface mounted stations where indicated on the drawings shall be mounted using a manufacturer's prescribed matching red enamel outlet box.
  2. Where shown on the schematic design drawings, provide a protective shield.
    - a. Shall be constructed of a clear LEXAN shield and red frame that easily fits over manual pull stations.
    - b. When shield is lifted to gain access to the station, a battery powered piercing warning speaker shall be activated. The horn shall be silenced by lowering and realigning the shield. The horn shall provide 85dB at 10 feet and shall be powered by a 9 VDC battery.
  3. Where required, there shall also be available pull stations with break glass, capable of explosion proof installation, capable of weatherproof installation, reset key operation, and metal housings.
- F. Addressable Monitoring and Control Modules
1. Addressable Interface Devices shall be provided to monitor contacts for such items as water-flow, tamper, and PIV switches connected to the fire alarm system. These interface devices shall be able to monitor a single or dual contacts. An address will be provided for each contact. Where remote supervised relay is required the interface shall be equipped with a SPDT relay rated for 4 amps resistive and 3.5 amps inductive. The addressable interface modules shall be model number HTRI or FDCIO Series.
    - a. The modules shall support two operation modes: an isolator (polarity sensitive) or non-isolator (polarity insensitive) mode. The module shall be capable of being wired for either mode. During the isolator mode, the built-in dual isolators will work at both sides of the module to isolate the line short in front or behind the module.
      - 1) Supports up to 252 addressable points per SLC devices loop, and in mixed mode up to 30 devices between isolated devices
    - b. Modules shall support NFPA 72 survivability requirements for shorts and provide information as to the location of the fault.
    - c. Each Model XTRI-series device has a multi-color LED that flashes when GREEN operating in Normal mode; AMBER if the unit is in a 'Trouble' condition, and RED to indicate a change of status.
    - d. Provide non-obstructive front-end access to programming port and wiring terminals.

G. Weatherproof Conventional Heat Detector

1. Thermal Fire Detectors are of the rate compensation/fixed temperature type. The detector element is self-restoring after operation and is supplied in ratings of 135°F. The detector shall be epoxy coated and mounts to a weatherproof box for approved use in wet or
2. unsheltered locations. Provide protective guards as required in public areas.

2.09 DEVICE PROGRAMMING / TEST UNIT

A. The device programming unit is a tool used for installation, commissioning, maintenance and servicing of addressable devices. It shall program the intelligent devices with the assigned addresses and provide an electronic test to ensure proper operation. Programming dipswitches and/or rotary switches shall not be acceptable. The portable unit shall provide the following features:

1. Liquid-crystal display (LCD) screen with keypad
2. Built in addressable base as well as two external terminals for use with all other addressable ancillary devices.
3. Powered from on-board standard NiMH rechargeable batteries or standard 'AA' Alkaline battery or an external AC adaptor.
4. Reads analogue values of addressable loops and perform maintenance features such as ground fault detection.
5. nonvolatile Flash memory with ability to download software upgrades.

B. The equipment supplier shall furnish a device programming unit to the installer for the duration of the project.

2.10 NOTIFICATION APPLIANCES

A. General requirements: Provide combination or individual audible and visual notification appliances as shown and permitted. All appliances shall be direct-wired; devices that utilize a multi-part assembly with swipe or non-mechanical pressure-type contact connections will not be considered acceptable.

1. Appliance housing available in red or white.
2. All field adjustments shall not require special tools or programming software for setting changes.

a. The selector switch for selecting the candela shall be tamper resistant.

3. All inputs shall employ terminals that accept #12 to #18 AWG wire sizes
4. The contractor shall provide fitted surface mount backboxes supplied by the appliance manufacturer and outdoor-rated appliances where site conditions dictate.
5. wall or ceiling-mount applications.
6. 24VDC operation, operating by reverse-polarity.
7. The appliance shall also be designed so that the audible signal may be silenced while maintaining strobe activation.
8. Provide surface or semi-flush installations
9. Provide weather-proof appliances as shown on the drawings

a. Extended temperature range of -40°F to 150°F (-40°C to 66°C).

b. Listed for outdoor applications under UL 1638 as well as under UL 1971

B. Audible Horn Appliances:

- a. Evacuation signal shall be the ANSI 53.41 three-pulse temporal pattern. Sleeping areas shall have low-frequency 520 Hz audible signals.
  - 1) Horns shall be UL Listed (for indoor use under Standard 1971 and 464).
  - 2) High and Low audible outputs (90 & 95 dB)
  - 3) Selectable temporal or steady horn output.
- b. Provide high output re-entrant-type speakers with the appropriate weatherproof listings in outdoor or other high ambient noise areas, as shown on the schematic design drawings.

C. Visual Strobe Appliances:

- a. Visual-notification appliances shall meet and be listed for UL Standard 1971 (Emergency Devices for the Hearing-Impaired) for Indoor Fire Protection Service.
  - b. Strobe shall be listed for indoor use, and shall meet the requirements of FCC Part 15 Class B.
  - c. Ability to mix LED and xenon strobes in the same field of view
  - d. LED multi-candela strobe shall have field-selectable settings, and be rated per UL Standard 1971 for:
    - 1) Wall-mount: 15/30/75/110cd
    - 2) Ceiling mount: 15/30/75/95cd or 115/177cd
2. The LED portions of the strobes shall meet the 20 millisecond light-pulse duration requirements of the 2016 edition of NFPA 72.
  3. All inputs shall be compatible with standard, reverse polarity supervision of circuit wiring by a Fire Alarm Control Panel (FACP)
  4. The selector switch for selecting the candela shall be tamper resistant
  5. The strobes shall not drift out of synchronization at any time during operation
    - a. If the sync module or Power Supply fails to operate, (i.e. - contacts remain closed), the strobe shall revert to a non-synchronized flash rate

2.11 DIGITAL COMMUNICATOR – CELLULAR TECHNOLOGY

- A. The commercial fire alarm off-site communicator shall provide general (alarm/ trouble/ supervisory) and ability for contact/ grouped event ID reporting from the fire alarm control panel (FACP). It shall be UL864 listed to provide point identification of alarm, supervisory, security and trouble events to a Central or Remote Receiving Station. It shall offer three selectable reporting paths which include: Cellular only, IP only, or IP primary/cellular backup. The Communicator shall receive its power and supervision from the FACP. Additional requirements:
  1. Provide cellular communications for this project with IP communication as owner selected/provided future option.
  2. Operates over the following communication protocols:
    - a. HSPA+ (4G)
    - b. HSPA (HSDPA & HSUPA) + (3G)

- c. EDGE (2G GPRS) (2G).
  - 3. Selectable reporting paths and supervision intervals to meet NFPA 72, chapter 26 requirements.
  - 4. Cellular provide capability: With broadest coverage footprint available in Verizon Network Certified™ or AT&T networks.
  - 5. Works over any type of customer provided Ethernet 10/100 based network connection (LAN or WAN), DSL modem or cable modem.
  - 6. Supports both dynamic (DHCP) or Public and Private Static IP addressing.
- B. Cellular communication shall be the primary means of communication to the off-site monitoring station, per NFPA 72 requirements. The equipment shall also support IP communications abilities with this project for future owner usage.

### PART 3 - EXECUTION

#### 3.01 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.02 INSTALLATION

- A. Perform work in accordance with the requirements of NFPA 70, NFPA 72, NFPA 13, NFPA 2001, and NECA , Standard of Good Workmanship in Electrical Contracting.
- B. Fasten equipment to structural members of building or metal supports attached to structure, or to concrete surfaces.
- C. In the event that limited energy cable installation is allowed, all cable runs shall be run at right angles to building walls, supported from structure at intervals not exceeding 3 feet and where installed in environmental air plenums, be rated for such use and tied/supported by components listed for environmental air plenums installation.
- D. Backing Boards: Provide 3/4-inch marine plywood backing boards for support of all fire alarm equipment panels surface mounted on masonry walls.
  - 1. Paint both sides of boards with two (2) coats of Gray enamel, including all edges.
- E. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal raceway and cables except in unfinished spaces.
- F. Wiring Integrity and survivability requirements – Specified on shop drawings per NFPA72, Chapter 12
- G. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- H. Provide Surge Protection Devices (SPD) on all fire alarm wiring, which extends beyond the main building. Locate the SPD as close as practicable to the point at which the circuit leave or enter the building where the Fire Alarm Control Panel is located. Protection devices shall be

shown on the schematic design drawings and shall be UL listed or in accordance with written manufacturer's requirements.

1. Provide equipment ground and connected to the building grounding electrode system per NEC.
  2. Provide a dedicated enclosure to house the SPD and label it.
- I. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.
- J. Provide primary power for each panel from normal/ emergency panels as indicated on the Electrical Power Plans. Power shall be 120V AC service, transformed through a two-winding, isolation type transformer and rectified to low voltage DC for operation of all circuits and devices.

### 3.03 BOXES, ENCLOSURES AND WIRING DEVICES

- A. All fire detection and alarm system devices, control units and remote annunciators shall be flush mounted when located in finished areas and may be surface mounted when located in unfinished areas.
- B. Fire Alarm: Terminal cabinets shall be provided in locations shown and as otherwise required to support wiring terminations, troubleshooting and future tenant fit-up. Cabinets shall be painted red and contain terminal blocks to support the system wiring where the Control Panels are remote from the devices served. Cabinets shall include accommodation for all wiring including SLCs, notification circuits, and related addressable and fault isolation modules for future expansion and modification.
1. Terminal boxes and cabinets shall have a volume 50 percent greater than required by the NFPA 70. Minimum sized wire shall be considered as 14 AWG for calculation purposes.
- C. Boxes shall be installed plumb and firmly in position.
- D. Extension rings with blank covers shall be installed on junction boxes where required.
- E. Junction boxes served by concealed conduit shall be flush mounted.
- F. Upon initial installation, all wiring outlets, junction, pull and outlet boxes shall have dust covers installed. Dust covers shall not be removed until wiring installation when permanent dust covers or devices are installed.
- G. "Fire alarm system" decal or silk-screened label shall be applied to all junction box covers.
- H. Panel enclosures shall be installed to meet clearance requirements per NFPA 70 and local codes. Minimum requirements shall be 3 foot clearance in front of the enclosure

### 3.04 CONDUCTORS

- A. Each conductor shall be identified as shown on the shop drawings at each with wire markers at terminal points. Attach permanent wire markers within 2 inches of the wire termination. Marker legends shall be visible.
- B. All wiring shall be supplied and installed in compliance with the requirements of the National Electric Code, NFPA 70, Article 760, and that of the manufacturer.
- C. All splices shall be made using solder-less connectors. All connectors shall be installed in conformance with the manufacturer recommendations.

- D. Crimp-on type spade lugs shall be used for terminations of stranded conductors to binder screw or stud type terminals. Spade lugs shall have upset legs and insulation sleeves sized for the conductors.
- E. The installation contractor shall submit for approval prior to installation of wire, a proposed color code for system conductors to allow rapid identification of circuit types.
- F. Wiring within sub panels shall be arranged and routed to allow accessibility to equipment for adjustment and maintenance.

### 3.05 DEVICES

- A. Relays and other devices to be mounted in auxiliary panels are to be securely fastened to avoid false indications and failures due to shock or vibration.
- B. Wiring within panels shall be arranged and routed to allow accessibility to equipment for adjustment and maintenance.
- C. All devices and appliances shall be mounted to or in an approved electrical box.

### 3.06 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
- B. Permanently label or mark each conductor with alphanumeric wire markers at the main control panel, transponders, terminal cabinet and NAC booster panels.
- C. A consistent color code for fire alarm system conductors throughout the installation.

### 3.07 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Testing General:
  - 1. All Alarm Initiating Devices shall be observed and logged for correct zone and sensitivity. These devices and their bases shall be tagged with adhesive tags located in an area not visible when installed, showing the initials of the installing technician and date.
  - 2. Wiring runs shall be tested for continuity, short circuits and grounds before system is energized. Resistance, current and voltage readings shall be made as work progresses.
  - 3. The acceptance inspector shall be notified before the start of the required tests. All items found at variance with the schematic design drawings or this specification during testing or inspection by the acceptance inspector shall be corrected.
  - 4. Test reports shall be delivered to the acceptance inspector as completed.
  - 5. All test equipment, instruments, tools and labor required to conduct the system tests shall be made available by the installing contractor. The following equipment shall be a minimum for conducting the tests:
    - a. Ladders and scaffolds as required to access all installed equipment.
    - b. Multi-meter for reading voltage, current and resistance.
    - c. Two-way radios and flashlights.

- d. A manufacturer recommended device for measuring air flow through air duct smoke detector sampling assemblies.
- e. Decibel meter
- f. In addition to the testing specified to be performed by the installing contractor, the installation shall be subject to test by the authority having jurisdiction.

### 3.08 ACCEPTANCE TESTING

- A. A written acceptance test procedure (ATP) for testing the fire alarm system components and installation will be prepared by the engineer in accordance with NFPA 72 and this specification. The contractor shall be responsible for the performance of the ATP, demonstrating the function of the system and verifying the correct operation of all system components, circuits, and programming.
  - 1. A program matrix shall be prepared by the installing contractor referencing each alarm input to every output function affected as a result of an alarm condition on that input.
  - 2. The installing contractor prior to the ATP shall prepare a complete listing of all device labels for alphanumeric annunciator displays.
- B. Preliminary Testing: Conduct preliminary tests to ensure that all devices and circuits are functioning properly. After preliminary testing is complete, provide a letter certifying that the installation is complete and fully operable. The letter shall state that each initiating and indicating device was tested in place and functioned properly. The letter shall also state that all panel functions were tested and operated properly. The Contractor and an authorized representative from each supplier of equipment shall be in attendance at the preliminary testing to make necessary adjustments.
  - 1. Verify that the control unit is in the normal condition as detailed in the manufacturer's O&M manual.
  - 2. Visually inspect wiring.
  - 3. Test the battery charger and batteries.
  - 4. Verify that software control and data files have been entered or programmed into the FACP.
  - 5. Measure the current in circuits to ensure there is the calculated spare capacity for the circuits.
  - 6. Measure voltage readings for circuits to ensure that voltage drop is not excessive.
  - 7. Measure the voltage drop at the most remote appliance (based on wire length) on each notification appliance circuit.
  - 8. Megger Tests: After wiring has been installed, and prior to making any connections to panels or devices, wiring shall be megger tested for insulation resistance, grounds, and/or shorts. Conductors with 300 volt rated insulation shall be tested at a minimum of 250 VDC. Conductors with 600 volt rated insulation shall be tested at a minimum of 500 VDC. Test results recorded for use at the final acceptance test.
  - 9. Loop Resistance Tests: Measure and record the resistance of each circuit with each pair of conductors in the circuit short-circuited at the farthest point from the circuit origin. The tests shall be witnessed by the owner and test results recorded for use at the final acceptance test.
  - 10. Verify the absence of unwanted voltages between circuit conductors and ground. The tests shall be accomplished at the preliminary test with results available at the final system test.
  - 11. Test each initiating device and notification appliance and circuit for proper operation and response at the control unit. Smoke sensors shall be tested in accordance with

manufacturer's recommended calibrated test method. Use of magnets is prohibited. Testing of duct smoke detectors shall comply with the requirements of NFPA 72 except that, for item 12(e) (Supervision) in Table 14.4.2.2, disconnect at least 20 percent of devices. If there is a failure at these devices, then supervision shall be tested at each device.

12. All readings for Sound Pressure Level (SPL) shall be recorded on the installation drawings next to the speaker symbol. The readings shall then be added on the "as-Built" drawings to be submitted at the conclusion of the Final Acceptance test.
  13. Verify with all parties the required survivability of wiring, raceways, and junction boxes
  14. Determine that the system is operable under trouble conditions as specified.
- C. Final Acceptance Test: Notify the owner in writing when the system is ready for final acceptance testing. Submit request for test at least 30 calendar days prior to the test date. A final acceptance test will not be scheduled until the Preliminary Testing has been completed.
1. Provide documentation of Preliminary Testing results.
  2. Test the system in accordance with the procedures outlined in NFPA 72 acceptance testing.
  3. Demonstrate the performance of the required number and type of initiating devices and notification appliances per the AHJ's requirements.
  4. Verify that Shop Drawings reflecting as-built conditions are accurate. Upon final approval by all parties, provide two sets of AS-built documents in a cabinet adjacent to the main FACP or designated area within the building. Per NFPA 72 7.7.2 Measure the current in Notification appliance circuits under full load to assure that there is the calculated spare capacity for every circuit.
- D. The acceptance inspector shall use the system record drawings in combination with the documents specified in this specification during the testing procedure to verify operation as programmed. In conducting the ATP, the acceptance inspector shall request demonstration of any or all input and output functions. The items tested shall include but not be limited to the following:
1. System wiring shall be tested to demonstrate correct system response and correct subsequent system operation in the event of:
    - a. Open, shorted and grounded signal line circuits.
    - b. Open, shorted and grounded notification, releasing circuits.
    - c. Primary power or battery disconnected.
  2. System notification appliances shall be demonstrated as follows:
    - a. All alarm notification appliances actuate as programmed
    - b. Audibility and visibility at required levels.
  3. System indications shall be demonstrated as follows:
    - a. Correct message display for each alarm input at the control display.
    - b. Correct annunciator light for each alarm input at each annunciator and graphic display as shown on the drawings.
    - c. Correct history logging for all system activity.

4. System off-site reporting functions shall be demonstrated as follows:
  - a. Correct zone transmitted for each alarm input
  - b. Trouble signals received for disconnect
5. Secondary power capabilities shall be demonstrated as follows:
  - a. System primary power shall be disconnected for a period of time as specified herein. At the end of that period, an alarm condition shall be created and the system shall perform as specified for a period as specified.
  - b. System primary power shall be restored for forty-eight hours and system-charging current shall be normal trickle charge for a fully charged battery bank.
  - c. System battery voltages and charging currents shall be checked at the fire alarm control panel.

### 3.09 DOCUMENTATION

- A. System documentation shall be furnished to the owner and shall include but not be limited to the following:
  1. System record drawings and wiring details including one set of reproducible drawings, and a CD ROM or memory stick (thumb drive) with digital copies of the record drawings in PDF format.
  2. System operation, installation and maintenance manuals.
  3. System matrix showing interaction of all input signals with output commands.
  4. Documentation of system voltage, current and resistance readings taken during the installation, testing and ATP phases of the system installation.
  5. System program showing system functions, controls and labeling of equipment and devices.

### 3.10 PROTECTION

- A. Remove and replace devices and panel components that are wet, moisture damaged, or mold damaged.

### 3.11 DEMONSTRATION

- A. Include in the project the services of a factory-trained instructor, regarding the system operations, inspection requirements, and maintenance of the system provided. The instructor shall train the employees designated by the owner, in the care, adjustment, and operation of the fire alarm system.
  1. Required Instruction Time: Provide 2 hours of instruction after final acceptance of the system. The instruction shall be given during working hours on such dates and times as are selected by the owner. The instruction may be divided into two periods and videotaped at the discretion of the owner.
- B. Provide a printed instruction card in a conspicuous location observable from the FACP. The card shall show those steps to be taken by an operator when a signal is received as well as the functional operation of the system under all conditions, normal, alarm, supervisory and trouble.

END OF SECTION 283111

## SECTION 285000 - SECURITY MANAGEMENT SYSTEM

### PART 1 – GENERAL

#### 1.1 SUMMARY

- A. Union County has an existing enterprise level OSSI Intelli Site Security Management System (SMS). The new garage shall be integrated into the county's existing system using compatible components and software. The garage shall have a system capable of operation in standalone mode as well as remote operation from the County's command center. The SMS shall integrate with the new door hardware, card readers, and parking gate controls. All programming and work shall be coordinated with the County's current vendor:

Maffey's Security Group  
1172-80 E. Grand St.  
Elizabeth, NJ 07201  
908-351-1172  
[sales@maffeys.com](mailto:sales@maffeys.com)

#### 1.2 CONDITIONS AND REQUIREMENTS

- 1.1 The General Conditions, Supplementary Conditions, and Division 01 – General Requirements apply.

#### 1.3 SECTION INCLUDES

- A. General description, functional requirements, operational characteristics, and criteria for the Security Management System (SMS).

#### 1.4 RELATED SECTIONS

- A. Division 26 - Electrical: Electrical systems and components.  
B. Section 28 05 13 - Conductors and Cables for Electronic Safety and Security.

#### 1.5 DEFINITIONS

- A. API: Application Programming Interface.  
B. LDAP: Lightweight Directory Access Protocol.  
C. NTSC: National Television Standards Committee.  
D. PAL: Phase Alternating Line. PAL is the color video standard used in Europe and many other countries.  
E. SMS: Security Management System.

#### 1.6 REFERENCE STANDARDS

- A. Where more than one (1) reference standard, code, or regulation applies, the more stringent one shall govern.

- B. Electronic Industries Alliance (EIA):
  - 1. EIA RS-170 - Standard for Composite Video Signals.
- 1.2 European Union (EU):
  - 1. Restriction of the Use of Certain Hazardous Substances (RoHS) in Electronic Equipment Regulations 2002/95/EC.
- 1.3 Federal Communications Commission (FCC).
  - 1. FCC Part 15 - Unlicensed RF Devices.
  - 2. FCC Part 68 - Requirements for Connecting to the U.S. Phone Network.
- 1.4 Institute of Electrical and Electronics Engineers, Inc. (IEEE).
- 1.5 International Organization for Standardization (ISO).
- 1.6 International Radio Consultive Committee (CCIR).
- 1.7 Microsoft® Open Database Connectivity (ODBC) Interface.
- 1.8 National Fire Protection Association (NFPA):
  - 1. NFPA 70 - National Electrical Code.
- 1.9 National Institute of Standards and Technology (NIST):
  - 1. Federal Information Processing Standards Publication (FIP PUBS 197) - Specification for the Advanced Encryption Standard (AES).
- 1.10 National Television Standards Committee (NTSC):
  - 1. Color Camera Broadcast Standard.
- 1.11 Underwriters Laboratories Inc. (UL):
  - 1. UL 294 - Standard for Access Control System Units.
  - 2. UL 1076 - Standard for Proprietary Burglar Alarm Units and Systems.
  - 3. UL 1981 - Standard for Central-Station Automation Systems.

#### 1.7 SECURITY MANAGEMENT SYSTEM (SMS) DESCRIPTION

- A. The Security Management System (SMS) outlined in this section is the key central component for managing physical security and the bridge between physical and logical security for a project. The system shall provide a variety of integral functions including: regulation of access and egress; provision of identification credentials; monitor, track and interface alarms.
- B. The SMS shall utilize a single seamlessly integrated relational database for all functions utilizing a fully multi-tasking multi-threading Microsoft Windows 10 or Server Operating

System. The SMS shall be written so that all system modules (access control, alarm monitoring, ID or credential management, visitor management, asset management and digital video management) are developed and built from a unified single 32-bit source code set. Separate source code bases for individual modules of the SMS are not acceptable.

- C. Upgrades or expansion of the SMS to a larger size system in scale shall not require installation of a different and/or new SMS application or require the administrator or operator to learn a different and or new interface from the previous version.
- D. The SMS shall be written using Unicode format. Unicode enables a single software product to be targeted across multiple platforms and languages without re-engineering and allows for data to be transported through different systems without corruption.
- E. The SMS shall be compatible with Microsoft Windows 10, and shall have passed Microsoft-designed tests for compatibility and reliability on Windows 10.
- F. The SMS shall be UL 1076 Listed.
- G. The SMS shall have FIPS 140-2 certification.
- H. The SMS shall only require a single license key to be present on the database server for the SMS to operate. The license key shall either be a physical device or a software license key. The SMS shall allow the SMS USER the ability to activate, return, or repair the software license key. The software license shall only be used on a physical computer or in a VMware virtual environment. License keys shall not be required at the client workstations. The license key on the database server shall determine the number of client workstations that shall be able to connect to the SMS as well as all SMS functionality. An alarm shall be generated in the SMS's Alarm Monitoring application as the license expiration date approaches.
- I. The License Administration login and password shall be encrypted when they are passed to the License Server. The hash shall not be the same data even with the same logon credentials on different systems. This is a requirement for U.S. government DIACAP certification.
- J. The SMS shall support concurrent licensing with respect to client licenses. The SMS shall be installed on any number of client workstations in the CUSTOMER facility. Then, any of the client workstations that have the SMS software installed shall have the ability to connect to the database server as long as the maximum number of concurrent connections purchased has not been reached. Connections shall be licensed on a per module basis. This shall provide CUSTOMER with great flexibility in system design and layout.
- K. The SMS shall provide support for single sign-on capability. Single sign-on shall allow System Administrators or System Operators to authenticate into SMS applications using their Windows domain account.
- L. Single sign-on shall support the following scenarios:
  - 1. Allow System Administrators or System Operators to interactively run SMS applications without having to enter a username or password. This shall make administration of the SMS easier since maintenance of separate SMS usernames and passwords is not required.

2. Allow SMS API scripts to authenticate. These scripts shall be run using a Windows account allowing a seamless and secure way to authenticate the account and restricting the script to those actions that the user is permitted to perform.
3. The SMS shall be able to seamlessly interface with and monitor intelligent system controllers, reader interface modules, I/O panels, alarm panels, and alarm panel receivers.
4. The SMS shall be able to communicate with intelligent system controllers via RS-485, RS-232, TCP/IP or Ethernet, and dialup via modem.
5. Tasks shall be accessible from any compatible client workstation on the network utilizing one (1) or all of the following:
6. Traditional client-server architecture.
7. N-tier architecture where the SMS supports the expansion of the system architecture and allows for user deployment based upon their system architectural needs. The SMS shall allow for, but not require, the separation of the database, application server, Web server, and client interface. The system shall require that all connections to the database be performed through a trusted link from the client or internet browser interface.
8. Utilize an open architecture where all data must reside on a single database and must be accessible in real time to SMS workstation or Web-based client connected to the network. The system shall be configurable to support all of the following databases: Microsoft SQL Server 2008, Microsoft SQL Server 2005, Oracle Server 11g, and Oracle Server 10g. Oracle data may reside on Windows or UNIX platforms.
9. The SMS shall support:
10. OSSI Intelli Site.

## 1.8 SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Reference each product to a location on Drawings.
  1. Manufacturer's technical data for all material and equipment at the system and sub system level to be provided as part of the SMS.
  2. A system description including analysis and calculations used in sizing equipment required by the SMS. The description shall show how the equipment will operate as a system to meet the performance requirements of the SMS. The following information shall be supplied as a minimum:
    3. Server(s) processor(s), disk space and memory size.
    4. Description of site equipment and its configuration.
    5. Network bandwidth, latency and reliability requirements.

6. Backup or archive system size and configuration.
  7. Start up operations.
  8. System expansion capability and method of implementation.
  9. System power requirements and UPS sizing.
  10. Device or component environmental requirements (cooling and or heating parameters).
  11. A description of the operating system and application software.
- B. Shop Drawings: Submit plans, elevations, sections, details, and attachments to other work.
1. Indicate all system device locations on architectural floor plans. No other system(s) shall be included on these plans.
  2. Include full schematic wiring information on these drawings for all devices. Wiring information shall include cable type, conductor routings, quantities, and connection details at device.
  3. Include a complete SMS one-line, block diagram.
  4. Include a statement of the system sequence of operation.
- 1.12 Operation and Maintenance Data: For electronic security system to include in emergency, operation, and maintenance manuals, include the following:
1. Provide [3] sets electronic format manuals including operating instructions, maintenance recommendations and parts list including wiring and connection diagrams modified to reflect as-built conditions.
  2. Manuals: Deliver final copies of the manuals within [14] days after completing the installation test. Each manual's contents shall be identified on the cover. The manual shall include names, addresses, and telephone numbers of the Contractor responsible for the installation and maintenance of the system and the factory representatives for each item of equipment for each system. The manuals shall have a table of contents and labeled sections. The final copies delivered after completion of the installation test shall include all modifications made during installation, checkout, and acceptance testing. The manuals shall consist of the following:
    3. Functional Design Manual: Identify the operational requirements for the system and explain the theory of operation, design philosophy, and specific functions. Include a description of hardware and software functions, interfaces, and requirements.
    4. Hardware Manual: Describe equipment furnished including:
      5. General description and specifications.
      6. Installation and check out procedures.

7. Equipment layout and electrical schematics to the component level.
8. System layout drawings and schematics.
9. Alignment and calibration procedures.
10. Manufacturer's repair parts list indicating sources of supply.
11. Software Manuals: Describe the functions of software and include all other information necessary to enable proper loading, testing, and operation. The manual shall include:
12. Definition of terms and functions.
13. System use and application software.
14. Initialization, startup, and exit.
15. Reports generation.
16. Details on forms customization and field parameters.
17. As-Built Drawings: During system installation, the Contractor shall maintain a separate hard copy set of drawings, elementary diagrams, and wiring diagrams of the SMS to be used for record drawings. This set shall be accurately kept up to date by the Contractor with all changes and additions to the SMS. Copies of the final as-built drawings shall be provided to the end user in DXF format.

## 1.9 QUALITY ASSURANCE

### A. Manufacturer Qualifications:

1. SMS manufacturer shall be an established organization with referenced and documented experience delivering and maintaining SMS of equal or higher sophistication and complexity as compared to the system detailed in this specification.
2. SMS manufacturer shall employ at a minimum the following methods for quality assurance of component and assembly devices.
3. Perform visual inspection of devices to verify assembly according to defined procedures. Perform end of line operational tests to ensure product functionality has been correctly configured.
4. Perform individual functionality and system level regression testing to ensure compliance with product specifications. Perform single and multiple unit system tests to mimic end-user installation configurations. Utilize automated hardware and software testing to evaluate system performance under published operational loads and compare to published system capabilities.

### B. Bidder Qualifications:

1. At the time of the bid, the bidder shall have satisfactorily completed projects of a similar size, scope and complexity as the system detailed in this specification. The bidder shall furnish written proof of experience from three (3) references and proof of current accreditation or certification by the manufacturer for required training for sales or installation or service of the SMS and associated devices.
2. The bidder shall also be a factory authorized local service organization that shall carry a complete stock of parts and provide maintenance for the SMS and related systems under this contract. Local shall be defined as an area in a (50) mile radius of installed location.

#### 1.10 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging.
- B. Store components and equipment in temperature and humidity controlled environment in original manufacturer's sealed containers. Maintain ambient temperature between 50 and 85 degrees Fahrenheit (10 and 29.4 degrees Celsius), and not more than 80 percent relative humidity, non-condensing.
- C. Open each package; verify contents against packing list; and file copy of packing list, complete with package identification, for inclusion in operation and maintenance data.
- D. Mark packing list with the same designations assigned to materials, components, and equipment for recording in the system labeling schedules that are generated by software.
- E. Save original manufacturer's containers and packing materials and deliver as directed under provisions covering extra materials.

#### 1.11 SEQUENCING

- A. New access control system and peripheral equipment shall be installed prior to the removal of the existing Kerri MS security management system. The installer shall coordinate individual door cut over to new system with county personnel.

#### 1.12 TRAINING

- A. Provide 3-day certification training for (2) county sheriff's office personnel at OSSI facility. Include cost for travel and boarding as necessary.
- B. Provide OSSI certified technician on site for (7) days to facilitate proximity card issuance and migration of card holder data base. Schedule to be coordinated with county.
- C. Provide (2) 4 hour trainings sessions on site for OSSI security management system and peripheral equipment at completion of installation. Schedule to be coordinated with county.

- 1.13 Provide (2) 4 hour trainings sessions on site 120 days post construction for OSSI security management system and peripheral equipment. Schedule to be coordinated with county.

## PART 2 - PRODUCTS

### 1. WARRANTY

- B. SMS manufacturer warrants that the product disc and hardware key shall be free from defects in material and workmanship and that SMS software product will function in substantial accordance to SMS manufacturer's specifications. Any defective dongle will be replaced at no charge provided that the system is currently on a supported version of SMS software.
- C. All SMS manufacturer branded access control hardware. SMS manufacturer warrants that such products will be free from defects in material and workmanship and that they will operate in general accordance with their product specifications. The parts will be repaired or replaced at the manufacturer's option. SMS manufacturer provides repair or replacement of SMS manufacturer branded components for five years.
- D. Transfer SMS third-party device warranties from the manufacturer to the Contractor, which may then transfer third-party warranties to the Owner. Examples may include but not be limited to: credential printers, reader heads, computers, etc.
- E. SMS products and peripheral equipment located at doors shall include a 2 year installation warranty for all equipment and wiring associated with installation. The contractor shall provide a quarterly cleaning and maintenance of the system components in coordination with county personnel.

### 1. MANUFACTURERS

2.2 Basis-of-Design Manufacturer: The security management system is based on products of OSSI; Web site: [www.OSSI-usa.com](http://www.OSSI-usa.com).

- A. Substitutions will not be considered.

### 2.3 SMS SOFTWARE

- A. Security Management System (SMS) Software: OSSI "Intelli Site".

### 2.4 SMS FIELD HARDWARE

- A. Security Management System (SMS) Hardware: The SMS shall be equipped with the access control field hardware required to receive alarms and administer all access granted or denied decisions. All field hardware must be designed to meet UL 294 requirements. The SMS must be able to retrieve device serial numbers from all field hardware, excluding card readers. Depending upon the configuration, the SMS field hardware must be able to include any or all of the following components:

- 1. Intelligent Reader Module (IRM)
- 2. Intelligent Input Module (IIM)
- 3. Input Relay Module (IRM)

4. Network Adapters
5. Power supplies and enclosures
6. UL, CUL, and CE listed power supplies and enclosures

B. SMS Authentication Hardware:

1. HID SmartID Reader
2. HID Proximity Readers
3. HID Wiegand Readers
4. HID iCLASS credential readers

2.5 SMS WORKSTATION HARDWARE

- A. CPU: Intel Core Series I5 – current generation
- B. RAM: 8GB minimum
- C. HDD: 500GB SATA III
- D. Display: 24” 1080p minimum
- E. Input devices: keyboard, mouse

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of electronic security system.
- B. Examine rough-in for embedded and built-in anchors to verify actual locations of intrusion detection connections before electronic security system installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SYSTEM INTEGRATION

- A. Integrate electronic security system with the following systems and equipment:
  1. Electronic door hardware.
  2. Elevators – valid card read required to access courts facility judges elevator.
  3. Access control.

4. Fire-alarm system.

### 3.3 INSTALLATION

- A. Install electronic security system in accordance with manufacturer's written instructions.
- B. Wiring Method: Install wiring in metal raceways, except in accessible indoor ceiling spaces and in interior hollow gypsum board partitions where cable may be used. Conceal raceways and wiring except in unfinished spaces and as indicated. Minimum conduit size shall be 1/2-inch. Control and data transmission wiring shall not share conduit with other building wiring systems.
- C. Wiring Method: Cable, concealed in accessible ceilings, walls, and floors when possible.

END OF SECTION 285000

## SECTION 311000 – SITE PREPARATION

### PART 1 - GENERAL

#### 1.1 DESCRIPTION

A. Section Includes:

1. Site demolition:

- a. Selective site demolition: Demolition of pavements, curbs and gutters, and utilities, and backfilling voids resulting from removals or demolition.

2. Site Clearing:

- a. Removing Above-Grade and Below-Grade Improvements  
b. Soil Erosion and Sedimentation Control

#### 1.2 RELATED DOCUMENTS:

- A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and other Division 00 and 01 Specification Sections, apply to this Section.
- B. Somerset-Union Soil Erosion and Sediment Control Plan Certification and NJDEP 5G3 Permit.
- C. The Standards for Soil Erosion and Sediment Control in New Jersey, 7<sup>th</sup> Edition, January 2014, revised July 2017.
- D. Related Sections:
1. Section 312000 – Earth Moving

#### 1.3 SUBMITTALS

- A. Product Data: Silt fence.
- B. Contractor shall prepare an accurate record of actual locations of capped and abandoned utilities and subsurface obstructions.

#### 1.4 QUALITY ASSURANCE

A. Regulatory Requirements:

1. Conform to applicable local code for demolition of structures, safety of adjacent structures, dust control and runoff control.
2. Obtain required permits and licenses from authorities. Pay associated fees including disposal charges.
3. Notify affected utility companies before starting work and comply with their requirements.
4. Do not close or obstruct roadways, sidewalks or hydrants without permits.
5. Conform to applicable regulatory procedures when discovering hazardous or contaminated materials.

6. The Contractor shall keep a copy of the Soil Erosion and Sediment Control Plan on-site at all times throughout the construction period.
- B. In addition to complying with all pertinent codes, the Contractor will also comply with the requirements of those insurance carriers providing coverage for existing structures and this work.
1. Comply with governing EPA notification regulations before starting selective demolition. Comply with hauling disposal regulations of authorities having jurisdiction.

#### 1.5 PROJECT CONDITIONS

- A. Existing Conditions:
1. Conditions existing at time of inspection for bidding purposes will be maintained by Owner in so far as practicable. Variations within structures may occur by Owner's removal and salvage operations prior to start of demolition work.
  2. Notify Owner of variations to conditions or discrepancies in actual site conditions prior to start of site preparation Work.
- B. Traffic: Conduct site clearing operations to ensure minimum interference with roads, streets, walks, and other adjacent occupied or used facilities. Do not close or obstruct streets, walks, or other occupied or used facilities without permission from authorities having jurisdiction.
- C. Existing Utility Services:
1. General: Indicated locations are approximate; determine exact locations before commencing Work.
  2. Arrange and pay for disconnecting, removing, capping, and plugging utility services. Notify affected utility companies in advance and obtain before starting this Work.
  3. Place markers to indicated location of disconnected services. Identify service lines and capping locations on Project Record Documents.
- D. Protection of Existing Improvements: Provide protections necessary to prevent damage to existing improvements indicated to remain in place.
1. Restore damaged improvements to their original condition, as acceptable to property Owners.
  2. Provide protection for safe passage of persons around area of site preparation. Take precautions and conduct operations to prevent injury to adjacent buildings, structures, other facilities, and persons.
  3. Provide interior and exterior shoring, bracing, or support to prevent movement, settlement or collapse of structures to be demolished and adjacent facilities to remain.
- E. Salvageable Improvements: Carefully remove items indicated to be salvaged and store on Owner's premises where indicated or directed.
- F. Obtain and pay for permits required for the execution of the Work.
- G. Notify corporations, companies, individuals, and local authorities owning conduits, wires, or pipes that will be affected by this Work. Arrange for removal and relocation of wires running to or on the property that will interfere with the execution of the Work.

- H. Verify actual locations of underground structures. Protect and maintain conduit, drains, sewers, pipes, and wires that are to remain. Provide and maintain markers for location of underground facilities.
- I. Contractor shall be responsible for maintaining all safety precautions in accordance with local and state laws and regulations to ensure the safety of the workers and general public.
- J. Contractor shall be responsible for maintaining dust control throughout the demolition and site clearing operations.

#### 1.6 MATERIAL OWNERSHIP

- A. Except for materials indicated to be stockpiled or to remain Owner's property, cleared materials shall become Contractor's property and shall be removed from the site.

### PART 2 - PRODUCTS

#### 2.1 MATERIALS

- A. Fill Materials - Specified in Section 312000 – Earth Moving.
- B. Soil Erosion and Sedimentation Control – Refer to Construction Plans and Soil Erosion and Sediment Control Certification.
  - 1. Silt fence, inlet sedimentation protection, and construction entrance.

### PART 3 - EXECUTION

#### 3.1 PREPARATION

- A. Protect and maintain benchmarks and survey control points from disturbance during construction.
- B. Provide erosion-control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.
- C. Locate and clearly flag trees and vegetation to remain or to be relocated.
- D. Protect existing site improvements to remain from damage during construction.
  - 1. Restore damaged improvements to their original condition, as acceptable to Owner.

#### 3.2 SITE DEMOLITION

- A. Utilities
  - 1. Locate, identify, disconnect, and seal or cap off utilities indicated to be removed.
    - a. Owner's Representative will arrange to shut off indicated utilities when requested by Contractor.
    - b. Arrange to shut off indicated utilities with utility companies.

2. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
    - a. Notify Owner's Representative not less than two days in advance of proposed utility interruptions.
    - b. Do not proceed with utility interruptions without Owner's Representative's written permission.
  3. Excavate for and remove underground utilities indicated to be removed. Remove or abandon existing storm or sanitary sewers indicated to be removed in accordance with local MUA requirements.
  4. Removal of abandoned underground piping or conduit interfering with construction is included under this Section.
- B. Site Improvements
1. Remove existing above- and below-grade improvements as indicated and as necessary to facilitate new construction.
  2. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.
    - a. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut length of existing pavement to remain before removing existing pavement. Saw-cut faces vertically.
  3. Removal of rock.
  4. Removal of debris.
    - a. Remove all debris from the site.
- C. Pollution Controls:
1. Use water mist, temporary enclosures, and other suitable methods to limit the spread of dust and dirt. Comply with governing environmental protection regulations.
    - a. Do not use water when it may damage existing construction or create hazardous or objectionable conditions, such as ice, flooding, and pollution.
  2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
    - a. Clean adjacent structures and improvements of dust, dirt, and debris caused by selective demolition operations. Return adjacent areas to condition existing before start of selective demolition.
- D. Salvage Materials:
1. All demolished material shall be offered to the Owner. If not desired by the Owner, materials shall become property to be removed from site and disposed of by the Contractor at his expense unless noted otherwise on the Drawings.

2. Historic artifacts, including cornerstones and their contents, commemorative plaques and tablets, antiques, and other articles of historic significance remain to the Owner. Notify the Owner's representative if items are encountered and obtain acceptance regarding method of removal and salvage for the Owner.

### 3.3 SITE CLEARING AND GRUBBING

- A. General: Remove trees, shrubs, grass and other vegetation, improvements, or obstructions as required to permit installation of new construction. Remove similar items elsewhere on site or premises as specifically indicated.

### 3.4 BACKFILLING

- A. Completely fill below grade areas and voids resulting from demolition or removal of structures (including underground) using approved select fill materials consisting of stone, gravel, and sand free from debris, trash, frozen materials, roots, and other organic matter.
  1. Fill depressions caused by clearing and grubbing operations with acceptable fill material to subgrade elevation.
  2. Ensure that areas to be filled are free of standing water, frost, frozen, or unsuitable material, trash, and debris prior to fill placement.
  3. Place fill materials in horizontal layers and compact each layer at optimum moisture content of fill material to proposed density as specified in Section 312000 – Earth Moving.
  4. Grade surface to match adjacent grades and to provide flow of surface drainage after fill placement and compaction.

### 3.5 REMOVAL

- A. Remove debris, rock, extracted plant life, paving, curbs, and other structures indicated on Drawings and as specified.
- B. Disposal of Demolished Materials:
  1. Remove from site debris, rubbish, and other materials resulting from demolition operations.
  2. No burning of any material, debris, cleared material, or trash on-site or off-site will be allowed.
  3. Transport cleared and demolished materials with appropriate vehicles and dispose off-site to areas which are approved for disposal by governing authorities and appropriate property owners. Do not burn or bury waste materials on-site.
- C. Remove grass, trees, plant life, stumps and all other construction debris from site to a dump site that is suitable for handling such material according to state laws and regulations.

### 3.6 SOIL EROSION AND SEDIMENTATION CONTROL

- A. Sequence of Construction Activities
  1. The City of Elizabeth Department of Engineering must be notified in writing 48 hours prior to commencement of any construction activity. A copy of the certified plan must be kept on the job site at all times.

2. Contractor shall install silt fence, snow fence tree protection, inlet sediment filters, and stabilized construction access, as part of initial phase of any work to insure maximum silt retention on-site. Soil Erosion and Sediment Control measures shall be installed as indicated on Drawings and in conformance with The Standards for Soil Erosion and Sediment Control in New Jersey, latest edition.
3. Mass grade the site, keeping disturbed areas to a minimum at all times. All soil to be exposed or stockpiled for a period of greater than 14 days, and not under active construction, will be temporarily seeded and hay mulched or otherwise provided with vegetative cover. This temporary cover shall be maintained until permanent protection is established.
4. Contractors shall control mud accumulation on all streets surrounding project by installing stone surface at all locations where construction traffic leaves the site. Dust shall be kept to a minimum by utilizing sprinkling, calcium chloride, vegetative cover, spray on adhesives, or other approved methods.
5. Maintain all filters and traps during construction to prevent any blockages from accumulated sediment. Clean sediment traps, filters, and fencing after each storm event and on a weekly basis. Replace all materials that are clogged or ineffective.
6. As storm sewer lines are installed, Contractor is to install a silt barrier at each inlet.
7. Temporary erosion control and sediment controls shall be removed by the Contractor only when sufficient growth of ground cover is established to prevent further erosion.
8. The contractor must request a final inspection once landscaping and final soil stabilization is complete and obtain a Report of Compliance. The contractor shall provide any additional erosion controls as directed by the City of Elizabeth Department of Engineering and / or Somerset-Union Soil Conservation District upon final inspection and as required for a Report of Compliance.

### 3.7 MONITORING

- A. Contractor shall monitor soil erosion control practices at least weekly to determine the effectiveness of the installation any repairs required. Any damage incurred by erosion shall be rectified immediately. Contractor shall keep a detailed log of these observations and remedies taken. Log shall be submitted monthly.
- B. Contractor shall clean-out siltation features when siltation reduces capacity by 20 percent.

END OF SECTION 311000

## SECTION 312000 – EARTH MOVING

### PART 1 - GENERAL

#### 1.1 DESCRIPTION

- A. General: Provide all materials, labor, equipment, and services and perform all operations in connection with the Excavating, complete, in accordance with the Drawings and Specifications, and including but not limited to, the following:
  - 1. Excavating and backfilling for site utilities.
  - 2. Excavation Support and Protection and removal when no longer needed.
  - 3. Onsite and imported fills as necessary to bring areas to elevations indicated on the Drawings.
- B. All excavation shall be considered unclassified.

#### 1.2 RELATED DOCUMENTS

- A. Drawings and General Provisions of Contract.
- B. Geotechnical Report for Caldwell & Elizabethtown Parking Garage prepared by Remington & Vernick Engineers dated December 14, 2020.
- C. Related sections:
- D. Section 311000 – Site Clearing
- E. Section 312316 – Trenching
- F. Section 312323 – Backfill

#### 1.3 DEFINITIONS

- A. Excavation consists of the removal of material encountered above subgrade elevations indicated and the disposal, on-site, of materials removed.
- B. Subgrade: The surface or elevation remaining after completing excavation, or the top surface or a fill or backfill immediately below sub base, drainage fill, or topsoil materials.
- C. Borrow: Soil material obtained off-site for use as backfill or fill.
- D. Subbase Course: The layer placed between the subgrade and base course in a paving system or the layer placed between the subgrade and surface of a pavement or walk.
- E. Base Course: The layer placed between the sub base course and surface pavement in a paving system.
- F. Bedding Course: Layer placed over the excavated subgrade in a utility trench before placement of pipe.
- G. Drainage Fill: Course of 3/4-inch size clean crushed stone supporting slab-on-grade placed to minimize upward capillary flow of perched water.

- H. Unauthorized excavation consists of removing materials below indicated subgrade elevations or dimensions without direction of the Owner's Representative. Unauthorized excavation, as well as remedial work not directed by the Owner's Representative, shall be at the Contractor's expense.
- I. Structures: Buildings, footings, piles, pile caps, foundations, retaining walls, slabs, tanks, curbs, encasings, cradles, mechanical and electrical appurtenances, or other man-made stationary features constructed above or below ground surface.
- J. Utilities include underground pipes, conduits, ducts, and cables, as well as underground services five feet beyond the face of the exterior building wall lines.
- K. Rock: Rock material in beds, ledges, unstratified masses, and conglomerate deposits and boulders of rock material  $\frac{3}{4}$  c.y. or more in volume.
- L. Additional Excavation: If unsatisfactory soil materials are encountered at design elevations, continue excavation as directed by Owner's Representative. If conditions are not a result of Contractor's negligence, additional excavation will be measured as directed by Owner's Representative and paid for in accordance with contract conditions relative to changes in work.

#### 1.4 PROJECT CONDITIONS

- A. EXISTING UTILITIES: Locate existing underground utilities in areas of work. If utilities are to remain in place, provide adequate means of support and protection during earthwork operations.
  - 1. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility owner immediately for directions. Cooperate with Owner and utility companies in keeping respective services and facilities in operation. Repair damaged utilities to satisfaction of utility owner.
    - a. Existing sub-surface structures, including old sewers, abandoned drains, etc., which may appear within the limits of excavation, shall be removed if required, but such removals will not be paid for separately, being included in the price paid for excavation or other items including such excavation.
    - b. In case the uncovering or interference of sub-surface structures necessitates a change in the alignment or grade of the proposed work, the Contractor shall give written notice of such condition, and shall cease work at such points until ordered to proceed.
    - c. In case any change of grade or alignment shall serve to delay the work, the time allowed for completion of the contract will be extended by the same length of time to which the delay shall have operated, the decisions of the Owner's Representative, being final.
  - 2. All excavation, trenching and shoring operations must be conducted in accordance with the State of New Jersey Occupational Safety and Health Standards for the Construction Industry (with recent amendments) and in accordance with 29 CFR Part 1926, Occupational Safety and Health Standards – Excavations; Final Rule (October 31, 1989), and recent amendments. The selection of appropriate temporary slope angles is the responsibility of the Contractor who is on-site full time and is responsible for construction operations and safety. In selecting temporary slopes, the contractor should consider the type of materials excavated, groundwater and seepage conditions, the presence of construction equipment, and other surcharge loads near the top of the excavation, the excavation depth, and the slope and conditions of the bedrock. It is expected that the natural soils and existing fill materials can be excavated with

conventional equipment and that excavations into the bedrock will require special considerations to facilitate rock removal.

3. Do not interrupt existing utilities serving facilities occupied and used by Owner or others, during occupied hours, except when permitted in writing by Owner's Representative and then only after acceptable temporary utility services have been provided.
  - a. Provide minimum of 48-hour notice to Owner's Representative and receive written notice to proceed before interrupting any utility.
  - b. Demolish and completely remove from site existing underground utilities indicated to be removed. Coordinate with utility companies for shut-off of services if lines are active.
  - c. The use of explosives is not permitted.

#### 1.5 PROTECTION OF PERSONS AND PROPERTY

- A. Barricade open excavations occurring as part of this work and post with warning lights.
- B. Operate warning lights as recommended by authorities having jurisdiction.
- C. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earthwork operations.
- D. Perform excavation by hand within dripline of large trees to remain. Protect root systems from damage or dry out to the greatest extent possible. Maintain moist condition for root system and cover exposed roots with moistened burlap.
- E. Protect trees, shrubs, lawns, and other features remaining as portions of final landscape.
- F. Use all means necessary to protect the building, neighboring property, and materials that are to be salvaged. This protection shall be given to public walks, streets, and utilities. Any damage to same shall be repaired by Contractor at his expense.

### PART 2 - PRODUCTS

#### 2.1 SUBBASE MATERIALS

- A. Subbase and base materials shall be naturalized or artificially graded mixture of natural or crushed gravel, crushed stone, natural or crushed sand; ASTM D2940, with at least 95 percent passing a 1½-inch sieve and not more than 8 percent passing a No. 200 sieve.

#### 2.2 FILL MATERIALS

- A. Fills shall be constructed from approved materials found on or off site.
- B. All fill material, unless noted otherwise herein, shall be a clean fill material free of debris and organic matter. Material shall be free of rock, stone, or broken concrete larger than 2 inches in the largest dimension. All imported fill material shall be "certified clean."

### 2.3 GRANULAR FILL MATERIAL

- A. Granular fill materials shall be bank run gravel or sand, or processed stone which meets the gradation criteria of the Unified Soil Classification System for Well Graded, Silty Gravel (GM), Gravel (GW) or sand (SW or SM). Maximum particle size shall pass a 3-inch sieve.
- B. The material shall contain more than 5 percent but less than 15 percent silt passing the No. 200 sieve and shall have a maximum plasticity index of six (6). All granular fill material is subject to the continuing inspection and acceptance of the Owner and Engineer.

### 2.4 TOPSOIL

- A. Topsoil shall be natural fertile friable loamy soil from a well-drained site, free of coarse sand, weeds, roots, and any sticks, stones, or other extraneous matter over 1 inch in size. Landscape Engineer shall approve topsoil in advance of delivery to the site.

## PART 3 - EXECUTION

### 3.1 PREPARATION

- A. Protect structure, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earthwork operations.
- B. Protect subgrades and foundation soils against freezing temperature or frost. Provide protective insulating materials as necessary.
- C. Provide erosion control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.
- D. All filling operations requiring compaction shall be observed by a qualified soils/geotechnical engineer with field density tests made, to assure compaction to Specification.

### 3.2 DEWATERING

- A. Prevent surface water and subsurface or groundwater from entering excavations, from ponding on prepared subgrades, and from flooding Project site and surrounding area.
  - 1. Do not allow water to accumulate in excavations. Remove water to prevent softening of foundation bottoms, undercutting footings, and soil changes detrimental to stability of subgrades and foundations. Provide and maintain pumps, well points, sumps, suction, and discharge lines, and other dewatering system components necessary to convey water away from excavations.
  - 2. Convey water removed from excavations and rainwater to collecting or runoff areas. Establish and maintain temporary drainage ditches and other diversions outside excavation limits to convey rainwater and water removed from excavations to collecting or runoff areas. Do not use trench excavations as temporary drainage ditches.

### 3.3 STABILITY OF EXCAVATIONS

- A. Comply with the applicable provisions of the Occupations Safety and Health Administration Standards and Interpretations (OSHA), including Amendments and requirements of authorities having jurisdiction to maintain stable excavations.

- B. Slope sides of excavations to comply with local codes, ordinances, and requirements of agencies having jurisdiction. Shore and brace where sloping is not possible because of space restrictions or stability of material excavated. Maintain sides and slopes of excavations in safe condition until completion of backfilling.
- C. Shoring and Bracing: Provide materials for shoring and bracing, such as sheet piling, uprights, stringers, and cross braces, in good serviceable condition. Maintain shoring and bracing in excavations regardless of time period excavations will be open. Extend shoring and bracing as excavation progresses.

#### 3.4 APPROVAL OF SUBGRADE

- A. Notify Owner's Representative when excavations have reached required subgrade.
- B. When Owner's Representative determines that unforeseen unsatisfactory soil is present, continue excavation and replace with compacted backfill or fill material as directed.
- C. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by the Owner's Representative.
- D. Contractor shall examine all surfaces to receive geotextile for compliance with requirements for soil compaction and grading and to ensure that all subgrades are free from sharp projections and voids; for subgrade free from angular rocks, rubble, roots, vegetation, debris, voids, protrusions, and ground water; and for other unsuitable conditions that could adversely affect the performance of or otherwise damage the geotextile.
- E. Excavate and replace pockets of weak, soft, or pumping soils and all areas of unsuitable subgrade conditions with granular fill. The surface of the subgrade shall be smooth and level.
- F. Proceed with geotextile installation only after unsatisfactory conditions have been corrected and the Owner's Representative has documented in writing that the subgrade is satisfactory to receive geotextile.
- G. Contractor shall be responsible to properly repair or replace all damaged geotextile.

#### 3.5 BACKFILL

- A. Place and compact satisfactory soil material in layers to required elevations. Use soil material free of: clay, rock, or gravel larger than 3 inches in any dimension, debris, vegetable matter, waste, and frozen materials. Use subbase material where indicated under piping or conduit; shape to fit bottom 90 degrees of cylinder.
- B. Backfill excavations promptly, but not before completing the following:
  - 1. Acceptance of construction below finish grade including, where applicable, damp-proofing and perimeter insulation.
  - 2. Removal of trash, debris, mud, slough, and water from excavation
  - 3. Removal of temporary shoring and bracing, and sheeting.

#### 3.6 FILL

- A. Preparation: Remove vegetation, topsoil, debris, wet, and unsatisfactory soil materials, obstructions, and deleterious materials from ground surface prior to placing fills.

1. Plow scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing surface.
- B. Subgrades or existing ground surfaces to receive fill shall be proofrolled. Soft/unstable areas shall be removed and replaced with compacted satisfactory fill material.

### 3.7 MOISTURE CONTROL

- A. Uniformly moisten or aerate subgrade and each subsequent fill or backfill layer before compaction to within 2 percent of optimum moisture content.
  1. Do not place backfill or fill material on surfaces that are muddy, frozen, or contain frost or ice.
  2. Remove and replace, or scarify and air-dry satisfactory soil material that is too wet to compact to specified density.
  3. Remove and replace or uniformly moisten soil material that is too dry to compact to specified density.
  4. Stockpile or spread and dry/moisten removed wet/dry satisfactory soil material.

### 3.8 COMPACTION

- A. Place backfill and fill materials in layers not more than 12 inches in loose depth for material compacted by heavy compaction equipment and not more than 8 inches in loose depth for material compacted by hand-operated tampers.
- B. Place backfill and fill materials evenly on all sides of structures to required elevations. Place backfill and fill uniformly along the full length of each structure.
- C. Percentage of Maximum Dry Density Requirements: Compact soil to the following percentages of maximum dry density according to ASTM D 1557.
  1. Under lawn or unpaved areas, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill material at 90 percent.

### 3.9 GRADING

- A. General: Uniformly grade areas to a smooth surface, free from irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.
  1. Provide a smooth transition between existing adjacent grades and new grades.
  2. Cut out soft spots, fill low spots, and trim high spots to conform to required surface tolerances.

### 3.10 PROTECTION

- A. Protection Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.
- B. Repair and re-establish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or loose compaction due to subsequent construction operations or weather conditions.

1. Scarify or remove and replace material to depth directed by the Geotechnical Engineer; reshape and recompact at to the required density.
- C. Settling: Where settling occurs during the Project correction period, remove finished surfacing, backfill with addition approved material, compact, and reconstruct surfacing.
  1. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to the greatest extent possible.

### 3.11 DISPOSAL OF SURPLUS AND WASTE MATERIALS

- A. Excavated materials shall be redirected on-site and properly graded or legally removed off-site to a disposal area, at the Contractor's expense. Material removed off-site shall be properly documented and manifested.
- B. Transport surplus satisfactory soil to designated storage areas on Owner's property. Stockpile or spread soil as directed by Owner's Representative.

END OF SECTION 312000

## SECTION 312316.13 – TRENCHING

### PART 1 - GENERAL

#### 1.1 SECTION INCLUDES

- A. Excavating trenches for utilities as shown on plans.
- B. Compacted fill from top of utility bedding to subgrade elevations.
- C. Backfilling and compaction.

#### 1.2 RELATED DOCUMENTS

- A. Section 312000 – Earth Moving.
- B. Section 322323.13 – Backfill.
- C. Section 334000 – Storm Drainage Utilities.

#### 1.3 REFERENCES

- A. AASHTO T180 – Moisture-Density Relations of Soils Using a 10-lb Rammer and an 18-in. Drop.
- B. ANSI/ASTM C136 – Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates.
- C. ANSI/ASTM D698 – Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft<sup>3</sup> (600 kN-m/m<sup>3</sup>)).
- D. ANSI/ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft<sup>3</sup> (2,700 kN-m/m<sup>3</sup>)).
- E. ASTM D2167 – Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method.
- F. ASTM D6938 – Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).
- G. Geotechnical Report for Caldwell & Elizabethtown Parking Garage prepared by Remington & Vernick Engineers dated December 14, 2020.

#### 1.4 DEFINITIONS

- A. Utility: Any buried pipe, conduit, or cable.

#### 1.5 FIELD MEASUREMENTS

- A. Verify that survey bench mark and intended elevations for the Work are as shown on drawings.

#### 1.6 COORDINATION

- A. Coordinate work under provisions of Contract.

- B. Verify works associated with lower elevation utilities are complete before placing higher elevation utilities.
- C. Owner shall be given two (2) days prior notification by sub-contractors prior to commencing digging operations.
- D. A Construction Safety Work Permit shall be obtained from a designated Owner employee prior to commencing excavation operations with motorized equipment.
- E. Layout of excavation shall be performed by sub-contractor and verified by an Owner representative prior to beginning work. The purpose of this is to allow Owner to verify any utilities in the area. Contractors must verify all existing underground utilities by hand-digging test holes at all points of intersection.

## PART 2 - PRODUCTS

### 2.1 FILL MATERIALS

- A. Fill materials shall be as specified on plans and Section 322323.13 – Backfill.

## PART 3 - PARTS – EXECUTION

### 3.1 PREPARATION

- A. Identify required lines, levels, contours, and datum.
- B. Protect plant life, lawns and other features remaining as a portion of final landscaping.
- C. Protect bench marks, survey control points, existing structures, fences, sidewalks, paving, and curbs from excavation equipment and vehicular traffic.
- D. Maintain and protect above and below grade utilities which are to remain.
- E. Cut out soft areas of subgrade not capable of in situ compaction. Backfill and compact to density equal to or greater than requirements for subsequent backfill material.
- F. Escape ladders shall be provided in trenches in excess of four (4) feet deep.
- G. All trenches in excess of five (5) feet in depth shall be shored or sloped.
- H. Proper barricading road closings and night lighting shall be provided for all open trenches.

### 3.2 EXCAVATION

- A. Excavate subsoil required for utilities.
- B. Cut trenches sufficiently wide to enable installation and allow inspection.
- C. Do not interfere with 45 degree bearing splay of foundations.
- D. Hand trim excavation. Remove loose matter.
- E. Remove lumped subsoil, boulders, and rock up to 1/3 cu. yd. measured by volume.

- F. Stockpile excavated material in area designated on site and remove excess material not being used, from site.

### 3.3 BACKFILLING

- A. Backfill trenches to contours and elevations with unfrozen materials.
- B. Systematically backfill to allow maximum time for natural settlement. Do not backfill over porous, wet, frozen, or spongy subgrade surfaces.
- C. All fill and backfill should be placed in maximum 8-inch thick, loose lifts and compacted to at least 95 percent of maximum dry density as determined by the ASTM D 1557 test procedure. Fill materials in landscaped areas should be compacted to 90 percent of maximum dry density. The moisture content of the fill should be maintained with plus/minus two percentage points of optimum moisture during compaction.
  - 1. Fill materials should be wetted or dried as necessary to efficiency of the compaction equipment used by the contractor, the lift thickness should be reduced as necessary to achieve the required degree of compaction throughout the full thickness of each lift.
- D. Remove surplus fill materials from site.

### 3.4 TOLERANCES

- A. Top Surface of Backfilling Under Paved Areas: Plus or minus 3/8 inch from required elevations.
- B. Top Surface of General Backfilling: Plus or minus 1/2 inch from required elevations.

### 3.5 FIELD QUALITY CONTROL

- A. Field inspection and testing will be performed under provisions of Contract.
- B. If tests indicate Work does not meet specified requirements, remove Work, replace, compact, and retest.

### 3.6 PROTECTION OF FINISHED WORK

- A. Protect finished Work under provisions of Contract.
- B. Reshape and re-compact fills subjected to vehicular traffic during construction.

END OF SECTION 312316.23

## SECTION 312323.13 – BACKFILL

### PART 1 - GENERAL

#### 1.1 SECTION INCLUDES

- A. Site structure backfilling to subgrade elevations.
- B. Site filling and backfilling.
- C. Fill under paving.
- D. Consolidation and compaction as scheduled.

#### 1.2 RELATED DOCUMENTS

- A. Section 311000 – Site Preparation.
- B. Section 312000 – Earth Moving.
- C. Section 312316.13 – Trenching.

#### 1.3 REFERENCES

- A. AASHTO T180 - Moisture-Density Relations of Soils Using a 10-lb Rammer and an 18-in. Drop.
- B. ANSI/ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft<sup>3</sup> (600 kN-m/m<sup>3</sup>)).
- C. ANSI/ASTM D1556 - Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method.
- D. ANSI/ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft<sup>3</sup> (2,700 kN-m/m<sup>3</sup>)).
- E. ASTM D2167 – Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method.
- F. ASTM D6938 – Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).
- G. NJDOT Standard Specifications for Road and Bridge Construction, 2007, and amendments.
- H. Geotechnical Report for Caldwell & Elizabethtown Parking Garage prepared by Remington & Vernick Engineers dated December 14, 2020.

### PART 2 - PRODUCTS

#### 2.1 FILL MATERIALS

- A. Fill: Conforming to NJDOT Section 901. Backfill shall consist of clean fill only. No debris shall be allowed as part of the backfill material.

- B. Structural Fill: Conforming to NJDOT Section 901.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Verify subdrainage, damp proofing or waterproofing installation has been inspected.

#### 3.2 PREPARATION

- A. Prior to commencement of backfill operations, an authorized Owner representative must sign off on all underground work.
- B. After the stripping operations and prior to placement of any new fill, the existing subgrade soils should be proofrolled to recompact any areas disturbed by the stripping operations and to detect any soft or otherwise unstable areas that must be removed and replaced with suitable fill material. A compactor with a minimum static weight of ten tons and with vibratory capability should be used for the proofrolling work. The proofrolling will be monitored by the Geotechnical Engineer who will determine the acceptability of the subgrades and also will determine whether vibratory or static proofrolling is appropriate.

#### 3.3 BACKFILLING

- A. Backfill areas to contours and elevations with unfrozen materials.
- B. Systematically backfill to allow maximum time for natural settlement. Do not backfill over porous, wet, frozen, or spongy subgrade surfaces.
- C. All fill and backfill used for support of footings, slabs, pavements, and sidewalks should be placed in maximum 12-inch thick, loose lifts and compacted to at least 95 percent of maximum dry density as determined by the ASTM D1557 test procedure. Fill materials in landscaped areas should be compacted to 90 percent of maximum dry density. The moisture content of the fill should be maintained with plus/minus two percentage points of optimum moisture during compaction. Fill materials should be wetted or dried as necessary to achieve the required moisture content. Depending on the efficiency of the compaction equipment used by the contractor, the lift thickness should be reduced as necessary to achieve the required degree of compaction throughout the full thickness of each lift.
- D. All backfill shall be placed in lifts of 12" or less.

#### 3.4 TOLERANCES

- A. Top Surface of Backfilling under Paved Areas: Plus or minus 3/8 inch from required elevations.
- B. Top Surface of General Backfilling: Plus or minus 1/2 inch from required elevations.

#### 3.5 FIELD QUALITY CONTROL

- A. Field inspection and testing will be performed under provisions of Contract.
- B. If tests indicate Work does not meet specified requirements, remove Work, replace, and retest.

- C. All soils testing shall be performed by an independent agency, employed by and reporting directly to Owner.

3.6 PROTECTION OF FINISHED WORK

- A. Protect finished Work under provisions of Contract.
- B. Reshape and re-compact fills subjected to vehicular traffic.

END OF SECTION 312323.13

## SECTION 321216 – ASPHALT PAVING

### PART 1 - GENERAL

#### 1.1 DESCRIPTION

A. Section Includes:

1. Hot-Mix Asphalt Paving
  - a. Roads
  - b. Parking lots
  - c. Driveways
2. Patch and Repair of Existing Pavement where shown on Contract Drawings.
3. Pavement markings, including temporary markings before sealer coat and final markings after sealer coat.

#### 1.2 RELATED DOCUMENTS:

A. Related documents:

1. Drawings and General Provisions of Contract, including General and Supplementary Conditions and other Division 00 and 01 Specification Sections, govern the work of this Section.

B. NJDOT Standards.

C. Related Sections:

1. Section 312000 – Earth Moving
2. Section 321373 – Expansion Joints

#### 1.3 SUBMITTALS

- A. Product Data: For each product specified include technical data and tested physical performance properties.
- B. Job Mix Designs: For each job mix proposed for the work.
- C. Material Certificates: Provide copies of material certificates signed by material producer and Contractor certifying that each material item complies with, or exceeds, specified requirements, including job mix design.

#### 1.4 QUALITY ASSURANCE

- A. Provide hot-mix asphalt pavement according to the materials, workmanship, and other applicable requirements of the standard specifications of the State of New Jersey Department of Transportation (NJDOT), or of authorities having jurisdiction.
- B. Use locally available materials and gradations which meet standard state highway specifications and exhibit satisfactory records of previous installations.

## 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver pavement-marking materials to Project site in original packages with seals unbroken and bearing manufacturer's labels containing brand name and type of material, date of manufacturer, and directions for storage.
- B. Store pavement-marking materials in a clean, dry, protected location and within temperature range required by manufacturer. Protect stored materials from direct sunlight.

## 1.6 PROJECT CONDITIONS

- A. Weather Limitations: Apply prime and tack coats when ambient temperature is above 50°F. and when temperature has not been below 35°F. for 12 hours immediately prior to application. Do not apply when base is wet or contains an excess of moisture.
- B. Construct asphalt concrete surface course when atmospheric temperature is above 40°F. and when base is dry. Base course may be placed when air temperature is above 30°F. and rising.
- C. Pavement-Marking Paint: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of 40°F for oil-based materials, 50°F for water-based materials, and not exceeding 95°F.

## PART 2 - PRODUCTS

### 2.1 AGGREGATES

- A. General: Use materials and gradations that have performed satisfactorily in previous installations.
- B. Coarse Aggregate: Sound; angular crushed stone; crushed gravel; or properly cured, crushed blast-furnace slag; complying with ASTM D692 and NJDOT Standard Specifications for Road and Bridge Construction latest edition.
- C. Fine Aggregate: Sharp-edged natural sand or sand prepared from stone; gravel, properly cured blast-furnace slag, or combinations thereof; complying with ASTM D1073 and NJDOT Standard Specifications for Road and Bridge Construction latest edition.
  - 1. For hot-mix asphalt, limit natural sand to a maximum of 20 percent by weight of the total aggregate mass.
- D. Mineral Filler: Rock or slag dust, hydraulic cement, or other inert material complying with ASTM D242, if recommended by applicable DOT standards.

### 2.2 ASPHALT MATERIALS

- A. Asphalt Cement: Comply with ASTM D3381; Table 2 AC-10, AC-20, or AC-30, NJDOT Standard Specifications for Road and Bridge Construction latest edition.
- B. Prime Coat: A medium curing cut-back asphalt or an asphalt penetrating prime coat consisting of either ASTM D2397 or ASTM D2399, MC-30 or SS-1 h and NJDOT Standard Specifications for Road and Bridge Construction latest edition.
- C. Tack Coat: Emulsified asphalt; ASTM D2397 or ASTM D2399, SS-1 h, CSS-1, or CSS-1 h and NJDOT Standard Specifications for Road and Bridge Construction latest edition.

### 2.3 AUXILIARY MATERIALS

- A. Water: Potable
- B. Sand: ASTM D1073, Grade No's. 2 or 3.
- C. Joint Fillers
  - 1. Bituminous Fiber Joint Filler: Preformed strips of asphalt saturated fiberboard, complying with ASTM D1751.
- D. Pavement-Marking Paint: See section 321723 – Pavement Markings

### 2.4 MIXES

- A. Hot-Mix Asphalt: Provide dense, hot-laid, hot-mix asphalt plant mixes approved by authorities having jurisdiction; as shown on the approved plans.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Verify that subgrade is dry and in suitable condition to support paving and imposed loads.
- B. Notify General Contractor in writing of any unsatisfactory conditions. Do not begin paving installation until these conditions have been satisfactorily corrected.

### 3.2 SURFACE PREPARATION

- A. General: Immediately before placing asphalt minerals, remove loose and deleterious material from substrate surfaces. Ensure that prepared subgrade is ready to receive paving.
  - 1. Sweep loose granular particles from surface of unbound-aggregate base course. Do not dislodge or disturb aggregate embedded in compacted surface of base course.
- B. Herbicide Treatment: Apply herbicide according to manufacturer's recommended rates and written application instructions. Apply to dry, prepared subgrade or surface of compacted-aggregate base before applying paving materials.
  - 1. Mix herbicide with prime coat when formulated by manufacturer for that purpose.
- C. Prime Coat: Apply uniformly over surface of compacted-aggregate base at a rate of 0.15 to 0.35 gal./sq. yd. Apply enough material to penetrate and seal, but not flood, surface. Allow prime coat to cure for 72 hours minimum.
  - 1. If prime coat is not entirely absorbed within 24 hours after application, spread sand over surface to blot excess asphalt. Use just enough sand to prevent pickup under traffic. Remove loose sand by sweeping before pavement is placed and after volatiles have evaporated.
  - 2. Protect primed substrate from damage until ready to receive paving.
- D. Base Coat: Apply over compacted subgrade. Apply material to penetrate and seal, but not flood surface. Cure and dry as long as necessary to attain penetration and evaporation of volatile.

- E. Tack Coat: Apply to contact surfaces of previously constructed asphalt or Portland cement concrete and surfaces abutting or projecting into asphalt concrete pavement.
- F. Allow to dry until at proper condition to receive paving.
- G. Exercise care in applying bituminous materials to avoid smearing of adjoining concrete surfacing. Remove and clean damaged surfaces.

### 3.3 HOT-MIX ASPHALT PLACING

- A. General: Place asphalt concrete mixture on prepared surface, spread and strike-off. Spread mixture at minimum temperature as specified by NJDOT. Place inaccessible and small areas by hand. Place each course to required grade, cross-section, and compacted thickness.
- B. Placing Asphalt Paving: Place in strips not less than 10' wide, unless otherwise acceptable to Engineer. After first strip has been placed and rolled, place succeeding strips and extend rolling to overlap previous strips. Complete base course for a section before placing surface course.
- C. Joints: Make joints between old and new pavements, or between successive days' work, to ensure continuous bond between adjoining work. Construct joints to have same texture, density, and smoothness as other sections of asphalt concrete course. Clean contact surfaces and apply tack coat.
- D. Final course of asphalt paving shall be installed at completion of Project, at scheduled time as approved by Owner's Representative.

### 3.4 ROLLING AND COMPACTION

- A. General: Begin rolling when mixture will bear roller weight without excessive displacement.
- B. Compact mixture with hot hand tampers or vibrating plate compactors in areas inaccessible to rollers.
- C. Breakdown Rolling: Accomplish breakdown or initial rolling immediately following rolling of joints and outside edge. Check surface after breakdown rolling and repair displaced areas by loosening and filling, if required, with hot material.
- D. Second Rolling: Follow breakdown rolling as soon as possible, while mixture is hot. Continue second rolling until mixture has been thoroughly compacted.
- E. Finish Rolling: Perform finish rolling while mixture is still warm enough for removal of roller marks. Continue rolling until roller marks are eliminated and course has attained maximum density.
- F. Patching: Remove and replace paving areas mixed with foreign materials and defective areas. Cut-out such areas and fill with fresh, hot asphalt concrete. Compact by rolling to maximum surface density and smoothness.
- G. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened, and in no case sooner than six hours.
- H. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

### 3.5 PAVEMENT MARKING

- A. General: The extent of pavement marking is shown on the Drawings.
- B. Allow paving to cure before starting markings.
- C. Preparation: Sweep surface with power broom supplemented by hand brooms to eliminate loose material and dust.
- D. Apply paint products in accordance with manufacturer's published instructions using application procedures approved for the particular application and substrate to the specified Minimum Dry Film Thickness (MDF). Apply each coat to uniform finish.
- E. Apply paint markings on surfaces that are dry and rain is not expected within 24 hours.
- F. Apply paint markings only when surface or air temperature is 50°F or above.
- G. Apply 2 coats at 7 mils OFT each coat or the manufacturer recommended rate without addition of thinner, with maximum 100 square feet per gallon coverage. Apply with mechanical equipment to produce uniform straight edges. At sidewalk curbs and crosswalks, use straightedge to provide uniform, clean, and straight stripe.
- H. Clean-Up: Upon completion of the work, Contractor shall perform clean-up as necessary, eliminating any incorrectly painted lines or spills by paint remover or painting over with blending color, and leaving the area in a neat and finished condition.

### 3.6 FIELD QUALITY CONTROL

- A. General: Provide results of reports to test in-place asphalt concrete courses for compliance with requirements for thickness and surface smoothness. Repair or remove and replace unacceptable paving as directed by Owner's Representative.
- B. Thickness: In-place compacted thickness will not be acceptable if exceeding the following allowable variation from required thickness:
  - 1. Base Coat: Plus or minus ¼"
  - 2. Surface Course: Plus or minus ¼"
- C. Surface Smoothness: Test finished surface of each asphalt concrete course for smoothness using 10' straightedge applied parallel with, and at right angles to, centerline of paved area. Surfaces will not be acceptable if exceeding the following tolerances for smoothness.
  - 1. Wearing Course Surface: 3/16"
- D. Compaction: Field density test for in place materials shall be performed by examination of field cores in accordance with one of the following standards:
  - 1. Bulk Specific Gravity of Paraffin-coated Specimens: ASTM D 1188, minimum one core per 20,000 square feet – minimum of 3 cores.
  - 2. Bulk Specific Gravity Using Saturated Surface- Specimens: ASTM D 2726, minimum one core per 20,000 square feet – minimum of 3 cores.
- E. Flood Test:

1. Schedule: After the pavement is complete, perform a flood test if required by the Owner's Representative.
2. Method: Perform the flooding by use of water tank truck or available water.
3. If depressions exist where water is ponding to a depth of more than 1/8 inch, fill with fresh hot asphalt concrete to provide proper drainage. Feather and smooth the edges of fill so that the joint to original surface is not visible.

F. Check surface areas at intervals as directed by Owner's Representative.

### 3.7 CLEAN-UP

- A. Upon completion of the work, Contractor is to clean-up the site and leave it in a finished condition acceptable to the Owner.

END OF SECTION 321216

## SECTION 321313 - PORTLAND CEMENT CONCRETE PAVING

### PART 1 - GENERAL

#### 1.1 DESCRIPTION

A. Section Includes:

1. Extent of Portland cement concrete paving is shown on Drawings, including curbs, walkways, approaches, pavement, and exterior stairs.
2. Pavement-Marking Paint
3. Paving Joint Sealers

#### 1.2 RELATED DOCUMENTS:

A. Related documents:

1. Drawings and General Provisions of Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, govern the work of this Section.

B. Related Sections:

1. Section 31 20 00 – Earthwork
2. Section 03 30 00 – Site Cast-in-Place Concrete

#### 1.3 SUBMITTALS

- A. Provide samples, manufacturer's product data, laboratory test reports, and materials' certifications as required in referenced Sections for concrete and joint fillers and sealers.
- B. Product Data: Proprietary materials, including reinforcement and forming accessories, admixtures, joint systems, curing compounds, dry-shake finish materials and others if requested by Architect.
- C. Design mixes for each class of concrete. Include revised mix proportions when characteristics of materials, project conditions, weather, test results, or other circumstances warrant adjustments.

#### 1.4 QUALITY ASSURANCE

- A. Codes and Standards: Comply with local governing regulations if more stringent than herein specified.
- B. Installer Qualifications: An experienced installer who has completed pavement work similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
- C. Manufacturer Qualifications: Manufacturer of ready-mixed concrete products complying with ASTM C 94 requirements for production facilities and equipment.
- D. ACI Publications: Comply with ACI 301, "Specification for Structural Concrete," unless modified by the requirements of the Contract Documents.
- E. Obtain Joint Sealant Materials from a single manufacturer for each different product specified.

## 1.5 PROJECT CONDITIONS

- A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.
- B. Accessibility Requirements:
  - 1. Concrete ramps and curbs shall be provided to conform with the Americans with Disabilities Act Accessibility Guidelines (ADAAG) and State and Local Regulations. These requirements supersede Technical Specifications in this Section.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Forms: Plywood, metal, metal-framed plywood, or other approved panel-type material of size and strength to resist movement during concrete placement and to retain horizontal and vertical alignment until removal. Use straight forms, free of distortion and defects. Provide full-depth, continuous, straight, smooth exposed surfaces.
  - 1. Use flexible spring steel forms or laminated boards to form radius bends for curves of a 100-foot or less radius and as required.
- B. Form Release Agent: Coat forms with a nonstaining form release agent that will not discolor or deface surface of concrete. Provide commercial formulation with a maximum of 350 g/L volatile organic compounds (VOC's).
- C. Plain-Steel Welded Wire Mesh: Fabricated from as-drawn steel wire into flat sheets, ASTM A-185.
- D. Reinforcing Bars and Tie Bars: Deformed steel bars, ASTM A-615, Grade 60.
- E. Plain, Cold-drawn Steel Wire: ASTM A 82.
- F. Joint Dowel Bars: Plain steel bars, ASTM A-615, Grade 60. Cut bars true to length with ends square and free of burrs.
- G. Epoxy-Coated Joint Dowel Bars: ASTM A 775 with ASTM A 615, Grade 60 Plain Steel Bars.
- H. Hook Bolts: ASTM A-307, Grade A bolts, internally and externally threaded. Design hook bolt joint assembly to hold coupling against pavement form and in position during concreting operations, and to permit removal without damage to concrete or hook bolt.
- I. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcement bars, welded wire fabric, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete or fiber-reinforced concrete of greater compressive strength than concrete.
- J. Concrete Materials: Comply with requirements of applicable Division 3 Sections for concrete materials, admixtures, bonding materials, curing materials, and others as required.
- K. Expansion Joint Materials: Comply with requirements of applicable Division 7 Sections for preformed expansion joint fillers and sealers.

1. Bituminous Fiber Joint Filler: Pre-formed strips of asphalt saturated fiberboard, complying with ASTM D 1751.
- L. Clear Liquid-Membrane Forming and Sealing Curing Compound: Comply with ASTM C-309, Type I, Class A unless other type acceptable to Architect. Moisture loss no more than 0.055 gr./sq. cm. when applied at 200 sq. ft./gal.
- M. Bonding Compound
  1. Epoxy Adhesive: ASTM C-881, 2-component material suitable for use on dry or damp surfaces. Provide material "Type", "Grade", and "Class" to suit project requirements.
    - a. Manufacturers:
      - 1) "Sikadur Hi-Mod", Sika Chemical Corporation
      - 2) "Eucopoxy 452 or 620", Euclid Chemical Company
- N. Pavement-Marking Paint: Alkyd-resin type; ready mixed; complying with FS TT-P-115, Type I, or AASHTO M 248, Type N, or latex, water-base emulsion, ready mixed, complying with FS TT-P-1952 and NJDOT specifications for Road and Bridge Construction, latest edition.
  1. Color:
    - a. White for parking stalls.
    - b. Blue for accessible spaces.
    - c. Yellow for fire lanes.

## 2.2 JOINT MATERIALS

- A. Sealed expansion and contraction joints: Filler of nonbituminous rubber or cork conforming to ASTM D1752.
- B. Non-sealed joints:
  1. Manufacturers:
    - a. "Elastizell"; Elastizell Corp. of America (734-761-6900)
    - b. "Flexcell"; Celotex Corp. (813-873-4000)
    - c. "Seal Tight Fiber Expansion Joint"; W.R. Meadows Inc. (800-342-5976)
    - 1) Filler premolded bituminous type conforming to ASTM D756;
- C. Noncompressive Filler:
  1. Manufacturers:
    - a. "Styrofoam SM"; Dow Chemical Co. (800-441-4369)
- D. Compressive Filler:
  1. Manufacturers:
    - a. "Ethafoam"; Dow Chemical Co. (800-441-4369)

- 1) 1" or 2" thick sheets, compression modulus within the range of 15 to 25 pounds per square inch per inch.
- E. Filler Adhesive for Noncompressive Filler and Compressive Filler:
1. Manufacturers:
    - a. "General Purpose Mastic No. 11"; Dow Chemical Co. (800-441-4369)
  2. Slab-on-grade Construction Joints: Provide a full slab depth 24 gauge metal preshaped key approximate depth of key to be 1/4 slab thickness and a key width of about 1/10 slab thickness.
- F. Joint Sealants: ASTM C920. Non-priming, pourable, self-leveling polyurethane.
1. Manufacturers:
    - a. "SL2"; Sonneborn Building Products (800-496-6067)
    - b. "Sonomeric 1 Sealant"; Sonneborn Building Products (800-496-6067).
    - c. "Sonomeric 2 Sealant"; Sonneborn Building Products (800-496-6067).
    - d. "Vulkem 45"; Tremco, Inc. (800-562-2728)
    - e. "THC 900"; Tremco, Inc. (800-562-2728)

## 2.3 MIXES

- A. Concrete Mixes: Comply with requirements of applicable Division 3 Sections for concrete mix design, sampling and testing, quality control, and as herein specified.
- B. Design mix to produce normal-weight concrete consisting of Portland cement, aggregate, water-reducing or high-range water-reducing admixture (superplasticizer), air-entraining admixture, and water to produce the following properties:
1. Compressive Strength: 4500 psi minimum at 28 days, unless otherwise indicated.
  2. Slump Limits: 4 inches
  3. Air Content: 6 percent

## PART 3 - EXECUTION

### 3.1 SURFACE PREPARATION

- A. Proof-roll prepared subbase surface to check for unstable areas and need for additional compaction. Do not begin paving work until such conditions have been corrected and subgrade is ready to receive paving.
- B. Remove loose material from compacted subbase surface immediately before placing concrete.
- C. Concrete shall not be placed on a soft, spongy, frozen, or otherwise unsuitable subgrade. The subgrade shall be moist when concrete is placed.

### 3.2 EDGE FORMS AND SCREED CONSTRUCTION

- A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides for pavement to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement

- B. Check completed formwork for grade and alignment to following tolerances:
  - 1. Top of forms not more than 1/4 inch in 10 feet.
  - 2. Vertical face on longitudinal axis not more than 1/4 inch in 10 feet.
- C. Clean forms after each use and coat with form release agent as required to ensure separation from concrete without damage.
- D. Slope step treads at 1/4 inch per foot to drain.

### 3.3 STEEL REINFORCEMENT

- A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating reinforcement, with recommendations in CRSI's "Placing Reinforcing Bars" and as specified in Division 3 Sections, for placing and supporting reinforcement.
- B. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2" overlap to adjust mats.

### 3.4 JOINTS

- A. General: Construct expansion, weakened-plane (contraction), and construction joints true to line with face perpendicular to surface of concrete. Construct transverse joints at right angles to the centerline, unless otherwise indicated.
  - 1. When joining existing structures, place transverse joints to align with previously placed joints, unless otherwise indicated.
  - 2. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
- B. Weakened-Plane (Contraction) Joints: Form weakened-plane (contraction) joints, sectioning concrete into areas as shown on Drawings. Construct weakened-plane joints for a depth equal to at least 1/4 concrete thickness, with one of the following methods:
  - 1. Sawed Joints: Form weakened-plane joints with powered saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8" wide joints into hardened concrete as soon as surface will not be torn, abated, or otherwise damaged by cutting action.
  - 2. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with groover tool to the following radius. Repeat grooving of contraction joints after applying surface finishes. Eliminate groover marks on concrete surfaces. Provide 1/4" radius.
- C. Construction Joints: Set construction joints at side and at end terminations of pavement and at locations where placement operations are stopped for more than 1/2 hour, unless pavement terminates at isolation joints.
  - 1. Construct joints as shown or, if not shown, use standard galvanized steel or plastic keyway-section forms, or bulkhead forms with keys. Embed keys at least 1-1/2" into concrete.
  - 2. Continue reinforcement across construction joints, unless otherwise indicated. Do not continue reinforcement through sides of pavement strips, unless otherwise indicated.
  - 3. Provide tie bars at sides of pavement strips where indicated.

- D. Isolation Joints: Provide premolded joint filler for isolation joints abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.
  - 1. Locate expansion joints at intervals of 20' for each pavement lane unless otherwise indicated.
  - 2. Extend joint fillers full width and depth of joint. Terminate joint filler less than 1/2" or more than 1" below finished surface if joint sealant is indicated. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
  - 3. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
  - 4. Protect top edge of joint filler during concrete placement with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.
- E. Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt-coat one-half of dowel length to prevent concrete bonding to one side of joint.
- F. Edging: Tool edges of pavement, gutters, curbs, and joints in concrete after initial floating with an edging tool to the following radius. Repeat tooling of edges after applying surface finishes. Eliminate tool marks on concrete surfaces. Provide 1/4" radius, unless noted otherwise.

### 3.5 CONCRETE PLACEMENT

- A. General: Comply with requirements of Division 3 Sections for mixing and placing concrete, and as herein specified.
- B. Inspection: Before placing concrete, inspect and complete formwork installation, reinforcement steel, and items to be embedded or cast in. Notify other trades to permit installation of their work.
- C. Remove snow, ice, or frost from subbase surface and reinforcement before placing concrete. Do not place concrete on frozen surfaces.
- D. Do not place concrete until subbase and forms have been checked for line and grade. Moisten subbase if required to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.
- E. Place concrete by methods that prevent segregation of mix. Consolidate concrete along face of forms and adjacent to transverse joints with internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand-spreading and consolidation. Consolidate with care to prevent dislocation of reinforcing, dowels, and joint devices.
- F. Use bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
- G. Deposit and spread concrete in a continuous operation between transverse joints as far as possible. If interrupted for more than 1/2 hour, place a construction joint. Do not push or drag concrete into place or use vibrators to move concrete into place.

### 3.6 CONCRETE FINISHING

- A. After striking-off and consolidating concrete, smooth surface by screeding and floating.

- B. After floating, test surface for trueness. Distribute concrete as required to remove surface irregularities, and refloat repaired areas to provide a continuous smooth finish. Comply with tolerances of ACI 117 and as follows:
1. Elevation: 1/4"
  2. Thickness: Plus 3/8", minus 1/4"
  3. Surface: Gap below 10' long, unlevelled straightedge not to exceed 1/4"
  4. Lateral Alignment and Spacing of Tie Bars and Dowels: 1"
  5. Vertical Alignment of Tie Bars and Dowels: 1/4"
  6. Alignment of Tie-Bar End Relative to Line Perpendicular to Pavement Edge: 1/2"
  7. Alignment of Dowel-Bar End Relative to Line Perpendicular to Pavement Edge: Length of dowel 1/4" per 12".
  8. Joint Spacing: 3"
  9. Contraction Joint Depth: Plus 1/4", no minus.
  10. Joint Width: Plus 1/8", no minus.
- C. Work edges of slabs, gutters, back top edge of curb, and formed joints with an edging tool, and round to 1/2 inch radius, unless otherwise indicated. Eliminate tool marks on concrete surface.
- D. After completion of floating and when excess moisture or surface sheen has disappeared, complete troweling and finish surface as follows:
1. Broom finish by drawing a fine-hair broom across concrete surface perpendicular to line of traffic. Repeat operation if required to provide a fine line texture acceptable to Architect.
    - a. On inclined slab surfaces, provide a coarse, non-slip finish by scoring surface with a stiff-bristled broom, perpendicular to line of traffic.
- E. Exposed vertical surfaces shall be finished as follows:
1. Smooth form finish with grout-cleaned finish.
  2. Refer to Section 03300 for finish description.
- F. Do not remove forms for 24 hours after concrete has been placed. After form removal, clean ends of joints and point-up any minor honeycombed areas. Remove and replace areas or sections with major defects, as directed by Architect.

### 3.7 CURING

- A. Protect and cure finished concrete paving in compliance with applicable requirements of Division 3 Sections. Use membrane-forming curing and sealing compound or approved moist-curing methods.

### 3.8 PAVEMENT MARKING

- A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with Architect.
- B. Allow concrete pavement to cure for 28 days and be dry before starting pavement marking.

- C. Sweep and clean surface to eliminate loose material and dust.
- D. Apply paint with mechanical equipment to produce pavement markings of dimensions indicated with uniform, straight edges. Apply at manufacturer's rates to provide a minimum wet film thickness of 15 mils.

3.9 REPAIRS AND PROTECTIONS

- A. Repair or replace broken, damaged, defective concrete, or does not meet requirements of this Section, as directed by Architect.
- B. Drill test cores where directed by Architect when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory pavement areas with Portland cement concrete bonded to pavement with epoxy adhesive.
- C. Protect concrete from damage until acceptance of work. Exclude traffic from pavement for at least 14 days after placement. When construction traffic is permitted, maintain pavement as clean as possible by removing surface stains and spillage of materials as they occur.
- D. Maintain concrete pavement free of stains, discoloration, dirt and other foreign material. Sweep concrete pavement not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION 321313

## SECTION 321373 - EXPANSION JOINTS AND JOINT SEALANTS FOR PAVEMENTS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 00 and 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes joints between:
  - 1. Concrete pavement.
  - 2. Concrete and asphalt pavement.
  - 3. Concrete unit pavers and curb.
  - 4. Concrete unit pavers.
- B. Related Sections include the following:
  - 1. Section 033000 – Site Cast-in-Place Concrete
  - 2. Section 321216 – Asphalt Paving
  - 3. Section 321313 – Portland Cement Concrete Paving

#### 1.3 SUBMITTALS

- A. Product Data: For each joint-sealant product indicated.
- B. Samples for Verification: For each type and color of joint sealant required. Install joint sealant samples in 1/2-inch- wide joints formed between two 6-inch- (150-mm-) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
- C. Product Certificates: Signed by manufacturers of joint sealants certifying that products furnished comply with requirements and are suitable for the use indicated.
- D. Qualification Data: For firms and persons scheduled to perform the work of this section demonstrating their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of Engineers and owners, and other information specified.
- E. Compatibility and Adhesion Test Reports: From joint sealant manufacturer indicating the following:
  - 1. Materials forming joint substrates and joint-sealant backer materials have been tested for compatibility and adhesion with joint sealants.
  - 2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
- F. Product Test Reports: From a qualified testing agency indicating joint sealants comply with requirements, based on comprehensive testing of current product formulations.

#### 1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who has specialized in installing joint sealants similar in material, design, and extent to those indicated for this Project and whose work has resulted in joint-sealant installations with a record of successful in-service performance.
- B. Source Limitations: Obtain each type of joint sealant through one source from a single manufacturer.
- C. Product Testing: Obtain test results from a qualified testing agency, based on testing current sealant formulations within a 36-month period.
  - 1. Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated, as documented according to ASTM E 548.
- D. Pre-construction Compatibility and Adhesion Testing: Submit to joint sealant manufacturer, for testing indicated below, samples of materials that will contact or affect joint sealants.
  - 1. Use manufacturer's standard test methods to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
    - a. Perform tests under environmental conditions replicating those that will exist during installation.
  - 2. Submit not fewer than nine pieces of each type of material, including joint substrates, joint-sealant backer materials, secondary seals, and miscellaneous material.
  - 3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
  - 4. For materials failing tests, obtain joint sealant manufacturers' written instructions for corrective measures, including the use of specially formulated primers.
  - 5. Testing will not be required if joint sealant manufacturer submits joint preparation data that are based on previous testing of current sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.

#### 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration date, pot life, curing time, and mixing instructions for multi-component materials.
- B. Store and handle materials to comply with manufacturer's written instructions to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

## 1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not proceed with installation of joint sealants under the following conditions:
  - 1. When ambient and substrate temperature conditions are outside limits permitted by joint sealant manufacturer.
  - 2. When ambient and substrate temperature conditions are outside limits permitted by joint sealant manufacturer or are below 40 deg F.
  - 3. When joint substrates are wet.
- B. Joint Width Conditions: Do not proceed with installation of joint sealants where joint widths are less than that allowed by joint sealant manufacturer for application indicated.
- C. Joint Substrate Conditions: Do not proceed with installation of joint sealants until contaminants capable of interfering with their adhesion are removed from joint substrates.

## PART 2 - PRODUCTS

### 2.1 MATERIALS, GENERAL

- A. Compatibility: Provide joint sealants, backing materials, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint sealant manufacturer based on testing and field experience.
- B. Colors of Exposed Joint Sealants: Match samples as selected by Owner.
- C. Colors of Exposed Joint Sealants: As indicated by referencing manufacturers' designations.
- D. Colors of Exposed Joint Sealants: As selected by Owner from manufacturer's full range for this characteristic.

### 2.2 EXPANSION JOINTS

- A. Expansion joint material shall be one of the following:
  - 1. Pre-molded bituminous fiber joint filler requiring a bond breaker and sealant or approved equal.
  - 2. Pre-molded closed cell expanded polyethylene foam joint filler, such as Sonoflex F by Sonneborn Corporation, Shakopee, MN requiring only sealant, or approved equal.
  - 3. Shredded recycled rubber aggregate joint filler, such as a polymerically bound reclaimed rubber expansion joint CEJ6510 by Concrete Expansion Joint Company, requiring only sealant
- B. Bond Breaker: If bituminous fiber material is used, a bond breaker such as one-half inch (1/2") wide polyethylene tape or five-eighths inch (5/8") diameter expanded polyethylene foam backer rod shall be installed as recommended by the manufacturer. A bond breaker will not be required for a pre-molded foam joint or a shredded recycled rubber aggregate joint filler, however sealant shall be required.

- C. Joint-Sealant Backer Materials:
1. General: Provide joint-sealant backer materials that are non-staining; compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by joint sealant manufacturer based on field experience and laboratory testing.
  2. Round Backer Rod for Cold- and Hot-Applied Sealants: ASTM D 5249, Type 1, of diameter and density required to control sealant depths and prevent bottom-side adhesion of sealant.
  3. Backer Strips for Cold-and Hot-Applied Sealants: ASTM D 5249; Type 2; of thickness and width required to control sealant depths, prevent bottom-side adhesion of sealant, and fill remainder of joint opening under sealant.
  4. Round Backer Rods for Cold-Applied Sealants: ASTM D 5249, Type 3, of diameter and density required to control sealant depths and prevent bottom-side adhesion of sealant.
- D. Joint Sealant: Prepared expansion joints shall be coated with a primer followed by installation of a bond breaker and a self-leveling two-component polyurethane-based elastomeric sealant. Contractor shall apply Sikaflex 429 primer with Sikaflex - 2C SL sealant, manufactured by Sika Corp., Lyndhurst, NJ; or Sonneborn 733 primer with Sonolastic SL-2 sealant, by Sonneborn and ChemRex, Inc., Shakopee, MN, or approved equal. Color of sealant shall match adjacent pavement.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint sealant manufacturer's written instructions.
- B. Joint Priming: Prime joint substrates where indicated or where recommended in writing by joint sealant manufacturer, based on pre-construction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint sealant manufacturers' written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

#### 3.3 INSTALLATION OF EXPANSION JOINT AND SEALANTS

- A. Place expansion joints as shown. Install bond breaker if necessary, as shown, and fill space as indicated on the plans with a joint sealant.
- B. Thoroughly clean expansion joints of dirt, loose particles, asphalt, tar, paint, wax, waterproofing, and curing compounds.

- C. When dry, apply primer to the clean dry surfaces by brushing on a thin, uniform coat. Allow primer to dry, tack free.
- D. Fill joint with filler where necessary and compressible backer rod and leave a one-half inch (1/2") deep void for placement of sealant. Cover adjacent sides of joints with masking tape to prevent spillage onto pavement.
- E. Fully mix the two component sealant and pour into joint slot in one direction and allow to flow and level out as necessary. Smaller joints can be filled from a bulk-loading gun.
- F. Fill joints from bottom to prevent air voids. Tool lightly to smooth out ripples and maximize adhesion to the sides of joints. If bubbles form, wait 5-10 minutes before tooling to break the bubbles. Remove excess sealant promptly as the work progresses and clean adjacent surfaces. Remove masking tape.
- G. Clean off excess sealants or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved by manufacturers of joint sealants and of products in which joints occur.

#### 3.4 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from the original work.

END OF SECTION 321373

## SECTION 323119 - METAL SECURITY GUARDS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. Section Includes:

- 1. Window guards.

#### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

#### 1.4 WARRANTY

- A. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal window guards that show evidence of deterioration of factory-applied finishes within specified warranty period.
  - 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
    - a. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
  - 2. Finish Warranty Period: 20 years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Basis of Design Manufacturer: The Basis of Design Manufacturer for window guards products are manufactured by Ametco Manufacturing Corporation. Subject to compliance with requirement, provide products by the Basis-of-Design manufacturer or equal.

#### 2.2 MATERIALS

- A. Bars: Hot-rolled steel members; ASTM A36; Cold-rolled steel members: ASTM A611, Grade C.
- B. Plates, Shapes, and Bars: ASTM A 36.
- C. Tubing: ASTM A 500, cold-formed steel tubing.

- D. Uncoated Steel Sheet: Hot-rolled steel sheet, ASTM A 1011, Structural Steel, Grade 45.
- E. Castings: Either gray or malleable iron unless otherwise indicated.

### 2.3 WINDOW GUARDS

- A. General: Window guards consisting of modular open grille panels fabricated by welding flat vertical steel and perimeter bars and horizontal cross rods.
  - 1. Guard Height and Width: As shown.
  - 2. Guard Spacing: As shown.
- B. Frame Corner Construction: Welded.
- C. Steel Finish: Shop painted.

### 2.4 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Connection and expansion bolts; galvanize or stainless steel.

### 2.5 FACTORY FINISHING

- A. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A 123. For hardware items, hot-dip galvanize to comply with ASTM A 153.
- B. Polyester Powder Coating: Electrostatically applied colored polyester powder coating heat cured to chemically bond finish to metal substrate. Color selected by Architect from manufacturer's standard offerings.
  - 1. Minimum hardness measured in accordance with ASTM D3363: 2H.
  - 2. Direct impact resistance tested in accordance with ASTM D2794: Withstand 160 inch-pounds.
  - 3. Salt spray resistance tested in accordance with ASTM B117: No undercutting, rusting, or blistering after 500 hours in 5 percent salt spray at 95 degrees F and 95 percent relative humidity and after 1000 hours less than 3/16 inch undercutting.
  - 4. Weatherability tested in accordance with ASTM D822: No film failure and 88 percent gloss retention after 1 year exposure in South Florida with test panels tilted at 45 degrees.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for construction layout, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLTION OF WINDOW GUARDS

- A. Verify that openings fit allowable tolerances are plumb, level, provide a solid anchoring surface and comply with approved shop drawings. Plumb and align faces in a single plane and erect window guards square and true adequately anchored.
- B. Install guards according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means

END OF SECTION 323119

## SECTION 331000 - SITE WATER LINES

### PART 1 – GENERAL

#### 1.1 DESCRIPTION

- A. General: Provide all labor, equipment and materials required to complete and shall complete the construction of site water lines including but not limited to the following general items of work in accordance with the Drawings and Specifications:
  - 1. Providing water main piping and fittings, valves, valve boxes, thrust blocks, and related materials and labor adjunct to the completion of the site water main.
  - 2. Provide fire hydrants, fire department connections, post indicator valves, and related materials and labor adjunct to the completion of the exterior fire protection system.

#### 1.2 RELATED DOCUMENTS

- A. Drawing and General Provisions of Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, govern the work of this section.
- B. Geotechnical Report for Caldwell & Elizabethtown Parking Garage prepared by Remington & Vernick Engineers dated December 14, 2020.
- C. Approved NJ American Water Service Connection and City of Elizabeth Road Opening permits.
- D. AWWA Standards.
- E. NJ American Water Company Standards.
- F. Related work specified elsewhere:
  - 1. Section 31 10 00 – Site Preparation
  - 2. Section 31 20 00 – Earth Moving
  - 3. Section 03 30 00 – Site Cast-In-Place Concrete

#### 1.3 DEFINITIONS

- A. DIP: Ductile Iron Pipe

#### 1.4 SUBMITTALS

- A. Shop Drawings: The Contractor shall submit detailed Shop Drawings for all water line work.
- B. Record Drawings: The Contractor shall submit, prior to final payment, accurate record drawings for all water line and associated work.
- C. Test Reports.
- D. Disinfection Report
  - 1. Type and form of disinfectant used.
    - a. Date and time of disinfectant injection start and time of completion.
    - b. Test locations.

- c. Initial and 24 hour disinfectant residuals (quantity in treated water) in ppm for each outlet tested.
  - d. Date and time of flushing start and completion.
  - e. Disinfectant residual after flushing in ppm for each outlet tested.
2. Bacteriological report; record:
- a. Date issued, project name, and testing laboratory name, address, and telephone number.
  - b. Time and date of water sample collection.
  - c. Name of person collecting samples.
  - d. Test locations.
  - e. Initial and 24 hour disinfectant residuals in ppm for each outlet tested.
  - f. Coliform bacteria test results for each outlet tested.
  - g. Certification that water conforms, or fails to conform, to bacterial standard of New Jersey Department of Environmental Protection and County Health Department.
  - h. Bacteriologist's signature and authority.
3. Certificate: Certify that cleanliness of water distribution system meets or exceed specified requirements.

#### 1.5 REGULATORY REQUIREMENTS

- A. Specification references made herein for manufactured materials such as pipe, hydrants, valves and fittings refer to designations for American Water Works Association (AWWA), or to American Standards Association (ASA) as they are effective on the date of call for bids.
- B. Copies of these publications may be obtained at nominal cost from the American Water Works Association, 2 Park Avenue, New York, NY 10016, and from the American Standards Association, 10 East 40th Street, New York, NY 10016
- C. All work shall conform to NJ American Water Company standards which shall take precedence to the above-named standards and these Specifications in the event of a conflict, however, if the requirements of these Specifications are more stringent.

#### 1.6 QUALITY ASSURANCE

- A. Reference Standards:
  1. Some products and execution and specified in this Section by reference to published specifications or standards of the following (with respective abbreviation used):
    - a. The American Society for Testing and Materials (ASTM)
    - b. American Water Work Association (AWWA)
    - c. American Standards Association (ASA)

#### 1.7 PROJECT CONDITIONS

- A. Site Information: Perform site survey, research public utility records, and verify existing utility locations.

- B. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
1. Notify Owner's Representative not less than one week in advance of proposed utility interruptions.
  2. Do not proceed with utility interruptions without Owner's Representatives written permission.

## PART 2 – PRODUCTS

### 2.1 DUCTILE IRON PIPE

- A. Water mains shall be ductile iron with cement mortar lining complying with ANSI/AWWA C104/A21.4. Pipe and fittings shall be ductile iron mechanical joint according to ANSI/AWWA C111/A21.11. Pipe and fittings shall be Class 53. Provide 8 mil polyethylene tube encasement around pipe per ANSI/AWWA-C105/A21.5. Ductile Iron Pipe: AWWA C151: with cement mortar lining complying with AWWA C104, Class 53, or as required by NJ American Water Company or the City of Elizabeth.
1. Fittings: Ductile iron, standard thickness.
  2. Joints: ANSI/AWWA C111, rubber gasket with rods.
- B. All service pipes, sizes 2-inches through 12-inches, shall be Pressure Class 350 psi, cement-lined ductile iron pipe with mechanical joints complying with ANSI/AWWA C104/A21.4 and ANSI/AWWA C111/A21.11, or as required by NJ American Water Company or the City of Elizabeth.
- C. Copper Tubing: ASTM B88, Type K annealed:
1. Fittings: ANSI/ASME B16.18, cast copper, or ANSI/ASME B16.22, wrought copper.
  2. Joints: Compression connection or ANSI/AWS A5.8, BCuP silver braze.

### 2.2 VALVES

- A. The valves shall be gate valves suitable for ordinary waterworks service, intended to be installed in a normal position on buried pipe lines for water distribution.
- B. The minimum requirements for all gate valves shall, in design, material and workmanship, conform to the standards of the latest AWWA C500. All materials used in the manufacture of waterworks gate valves shall conform to AWWA standards designed for each material listed.
- C. The gate valve shall be NJ American Water Company standard valves M&H Metropolitan mechanical joint valves as manufactured by Dresser Company or approved equal. Valves shall be non-rising stem, mechanical joint. Gate valves shall be standard pattern and shall have the name or mark of the manufacturer, size and working pressure plainly cast in raised letters on the valve body.
- D. The valve bodies shall be cast iron, mounted with approved non-corrosive metals. All wearing surfaces shall be bronze or other approved non-corrosive material and there shall be no moving bearing or contact surfaces of iron in contact with iron. Contact surfaces shall be machined and finished in the best workmanlike manner, and all wearing surfaces shall be easily renewable.
- E. All gate valves shall be two-faced, non-rising stem, double disc, with parallel seats of bronze or other approved wedging devices placed between them. The stem shall be of high tensile strength bronze or

other approved non-corrosive metal. All nonferrous bushings shall be of substantial thickness tightly fitted and pressed into machined seats. All valves shall open by turning to the right, unless otherwise specified.

- F. End connections for gate valves shall be pushed-on (rubber gasketed) joints.
- G. All gate valves up to and including 12 inches in size shall be furnished with O-ring Stem Seals. Number, size and design shall conform to the AWWA Standards for gate valve O-Ring Stem Seals.
- H. Wrench nuts shall be made of cast iron and shall be 1-15/16 inches square at the top, two inches (2") square at the base, and 1-1/4 inches high, unless otherwise designated in the special provisions. Nuts shall have a flanged base upon which shall be cast an arrow at least 2 inches long showing the direction of opening. The word "Open" in 1/2 inch or larger letters shall be cast on the nut to clearly indicate the direction of opening the valve.
- I. Each gate valve shall be tested at the factory for performance and operation prior to painting and shall be subject to the following hydrostatic pressure tests: Each 3 inch to 12 inch valve, inclusive, shall be subjected to hydrostatic pressure test under pressures of both 300 psi and 175 psi. These tests shall be conducted in accordance with provisions of AWWA C500.
- J. After the factory test and inspection, all ferrous parts of the valves except finished or bearing surfaces shall be painted inside and out with two coats of asphalt varnish.

### 2.3 TAPPING SLEEVE AND VALVE

- A. Complete assembly, including tapping sleeve, tapping valve and bolts and nuts. Use sleeve and valve compatible with tapping machine.
  - 1. Tapping Sleeve: Solid ductile iron mechanical joint tapping sleeve such as Mueller H-615 tapping sleeve or approved equal shall be utilized for all taps 2-inches and larger. Use sleeve that mates with size and type pipe material being tapped. Outlet flange shall be size required for branch connection.
  - 2. Tapping Valve: NJ American Water Company standard valves, M&H Metropolitan mechanical joint as manufactured by Dresser Company or approved equal. Tapping valves shall be non-rising stem, mechanical joint, furnished with a 2" square operating nut and shall be furnished opened right.

### 2.4 HYDRANTS

- A. All materials used in the production of fire hydrants for ordinary service shall conform to the specifications designated for each material listed in AWWA Standard C502.
- B. The hydrant shall be two (2) piece "City of Elizabeth Standards" hydrants as manufactured by A.P. Smith or approved equal by City of Elizabeth. The name or mark of the manufacturer, size of the valve opening shall be plainly cast in raised letters and so placed on the hydrant barrel as to be visible after the hydrant has been installed.
- C. As a minimum requirement, all hydrants shall be designed for a working pressure of 200 lbs. per square inch and in workmanship, design and material shall conform to the AWWA Standard A502. The hydrant bodies shall be cast iron, fully mounted with approved non-corrodible metals. All wearing surfaces shall be either bronze or some other approved non-corrodible material, and there shall be no moving bearing or contact surfaces of iron in contact with iron or steel. All contact surfaces shall be finished or machined in the best workmanlike manner and all wearing surfaces shall be easily renewable.

- D. The design of the hydrant shall be such that all working parts may be removed through the top of the hydrant and shall have the required AWWA specified number of turns of the stem to open the gate an area equal to the area of the valve opening. Any change in area of the water passage through the valve must have an easy curve, and all outlets must have round corners of good radium.
- E. Lugs, if required for harnessing the hydrant to the connecting pipe from the main in the street, shall be provided on the bell of the elbow or on the hydrant bottom casting. A drawing of the lug construction shall be submitted for approval, on request of the Construction Manager and the Owner.
- F. Hydrants shall be provided with a sidewalk flange. Breaking devices shall be at the sidewalk flange which will allow the hydrant barrel to separate at this point with a minimum breakage of hydrant parts in case of damage. There shall also be provided at this point a safety stem coupling on the operating stem that will shear at the time of impact. Unless otherwise specified, all hydrants will be equipped with O-Ring stem seals
- G. All dimensions, thread details and other specifications and construction details for all hydrants shall be approved by the Construction Manager.
- H. Before the hydrant is painted at the factory, it shall be subjected to an internal hydrostatic test of 300 pounds per square inch with the hydrant valve in a closed position and again with the hydrant valve in an open position.
- I. All iron parts of the hydrant both inside and outside shall be thoroughly cleaned and painted. All inside surfaces and the outside surfaces below the ground line shall be coated with asphalt varnish. They shall be covered with two coats, the first having dried thoroughly before the second is applied. The outside of the hydrant above the finished ground line shall be thoroughly cleaned and thereafter painted with one coat of paint of a durable composition, and one additional coat of a color specified by the Construction Manager.

## 2.5 THRUST BLOCKS

- A. Concrete for thrust blocks shall have minimum 28 day strength of 3,000 psi and conform to Section 03 30 00 – Site Cast-In-Place Concrete and as indicated on Drawings.

## 2.6 TIE RODS

- A. Tie rods shall be three quarter (3/4) inch diameter threaded steel bars. Rods shall have a minimum yield stress of 36,000 psi.

## 2.7 RING AND COVER AND VALVE BOX CASTING

- A. Valve Boxes shall be NJ American Water Company standard as manufactured by Bingham and Taylor, or approved equal. Boxes shall have a minimum of 8-1/4 inch diameter and shall be an adjustable screw type with the box extending from the surface to 3-inches above the valve bonnet base. Valve box shall be cast iron with a standard coal tar foundry dip with cast iron drop cover and the word "WATER" cast in cover.

## 2.8 BEDDING MATERIALS

- A. Bedding Fill as specified in Section 312323 and as indicated on Drawings.

2.9 BACKFILL MATERIALS

- A. Backfill materials as specified in Section 312323 and as indicated on Drawings.

2.10 GEOTEXTILES

- A. Geotextile Fabric: woven or non-woven fabric composed of polypropylene, polyvinyl chloride, nylon, polyolefins, polyamides, or polyester fibers and formed into a stable network such that the filaments or yarns retain dimension stability relative to each other. The geotextile shall be inert to biological degradation and resist naturally encountered chemicals, alkalis, and acids. Geotextile shall be Mirafi 180N or approved equal or as directed by the Geotechnical Engineer or City of Elizabeth.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. Verify existing conditions under provisions of Contract.
- B. Verify that building service connection and water main size, location and invert are as indicated.

3.2 PREPARATION

- A. Ream pipe and tube ends and remove burrs.
- B. Remove scale and dirt, on inside and outside, before assembly
- C. Prepare pipe connections to equipment with flanges or unions.
- D. Notify NJ American Water Company prior to initiating installation of water main.

3.3 BEDDING

- A. Excavate pipe trench in accordance with Section 312316 for work of this Section. Hand trim excavation for accurate placement of pipe to elevations indicated.
- B. Place bedding material at trench bottom, level fill materials as shown on Drawings.
- C. Maintain optimum moisture content of bedding material to attain required compaction density.
- D. Broken stone foundation cushion shall be placed where subgrade soil conditions have been deemed inferior by the Geotechnical Engineer or as directed by NJ American Water Company or City of Elizabeth..
- E. Geotextile shall be placed in those areas where directed by the Geotechnical Engineer, NJ American Water Company or City of Elizabeth.

3.4 INSTALLATION OF PIPE

- A. Maintain separation of water main from other utility piping in accordance with applicable codes.
- B. Proximity to Sewers:

1. Water mains shall be laid at least 10 feet horizontally from any sanitary sewer, storm sewer or sewer manhole, whenever possible; the distance shall be measured edge to edge.
- C. Water mains passing under sewers shall, in addition, be protected by providing:
  1. A vertical separation of at least 18 inches between the bottom of the sewer and the top of the water main.
  2. Adequate pipe bedding of the sewers to prevent excessive deflection of joints and settling on and breaking the water mains.
  3. That the length of water pipe be centered at the point of crossing so that the joints will be equi-distant and as far as possible from the sewer.
- D. All pipe shall be laid to a minimum depth of 48 inches measured from the existing ground surface or established grade to the top of the barrel of the pipe. In areas subject to subsequent excavation or fill, the mains shall be laid to grades required on the Drawings.
- E. The trench, unless specified otherwise, shall have a flat bottom conforming to the grade to which the pipe is to be laid. The pipe shall be laid on approved granular material true and even so that the barrel of the pipe will have a bearing for its full length. Bell holes shall be excavated for joints. Any part of the trench excavation below grade shall be corrected with approved material and thoroughly compacted.
- F. Where water is encountered in the trench, it shall be removed during pipe laying and jointing operations. Provisions shall be made to prevent floating of the pipe. Trench water shall not be allowed to enter the pipe at any time.
- G. Dirt or other foreign material shall be prevented from entering the pipe or pipe joint during handling or laying operations and any pipe or fitting that has been installed with dirt or foreign material in it shall be removed, cleaned and re-laid. At times when pipe laying is not in progress, the open ends of the pipe shall be closed by a watertight plug or by other means approved by the Construction Manager to ensure absolute cleanliness inside the pipe.

### 3.5 INSTALLATION OF VALVES

- A. Set valves on solid bearing.
- B. Center and plumb valve box over valve. Set box cover flush with finished grade.

### 3.6 JOINTING OF PIPE

- A. The inside of the bell shall be thoroughly cleaned to remove all foreign material from the joints. The circular rubber gasket shall be inserted in the gasket seat provided.
- B. A thin film of gasket lubricant shall be applied to the inside surface of the gasket. Gasket lubricant shall be a solution of vegetable soap or other solution supplied by the pipe manufacturer and approved by the Construction Manager.
- C. The spigot end of the pipe shall be cleaned and entered into the rubber gasket in the bell, using care to keep the joint from contacting the ground. The joint shall then be completed by forcing the plain end into the seat of the bell. Pipe which is not furnished with a depth mark shall be marked before assembly to assure that the spigot end is inserted to the full depth of the joint. Serrated brass wedges shall be provided for electrical thawing; two per joint, for 3 inch through 12 inches pipe; four for larger diameter pipe. Each wedge is driven into the opening between the plain end and the bell until snug. When four wedges are used, they are inserted side by side, in pairs.

- D. Field-cut pipe lengths shall be beveled to avoid damage to the gasket and facilitate making the joint.

### 3.7 THRUST BLOCKING

- A. Blocking to prevent movement of lines under pressure shall be placed at all bends, tees, caps, valves and hydrants. They shall be constructed as indicated on the Drawings and placed between solid ground and the fittings, and shall be anchored in such a manner that pipe and fitting joints will be accessible for repairs.
- B. All bends of 11-1/4 degrees or greater, and all tees and plugs shall be thrust protected to prevent movement of the lines under pressure.
- C. Contractor shall submit thrust block details to the Construction Manager for approval prior to the work. Details shall fully describe the width, length and depth of the thrust block, anchors where applicable, and the minimum concrete compressive strength.

### 3.8 TIE-RODS

- A. Tie rods shall be installed at all bends and fittings.

### 3.9 PRESSURE TESTING OF WATER MAINS

- A. Notify NJ American water Company and City of Elizabeth Water Department of testing of all water mains at least 48 hours prior to testing, unless otherwise directed by NJ American Water Company and / or City of Elizabeth. After the pipe has been laid and partly backfilled as specified herein, all-newly laid pipe or any valved sections of it shall, unless otherwise expressly specified, be subjected to a hydrostatic pressure equal to 50 percent more than the operating pressure at the lowest elevation of the pipe section, but not to exceed the pressure at the lowest elevation of the pipe section, but not to exceed the pressure rating of the type of pipe specified. The duration of each pressure test shall be for a period of not less than one hour and not more than six hours. The basic provisions of AWWA C600 and C603 shall be applicable.
- B. Each interval of pipe to be tested, as determined by the Owner's Representative, shall be slowly filled with water and the specified test pressure shall be applied by means of a pump connected to the pipe in a satisfactory manner. The pump pipe connection and all necessary apparatus including gauges and meters shall be furnished by the Contractor. Before applying the specified test pressure, all air shall be expelled from the pipe. To accomplish this, taps shall be made, if necessary, at points of highest elevation and afterwards tightly plugged. Any cracked or defective pipes, fittings, valves or hydrants discovered in consequence of this pressure test shall be removed and replaced by the Contractor with sound material and the test shall be repeated until satisfactory to the Owner's Representative. Provisions of AWWA C600 and C603, where applicable, shall apply.
- C. Leakage Test:
  - 1. After completion of the pressure test, a leakage test shall be conducted to determine the quantity of water lost by leakage under the specified test pressure. Test pressure is defined as the maximum operating pressure of the section under test and is based on the elevation of the lowest point in the line or section under test corrected to the elevation of the test gauge. Applicable provisions of AWWA C600 and C603 shall apply. Duration of each leakage test shall be a minimum of one hour in addition to the pressure test period.
  - 2. Allowable leakage in gallons per hour for pipeline shall not be greater than that determined by the formula:

$$L = \frac{ND(P)^{1/2}}{7400}$$

NOTE: L = Allowable leakage in gallons per hours.  
 N = Number of joints in length of pipe line tested.  
 D = Nominal diameter of the pipe in inches.  
 P = Average test pressure during leakage test in pounds per square inch gauge.

3. Leakage is defined as the quantity of water to be supplied in the newly-laid pipe or any valved section under test, which is necessary to maintain the specified leakage test pressure after the pipe has been filled with water and the air expelled.

### 3.10 DISINFECTION OF WATER MAINS

#### A. Flushing:

1. Sections of pipe to be disinfected shall first be flushed to remove any solids or contaminated material that may have become lodged in the pipe. If no hydrant is installed at the end of the main, then a tap should be provided large enough to develop velocity of at least 2-5/10 feet per second in the main. One 2-1/2 inch hydrant opening will, under normal pressure, provide this velocity in pipe sizes up to and including 12 inches.
2. All taps 2 inch size and smaller required for chlorination or flushing purposes, or for temporary or permanent release of air shall be provided for by the Contractor as a part of the construction of water mains. Taps larger than 2 inches shall be paid for as a bid item or as an extra.

#### B. Before being placed into service, all new mains and repaired portions of, or extensions to existing mains shall be chlorinated so that a chlorine residual of not less than 25 mg/l remains in the water after standing 24 hours in the pipe. Chlorine shall be applied by one of the methods which follow subject to approval by the Owner's Representative.

1. A chlorine gas-water mixture shall be applied by means of a solution-feed chlorinating device, or a dry gas may be fed directly through proper devices for regulating the rate of flow and providing effective diffusion of the gas into the water within the pipe being treated. Chlorinating devices for feeding solution of the chlorine gas, or the gas itself, must provide means for preventing the backflow of water into the chlorine.
2. A mixture of water and high-test calcium hypochlorite (65-70 percent C1) may be substituted for the chlorine gas water mixture. The dry powder shall first be mixed as a paste and then thinned to a 1 percent chlorine solution by adding water to give a total quantity of 7.5 gallons of water per pound of dry powder. This solution shall be injected in one end of the section of main to be disinfected while filling the main with water in the amounts as shown in the table which follows:

Chlorine Requirements to Produce 50 MG/L  
 Concentration in 100 Foot of Pipe - By Diameter

<u>Pipe Size</u> <u>Inches</u>	<u>100%</u> <u>Chlorine Lb.</u>	<u>1% Chlorine</u> <u>Solution, Gals.</u>
4	0.027	0.33
6	0.061	0.73
8	0.108	1.30
10	0.170	2.04
12	0.240	2.88

3. Tablet disinfection is best suited to short extensions (up to 2,500 feet) and smaller diameter mains (up to 12 inches). Since preliminary flushing must be eliminated in using this method, it should be utilized only when scrupulous cleanliness has been used in construction. It shall not be used if trench water or foreign material has entered the main or if the water is below 40 degrees F.
4. Tablets should be placed in each section of pipe, hydrant branches and other appurtenances. Tablets must be at the top of the main and shall be attached by an adhesive, such as Permatex No. 1 or any alternative approved by the Construction Manager. Tablets in joints between pipe sections, hydrants, hydrant branches or appurtenances are to be crushed and placed inside the annular space, rubbed like chalk in butt ends of sections to coat them if the type of assembly does not permit crushing. In filling a section of piping with water when using the tablet method, water velocity shall be less than 1 foot per second.

Number of 5-Gram Hypochlorite Tablets Required  
 for a Dosage of 50 MG/L per Length of Pipe Section

<u>Pipe Inches</u>	<u>Length of Pipe Section</u>				
	<u>Up to 13</u>	<u>18</u>	<u>20</u>	<u>30</u>	<u>40</u>
2	1	1	1	1	1
4	1	1	1	2	2
6	2	2	2	3	4
8	2	3	3	5	6
10	3	5	5	7	9
12	5	6	7	10	14

- C. The preferred point of application of the chlorinating agent is at the beginning of the pipeline extension or any valved section of it, and through a corporation stop inserted in the pipe. The water injector for delivering the chlorine-bearing water into the pipe should be supplied from a tap made on the pressure side of the gate valve controlling the flow into the pipe line extension. Alternate points of application may be used when approved or directed by the Construction Manager.
- D. Valves shall be manipulated so that the strong chlorine solution in the line being treated will not flow back into the line supplying the water. Check valves may be used if desired.
- E. Treated water shall be retained in the pipe at least 24 hours. After this period, the chlorine residual at pipe extremities and at other representative points shall be at least 25 mg/l.
- F. In the process of chlorinating newly-laid pipe, all valves or other appurtenances shall be operated while the pipe line is filled with the chlorinating agent and under normal operating pressure.
- G. Final Flushing:
  1. Following chlorination, all treated water shall be thoroughly flushed from the newly laid pipe at its extremity until the replacement water throughout its length shows upon test, a chlorine residual of less than 1 mg/l. In the event chlorine is normally used in the source of supply, then the tests shall show a residual of not in excess of that carried in the system.
  2. After flushing, water samples collected on two successive days from the treated piping system, as directed by the Construction Manager, shall show satisfactory bacteriological results. Bacteriological analysis must be performed by a laboratory approved by the Environmental Protection Agency.
- H. Repetition of Flushing and Testing:

1. Should the initial treatment result in an unsatisfactory bacterial test, the original chlorination procedure shall be repeated by the Contractor until satisfactory results are obtained.

### 3.11 INSTALLATION OF HYDRANTS

- A. Hydrants shall be installed at or relocated to the locations as shown on the Drawings. They shall be plumb and shall be set so that the lowest hose connection is at least 24 inches above the surrounding finished grade.
- B. All hydrants shall be inspected in the field upon delivery to the job site to insure proper operation before installation.
- C. A minimum of 1/4 cubic yard of coarse stone shall be placed at and around the base of the hydrant to insure proper drainage of the hydrant after use.
- D. The blocking of the hydrant shall consist of wedge of Portland cement concrete of not less than 1/4 cubic yard extending from the hydrant to undisturbed soil and shall be so placed to form a solid barrier adjacent to the hydrant base to counteract the pressure of water exerted thereon. Care shall be taken to insure that weep holes are not covered by concrete. The hydrant shall be set on a concrete block to insure a firm bearing on the hydrant base.

### 3.12 TAPPING VALVE INSTALLATION

- A. The Contractor shall provide the excavation for the tapping valve installation.
- B. The fully gasketed tapping valve shall be provided and installed by the Contractor.
- C. The Contractor shall backfill and re-pave the street portion of the excavation as directed by the appropriate authority.

### 3.13 POST HYDRANT INSTALLATION

- A. Install post hydrants in pavement or with concrete anchor.

### 3.14 IDENTIFICATION INSTALLATION

- A. Install continuous plastic underground warning tape during back-filling of trench for underground water service piping. Locate 6 inches to 8 inches below finished grade, directly over piping.
- B. Attach nonmetallic piping label permanently to main electrical panel.

### 3.15 BACKFILLING

- A. Backfill trench with select granular fill backfill material as specified in Section 312323. Place material in maximum 12" lifts and compact to 95% Modified Proctor Density or as directed by the Geotechnical Engineer, NJ American Water Company or City of Elizabeth.

### 3.16 FIELD QUALITY CONTROL

- A. Piping Tests: Conduct piping tests before joints are covered and after thrust blocks have hardened sufficiently. Fill pipeline 24 hours prior to testing and apply test pressure to stabilize system. Use only potable water.
- B. Hydrostatic Tests: Test at not less than 1-1/2 times working pressure for 2 hours.

1. Increase pressure in 50-psig increments and inspect each joint between increments. Hold at test pressure for 1 hour, decrease to 0 psig. Slowly increase again to test pressure and hold for 1 more hour. Maximum allowable leakage is 2 quarts per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within above limits.

3.17 CLEAN-UP

- A. Upon completion of the Work, all surplus materials, debris, tools, and equipment shall be removed from the site.

END OF SECTION 331000

## SECTION 333000 - SITE SANITARY SEWERAGE SYSTEMS

### PART 1 – GENERAL

#### 1.1 DESCRIPTION

- A. General: Furnish all equipment, materials, labor and services required to complete and shall complete all site sanitary sewer work, shown on the drawings including but not limited to the following general items of work in accordance with the Drawings and Specifications:
  - 1. Sanitary sewer, piping and fittings
  - 2. Manholes, clean-outs and structures.

#### 1.2 RELATED DOCUMENTS

- A. Drawings and General Provisions of Contract, including General and Supplementary Conditions, and other Division 1 Specification Sections, govern the work of this section.
- B. Geotechnical Report for Caldwell & Elizabethtown Parking Garage prepared by Remington & Vernick Engineers dated December 14, 2020.
- C. New Jersey Department of Environmental Protection regulations.
- D. National Standard Plumbing Code, latest edition.
- E. City of Elizabeth Standard Requirements for New Sewer and Service Laterals.
- F. New Jersey Department of Transportation Standard Specifications for Road and Bridge Construction, 2007, or latest edition.
- G. Related work specified elsewhere:
  - 1. Section 31 10 00 – Site Preparation
  - 2. Section 31 20 00 – Earth Moving
  - 3. Section 03 30 00 – Site Cast-In-Place Concrete

#### 1.3 DEFINITIONS

- A. PVC: Polyvinyl Chloride.
- B. DIP: Ductile Iron Pipe

#### 1.4 SUBMITTALS

- A. Shop Drawings: The Contractor shall submit detailed Shop Drawings for all sanitary sewerage system work.
- B. Record Drawings: The Contractor shall submit, prior to final payment, accurate record drawings for all sanitary and associated work.
- C. Test results and inspection reports.

1.5 REGULATORY REQUIREMENTS

- A. All work shall conform to the New Jersey Environmental Protection standards which shall take precedence to these specifications. In the event of a conflict; however, if the requirements of these Specifications are more stringent, they shall apply.

1.6 QUALITY ASSURANCE

- A. Reference Standards:
  - 1. Some products and execution are specified in this Section by reference to published specifications or standards of the following (with respective abbreviation used):
    - a. The American Society for Testing and Materials (ASTM).
- B. Environmental Agency Compliance: Comply with regulations pertaining to sanitary sewerage systems.
- C. City of Elizabeth Compliance: Comply with regulations pertaining to sanitary sewer system, including required testing.
- D. Provide proper fittings for the installation of, and connection to, sewer lines. Where an underground branch connection is required, provide a "Y" branch and 30 degree curve type fitting. Connections made by cutting holes in pipe will not be permitted.

1.7 SUBMITTALS

- A. Product data and shop drawings.
- B. Test results.
- C. As-built plans.

1.8 PROJECT CONDITIONS

- A. Existing Sewers
  - 1. When existing sewers are encountered, whether indicated on the Drawings or not, adequate provisions shall be made for diverting the flow of such existing sewers so that the excavation will be kept dry during the progress of construction. Reroute such existing sewers as required to maintain proper functioning. Before completion of the construction work, the existing sewers shall be restored as called for on the Drawings, or otherwise provided with an adequate outlet, as directed by the Construction Manager. Under no conditions shall underground lines be abandoned or plugged until sufficient tests have been made to indicate that it is not a functioning line, and then only when so directed by the Architect/Engineer in writing.
  - 2. Reconnect existing drain lines which are to remain in service and which would otherwise be cut off and blocked by new Work.
- B. Relationship to Water Lines
  - 1. Sewer lines which cross over or under water lines and do not have an 18-inch vertical separation between pipes must be water grade ductile iron (DIP) with mechanical joints. Pipe to comply with ANSI/AWWA C104/A21.4, joints to comply with ANSI/AWWA

C111/A21.11. Pipe and fittings to be Class 53. This material is to extend 10'-0" on each side of the water line.

2. Where it is necessary to lay sewer pipes adjacent to existing water lines, where the flow line of the sewer pipe is above or level with the water lines, and the distance between them is less than 10 feet, then the sewer line shall be constructed of extra heavy cast iron, water sealed and tested, and the water line shall be relocated, as directed by the Architect/Engineer.

## PART 2 – PRODUCTS

### 2.1 PIPE MATERIALS

#### A. PVC Sewer Pipe:

1. Sanitary sewer pipe shall be polyvinyl chloride (PVC) pipe of the integral wall bell and spigot type with elastomeric seal joints and smooth inner walls meeting or exceeding all of the requirements set forth in ASTM D-3034, SDR-35 for installation depths up to 14 feet and SDR-21 for installations greater than 14 feet.
2. The pipe shall have minimum cell classification of 12454-B or 12454-C and a minimum tensile strength of 34.50 MPa as defined in ASTM D-1784.
3. PVC sanitary sewer pipe shall have a minimum pipe stiffness of 46 psi for each diameter when measured at 5 degree vertical ring deflection and tested in accordance with ASTM D-2412.
4. The minimum wall thickness shall conform to SDR-35 and SDR-26 Type PSM as specified in ASTM D-3034. The date of manufacture, class of pipe, specification designation, size of pipe, name or trademark of manufacturer, and identification of plan/location shall be legibly marked on the outside of each sanitary pipe section in accordance with the ASTM D-3034.
5. Sanitary sewer pipe joints shall be flexible gasketed joints of the compression type so that when assembled the gasket inside the bell will be compressed radially on the pipe spigot to form a watertight seal. The gaskets sealing the joint shall be made of rubber of special composition having a texture to assure a watertight and permanent seal and shall be the product of a manufacturer having at least five years' experience in the manufacturer of rubber gaskets for pipe joints. The gasket shall be a continuous ring of flexible joint rubber of a composition and texture which is resistant to common ingredients of sewage, industrial wastes and groundwater, and which will endure permanently under the conditions likely to be imposed by this service. The gasket shall conform to the requirements of ASTM F-477.
6. Sanitary sewer pipe fittings shall be manufactured fittings made of PVC plastic having a cell classification of 12454-B or 12454-C as defined in ASTM D-1784.

- B. Where indicated on the drawings piping shall be Ductile Iron (DIP) with cement mortar lining complying with ANSI/AWWA C104/A21.4. Pipe and fittings shall be ductile iron mechanical joint or push-on type according to ANSI/AWWA C111/A21.11. Pipe and fittings shall be Class 53. Provide 8 mil polyethylene tube encasement around pipe per ANSI/AWWA-C105/A21.5.

### 2.2 MANHOLES

- A. Unless otherwise approved by the Architect/Engineer or called for on the Drawings, manholes shall be precast concrete made up of vertical sections of appropriate length and diameter to meet drawing requirements. The precast sections shall be reinforced with steel, in accordance with ASTM C478 standards, with tongue and groove joints.
- B. The top section shall be flat or tapered to the size required to make a proper base for the cover and frame called for (see plan for type required). The bottom section shall have openings cast therein to receive sewer lines which are to be connected thereto. In the event that a sewer line empties into the

manhole at an elevation above the first section, it shall have an opening cast therein to receive such lines.

- C. Joints: Continuous rubber gasket, meeting standards of ASTM C443.
- D. Resilient Pipe Connectors: ASTM C 923 cast or fitted into manhole walls, for each pipe connection.
- E. Steps: Aluminum ladder rungs ALCO NO. 14869 or PVC rungs (ASTM C478), wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12-inch intervals. Omit steps if total depth from floor of manhole to finished grade is less than 48-inches.
- F. Grade Rings: Reinforced-concrete rings, to match diameter of manhole frame and cover.
- G. Protective Coatings: Exterior of concrete manholes/structures shall receive a seal coat of Carboline 50 or approved equal, 18 mil. thick.
- H. A drop manhole connection shall be used where there is a difference in elevation of two (2) feet or greater between the invert of a sanitary or combined inlet pipe to manhole and the crown of the outlet pipe from manhole. Drop connection shall be constructed as shown on Drawings.

### 2.3 FRAMES AND COVERS

- A. Manhole frames, covers, steps, materials, and equipment in this classification shall be of the type and duty shown on the Drawings and in accordance with City of Elizabeth requirements. Iron castings shall conform to ASTM A48 and shall be designed for heavy-duty traffic.
- B. Physical Requirements: Castings shall be true-to-pattern in form and dimension, free from faults, sponginess, cracks, blowholes, and other defects affecting their strength.
- C. New Manhole construction shall be provided with concentric frame and cover, Campbell Foundry Pattern No.4428, or approved equal.
- D. The letters "City of Elizabeth" and "SEWER" shall be cast on the cover as indicated on the Drawings.

### 2.4 BEDDING AND BACKFILL MATERIALS

- A. Bedding and backfill materials shall comply with NJDOT Standard Specifications for Road and Bridge Construction, Section 652 and Design and Construction of Urban Stormwater Management Systems: ASCE Manuals and Reports of Engineering Practice No.77 or as directed by the Geotechnical Engineer or City of Elizabeth.

### 2.5 MANHOLE BASE MATERIAL

- A. 1½" crushed stone, No. 4 stone per NJDOT Standard Specifications for Road and Bridge Construction, Section 901.03, or as directed by the Geotechnical Engineer or City of Elizabeth.

## PART 3 – EXECUTION

### 3.1 INSTALLATION OF PIPES

- A. Pipe trenches shall be excavated to the lines and grades shown on the Drawings. Depth of trench shall be as required to provide for the specified bedding materials.

- B. All excavations shall be adequately sloped or shored and braced to protect the property of the Owner and neighboring Owner(s), and the safety of the workmen. All such protection shall be in accordance with the Occupational Safety and Health Act (OSHA) requirements and all other applicable codes and ordinances, including the Health and Safety Work Plan.
- C. Trench width, measured at the top/centerline of the pipe, shall be a minimum of two (2) feet plus the outside diameter of the pipe.
- D. Sanitary sewer pipe bedding and backfilling shall be as shown on the Drawings.
- E. Sanitary sewer pipe joints shall be assembled in accordance with the pipe manufacturer's recommendation and ASTM D-3212.
- F. All field cutting of sanitary sewer pipe shall be done in a neat, trim manner using a hand or power saw, and the cut end shall be beveled using a file or wheel to produce a smooth bevel of approximately 15 degrees and be a minimum depth of one-third the pipe wall thickness. Field cut pipe will only be allowed to be installed at manholes, at prefabricated tees and wyes, and at the connection of new sanitary sewer to existing sanitary sewer.
- G. All pipe trenches shall be backfilled, after inspection by the Construction Manager and Testing Agency Representative, with mechanically compacted backfill material as specified in Section 2.4 of these Specifications, or as directed by the Geotechnical Engineer or City of Elizabeth.
- H. All sewer service connection 6-inches in size or smaller must be made directly to the sewer main and all connections 8-inches in size or larger must be made to a manhole. Where a connection to a manhole is required, manhole bench and channel may require modification.
- I. Sewer service lateral connections to City of Elizabeth's sewer main shall be made above horizontal center line of pipe and as shown on Drawings.
- J. Circular hole saws which are approximately sized or hand drills must be used to make the openings in the existing sewer to receive the laterals. Jackhammers, sledgehammers and other unsuitable tools or machinery which may damage the City of Elizabeth's sewer main are not allowed to be used to make the lateral openings. All debris must be removed and not allowed to fall into pipe.
- K. All existing sewer mains and sanitary laterals to be abandoned must be filled with concrete slurry or removed from the ground. Catch basins and manholes must be removed from the ground. Connections must be cut and sealed at the main and precautions must be undertaken by the contractor to ensure concrete and other materials do not enter the main and create obstructions.
- L. The Contractor shall be responsible for protecting all drainage structures and conduits from damage due to construction equipment.

### 3.2 SEWER TESTS AND REPAIRS

- A. All sewers shall comply with City of Elizabeth testing/inspecting procedures.
- B. Scheduling: A schedule shall be submitted by the Contractor sufficiently in advance of testing to enable the Owner's representative to assign inspection to the testing operations.
- C. Testing of Completed Sewer System

All sewers constructed within City of Elizabeth by Contractors not contracted to the City of Elizabeth shall comply with the following testing/inspection procedures.

1. CCTV inspection of all pipes, including, but not limited to vitrified clay pipe (VCP), reinforced concrete pipe (RCP), polyvinyl chloride pipe (PVC), ductile iron pipe (DIP), high-density polyethylene pipe (HDPE) with a copy of the video showing distances, date, operators, names, and a letter signed and sealed by the NJPE certifying tape (where applicable when City of Elizabeth has not received an inspection fee to conduct a CCTV inspection).
2. The testing shall be witnessed by a representative of the City of Elizabeth. In the event that the developer/Contractor is testing without the City of Elizabeth representative present and has written permission from the City of Elizabeth Chief Engineer. All test data and results shall be signed and sealed by a New Jersey Licensed Professional Engineer from a certified independent testing company.
3. Air pressure testing for the following pipe types: PVC, DIP, VCP, HDPE, and RCP adhering to the procedure as follows (ASTM F1417-92) or (ASTM 924 for RCP):
  - a. All laterals shall be installed.
  - b. Trench is backfilled.
  - c. Pipe is cleaned and has been flushed.
  - d. Stabilized base asphalt pavement is in place.
  - e. Pipes entering manholes are plugged at the inside face of manhole laterals, are plugged at ends and clean outs (where applicable) are plugged at top.
  - f. Pipe is pressurized to 3.5 psig with an allowable maximum pressure drop of 0.5 psig over the time period as shown in the table below.

Pipe Size	Time
8"	3 min. 47 sec.
12"	5 min. 40 sec.
15"	7 min. 5 sec.
18"	8 min. 30 sec.
24"	10 min. 0 sec.

For pipes with 24-inch diameter, or where laterals are included in main being testing, see the test time calculation procedure in section six (6).

In cases where a connection to a manhole is a drop configuration, plugs shall be placed in both upper and lower pipes of the drop, and the assembly shall be tested as a part of the pipeline.

4. Testing of Reinforced Concrete Pipe and Vitrified Clay Pipe:
  - a. Pipe shall be backfilled; stabilized base asphalt pavement shall be in place.
  - b. All laterals and clean outs installed and plugged at ends.
  - c. Both ends of pipe shall be plugged.
  - d. The pipe shall be filled with water to a level of 24-inches above crown of pipe or 12-inches above groundwater whichever provides greater head pressure. Filling with water and bleeding of air shall be at the upstream end of the pipe.
  - e. The test shall be held for 24 hours with an allowable leakage rate of one hundred (100) gallons per inch diameter per mile, as per NJDEP regulations.
5. Manholes shall be vacuum tested for infiltration in accordance with ASTM C1244. All pipes in this structure shall be plugged at the inside face of the manhole.

- a. A vacuum shall be pulled on the manhole equal to 10-inches Hg. Vacuum shall be turned off and all valves closed.
- b. The vacuum shall be held as shown in the following table:

Manhole Diameter	Time
48"	60 sec.
60"	75 sec.
72"	90 sec.
>72"	+15 sec./12 diameter

- 6. Determine test time for large diameter pipe (>24") or when laterals are included in the main being tested:

$$T = 0.085 * DK / Q$$

*(for mains only)*

$$T = 0.085 [(D^2 * L) + (d_L * L_T) / (D * L) + (d_L * L_T)] * (1.0 / 0.0015)$$

*(for sewer mains and laterals)*

Where:

T = shortest time to drop 1.0 psig

K = 0.000419 DL  
*(must not be less than 1.0)*

K = 0.000419 [(D \* L) + (d<sub>L</sub> \* L)]  
*(in cases where the laterals are included in the testing)*

Q = 0.0015 cubic feet/minute/square feet of internal surface area

D = pipe nominal diameter (inches)

d<sub>L</sub> = lateral diameter (inches)

L = length of pipe reach tested  
*(the time to drop 0.5 psig shall be equal to half of T as calculated)*

L<sub>T</sub> = total length of laterals included in test

- 7. Deflection testing for PVC, HDPE, and other;
  - a. A 7½% deflection mandrel shall be pulled through the entire pipe length by hand, without mechanical assistance.
- 8. All sanitary, storm, or combined sewer shall also be visually inspected by Lamping Method.

D. Repairs: Damaged pipe sections, crooked pipe sections, sections with excessive deflection or leaking joints are unacceptable and shall be corrected and retested. Chemical grouting is not acceptable repair for newly installed pipe and will not be permitted.

Damaged pipe sections immediately adjacent to manholes shall be repaired by replacement of the sections. Methods of repairing other pipe sections shall be submitted for approval with shop drawings or catalog cuts of devices proposed for use.

Repair sleeves shall be full circle type, utilizing a corrosion resistant steel sleeve which covers the entire repair. The sleeve shall be lined with a gasket composed of 100% natural rubber or neoprene. The entire assembly shall be tightly clamped with corrosion resistant bolts fitted into malleable or

ductile iron lugs designed to eliminate bending. Sleeves shall be Dresser 360° or Smith-Blair Full Circle or AJMC Industries 101, 102 or approved equal.

E. Acceptance of New Sewer System

Prior to acceptance by the City of Elizabeth, the Applicant's Engineer will certify to the City of Elizabeth, and the State, where necessary, that all plans and specifications were prepared in accordance with the City of Elizabeth's Rules and Regulations and with the requirements of the NJDEP, that actual construction costs were not significantly different from the originally submitted cost estimates and that the construction has been in conformance with the approved plans and specifications.

It should be noted that the sewer lateral from the first clean-out at the street onto a private property belongs to the property owner. The property owner has the sole responsibility of maintenance and repair of that section of sewer lateral.

F. Record Drawings and Manuals

Upon completion of construction and prior to City of Elizabeth acceptance of the new sewer system, complete As-built Drawings and/or Manuals must be submitted to the City of Elizabeth. They must be signed and sealed by a New Jersey Licensed Professional Engineer or Land Surveyor. They must meet all the requirements of the City of Elizabeth's "Submission of Record Drawings for Extension of Water/Sewer Mains and other Water/Wastewater Facilities," current revision.

3.3 CONSTRUCTION OF MANHOLES

- A. All precast bases shall be placed on a 12-inch thick bed of 1½" crushed stone (No. 4), or as indicated on plans and details, conforming to NJDOT Standard Specifications Section 901.
- B. Bottom channels shall be formed to the crown of the outlet pipe with concrete in all manholes.
- C. All lift holes on all precast elements shall be completely filled with an approved bitumastic material. All joints between all precast elements shall be made with an approved bitumastic material or an approved rubber gasket.
- D. Casting shall be set in a full bed of Portland cement mortar.
- E. Excavation and backfill shall be as specified herein, and on the drawings.

3.4 CLEAN-UP

- A. Upon completion of the Work, all surplus materials, debris, tools, and equipment shall be removed from the site.

END OF SECTION 333000

## SECTION 334000 - STORM DRAINAGE

### PART 1 - GENERAL

#### 1.1 DESCRIPTION

- A. General: Provide all materials, labor, equipment and services and perform all operations in connection with storm drainage complete, in accordance with the Drawings and Specifications, and as follows:
  - 1. Storm drainage outside the building including but not limited to storm sewer piping, watertight joints, manholes, inlets, cleanouts, roof drains, stormwater management facilities including: underground detention system.

#### 1.2 RELATED DOCUMENTS

- A. Drawings and General Provisions of Contract, including General and Supplementary Conditions, and other Division 1 Specification Sections, govern the work of this section.
- B. Geotechnical Report for Caldwell & Elizabethtown Parking Garage prepared by Remington & Vernick Engineers dated December 14, 2020.
- C. City of Elizabeth Standard requirements for new sewer and service laterals.
- D. National Standard Plumbing Code, latest edition.
- E. Related work specified elsewhere:
  - 1. Section 31 10 00 – Site Preparation
  - 2. Section 31 20 00 – Earth Moving
  - 3. Section 03 30 00 – Site Cast-In-Place Concrete

#### 1.3 DEFINITIONS

- A. PVC: Polyvinyl Chloride.
- B. RCP: Reinforced Concrete Pipe

#### 1.4 PERFORMANCE REQUIREMENTS

- A. Gravity-Flow, Nonpressure-Piping Pressure Ratings: At least equal to system test pressure.

#### 1.5 SUBMITTALS

- A. Shop Drawings: Include plans, elevations, details, and attachments for the following:
  - 1. Precast concrete manholes and other structures, including frames, covers, and grates.
  - 2. Cast-in-place concrete manholes and other structures, including frames, covers, and grates.
- B. Design Mix Reports and Calculations: For each class of cast-in-place concrete.
- C. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Do not store plastic structures, pipe, and fittings in direct sunlight.
- B. Protect pipe, pipe fittings, and seals from dirt and damage.
- C. Handle precast concrete manholes and other structures according to manufacturer's written rigging instructions.

1.7 PROJECT CONDITIONS

- A. Site Information: Perform site survey, research public utility records, and verify existing utility locations.
- B. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
  - 1. Notify Engineer not less than one week in advance of proposed utility interruptions.
  - 2. Do not proceed with utility interruptions without Engineer's written permission.

1.8 QUALITY ASSURANCE

- A. Environmental Agency Compliance: Comply with regulations pertaining to storm drainage systems.
- B. City of Elizabeth Compliance: Comply with regulations pertaining to storm drainage systems, including required testing.

PART 2 - PRODUCTS

2.1 DRAINAGE PIPE AND FITTING

- A. Piping and fittings shall be supplied as required to complete the site storm drainage work.
- B. Fittings shall be supplied as required. Fittings produced by manufacturers other than the supplier of the pipe shall not be permitted.
- C. Storm Sewer:
  - 1. Reinforced Concrete Pipe (RCP) in accordance with ASTM C76, Class III unless indicated otherwise on the Drawings. Gaskets shall be in accordance with ASTM C443, rubber compression gaskets installed in accordance with manufacturer's published instructions.
  - 2. Roof Drains: Polyvinyl Chloride (PVC) Schedule 40. ASTM D1785, fittings/couplings to be solvent welded.
- D. Roof Drain, Footing Drain, Riser: Polyvinyl Chloride (PVC) Schedule 40. ASTM D 1785, fittings/couplings to be solvent welded.

2.2 MANHOLES

- A. Normal-Traffic Precast Concrete Manholes: ASTM C 478, precast reinforced concrete, of depth indicated, with provision for rubber gasketed joints.
  - 1. Diameter: 48 inches or 72 inches minimum, unless otherwise indicated.

2. Ballast: Increase thickness of precast concrete sections or add concrete to base section, as required to prevent flotation.
3. Base Section: 6-inch minimum thickness for floor slab and 5-inch minimum thickness for walls and base riser section, and having separate base slab or base section with integral floor.
4. Riser Sections: 5-inch minimum thickness, and lengths to provide depth indicated.
5. Top Section: Eccentric-cone type, unless concentric-cone or flat-slab-top type is indicated. Top of cone of size that matches grade rings.
6. Gaskets: ASTM C 443, rubber.
7. Grade Rings: Include two or three reinforced-concrete rings, of 6- to 9-inch total thickness, that match the diameter opening of the frame and cover.
8. Joint Sealant: ASTM C990 bitumen or butyl rubber.
9. Resilient Pipe Connectors: ASTM C923 cast or fitted into manhole walls, for each pipe connection.

### 2.3 FRAMES AND COVERS

- A. Manhole and inlet frames, covers, steps, materials, and equipment in this classification shall be of the type and duty shown on the Drawings and in accordance with City of Elizabeth Standards. Iron castings shall conform to ASTM A536 and shall be designed for heavy-duty traffic.
- B. Physical Requirements: Castings shall be true-to-pattern in form and dimension, free from faults, sponginess, cracks, blowholes, and other defects affecting their strength.

### 2.4 CLEANOUTS

- A. PVC with cast-iron adapter.

### 2.5 STORMWATER INLETS

- A. Inlets: ASTM C913, precast reinforced concrete, of depth indicated; Made with horizontal gutter opening, of materials and dimensions according to utility standards. Include heavy-duty frames and grates as indicated on the Drawings.
  1. Frames and Grates: Heavy-duty frames and grates according to City of Elizabeth standards.
  2. Joint Sealant: ASTM C990 bitumen or butyl rubber.
  3. Resilient Pipe Connectors: ASTM C923 cast or fitted into manhole walls, for each pipe connection.

### 2.6 CONCRETE

- A. General: Cast-in-place concrete according to ACI 318, ACI 350R, and the following:
  1. Cement: ASTM C 150, Type II.
  2. Fine Aggregate: ASTM C 33, sand.
  3. Coarse Aggregate: ASTM C 33, crushed gravel.
  4. Water: Potable.
- B. Portland Cement Design Mix: 4000 psi minimum, with 0.45 maximum water-cement ratio.
  1. Reinforcement Fabric: ASTM A 185, steel, welded wire fabric, plain.
  2. Reinforcement Bars: ASTM A 615/A 615M, Grade 60, deformed steel.

- C. Structure Channels and Benches: Factory or field formed from concrete. Portland cement design mix, 4000 psi minimum, with 0.45 maximum water-cement ratio.
  - 1. Include channels and benches in manholes.
    - a. Channels: Concrete invert, formed to same width as connected piping, with height of vertical sides to eight-tenths of pipe diameter. Form curved channels with smooth, uniform radius and slope.
      - 1) Invert Slope: One-tenth drop through manhole, (Minimum), unless otherwise noted.
    - b. Benches: Concrete, sloped to drain into channel.
      - 1) Slope: 8 percent.
      - 2) Include channels in inlets.
- D. Ballast and Pipe Supports: Portland cement design mix, 3000 psi minimum, with 0.58 maximum water-cementitious ratio.
  - 1. Reinforcement Fabric: ASTM A 185, steel, welded wire fabric, plain.
  - 2. Reinforcement Bars: ASTM A 615/A 615M, Grade 60, deformed steel.

## 2.7 SAND

- A. Fine Aggregate: ASTM D 1073 sharp-edged natural sand or sand prepared from stone, gravel, properly cured blast-furnace slag, or combinations thereof.

## PART 3 - EXECUTION

### 3.1 EARTHWORK

- A. Excavating, trenching, and backfilling specified in Section 312000 – Earth Moving.

### 3.2 IDENTIFICATION

- A. Materials and their installation are specified in Section 312000 – Earth Moving. Arrange for installing green warning tapes directly over piping and at outside edges of underground structures.
  - 1. Use warning tape or detectable warning tape over ferrous piping.
  - 2. Use detectable warning tape over nonferrous piping and over edges of underground structures.

### 3.3 PIPING APPLICATIONS

- A. General: Include silt-tight joints.
- B. Refer to Part 2 of this Section for detailed specifications for pipe and fitting products listed below. Use pipe, fittings, and joining methods according to applications indicated.
- C. Gravity-Flow Piping: Use the following:
  - 1. Reinforced Concrete Pipe, as needed: ANSI/ASTM C76, Class III, bell and spigot end joints unless specified otherwise.

2. PVC Schedule 40 Pipe: Couplings to be solvent welded unless specified otherwise.

### 3.4 INSTALLATION, GENERAL

- A. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground storm drainage piping. Location and arrangement of piping layout take design considerations into account. Install piping as indicated, to extent practical.
- B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab or drag in line, and pull past each joint as it is completed.
- C. Use manholes for changes in direction, unless fittings are indicated. Use fittings for branch connections, unless direct tap into existing sewer is indicated.
- D. Use proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.
- E. Tunneling: Install pipe under streets or other obstructions that cannot be disturbed by tunneling, jacking, or a combination of both.

### 3.5 PIPE JOINT CONSTRUCTION AND INSTALLATION

- A. General: Join and install pipe and fittings according to installations indicated.
- B. For HDPE: Bell and spigot joint with rubber compression gasket joint conforming to AASHTO M252, AASHTO M294 or ASTM F2306. Gaskets meeting requirements of ASTM F477 shall be installed by the pipe manufacturer and covered with a removable wrap. A joint lubricant supplied by the manufacturer shall be used on the gasket and bell during assembly.
- C. For PVC Schedule 40: Coupling to be solvent welded.
- D. Join piping made of different materials or dimensions with couplings made for this application use couplings that are compatible with and that fit both systems materials and dimensions.

### 3.6 MANHOLE INSTALLATION

- A. General: Install manholes, complete with appurtenances and accessories as indicated on drawings.
- B. Form continuous concrete channels and benches between inlets and outlet.
- C. Set tops of frames and covers flush with finished surface of manholes that occur in pavements. Set tops 3 inches above finished surface elsewhere, unless otherwise indicated.
- D. Install precast concrete manhole sections with gaskets according to ASTM C 891.

### 3.7 STORM DRAINAGE INLET AND OUTLET STRUCTURE INSTALLATION

- A. Construct inlets and outlet structures as indicated on drawings.

3.8 CONCRETE PLACEMENT

- A. Place cast-in-place concrete according to ACI 318 and ACI 350R and Section 03 30 00 – Site Cast-in-place concrete.

3.9 FIELD QUALITY CONTROL

- A. Clear interior of piping and structures of dirt and superfluous material as work progresses. Maintain swab or drag in piping, and pull past each joint as it is completed.
  - 1. In large, accessible piping, brushes and brooms may be used for cleaning.
  - 2. Place plug in end of incomplete piping at end of day and when work stops.
  - 3. Flush piping between manholes and other structures to remove collected debris, if required by authorities having jurisdiction.
- B. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches of backfill is in place, and again at completion of Project.
  - 1. Submit separate reports for each system inspection.
  - 2. Defects requiring correction include the following:
    - a. Alignment: Less than full diameter of inside of pipe is visible between structures.
    - b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
    - c. Crushed, broken, cracked, or otherwise damaged piping.
    - d. Infiltration: Water leakage into piping.
    - e. Exfiltration: Water leakage from or around piping.
  - 3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
  - 4. Reinspect and repeat procedure until results are satisfactory.

END OF SECTION 334000

## SECTION 033000 - SITE CAST-IN-PLACE CONCRETE

### PART 1 - GENERAL

#### 1.1 DESCRIPTION

- A. Furnish and install all cast-in-place concrete including curbs, walkways, aprons, equipment pads, ramps and exterior stairs as shown on the Contract Drawings and specified herein.
- B. Pavement Marking Paint
- C. Paving Joint Sealers

#### 1.2 RELATED DOCUMENTS

- A. Drawings and General Provisions of Contract, including General and Supplementary Conditions, and other Division 1 Specification Sections, govern the work of this section.
- B. Related Sections
  - 1. Section 31 20 00 – Earth Moving
  - 2. Section 33 40 00 – Storm Drainage
  - 3. Section 33 10 00 – Site Water Lines
  - 4. Section 33 30 00 – Site Sanitary Sewerage Systems
  - 5. Section 32 13 13 – Portland Cement Concrete Paving

#### 1.3 QUALITY ASSURANCE

- A. The work shall comply with the latest edition of the AASHTO Standards Specifications for Highway Bridges.
- B. Where provisions of Federal, State or local building codes having jurisdiction over this Project are more stringent than the above standards, the Federal, State or local building codes shall govern.
- C. Contractor Qualifications: Contractor shall have the equipment and experienced personnel to perform the concrete work as shown and as specified. The Contractor shall list at least five projects which the Contractor has successfully completed equal in quality and magnitude to this Project.

#### 1.4 SUBMITTALS

- A. Provide samples, manufacturer's product data, laboratory test reports, and materials' certifications as required in referenced Sections for concrete and joint fillers and sealers. Statements of materials and quantities.
- B. Product Data: Proprietary materials, including reinforcement and forming accessories, admixtures, joint systems, curing compounds, dry-shake finish materials and others if requested by Architect. Concrete delivery tickets.
- C. Design mixes for each class of concrete. Include revised mix proportions when characteristics of materials, project conditions, weather, test results, or other circumstances warrant adjustments. Shop drawings of reinforcement, shall be provided.
- D. Concrete test results.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Ready Mix Concrete: Shall conform to ASTM C 94, Alternate No. 2.
- B. Portland Cement: Shall conform to ASTM C 150, Type I or II; Type IA or IIA for air entrained concrete.
- C. Different brands of cement or the same brand of cement from different mills shall not be used in any structure unless authorized in writing. Only those cements which can produce similar color in the concrete of any structure will be authorized.
- D. Aggregates:
  - 1. Fine Aggregate: Shall conform to ASTM C 33; washed and processed natural sand having strong, hard, durable particles and containing no more than 2 percent by weight of deleterious matter such as clay lumps, mica, shale or schist. Fine aggregate shall be graded within the following limits:

Sieve Size	Percent	
	Minimum	Maximum
3/8"	100	--
No. 4	95	100
No. 8	80	100
No. 16	50	85
No. 30	25	60
No. 50	10	30
No. 100	2	10
No. 200	0	3

- 2. Coarse Aggregate: Shall conform to ASTM C 33; washed and processed clean, hard, fine grained, sound crushed rock or gravel or combination of both, containing not more than 5 percent by weight of flat, thin, elongated, friable, or laminated pieces, nor more than 2 percent of shale or cherty material.
  - a. Any piece having a length in excess of five times the average thickness shall be considered flat or elongated.
  - b. Coarse aggregate shall be graded within the following limits:

Sieve Size	Percent	
	Minimum	Maximum
3/4"	90	100
3/8"	20	55
No. 4	0	10
No. 8	0	5

- E. Water: Shall be clean and free of oil, acid, alkali, salt, sugar, vegetable, or other substances injurious to the finished product.
- F. Admixtures: Shall be used only when approved by the Construction Manager.

1. Admixture for Water Reduction: Shall conform to ASTM C 494, Type A.
    - a. High Range Water Reducing Admixture (Superplasticizer): Shall conform to ASTM C 494, Type F or G.
  2. Admixture for Acceleration: Shall conform to ASTM C 494, Type C and E and have long-term test proof of non-corrosive properties on reinforcing steel.
  3. Admixture for Air-Entraining: Shall conform to ASTM C 260.
  4. Calcium chloride or admixtures containing more than 0.1 percent chloride ions will not be permitted.
  5. Certification: Written conformance to above admixture requirements and the chloride ion content shall be required from the admixture manufacturer prior to mix design review.
- G. Curing Membrane Sheet: Reinforced waterproof paper, white polyethylene film or white burlap-polyethylene sheet, conforming to the requirements of ASTM C 171.
- H. Premolded Joint Filler: Conform to ASTM D1751.
- I. Joint Sealer: Hot-poured joint sealant conforming to ASTM D 3405.
- J. Epoxy Waterproofing Seal Coat: Shall be a two-component, epoxy-resin, waterproofing system for application to Portland cement concrete. The coating shall conform to ASTM C 881. The system type, grade, and class shall depend on the condition of intended use.

## 2.2 JOINTS

- A. General: Construct expansion, weakened-plane (contraction), and construction joints true to line with face perpendicular to surface of concrete. Construct transverse joints at right angles to the centerline, unless otherwise indicated.
1. When joining existing structures, place transverse joints to align with previously placed joints, unless otherwise indicated.
  2. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
- B. Weakened-Plane (Contraction) Joints: Form weakened-plane (contraction) joints, sectioning concrete into areas as shown on Drawings. Construct weakened-plane joints for a depth equal to at least 1/4 concrete thickness, with one of the following methods:
1. Sawed Joints: Form weakened-plane joints with powered saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8" wide joints into hardened concrete as soon as surface will not be torn, abated, or otherwise damaged by cutting action.
  2. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with groover tool to the following radius. Repeat grooving of contraction joints after applying surface finishes. Eliminate groover marks on concrete surfaces. Provide 1/4" radius.
- C. Construction Joints: Set construction joints at side and at end terminations of pavement and at locations where placement operations are stopped for more than 1/2 hour, unless pavement terminates at isolation joints.
1. Construct joints as shown or, if not shown, use standard galvanized steel or plastic keyway-section forms, or bulkhead forms with keys. Embed keys at least 1-1/2" into concrete.

2. Continue reinforcement across construction joints, unless otherwise indicated. Do not continue reinforcement through sides of pavement strips, unless otherwise indicated.
  3. Provide tie bars at sides of pavement strips where indicated.
- D. Isolation Joints: Provide pre-molded joint filler for isolation joints abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.
1. Locate expansion joints at intervals of 20' for each pavement lane unless otherwise indicated.
  2. Extend joint fillers full width and depth of joint. Terminate joint filler less than 1/2" or more than 1" below finished surface if joint sealant is indicated. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
  3. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
  4. Protect top edge of joint filler during concrete placement with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.
- E. Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt-coat one-half of dowel length to prevent concrete bonding to one side of joint.
- F. Edging: Tool edges of pavement, gutters, curbs, and joints in concrete after initial floating with an edging tool to the following radius. Repeat tooling of edges after applying surface finishes. Eliminate tool marks on concrete surfaces. Provide 1/4" radius, unless noted otherwise.

### PART 3 - EXECUTION

#### 3.1 DESIGN AND TESTING

- A. The concrete supplier shall design the concrete mix as specified. Ready-mix concrete shall be proportioned and mixed to obtain the compressive strengths as noted and as specified. Concrete shall develop the noted compressive strengths at 28 days with normal Portland cement and within seven days with high early cement or Type I Portland cement plus the non-chloride accelerator.
- B. The testing and inspection of concrete shall be performed by the Owner's Testing Agency. Any testing performed for the convenience of the Contractor shall be at no cost to the Owner.
- C. Prior to delivering any concrete, furnish a statement of materials giving for each type and class of concrete, the following information:
1. Type and brand name of cement.
  2. Type and brand name of all admixtures used.
  3. Quantities of all ingredients.
- D. During progress of the work, compression tests shall be made for each day of concrete placing. For major placements, a minimum of one test per 50 cubic yards of concrete placed, or fraction thereof, shall be required.
- E. Unless otherwise directed, a minimum of four cylinders shall be taken for each test. The cylinders shall be standard size, 6 inches in diameter and 12 inches long and shall be made in accordance with ASTM C 31. Testing shall be in accordance with ASTM C 39. For normal Portland cement, two cylinders each shall be crushed at seven days and 28 days, respectively. For high early concrete, two cylinders each shall be crushed at three days and seven days, respectively.
1. Unless otherwise directed, a minimum of one standard slump test shall be taken for each two

- compressive test cylinders. Slump tests shall be performed in accordance with ASTM C 143. Maximum slump shall be 4 inches unless otherwise specified.
2. All concrete samples shall be obtained in accordance with ASTM C 172 and transported to a place as directed where tests can be made and cylinders stored without being disturbed for the first 24 hours.
  3. The Contractor shall provide and maintain a wet-bath curing box on site for curing and storing of concrete test cylinders for the duration of the Contract in accordance with ASTM C 192.

3.2 PROPORTIONING OF CONCRETE

- A. Composition: The concrete shall be composed of Portland cement, fine aggregate, coarse aggregate, water, and as required, admixture and an air-entraining agent.
- B. Proportioning: The concrete shall be homogeneous, readily placeable and uniformly workable, and shall be proportioned to attain properties of strength, slump, entrained air content and rate of hardening in compliance with the following requirements:

Design Compressive Strength (28 day)	Slump (Inch)	Percent Air Entrainment
4,500 psi	3 ± 1	6.0 ± 1.5
4,000 psi	3 ± 1	6.0 ± 1.5
3,000 psi	3 ± 1	6.0 ± 1.5

3.3 GUARANTEE

- A. The concrete supplier shall guarantee the compressive strength specified. The slump, when discharged from the mixer, shall be within the limits specified.
- B. Should the 28 day compression tests show a lower strength than specified, the Construction Manager will then have a laboratory make impact hammer tests or Windsor Probe or take test cores from the area affected, secured and prepared according to ASTM C 42, or make load tests. Should these tests show the concrete to be below the strength specified, the entire affected area shall be removed and replaced by the Contractor, at no additional expense, including the cost of taking cores and testing them.

3.4 LIMITATIONS OF PLACING

- A. At least 30 days prior to the placement of concrete, a plan of action shall be submitted for approval for the placement of concrete during hot and cold weather conditions as defined herein. In no case, during mixing and placement, shall the temperature of the concrete be less than 50 °F or more than 90 °F. When the ambient temperature reaches 75 °F, the provisions of hot weather concreting, as specified below, shall apply. When the temperature of the plastic concrete reaches 85 °F, immediate steps shall be taken to cool either the mixing water or the aggregates, or both, in accordance with the plan of action. In no case shall concrete be placed when its temperature in the plastic state at the completion of mixing exceeds 90 °F.
- B. Cold and hot weather concreting shall be in accordance with the following:
  1. Cold Weather Concreting. When the Construction Manager determines that cold weather conditions exist, measures shall be provided by the Contractor to maintain the concrete temperature between 40 and 80 °F.

2. Hot Weather Concreting. When the ambient temperature reaches 75 °F, one or more of the following precautions shall be followed:
  - a. Schedule work so that concrete can be placed with the least possible delay and, if necessary, start placing during late afternoon, at night or early morning.
  - b. Use a water-reducing admixture or a water-reducing and retarding admixture in accordance with the manufacturer's recommendations. When more than one admixture is used, they shall be from the same manufacturer.
  - c. Sprinkle the coarse aggregate stockpile to cool it by evaporation.
  - d. Use chilled mixing water or shaved ice to replace part of the mixing water as recommended in ACI 305R, Subpart 2.3.6.
  - e. In the case of truck mixing, do not rotate the drum during and after the addition of cement to the mix until mixing water is added at the construction site. This may require reduced loads or the utilization of horizontal type mixers.
  - f. Prevent absorption by sprinkling the underlying material and the wood forms just before placing so that they do not absorb water from the mix.
  - g. Erect windbreaks to prevent winds from drying exposed concrete surfaces while they are being finished.
  - h. Screed and float concrete as it is placed and start curing immediately.

### 3.5 PROTECTION OF UNDERGROUND WORK

- A. Care shall be taken not to damage or displace underground piping and conduit. The Contractor shall be responsible for any damage caused by his work to new or existing underground work.

### 3.6 MEASURING, MIXING AND DELIVERY OF CONCRETE

- A. General: Unless otherwise directed, the concrete ingredients shall be measured, mixed and delivered in truck mixers in accordance with ASTM C 94, Alt. No. 2.
- B. Job Mixed Concrete: If approved, for small quantities of concrete, job mixed concrete shall be mixed in an approved type batch mixer. Do not exceed manufacturer's rated capacity of mixer.
- C. Ready (Truck) Mixed Concrete: With each batch of concrete delivered to the Project, the concrete supplier shall furnish duplicate batch delivery tickets as required by ASTM C 94.

### 3.7 PLACING CONCRETE

- A. Concrete shall not be placed until forms and all reinforcing steel has been placed, inspected and approved. The forms shall be clean of all debris immediately prior to placing concrete, and surfaces not oil treated shall be wetted. Concrete shall be placed so that segregation does not occur and there is no displacement of reinforcement. Concrete shall be placed in the forms as nearly as practical in its final position in order to avoid rehandling, and a horizontal surface of the plastic concrete shall be maintained. After initial set of the concrete, forms shall not be jarred and no strain shall be placed on the ends of projecting reinforcement. Concrete shall not be placed until all laitance which may have formed on concrete previously placed or any loose, deleterious material on reinforcing bars has been removed. Concrete may not be placed if the concrete temperature at the time of placement is greater than 90 °F, and concrete that is more than 12 hours old from time of batching will be rejected.
- B. The external surface of all concrete shall be worked during the placing so as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets or honeycombs.

- C. Chutes and Troughs: Concrete shall not be dumped or dropped for a distance greater than 5 feet, unless confined by closed chutes or pipes. All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete by flushing with water after each run. The water used for flushing shall be discharged outside of the forms and clear of the concrete already in place.
- D. Vibrating: The concrete shall be compacted with mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading to assure proper and adequate compaction. Vibrators shall be so manipulated as to work the concrete around the reinforcement and embedded fixtures and into corners and angles of the forms.

Vibrators shall not be used as a means to cause concrete to flow or run into position. The vibration at any point shall be of sufficient duration to accomplish compaction, but shall not be prolonged to the point where segregation occurs.

At least one additional standby vibrating unit shall be available for individual concrete placements in excess of 10 cubic yards.

- E. Construction and Contraction Joints: Construction or contraction joints shall be located only where shown on the Contract Drawings or where authorized. If joints are to be located other than where shown on the Contract Drawings, shop drawings indicated their location must be submitted for approval. Newly placed concrete in contact with previously placed concrete (at horizontal construction joints and at contact with existing concrete structures where the joints are exposed to view in the finished structure) shall contain an excess of mortar to insure bond and provide a neat joint. In order to provide sufficient mortar for such joints, a layer of Portland cement mortar, 1 to 2 inches thick, shall be deposited against the existing concrete into which the regular mix concrete shall be deposited immediately. The cement-sand mortar shall be of the same proportions as in the regular concrete mix except that the coarse aggregate is omitted.

- F. Expansion Joints:

1. Open Joints: Open joints shall be constructed by insertion and subsequent removal of a wooden strip or metal plate. The insertion and removal of the template shall be accomplished without chipping or breaking the corners of the concrete. Reinforcement shall not extend across an open joint.
2. Filled Joints: Expansion joints shall be constructed similarly to open joints.

- a. When preformed bituminous, cork, sponge rubber or other material is specified, it shall be cut to the same shape and size as that of the surfaces being jointed. It shall be fixed firmly against the surface of the concrete already in place in such manner that it is not displaced when concrete is deposited against it. When more than one piece of filler is used, the abutting pieces shall be covered with a layer of asphalt-saturated A40-pound of roofing felt, one side of which shall be covered with hot asphalt to insure proper retention.

- b. When preformed elastomeric joint seals are specified, the sealer shall be installed as soon as practicable after the concrete curing period using a lubricant-adhesive. Temperature limitations of the adhesive as recommended by the manufacturer shall be observed. Joints shall be cleaned and shall be free of oil, curing compound and all other foreign materials immediately prior to the application of the lubricant-adhesive.

The sealer shall be furnished and installed in a continuous length across the full width of slab unless otherwise authorized in writing.

The sealer shall be installed by the use of hand or machine tools and secured in

place with the lubricant-adhesive which shall cover both sides of the sealer over the full area in contact with the concrete. The adhesive may be applied to the concrete or the sealer or both.

- G. Drainage and Weep Holes. Drainage and weep holes shall be constructed in the manner and at the locations required. Forms for weep holes through concrete shall be 4-inch polyvinyl chloride drain pipe.
- H. Pipes, Conduits, and Ducts. Pipes, conduits, and ducts encased in concrete shall be installed before the concrete is placed. Pipes shall be held or braced rigidly during concrete placement in order to prevent their displacement.
- I. Pumped Concrete. At least 20 calendar days prior to beginning operations, a plan of operation conforming to ACI 304.2R shall be submitted for approval, showing method and procedures along with a list of adequate description of equipment and manpower proposed for use, including contingency equipment and manpower. The equipment shall be so arranged that no vibrations result which might damage freshly placed concrete. Aluminum alloy pipe will not be permitted as a conveyance for the concrete nor for any pieces of equipment in contact with the concrete. When pumping is completed, the concrete remaining in the pipeline, if it is to be used, shall be ejected in such a manner that there is no contamination of the concrete or separation of the ingredients. After this operation, the entire equipment shall be cleaned.

### 3.8 EDGE FORMS AND SCREED CONSTRUCTION

- A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides for pavement to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement
- B. Check completed formwork for grade and alignment to following tolerances:
  - 1. Top of forms not more than 1/4 inch in 10 feet.
  - 2. Vertical face on longitudinal axis not more than 1/4 inch in 10 feet.
- C. Clean forms after each use and coat with form release agent as required to ensure separation from concrete without damage.
- D. Slope step treads at 1/4 inch per foot to drain.

### 3.9 STEEL REINFORCEMENT

- A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating reinforcement, with recommendations in CRSI's "Placing Reinforcing Bars" and as specified in Division 3 Sections, for placing and supporting reinforcement.
- B. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2" overlap to adjust mats.

### 3.10 REMOVAL OF FORMS AND FALSEWORK

- A. Unless concrete strength test specimens are required as controls for form stripping and structure loading, the requirements herein shall apply.

- B. Superstructure load shall not be placed upon finished piers or abutments until authorized, but the minimum time allowed for the hardening of concrete in the substructure before any load of the superstructure is placed thereon shall be 14 calendar days.
- C. Forms and falsework shall not be loosened, disturbed or removed without authorization. Blocks and bracing shall be removed at the time the forms are removed and in no case shall any portion of the wood forms be left in the concrete.
- D. Falsework removal for continuous or cantilevered structures shall be such that the structure is gradually subjected to its working stress. To facilitate finishing, forms used on ornamental work, railings and parapets shall be removed in not less than 12 nor more than 48 hours, depending upon weather conditions.
- E. Forms and their supports may be removed from under beams and deck slabs after the expiration of 14 calendar days, and wall forms and side forms for beams carrying no loads after one calendar day.
- F. Precautions shall be exercised with respect to form removal and load applications for portland cement concrete containing fly ash since the rate of strength development may be slower.

### 3.11 FINISHING CONCRETE SURFACE

- A. The surface of the concrete shall be finished immediately after form removal.
- B. All concrete surfaces exposed to view shall be given a Class 2 rubbed finish. All other concrete surfaces shall be given a Class 1 ordinary surface finish.
- C. The classes of concrete finish are as follows:
  - 1. Class 1, Ordinary Surface Finish. As soon as the forms are removed, all projecting wire or metal devices that have been used for holding the forms in place and which pass through the body of the concrete, shall be removed or cut back at least 1 inch beneath the surface of the concrete. Lips of mortar and all irregularities caused by form joints shall be removed.

All small holes, depressions and voids that show upon the removal of forms shall be filled with cement mortar mixed in the same proportions as that used in the body of the work. In patching larger holes and honeycombs, all coarse or broken material shall be chipped away until a dense uniform surface of concrete exposing solid coarse aggregate is obtained. Feathered edges shall be cut away to form faces perpendicular to the surface. All surfaces of the cavity shall be saturated with water, after which a thin layer of neat cement mortar shall be applied. The cavity shall then be filled with stiff mortar composed of one part of portland cement to two parts of sand, which shall be tamped into place. The mortar shall be preshrunk by mixing approximately 30 minutes before using (the length of time may be varied in accordance with the brand of cement used, temperature, humidity and other local conditions). The surface of this mortar shall be floated with a wooden float before initial set takes place. The patch shall be kept wet for a period of five calendar days.

For patching large or deep areas, coarse aggregate shall be added to the patching material and precautions shall be taken to ensure a dense, well bonded and cured patch.

Areas having excessive honeycombs may be considered cause for rejection of a structure. Where written notice is given that a structure has been rejected, said structure shall be removed and rebuilt, in part or wholly, as specified, without additional compensation.

All construction and expansion joints shall be tooled and free of all mortar and concrete.

2. Class 2, Rubbed Finish. After removal of forms, the rubbing of concrete shall be started as soon as its condition permits. Immediately before starting this work, the concrete shall be kept saturated with water. Sufficient time shall have elapsed before the wetting down to allow the mortar used in the pointing to set. Surfaces shall be rubbed with a wetted wooden block or a medium coarse carborundum stone, using a small amount of mortar on its face. The mortar shall be composed of cement and fine sand mixed in proportions used in the concrete being finished. The carborundum stone shall not be used until the concrete has hardened to the state where the sand grinds rather than ravel or rolls. Rubbing shall be continued until all form marks, projections, and irregularities have been removed, all voids filled, and a uniform surface has been obtained. The paste produced by this rubbing shall be left in place. A brush finish or painting with grout will not be permitted.

After all concrete above the surface being finished has been cast, the final finish shall be obtained by rubbing with a fine carborundum stone and water. This rubbing shall be continued until the entire surface is of a smooth texture and uniform color.

### 3.12 CURING AND PROTECTING CONCRETE

- A. Curbs, and tops of sidewalks shall be cured in accordance with the following:
  1. The concrete shall be covered with strips of wet burlap which, after shrinkage, shall be not less than 2 feet 6 inches longer than the width of the slab. Approximately 2 feet shall be allowed for shrinkage of new burlap. The strips shall be laid across the slab and shall overlap not less than one-half the width of the strip to provide a double thickness of burlap. The burlap shall be maintained in a wet condition throughout the specified curing period. The minimum wet cure period shall not be less than seven calendar days.
  2. If a pipeline is to be used to furnish water for sprinkling, it shall have tees and stopcocks not more than 200 feet apart. If this pipeline is used for supplying water for the concrete mixer and other operations, it shall be of sufficient size and operated under sufficient pressure to serve all such operations and to permit sprinkling of the curing material and shall not be removed from the site of sprinkling until the curing period is over.
  3. The wet burlap shall be covered with white polyethylene sheeting. The sheeting shall be placed and weighted down so as to remain in contact with the surface covered. The sheeting shall extend beyond the edges of the slab for a distance at least twice that of the thickness of the concrete. The covering shall be maintained in place for 72 hours after the concrete has been placed.
- B. Other concrete structures and concrete surfaces to receive an epoxy coating, rubbed finish or to be covered with another material shall be cured as mentioned above or in accordance with the following:
  1. Waterproof paper blankets shall be not less than 20 feet nor more than 75 feet in length and shall be of a width so that, when in place, they completely cover the surface of the concrete. Unless the paper has been pretreated to resist such action, an 8-inch pleat to allow for shrinkage of the paper joints in the blankets shall be cemented together to provide seams with a minimum lap of 4 inches, producing and maintaining a waterproof joint.

The blankets shall be securely weighted down by placing a ridge of earth or light planks on the edges of the blankets just inside the forms or by other approved means such that depressions are not formed in the concrete surface. Adjoining blankets shall overlap not less than 12 inches. This lap shall also be securely weighted down to form a closed joint. If hair-

checking develops before the paper can be placed, the concrete shall be covered initially with wet burlap.

Before moving the blankets ahead to new locations, the blankets shall be inspected and all holes and tears shall be repaired with centered patches. When the blankets are no longer serviceable as a single unit, selections may be made from the rejected blankets which, if approved, may serve for further applications, provided that two blankets are used as a single unit. However, the double blanket may be rejected if it no longer provides an airtight cover.

2. Hay or Straw: The entire surface of the concrete shall be covered with a layer of hay or straw not less than 6 inches uniform thickness which shall be placed directly upon the concrete and wet by sprinkling.

- C. Protection and Curing Under Cold Weather Conditions: During cold weather, measures shall be taken to maintain the concrete temperature as specified in Section 3.4 above.

If concrete is placed or is scheduled to be placed at a time when the provisions for cold weather concreting apply, the Construction Manager shall be advised of the plans for curing and protecting the concrete. Concrete shall be protected in such a manner as to prevent damage from cold weather. Frozen concrete or concrete damaged by cold weather shall be removed and replaced without additional compensation.

Calendar days on which the surface temperature of the concrete falls below the minimum specified shall not be considered curing days.

Protection under cold weather conditions may be accomplished by heating and housing and by the use of insulated forms as follows:

1. General: Forms shall be free of ice, snow and frost at time of placing concrete. No substructure concrete shall be placed when the ambient temperature is below 40 1F, unless the interior of forms, metal surfaces and the surface of the concrete adjacent to the new concrete placement are preheated to that temperature or higher.

Certain procedures and requirements must be adhered to when protecting superstructure concrete. The top of the freshly placed concrete shall be protected as soon as possible with insulating blankets. Tarpaulins or other similar material shall be hung so that the entire section being protected is enclosed. Heated air shall be circulated under this enclosed portion for the full protection period as specified for concrete protected by heating and housing. No superstructure concrete shall be placed when the ambient temperature is below 40 1F, unless the interior of the forms, metal surfaces, and the surface of the concrete adjacent to the new concrete placement are preheated to that temperature or higher.

The concrete shall be kept at a temperature not lower than 60 1F for a period of seven calendar days after placing and then, at a temperature not lower than 40 1F for a period of four calendar days.

After the specified curing is complete, the temperature of the concrete shall not be permitted to fall at a rate greater than 10 1F per 12-hour period.

2. Heating and Housing: Before placing concrete in the forms, housing shall be provided for the section of concrete to be placed so that the temperatures specified can be maintained within such enclosure. Enclosures shall be so arranged as to permit removal of forms and finishing of concrete surfaces without interruption of heating.

The heating system shall be so arranged as to provide uniform heating by forced air or radiation within the enclosure. The heating system shall be operated for a sufficient period of time in advance of placing concrete so that the temperature of form surfaces to be in contact with the concrete, reinforcing steel and abutting construction shall be 70 plus 10 or minus 20 1F.

During and after the period of placing concrete, the heating plant shall be operated so as to maintain the temperature of the air within the enclosure at 70 plus 10 or minus 20 1F. Such temperatures shall be maintained in the enclosure until the completion of the curing period.

Salamanders shall be provided at the site or be available within an hour in such quantity as to ensure maintaining the concrete at the minimum temperature specified in the event of a breakdown, and shall be used for such reasonable time as to permit repair of the heating plant, subject to such location, arrangement, operation and provision for moisture.

3. Insulated Forms: Insulated forms may be used to protect concrete in abutments, walls and other structure units. The insulation shall be of a type, which meets the requirements of cold-weather concreting.

The temperature of the concrete and the temperature of the surface of the forms under the insulation will be checked at intervals, and the temperature of the concrete being mixed shall be adjusted to ensure that the rate of increase in concrete temperature after placement is not greater than 10 1F per hour. Maximum concrete temperatures shall not be greater than 100 1F.

The insulated forms shall remain in place for the protection period. The blankets or straw may be removed from tops of footings only as necessary to permit forming for subsequent concrete placements. Approval shall be obtained before loosening forms or removing the top covering.

### 3.13 SEALING OF JOINTS

- A. Prior to sealing joints with hot-poured rubber asphalt or cold applied joint sealer, the surfaces of the seams and joints must be clean and dry, and must be free of all loose aggregate, paint, corrosion, form oil and concrete curing compound.
- B. All loose concrete, dirt and foreign matter shall be removed by sandblasting or by the use of a wire brush. Projections of concrete into the seams shall also be removed. The joints and surfaces adjacent to the seams shall be blown free from all loose dust by means of oil-free compressed air immediately prior to priming.
- C. Alkaline seepage and form oil shall be cleaned by etching of the concrete surface with hydrochloric acid, thorough rinsing, neutralizing and drying.
- D. The sealing compound shall be made flush with or not more than 1/16 inch above the adjacent surfaces.

## **INTRODUCTION**

Remington & Vernick Engineers (RVE) has prepared this report which presents the findings, conclusions, and recommendations of a geotechnical investigation conducted for the proposed construction of the new Caldwell & Elizabethtown Parking Garage. The proposed parking garage will be constructed within the same location of the existing parking facility after demolition is completed. The parking garage site is located at the intersection of Caldwell Place and Elizabethtown Plaza in the City of Elizabeth, Union County, New Jersey.

The purpose of this geotechnical investigation is to determine the subsurface conditions at the site, the depth to bedrock and to provide recommendations, from a geotechnical engineering viewpoint, for the most suitable type of foundation, site preparation, earthwork operations, and other geotechnical considerations.

## **SITE & PROJECT DESCRIPTION**

The existing parking facility is a 7-story reinforced concrete structure with below grade parking, with the upper story having office space, utilized by the County Sheriff's office. The existing parking structure, including the below grade parking level, will be demolished, and removed in its entirety to allow for construction of the new parking structure. Based on preliminary information, the proposed footprint of the new parking structure will be located in approximately the same location as the existing structure.

The proposed new parking structure will be a 9-story structure, with a basement for below grade parking. The structure will be constructed using precast concrete members with reinforced cast-in-place concrete foundation. The depth of the proposed basement will vary from approximately 3.2 to 15.8 feet below existing grade. The parking structure is expected to be supported by a spread footing foundation system consisting of continuous wall and isolated column footings. The anticipated maximum wall and column loads are expected to 22 kips per liner foot and 325 kips respectively, with anticipated exterior column spacing of 30 feet. These anticipated loads and column spacing was provided to us by the Project Architect. The final exterior site grades are expected to change from those that currently exist at the site.

## **SUBSURFACE INVESTIGATION**

A Standard Penetration Test (SPT) boring investigation for this project was performed on October 27, 28 and 29, 2020. The investigation consisted of seven (7) SPT test borings drilled by Sano Drilling Inc., utilizing drilled in casing (hollow stem augers) at locations selected by RVE. The soil borings, designated as B-1 through B-7, were drilled to auger refusal at depths ranging from 10 to 15 feet below existing grade. At auger refusal, rock cores were performed in each boring into bedrock with the core runs measuring 5 feet in depth. All drilling, soil sampling and rock coring operations were supervised by RVE. The field logging of the soil and rock core samples was also performed by a representative of RVE.

Soil samples were recovered via a two-inch O.D. split-spoon sampler; driven by a hydraulically activated 140-pound hammer, free falling 30 inches (ASTM D 1586). The number of hammer blows required to advance the 24-inch spoon in 6-inch increments (four increments in all) were recorded. The number of blows required to penetrate the middle two increments (6 to 18 inches) is known as the Standard Penetration Resistance (N). Soil samples were obtained continuously in the upper 10 ft and at 5 ft intervals thereafter. Recovered soil samples were visually classified in

the field using the *Burmister Soil Identification System* and the *Unified Soil Classification System*.

All rock coring was performed using a 5-foot NX-size double tube core barrel. The recovered rock samples were visually classified in the field with the percentage of rock recovered (REC) and the rock quality designation (RQD) determined.

The results of the visual analyses were utilized to prepare the attached Test Boring Logs which are presented in Appendix C of this report, along with a Glossary of Terms and Definitions. The approximate location of the test borings, along with other pertinent site information, is shown on the Boring Location Plan, in Appendix B.

### **LABORATORY TESTING**

All recovered soil samples were retained by RVE for examination and testing. The field classifications were confirmed or modified as necessary by our Geotechnical Engineer. Gradation analysis and moisture content determinations were performed by TRC's testing laboratory on soil samples selected by RVE to determine soil properties and to assist in soil identification. Unconfined compression tests were also performed by TRC on two (2) representative rock core samples selected by RVE. Summaries of test results, along with graphic presentations of the test results are presented in Appendix E.

### **SUBSURFACE CONDITIONS**

#### **Published Geologic Data**

Published geology indicates the soils at the site are unstratified glacial ground moraine deposited during the Wisconsin glaciation. These deposits are generally described as unsorted and heterogeneous with soil composition ranging from clay to gravel, cobbles and boulders, though silt and sand sizes are predominant. The colors vary from red to red-brown or brown.

Underlying the glacial deposits is soft red shale bedrock with occasional beds of red sandstone. The depth to bedrock in the region is generally variable, with depths usually greater than 10 feet. Shallower depths to bedrock often occur on the tops of existing ridges while greater depths are observed along the lower ridge slopes and in valleys.

The geologic information was obtained from the "Engineering Soil Survey of New Jersey," Rutgers University, Report Number 5, Union County, Engineering Research Bulletin Number 19, 1952.

#### **Soils Encountered**

The site soils are in general agreement with the published geologic data. Fill or possible fill soils were encountered beneath asphalt or concrete pavement in all borings. Underlying the fill layer, natural glacial deposits and decomposed bedrock was encountered until auger or sampling spoon refusal on shale bedrock. Weathered and decomposed rock fragments that are moderately friable were observed in the soil matrix of the glacial deposits. Beneath the fill soils and glacial deposits, shale bedrock was encountered and extended to the termination depth of the borings. A detailed description of the soils encountered is shown on the boring logs. A brief general description is

given in the following sections. Inferred Subsurface Cross Sections are presented in Appendix D. The cross-sections present interpolations between the borings and the actual subsurface conditions and elevations may vary from those shown on the sections.

**Fill / Possible Fill Stratum (F/PF):** Beneath a 6-inch layer of bituminous asphalt or concrete pavement, fill or possible fill was encountered to a depth of 6 to 13 feet below existing grade in all borings. The fill soils consist of coarse to fine reddish brown to gray sand with varying amounts silt, clay, crushed stone and rock asphalt fragments. The relative density of this stratum varies from loose to dense with normalized Standard Penetration Test (SPT)  $N_{60}$  and  $N_{160}$ -values ranging from 4 to 49 blows per foot (bpf).

It should be noted, in the absence of foreign materials within the soil matrix, it may be difficult to differentiate between natural soils and fill or regraded soils, even when classified by experienced engineers. Accordingly, the depth of fill could vary from that indicated on the boring logs.

**Glacial Moraine Deposits (GM):** Underlying the fill stratum in all borings, naturally occurring glacial deposits were encountered to auger and sampling spoon refusal at depths ranging from 10 to 15 feet below existing grade. The soils in this stratum can be described as reddish brown coarse to fine sand with trace to “and” silt, trace to little clay and trace to some coarse to fine rock fragments. Immediately above the bedrock the soils become predominately coarse to fine rock fragments with little to some coarse to fine sand. The relative density of this stratum varies from compact to very dense, with normalized SPT  $N_{160}$ -values ranging from 16 bpf to over 50 blows per foot. In general, the relative density of the stratum increases with depth, becoming very dense 1 to 2 feet above the bedrock.

**Shale Bedrock (S):** In all borings, shale bedrock was encountered below the glacial deposits. Rock coring of the bedrock was performed in all borings using a NX double tube core barrel, to the boring termination depths of 15 to 20 feet below existing grade. In borings B-1 through B-5, recoveries of 100% were observed, while recoveries of 95% and 42% were observed in borings B-6 and B-7 respectively. Rock quality designations ranged from 0% to 28%. The shale bedrock encountered in the rock cores was reddish brown, and is considered to be soft, moderately to highly weathered and extremely close to closely fractured.

## **Groundwater**

Natural groundwater was not encountered in the borings at the time of drilling and prior to the introduction of water into the borehole for rock coring. However, pockets of shallow perched groundwater were observed in borings B-1 and B-4 at depths of 3.5 feet and 5 feet, respectively. It should be noted that this groundwater information represents the conditions encountered at the time of drilling operations. Groundwater levels generally can fluctuate due to changes in precipitation, infiltration, surface run-off and other hydrogeological factors. Therefore, the groundwater level present at the time of construction may vary from that observed at the time of the drilling operations.

It should also be noted that shallow or perched groundwater might be encountered during excavations for foundation construction, especially if the work commences after a wet weather period. Dewatering of perched water or surface runoff water encountered during construction can be performed using sump pumps.

## **DISCUSSION & RECOMMENDATIONS**

The subsurface investigation indicated that the site is underlain by loose to medium-dense fill material and glacial deposits which is not suitable to support the proposed structure. Based on the results of our field investigation and laboratory test data, we have evaluated the existing subsurface soil and rock strata to determine their engineering properties and to recommend the most feasible foundation system, from a geotechnical engineering point of view, for the proposed parking garage structure. The natural intact bedrock is capable of supporting the proposed structure and the anticipated maximum design loads on a spread footing type foundation system.

### **Demolition, Site Preparation Procedures & Earthwork Operations**

The proposed construction area is defined as the area within the proposed building limits, and a 5-foot wide zone outside the building.

1. Clear and strip from the construction area, any existing asphalt and concrete pavements or any other deleterious material. Also remove any structures, foundations, basement walls, floor slabs and all demolition debris completely from within the building footprint. Any debris, old foundations or abandoned pipes encountered during excavation, will have to be removed completely from the area under the proposed building to a minimum depth of 2 feet below the bottom slab elevation and completely from the area of the foundations. If any pipes are to be left in place, they must be completely filled with cement grout.
2. Excavate the site, where necessary as described in the “Soil Excavation” and/or “Rock Excavation” sections of this report, to proposed subgrade elevation. Over-excavate any unsuitable material or soils encountered below this elevation in the zone of influence of the foundations. The zone of influence is the volume of soil within lines drawn downward and outward, from the lower edges of a foundation, at a slope of 1.5H:1V. Unsuitable material includes all deleterious fill material, bricks, debris, rubble, or any other undesirable material designated by the on-site representative of the Geotechnical Engineer. Undesirable natural soils include all soft and loose soils encountered under the bottom of the foundation elevation. Replace the over-excavated material with controlled structural fill as defined herein.
3. After excavation procedures have been successfully completed, the rock surface should be examined and scaled to remove any loose rock fragments. The rock, including boulders or fingers and ledges of rock projecting into the bottom of excavation, should be removed to a minimum depth of 6 inches below the proposed bottom of foundation concrete. If the rock is shattered below the foundation elevation and surrounded by intact rock, the shattered material should be removed. The space created should be refilled with the same class of concrete as the overlying foundation. The rock surface should be freed from loose material, cleaned and cut to a firm surface, shaped and leveled according to final elevations. All seams should be cleaned out and filled with concrete, mortar or grout.
4. During a dry and favorable weather period and under the technical supervision of a representative of the Geotechnical Engineer, proof roll and compact the resulting subgrade, in areas underlain by soil, with a 10-ton heavy-duty vibratory roller. A minimum of 8 overlapping passes is recommended. Heavy equipment should not be

operated within 10 feet of any existing structures. Compaction of the soil in the vicinity of existing structures could be accomplished utilizing a mechanical compactor such as a walk behind vibratory roller or similar device as approved by the Geotechnical Engineer's representative on-site.

5. Undercut any zones of instability disclosed by the proof rolling, as determined by the on-site representative of the Geotechnical Engineer and replace the undercut material with controlled structural fill as defined herein. As required, raise the ground surface to proposed subgrade elevation with controlled structural fill. All material used as controlled structural fill material in the building area should comply with the requirements given herein and approved by the on-site representative of the Geotechnical Engineer.
6. All load-bearing fill should be controlled structural fill placed in loose horizontal lifts with a maximum thickness of 8 inches. Controlled structural fill should consist of inorganic, readily compactable, predominantly well-graded granular soils with no more than 12% fines (material passing the No. 200 sieve), and a maximum particle size of 3 inches. The moisture content of the fill materials should be controlled to within 2% of the optimum moisture content, as determined by ASTM D 1557, by wetting, aeration or blending, as necessary. It is recommended that controlled fill within the construction area be compacted to at least 98% and 95% of the maximum dry density, as determined by the Modified Proctor Test (ASTM D 1557), below and above the footing subgrade elevations, respectively. In addition, it is recommended that all fills be stable without significant movement under construction traffic, as judged by the on-site representative of the Geotechnical Engineer. Quality control testing of in-place fill densities should be conducted throughout the entire earthwork operation.
7. In areas where the proposed foundations are lower than existing adjacent foundations, it will be necessary to protect the existing foundations from being undermined by appropriate sheeting and shoring or underpinning of the existing foundations. Conventional steel sheet piling, soldier pile and lagging or pit underpinning will be satisfactory, but it should be designed by and installed in accordance with the requirements of a Licensed Professional Engineer.

### **Soil Excavation**

It is recommended that open cut excavation be used in areas where the granular fill and the glacial deposits are encountered overlying the bedrock. Open excavations are feasible provided there is enough room so that the stability of existing structures is not affected. Existing structures may be considered not affected by the open cut excavation if a line projected downward from the bottom edge of the existing footings at a slope of 1.5H:1V does not intersect the excavation slope. Any section of the existing foundations affected by the excavation should be underpinned. We recommend that the depth of the foundation of the existing school building and other adjacent structures should be established before starting the excavation for the proposed addition. Temporary side slopes of open cut excavations should not be steeper than 2H:1V.

If any existing structures will be affected by an open cut excavation, we recommend that the affected structures be underpinned. Alternatively, temporary sheeting and shoring should be used to support the sides of the excavation. If temporary shoring is utilized, the soil parameters presented in the table below may be used for the design of the shoring. All excavations should be

in compliance with “Excavating and Trenching Operations” manual (latest revision), issued by the US Department of Labor, OSHA 2226 and local requirements.

Temporary Shoring Design Parameters

Stratum	Design Parameters	
Existing Fill: <i>From ground surface to Glacial Deposits or Rock</i>	Unit Weight of Soil (pcf)	115
	Angle of Internal Friction ( $\phi$ )	28°
	Coefficient of Active Earth Pressure ( $K_a$ )	0.36
	Coefficient of Earth Pressure At-rest ( $K_o$ )	0.53
	Coefficient of Passive Earth Pressure ( $K_p$ )	2.7*
Glacial Deposits: <i>From bottom of fill to top of Rock</i>	Unit Weight of Soil (pcf)	120
	Angle of Internal Friction ( $\phi$ )	30°
	Coefficient of Active Earth Pressure ( $K_a$ )	0.33
	Coefficient of Earth Pressure At-rest ( $K_o$ )	0.5
	Coefficient of Passive Earth Pressure ( $K_p$ )	3.0*

\* A suitable factor of safety should be applied to  $K_p$ .

The lateral load information presented in this report should be used only as a guideline by the contractor, and it should be a requirement for the excavation contractor to prepare, and submit for review, a proposed sheeting and shoring design certified by a Licensed Professional Engineer prior to construction. The excavation contractor should be responsible for the design, installation, and maintenance of all sheeting and shoring.

Regardless of the excavation option chosen, excavated soils should not be stockpiled adjacent to the sides of the excavations to avoid the imposition of additional loads, unless these loads are considered in the design of the temporary shoring or side slopes. Additionally, the effect of excavation machinery should be included in the stability of the open cut slopes, as well as the temporary shoring design.

The on-site fill soils and glacial deposits are sensitive to moisture and are subject to disturbance and deterioration due to weather, moisture intrusion, construction traffic or any other site related disturbance. It is recommended that excavation equipment operating from the existing ground surface be utilized to complete the proposed excavations. The effect of this machinery should be included in the stability of the open cut slopes, as well as the temporary shoring design.

If soil subgrades within the excavation are to be left open for a prolonged period, a work mat should be used to protect the foundation subgrade. A work mat may consist of a layer of ¾ -inch quarry processed crushed stone, a two-inch lean concrete “mud mat,” or other approved material, which will serve to level the footing subgrade, as well as to prevent subgrade softening if the subgrade is exposed for prolonged periods to surface water infiltration.

After the approval of excavation subgrade by a qualified on-site engineer, it is recommended that provisions be made to cover the bottom of the excavation with a 6-inch layer of ¾-inch clean

crushed stone or recycled concrete (minimum thickness), and to follow the recommendations given in the “Foundations” section of this report. This layer will provide a means of protecting the subgrade soil and will facilitate the construction procedures.

### **Rock Excavation**

As discussed previously, the test borings indicate that the entire site is underlain by shale bedrock at a depth of 10 to 15 feet below existing grade. Based on the depth of the proposed basement it is expected that rock excavation may be required. The rock excavation will be facilitated in some areas by intense joints and fractures in the rock. In areas where highly fractured rock is encountered, it may possibly be rippable and can be excavated and removed using heavy construction equipment. Otherwise, in areas where the joints within the rock are more widely spaced, the rock can be dislodged and removed via pre-splitting using hydraulic rock splitters, pneumatic jack hammers or line drilling. Special provisions should be made during excavation. These are delineated in the following paragraphs.

Boulders extending laterally beyond the prescribed limits of excavation may be removed entirely. Any space created outside the prescribed limits due to the removal of such boulders should be refilled with controlled structural fill material as specified in this report.

If the rock excavation extends beyond the bottom elevation of the footing the space created between the intact rock and footing bottom should be refilled with the same class of concrete as the overlying foundation.

After completing the excavation of each section of rock and before beginning the next section, the rock vertical face or sloped surface of the excavation, should be scaled to remove any loose unstable rock fragments. The on-site engineer and the contractor should both examine all rock slopes during the excavation to identify possible unstable conditions and to determine the need for stabilization.

Care should be taken not to leave undrained pockets of surface water on the surface of the rock. Dewatering of surface runoff water encountered during construction can be performed using sump pumps.

### **Backfill**

A portion of the on-site soils contain fine grained material and are sensitive to moisture which may make them difficult to compact. Therefore, these soils are not suitable for use as controlled structural fill. However, they can be used as non-structural fill to raise grades outside of the building envelope and in any paved areas provided, they can be placed at a moisture content which would permit compaction to the required densities. The clean granular portions of the existing on-site soils can be reused as backfill after approval by the Geotechnical Engineer. Soils with organic or other deleterious materials should be discarded. The moisture content of the soil must be within 2% of the optimum value for proper compaction. Therefore, some adjustment of the moisture content may be necessary prior to use as fill material. If imported fill materials are required to complete backfilling of the excavations, they should consist of uncontaminated, relatively well-graded granular soils as defined in Item 5 of the Demolition, Site Preparation Procedures & Earthwork Operations portion of this report.

Backfilling against the foundations and for utility trenches, or other structural uses, should be accomplished using controlled structural fill, as defined in this report, compacted to 95% of the maximum dry density as determined by the Modified Proctor Test, ASTM D 1557. Compaction of the backfill within 5 feet of any existing structures should be performed with relatively light equipment such as a jumping jack, a walk behind roller, or similar device as approved by the on-site representative of the Geotechnical Engineer. The backfill should be placed in 8-inch lifts and compacted to at least 95% and 90% of maximum dry density, as determined by the ASTM D-1557 test procedure, in structural and paved areas or landscaped areas, respectively.

### **Dewatering**

The results obtained at the time of the drilling operation indicate that no natural groundwater was encountered in the borings and therefore continuous dewatering operations should not be required on this site. However, shallow perched groundwater was encountered in two (2) borings at the time of our drilling operation. The removal of perched water, run-off water and any water accumulating in pockets in the surface of the subgrades and exposed rock should be removed. This could be accomplished using sump pumps.

### **Foundations**

The existing fill or glacial deposits are not suitable for direct support of the anticipated heavy column and wall loads of the proposed structure. Based on the results of our field and laboratory investigations and on our engineering analyses, conventional spread footings founded on intact rock, will be the most suitable foundation system for the proposed parking garage structure. For design purposes, a maximum net allowable bearing pressure of 8 tons per square foot (tsf) can be used for both the column and continuous wall foundations. Bearing elevations between boring locations will vary depending upon the exposed soil and rock elevations. With the use of the recommended allowable bearing capacities, a satisfactory factor of safety will be provided against a shear failure and total and differential settlement will be within tolerable limits. The liquefaction potential of the subsoils was also evaluated, and the subsoils were found to have a very low liquefaction potential.

Wall and column footing widths should not be less than 2 and 3 feet respectively. All continuous wall footings should be designed to project at least six inches on each side of the walls. The requirements that the footings be founded at least three (3) feet beneath the finish grade level for frost protection will necessarily be satisfied with the foundations bearing on bedrock. In the vicinity of the existing structures, the proposed foundation bottom elevation should be the same as that of the existing foundation. It should be pointed out that in no case should a line drawn downward at a 1.5H:1V slope from the nearest edges of the proposed foundation bottom elevation intersect with any existing foundations, and vice versa. If the adjacent building foundation is above the proposed new footing founding level, their foundations must be underpinned to prevent undermining the existing foundations or structures.

Footing subgrades on rock should be level and prepared as discussed in Item 3 of the Demolition, Site Preparation Procedures & Earthwork Operations portion of this report. The footing subgrades on compacted structural fill should be thoroughly compacted prior to the placement of the concrete utilizing a mechanical compactor such as a jumping jack, walk-behind roller, or similar device as approved by the on-site representative of the Geotechnical Engineer.

Prior to the placement of concrete, the foundation subgrade must be inspected by a qualified representative of the Geotechnical Engineer in order to confirm that the rock subgrade is properly prepared and that the soil bearing capacity of any compacted structural fill is satisfactory. The contractor should exercise extreme caution not to disturb the subgrade soils. Should the subgrade be disturbed, the loosened soil should be compacted in-place or excavated down to firm soil. Any water, which accumulates in the bottom of the foundation excavation, should be removed promptly.

### **Basement Construction**

The basement walls should be designed to resist the expected lateral soil pressure and any surcharge load located within 15 feet of the basement wall. For design purposes, the lateral earth pressure may be estimated using the following recommended parameters:

Unit Weight of Soil (pcf)	120
Angle of Internal Friction ( $\phi$ )	30°
Coefficient of Active Earth Pressure ( $K_a$ )	0.33
Coefficient of Earth Pressure At-rest ( $K_o$ )	0.5
Coefficient of Passive Earth Pressure ( $K_p$ )	3.0*

\* A suitable factor of safety should be applied to  $K_p$ .

We recommend that the at-rest ( $K_o$ ) earth pressure coefficient should be used in the design of basement walls. All anticipated surface surcharge loads should also be taken into consideration.

Natural groundwater was not encountered in the borings, however shallow perched groundwater was encountered in borings B-1 and B-4. Based on the observed perched groundwater and the stratification and visible soil drainage characteristics of soils encountered during the geotechnical investigation, the likelihood of perched water tables and isolated zones of saturation can exist within the soil strata. We therefore recommend that a perimeter drainage system be installed to remove any groundwater seepage that may accumulate adjacent to the basement wall. The perimeter drainage system should include perimeter drains and free draining backfill, or a perimeter drainage membrane placed against the exterior basement walls. The perimeter drain should consist of perforated pipe (ADS or equivalent), having a minimum diameter of 4 inches. The pipe should be surrounded with 6 inches of clean ¾-inch crushed stone or washed gravel on all sides. The gravel should be wrapped in filter fabric (Mirafi 140N, or equivalent). The perimeter drainage system should flow by gravity into a nearby storm water system, if feasible, or connected to a sump from which water may be pumped. The exterior basement walls should be damp proofed and, if free-draining backfill is not installed, the walls should be provided with a drainage membrane, such as Tuff-N-Dri, Amerdrain or Miradrain or equal. The membrane should be hydraulically connected to the foundation drain and should extend to within 2 feet of the finished ground surface. After installation of the perimeter drainage system, the basement can be backfilled using approved imported select fill.

In addition, to the recommended subsurface drainage system, it is recommended that the finish exterior grades around the proposed building addition be sloped away from the building walls to rapidly drain the surface run-off water away from the building perimeter.

### **Slabs on Grade**

Proposed reinforced concrete slabs on grade can be uniformly supported on the densified natural soil or controlled structural fill after site preparation procedures have been successfully completed as discussed herein. The slabs should be structurally independent of walls and footings. Large floor areas should be provided with joints at frequent intervals as determined by the structural engineer. A minimum of 4 inches of ¾-inch clean crushed stone or a 12-inch thick layer (minimum) of well-graded sand and gravel with not more than 5% non-plastic fines is recommended below the slab to assure uniform bearing conditions and to act as a capillary break. A vapor barrier should be placed between the slab and base course, as directed by the Architect, to minimize moisture migration to the surface. All structural fill supporting the floor slab should be compacted to 95% of the maximum dry density (ASTM D 1557).

Concrete slabs placed on the subgrade, prepared as described herein, can be designed using a modulus of subgrade reaction of 225 pounds per cubic inch (pci).

### **Seismic Zone**

According to the New Jersey Edition of the 2018 International Building Code, Section 1613.2.2 referencing ASCE 7, Chapter 20 the project site is categorized as a Site Class “C” for seismic design purposes. This classification is based on subsoil conditions encountered in the borings. In general, the density of the soil below the test borings should increase with depth, based on experience.

### **LIMITATIONS**

The conclusions and recommendations contained in this report are based upon the subsurface data obtained during this investigation and on details stated in this report. It is understood that the number of borings made are consistent with good engineering practice but actual conditions encountered may differ significantly from those projected in this report. Should conditions arise which differ from those described in this report, **RVE** should be notified immediately and provided with all information regarding differing subsurface conditions.

Our recommendations are based upon the assumption that the services of a qualified Geotechnical Engineer will be retained during construction for the observation of all critical earthwork operations and foundation installation. **RVE** cannot minimize, or provide recommended solutions for, any problems resulting from construction or differing soil conditions unless our services include full-time construction inspection to determine that the work performed is in compliance with **RVE's** recommendations, and to ensure the work is carried out in the owner's best interests.

Environmental considerations and contaminants, such as petroleum products, hazardous waste, radioactivity, irritants, pollutants, radon or other dangerous substances and conditions were not the subject of this study. Their presence and/or absence are not implied, inferred or suggested by this report or results of this study.

This report is intended for use with regard to the specific project discussed herein, and any changes in the design of the structure or location, however slight, should be brought to our attention so that we may determine how they may affect our conclusions. We are responsible for the conclusions and opinions contained in this report based on the data relating only to the specific project and location discussed herein.

# KEY TO SYMBOLS

Symbol Description

## Strata symbols

Paving

Fill

Glacial Deposit

Shale

## Soil Samplers

Standard penetration  
test

Auger

Rock core

## Notes:

1. Exploratory borings were drilled on 10/27/20 through 10/29/20 using a continuous flight hollow stem augers. Rock coring was performed using a NX size double tube core barrel.
2. Natural groundwater was not encountered at the time of drilling and prior to the introduction of water for the rock coring operation.
3. Boring locations were located from existing features and elevations extrapolated from the topographic survey plan prepared by PS&S, dated 10/12/20.
4. These logs are subject to the limitations, conclusions, and recommendations in this report.

MODIFIED METHOD  
FOR  
IDENTIFICATION OF SOILS  
AFTER  
DR. D. M. BURMISTER

Soil Component	Descriptive Terms As Written on Log	Range of Proportions
PRINCIPAL COMPONENT (All Letters Capitalized)	-	35% or more
MINOR COMPONENTS (First Letter Capitalized)	and (a.) some (s.) little (l.) trace (tr.)	35% to 50% 20% to 35% 10% to 20% 1% to 10%

**Coarse Grained Soils-Gradation of Components**

Coarse to fine	cf	All sizes
Coarse to medium	cm	Less than 10% fine
Medium to fine	mf	Less than 10% coarse
Coarse	c	Less than 10% medium & fine
Medium	m	Less than 10% coarse & fine
Fine	f	Less than 10% coarse & medium

Component	Symbol	Sieve Range
Boulders		9" and larger
Cobbles		3" to 9"
Gravel	G	
Coarse		¾" to 3"
Fine		#4 to ¾"
Sand	S	
Coarse		#4 to #10
Medium		#10 to #40
Fine		#40 to #200

**Fine Grained Soils-Plasticity of Components**

Component	Symbol	Overall Plasticity	Plasticity Index
SILT	S	Non-Plastic	0
CLAYEY SILT	CyS	Slight	1 to 5
SILT & CLAY	S & C	Low	5 to 10
CLAY & SILT	C & S	Medium	10 to 20
SILTY CLAY	SyC	High	20 to 40
CLAY	C	Very High	. over 40

# UNIFIED SOIL CLASSIFICATION SYSTEM. (ASTM D-2487)

Major Divisions		Group Symbols	Typical Names	Laboratory Classification Criteria						
Coarse-grained soils (More than half of material is larger than No. 200 sieve size)	Gravels (More than half of coarse fraction is larger than No. 4 sieve size)	Clean gravels (Little or no fines)	GW	Well-graded gravels, gravel-sand mixtures, little or no fines	Determine percentages of sand and gravel from grain-size curve. Depending on percentage of fines (fraction smaller than No. 200 sieve size), coarse-grained soils are classified as follows:  Less than 5 per cent More than 12 per cent 5 to 12 per cent	Borderline cases requiring dual symbols <sup>b</sup>  GW, GP, SW, SP GM, GC, SM, SC	$C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{(D_{30})^2}{D_{10} \times D_{60}}$ between 1 and 3			
			GP	Poorly graded gravels, gravel-sand mixtures, little or no fines				Not meeting all gradation requirements for GW		
		Gravels with fines (Appreciable amount of fines)	GM <sup>a</sup>	d				Silty gravels, gravel-sand-silt mixtures	Atterberg limits below "A" line or P.I. Less than 4	Above "A" line with P.I. between 4 and 7 are <i>borderline</i> cases requiring use of dual symbols
				u					Atterberg limits below "A" line with P.I. Greater than 7	
			GC	Clayey gravels, gravel-sand-clay mixtures						
	Sands (More than half of coarse fraction is smaller than No. 4 sieve size)	Clean sands (Little or no fines)	SW	Well-graded sands, gravelly sands, little or no fines				Limits plotting in hatched zone with P.I. Between 4 and 7 are <i>borderline</i> cases requiring use of dual symbols		
			SP	Poorly graded sands, gravelly sands, little or no fines					$C_u = \frac{D_{60}}{D_{10}}$ greater than 6; $C_c = \frac{(D_{30})^2}{D_{10} \times D_{60}}$ between 1 and 3  Not meeting all gradation requirements for SW	
		Sands with fines (Appreciable amount of fines)	SM <sup>a</sup>	d					Silty sands, sand-silt mixtures	Atterberg limits above "A" line or P.I. Less than 4
				u						Atterberg limits above "A" line with P.I. Greater than 7
			SC	Clayey sands, sand-clay mixtures						
Fine-grained soils (More than half material is smaller than No. 200 sieve)	Silt and clays (Liquid limit less than 50)	ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands, or clayey silts with slight plasticity							
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays							
		OL	Organic silts and organic silty clays of low plasticity							
	Silt and clays (Liquid limit greater than 50)	MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts							
		CH	Inorganic clays of high plasticity, fat clays							
		OH	Organic clays of medium to high plasticity, organic silts							
	Highly organic soils	Pt	Peat and other highly organic soils							

<sup>a</sup>Division of GM and SM groups into subdivisions of d and u are for roads and airfields only. Subdivision is based on Atterberg limits; suffix d used when L.L. is 28 or less and the P.I. is 6 or less; the suffix u used when L.L. is greater than 28.  
<sup>b</sup>Borderline classifications, used for soils possessing characteristics of two groups, are designated by combinations of group symbols. For example: GW-GC, well-graded gravel-sand mixture with clay binder.

## **EXECUTIVE SUMMARY:**

Omega Environmental Services was retained by Paulus, Sokolowski & Sartor (PS&S), LLC to conduct a hazardous/regulated material investigation of the parking deck building located at Elizabethtown Plaza & Caldwell Place, Elizabeth, NJ 07201.

At the time of the investigation, the building was partially occupied.

The inspection included a visual assessment, and representative sampling/analysis of suspect Asbestos Containing Materials (ACM), Lead Based Paint (LBP), and PCBs (in caulking). This inspection also included a visual inspection for other possible suspect PCB containing materials, mercury-containing materials, hazardous material storage, and other areas of concern.

A few items of concern were noted, as summarized below, and delineated further in this report.

**Due to the extensive asbestos abatement scope delineated, preparation of an asbestos bid specification is highly recommended.**

### Site Description:

The 1960's structure consists of split level parking spaces from level 1 through 6. The 7<sup>th</sup> floor is occupied by the Newark Department of Corrections. The space includes meeting/office spaces, holding cells, exercise areas, and other related support spaces. The building is being prepared for demolition.

### Previous Survey and Decontamination Work:

No documentation of any previous survey work performed in the subject area was provided.

Summary of Findings:

The following summarizes the hazardous or regulated materials identified:

Elizabeth Plaza & Caldwell Place, NJ Pre-Renovation Hazardous Material Summary For Eastern and Western Garage Structures			
Parameter Investigated	Suspected Positive Materials	Estimated Total Quantity of Material	Recommended Action
Asbestos (ACM)	Roof MER - Fitting	Approx. 2 Each	-Abate/remove by licensed asbestos Contractor.  -Selective demolition required to expose all materials
	Deck #1 Security Control Bath – Fitting	Approx. 2 Each	
	Basement Deck Sprinkler Room – Fitting	Approx. 3 Each	
	Basement Deck Elevator Room – Fitting	Approx. 4 Each	
	7 <sup>th</sup> Floor Cell Chase – SOFP (Concealed)	Throughout (Estimate - Approx. 2,300 SF)	
	6 <sup>th</sup> Floor Deck – Ceiling Texture/Stucco	Approx. 14,000 SF	
	5 <sup>th</sup> Floor Deck – Ceiling Texture/Stucco	Approx. 14,000 SF	
	4 <sup>th</sup> Floor Deck – Ceiling Texture/Stucco	Approx. 14,000 SF	
	3 <sup>rd</sup> Floor Deck – Ceiling Texture/Stucco	Approx. 14,000 SF	
	2 <sup>nd</sup> Floor Deck – Ceiling Texture/Stucco	Approx. 14,000 SF	
	1 <sup>st</sup> Floor Deck – Ceiling Texture/Stucco	Approx. 14,000 SF	
	Basement Deck – Ceiling & Wall Texture/Stucco	Approx. 14,500 SF	
	Main Roof – Vent Flashing Bottom Layer	Approx. 300 SF (5 Vents)	
	Main Roof – Door Caulking A&B	Approx. 2 Doors (36"x80")	
	7 <sup>th</sup> Floor (Exterior) – Brick Expansion Joint	Unquantified (N/A)	
	6 <sup>th</sup> Floor Deck – Brick Expansion Joint	Approx. 32 LF	
	5 <sup>th</sup> Floor Deck – Brick Expansion Joint	Approx. 32 LF	
	4 <sup>th</sup> Floor Deck – Brick Expansion Joint	Approx. 32 LF	
	3 <sup>rd</sup> Floor Deck – Brick Expansion Joint	Approx. 32 LF	
	2 <sup>nd</sup> Floor Deck – Brick Expansion Joint	Approx. 32 LF	
1 <sup>st</sup> Floor Deck – Brick Expansion Joint	Approx. 32 LF		
7 <sup>th</sup> Floor – Roofs (Interior)	Unquantified		

**Elizabeth Plaza & Caldwell Place, NJ Pre-Renovation Hazardous Material Summary  
For Eastern and Western Garage Structures**

Parameter Investigated	Suspected Positive Materials	Estimated Total Quantity of Material	Recommended Action
Lead Based Paint (LBP)	Exterior – Roof Entrance by Caldwell Pl – Ladder (Metal)	Two (2)	Conduct demolition activities in accordance with OSHA <i>Lead in Construction Standard</i>
	Exterior – Roof Entrance by Caldwell Pl – Pipe (Metal)	One (1)	
	Exterior – Roof Entrance – Pipe (Metal)	One (1)	
	Exterior – Roof Entrance – Ladder (Metal)	One (1)	
	Staircase 7 <sup>th</sup> Floor – Stair Railing (Metal)	Two (2)	
	Staircase 6 <sup>th</sup> Floor – Stair Underside (Metal)	Two (2)	
	Staircase 6 <sup>th</sup> Floor – Stair Railing (Metal)	Two (2)	
	Staircase 4 <sup>th</sup> Floor – Stair Underside (Metal)	One (1)	
	Staircase by Caldwell Place 1st Floor – Stair Underside (Metal)	One (1)	
	Staircase by Caldwell Place 6th Floor – Vertical Pipe (Metal)	One (1)	
	7th Floor Training Center Private Hallway – Wall (Concrete)	One (1)	
	9th Floor Training Center Private Hallway – Wall (Concrete)	One (1)	
	10th Floor Training Center Private Hallway – Wall (Concrete)	One (1)	
Upper Basement OSY Valves Pump Room – Fire Pipe (Metal)	Two (2)		
PCBs	Fluorescent light ballasts	170 Ballasts	Remove from fixture and dispose of as PCB Bulk product segregated waste during renovation.
	Transformers	No suspect PCB transformers noted.	None
	Caulking	Trace levels (< 50 ppm) in 4 types sampled. 5 other types identified, but not sampled.	Verify that the disposal facility will accept materials with trace levels of PCBs; assume other types of caulk are TSCA PCB Bulk Product Waste unless tested.

Elizabeth Plaza & Caldwell Place, NJ Pre-Renovation Hazardous Material Summary For Eastern and Western Garage Structures			
Parameter Investigated	Suspected Positive Materials	Estimated Total Quantity of Material	Recommended Action
Mercury	Fluorescent light bulbs	1,100 bulbs	Remove and dispose of as mercury-containing universal waste during renovation.
	Thermostats, timers, misc.	2 manehelic gauges in basement pump room. No suspect mercury thermostats noted.	Remove and dispose of as mercury-containing equipment during renovation.
	High-Intensity Floodlights	200 bulbs	Remove and dispose of as Universal Waste prior to demolition.
Chemical Storage/tanks	Drums, tanks or significant chemical storage.	- Nine 55 gallon drums of antifreeze- - Nine pallets of ice melter.	Remove and dispose of prior to demolition
	USTs/ASTs	None identified	None
	Misc. paints, solvents, adhesives, small misc. fluids	De minimus quantities.	Remove and dispose of prior to demolition
	Staining	No significant staining observed other than is typical for a parking garage	None
	Batteries	None observed	None
Biological Concerns (mold, bird feces, sewage)	Water damage/mold growth	None observed	None
Other/Miscellaneous	Boiler Systems	None identified	None
	Refrigerant Systems	Rooftop HVAC units are present.	Extract refrigerant prior to demolition of systems
	Compressor Systems	None identified	None

# 1 ASBESTOS SURVEY:

## 1.1 Summary:

Omega Environmental Services, Inc. (Omega) was been retained by Paulus, Sokolowski & Sartor, LLC to conduct an asbestos survey of the Union County Caldwell & Elizabethtown Parking Deck located at Elizabethtown Plaza & Caldwell Place in Elizabeth, NJ 07201 to confirm the presence/absence of accessible asbestos containing materials (ACM).

### Notes:

- 7<sup>th</sup> floor cells had limited access above ceiling; possible concealed TSI/ACM Pipe Insulation inside the walls and ceilings.
- Presumed concealed SOFP/PACM on walls and above ceiling on deck and/or structural components.
- Two (2) interior/covered roofs with no access.
- No drawings available.

### 1.1.1 ACM identified:

The following materials were classified as regulated ACM (asbestos at concentrations above 1%):

LOCATION	MATERIAL DESCRIPTION	ASSESSED CONDITION	ESTIMATED QUANTITY* (square/linear feet)
Roof MER	Fitting	No Visible Damage	Approx. 2 Each
Deck #1 Security Control Bath	Fitting	No Visible Damage	Approx. 2 Each
Basement Deck Sprinkler Room	Fitting	No Visible Damage	Approx. 3 Each
Basement Deck Elevator Room	Fitting	No Visible Damage	Approx. 4 Each
7 <sup>th</sup> Floor Cell Chase	SOFP (Concealed)	Unknown	Throughout (Estimate - Approx. 2,300 SF)
6 <sup>th</sup> Floor Deck	Ceiling Texture/Stucco	Damaged	Approx. 14,000 SF
5 <sup>th</sup> Floor Deck	Ceiling Texture/Stucco	Damaged	Approx. 14,000 SF
4 <sup>th</sup> Floor Deck	Ceiling Texture/Stucco	Damaged	Approx. 14,000 SF
3 <sup>rd</sup> Floor Deck	Ceiling Texture/Stucco	Damaged	Approx. 14,000 SF
2 <sup>nd</sup> Floor Deck	Ceiling Texture/Stucco	Damaged	Approx. 14,000 SF
1 <sup>st</sup> Floor Deck	Ceiling Texture/Stucco	Damaged	Approx. 14,000 SF
Basement Deck	Ceiling & Wall Texture/Stucco	Damaged	Approx. 14,500 SF
Main Roof	Vent Flashing Bottom Layer	No Visible Damage	Approx. 300 SF (5 Vents)
Main Roof	Door Caulking A&B	No Visible Damage	Approx. 2 Doors (36"x80")
7 <sup>th</sup> Floor (Exterior)	Brick Expansion Joint	No Visible Damage	Unquantified (N/A)

6 <sup>th</sup> Floor Deck	Brick Expansion Joint	No Visible Damage	Approx. 32 LF
5 <sup>th</sup> Floor Deck	Brick Expansion Joint	No Visible Damage	Approx. 32 LF
4 <sup>th</sup> Floor Deck	Brick Expansion Joint	No Visible Damage	Approx. 32 LF
3 <sup>rd</sup> Floor Deck	Brick Expansion Joint	No Visible Damage	Approx. 32 LF
2 <sup>nd</sup> Floor Deck	Brick Expansion Joint	No Visible Damage	Approx. 32 LF
1 <sup>st</sup> Floor Deck	Brick Expansion Joint	No Visible Damage	Approx. 32 LF
7 <sup>th</sup> Floor	Roofs (Interior)	Assumed ACM	Unquantified
*Since asbestos materials potentially continue through adjoining areas and/or layers, final asbestos abatement quantities scope have to be determined in the field when project details are confirmed.			

## 1.2 Scope of Work:

Omega conducted a pre-demolition asbestos survey of the Union County Caldwell & Elizabethtown Parking Deck located at Elizabethtown Plaza & Caldwell Place in Elizabeth, NJ 07201 which is scheduled for a demolition and or renovation. Purpose of this investigation was that asbestos containing materials (ACM) could be identified and abated prior to the onset of potential renovation activities as per *EPA NESHAPS, OSHA, and NJ DOL* requirements.

### 1.2.1 Materials Tested:

Considering the age of the building, it was determined that the following **suspect** asbestos-containing materials (ACM) were observed, and were subsequently **tested** for presence/absence of asbestos:

- 12"x12" F.T.
- 2'x2' CT
- 2'x4' Ceiling Tile
- 2nd Layer
- 3rd Layer
- 4th Layer
- 5th Layer
- Air Vent Flashing
- Bottom Layer
- Bottom Unit Flashing Material
- Brick
- Brick Expansion Joint
- Caulking Around Doors
- Caulking Around Material Flashing
- Ceiling Drywall
- Ceiling Texture/Stucco
- CMU Glaze
- Concrete Decking
- Concrete Walls Expansion Joint
- Drywall
- Expansion Joint White
- Fitting
- Flashing
- Flooring Epoxy
- Grout
- Interior Brick
- Interior Mortar
- Joint Compound
- Mastic Under F.T.
- Mastic Under Floor Tile
- Mortar
- Pitch Pocket Material
- Roofing 2nd Layer
- Roofing 3rd Layer
- Roofing Bottom Layer
- Roofing Top Layer
- SOFP Gray
- SOFP Green
- SOFP I Beam/Column
- SOFP White

- Thinset
- Top Layer
- Top Unit Flashing Material
- Unit Flashing Bottom
- Unit Flashing Top
- Vent Flashing Bottom Layer
- Vent Flashing Top Layer
- Wall Texture/Stucco

Positive ACM materials above are highlighted.

### 1.2.2 Non-ACM:

The following materials were sampled, analyzed and identified to be **non-ACM**, with asbestos either not detected or detected in concentrations of less than one percent (1%):

- 12"x12" F.T.
- 2'x2' CT
- 2'x4' Ceiling Tile
- 2nd Layer
- 3rd Layer
- 4th Layer
- 5th Layer
- Air Vent Flashing
- Bottom Layer
- Bottom Unit Flashing Material
- Brick
- Caulking Around Material Flashing
- Ceiling Drywall
- CMU Glaze
- Concrete Decking
- Concrete Walls Expansion Joint
- Drywall
- Expansion Joint White
- Flashing
- Flooring Epoxy
- Grout
- Interior Brick
- Interior Mortar
- Joint Compound
- Mastic Under F.T.
- Mastic Under Floor Tile
- Mortar
- Pitch Pocket Material
- Roofing 2nd Layer
- Roofing 3rd Layer
- Roofing Bottom Layer
- Roofing Top Layer
- SOFP Gray
- SOFP Green
- SOFP I Beam/Column
- Thinset
- Top Layer
- Top Unit Flashing Material
- Unit Flashing Bottom
- Unit Flashing Top
- Vent Flashing Top Layer

### 1.3 Sampling Methodology:

The information that is contained in this report is based upon the following:

- Information which was provided by the building representatives interviewed.
- A visual inspection of the designated building areas supported by a representative sampling required to comply with EPA protocol for asbestos building surveys.
- Laboratory analysis of bulk samples of various materials collected from representative building areas that were suspected to contain asbestos. An accredited laboratory using PLM and TEM/NOB analysis methods performed the analysis.

The asbestos survey was conducted on October 1, 2020, by accredited USEPA AHERA Asbestos Inspectors. The bulk samples, which were representative of suspect ACM observed and are required by the USEPA, were collected as necessary. Multiple samples of each homogeneous material were

collected and analyzed by each discernible layer. According to USEPA, a building material with an asbestos concentration greater than one percent (>1%) is considered to be ACM.

Bulk samples were submitted to ELAP accredited Laboratory Testing Services/accreditation # 10955 and Omega Laboratories/accreditation # 10504 utilizing sealed chain-of-custody procedures.

#### 1.4 Unknown Variables/Areas Not Accessible for Sampling:

##### *Inaccessible Areas*

- **7<sup>th</sup> floor above cells was limited access. Additional probe cut required when contractor mobilized.**
- Enclosed wall/ceiling/chase assemblies
- Boiler/mechanical system interiors
- Inaccessible façade/roof layers
- Foundation slab edges and other sub surfaces materials will not be accessible for investigation excavation until equipment is mobilized.

#### 1.5 Review of Previous Asbestos Surveys, Renovations or Abatement Work:

Not available for review.

#### 1.6 Sampling Limitations/Conditions:

The following limitations/exclusions apply:

1. Asbestos bulk sampling report should not be used as sole reference source to determine Contractor scope of work – additional field coordination required in order to generate “Abatement Work Plan”.
2. If scope of renovation changes, and/or walls/ceilings/chases/flooring opened, then additional asbestos bulk sampling may be required at a later date.
3. All sampling is representative in nature and does not reflect every square inch of material.
4. Findings are representative of site conditions on the day of investigation.
5. Subject survey conducted according to published regulations in effect on survey date.

#### 1.7 ACM Conclusions and Recommendations

##### *Conclusions:*

1. ACM has been identified in the form of brick expansion joint, caulking around doors, ceiling texture/stucco, fitting, SOFP white, vent flashing bottom layer and wall texture/stucco.
2. This survey was based on visual observations of accessible interior/exterior areas of the subject building. Omega’s inspection team performed limited intrusive/invasive inspections at random locations in order to ascertain presence/absence of ACM that may be concealed within pipe chases, in wall cavities and above ceiling plenums.

3. Asbestos abatement activities must be conducted in accordance with NJ DOL Regulations, and other applicable federal, state and local requirements governing removal and disposal of regulated ACM utilizing licensed workers.

*Recommendations:*

- **Prepare abatement Design Documents to identify the locations of ACM and work practices to be employed during this project. This work should be performed by the USEPA AHERA accredited Asbestos Project Designer.**
- **Third party asbestos final clearance testing required prior to building demolition or new occupancy. Daily asbestos air sampling during abatement also recommended.**
- **Any building material that is not listed in this report and/or tested must be assumed to be ACM and treated as ACM until confirmed otherwise via laboratory testing.**

## **2 LEAD BASED PAINT (LBP):**

### **2.1 XRF Testing:**

#### **2.1.1 XRF Summary:**

On October 1, 2020, Omega Environmental Services Inc. (Omega) conducted a lead-based paint screen survey using XRF (x-ray fluorescence). Representative painted building and site components were classified as having lead-based (LBP) or non-LBP present. The inspection was intended for pre-demolition survey purposes only, and not intended to follow USEPA HUD protocol, and was not designed for certification or occupancy purposes.

The presence of LBP in the buildings indicates that the demolition Contractor should follow OSHA *Lead in Construction Standard* (LCS). LBP on metal components that are to be torch cut in relation to demolition should be abated in the area of the cut points prior to cutting. Other materials that may have LBP do not require special treatment. Intact LBP coated components may be disposed of intact as normal construction debris contingent upon acceptable representative TCLP lead test results.

#### **2.1.2 XRF Sampling Methodology:**

Omega performed XRF screening for lead within the subject building using a Niton XLp 300A Analyzer. The inspection was conducted by Darren Slack, an EPA/NJ Lead Inspector/Risk Assessor.

The certified Lead Inspector/Risk Assessor performed a lead based paint (LBP) inspection of representative accessible building areas so that presence/absence of LBP can be verified for the subject building in areas which is expected to be demolished to grade.

#### **2.1.3 XRF Clearance Criteria:**

The USEPA defines Lead Based Paint as paint having a lead level equal to or exceeding 1.0 mg/cm<sup>2</sup>.

#### **2.1.4 XRF Results Summary:**

The XRF results section of this report provides a listing of all the reading collected during the inspection, organized by building, component, and type of material. The positive readings, if any, are highlighted and include those readings that were at or above the action level 1.0 mg/cm<sup>2</sup>.

The following components were found to be covered with lead containing paint/primer:

Location	Component	Type of Material	Quantity of Positive LBP Readings
Exterior-Roof Entrance by Caldwell Pl	Ladder	Metal	2
	Pipe	Metal	1
Exterior-Roof entrance	Pipe	Metal	1
	Ladder	Metal	1
Staircase 7th Fl	Stair Railing	Metal	2
Staircase 6th Fl	Stair Underside	Metal	2
	Stair Railing	Metal	2
Staircase 4th Fl	Stair Underside	Metal	1
Staircase by Caldwell Place 1st Floor	Stair Underside	Metal	1
Staircase by Caldwell Place 6th Floor	Vertical Pipe	Metal	2
7th Floor Training Center Private Hallway	Wall	Concrete	1
9th Floor Training Center Private Hallway	Wall	Concrete	1
10th Floor Training Center Private Hallway	Wall	Concrete	1
Upper Basement OSY Valves Pump Room	Fire Pipe	Metal	2
**Additional LBP/primer is likely to be identified on steel structures and or concealed components			

LBP *was not* identified on the following components:

Location	Component	Type of Material	Quantity of Non-LBP Results
Exterior-Roof	Door	Metal	1
	Door Buck	Metal	1
	Pipe	Metal	3
Exterior-Roof Entrance by Caldwell Pl	Door	Metal	2
	Door Buck	Metal	1
	Pipe	Metal	1
Roof Penthouse	Ceiling	Concrete	1
	Wall	Wood	1
	Door	Metal	1
Staircase 7th Fl	Stair Treads	Metal	1
	Stair Stringer	Metal	1
	Wall	Concrete	3
	Ceiling	Concrete	1
	Pipe	Metal	1
Staircase 6th Fl	Wall	Concrete	4
	Vertical Pipe	Metal	1
Staircase 5th Fl	Ceiling	Concrete	1
	Stair Underside	Metal	1
Staircase 4th Fl	Stair Underside	Metal	1
	Wall	Concrete	2
Staircase Basement	Door	Metal	1
Staircase by Caldwell Place Basement	Door	Metal	1
	Door Buck	Metal	1
	Wall	Concrete	2
Staircase by Caldwell Place 1st Floor	Wall	Concrete	1
	Window Sill	Concrete	1

Staircase by Caldwell Place 1st Floor	Stair Railing	Metal	2
	Stair Treads	Concrete	1
	Stair Stringer	Metal	1
	Stair Underside	Metal	2
Staircase by Caldwell Place 3rd Floor	Wall	Concrete	2
Staircase by Caldwell Place 6th Floor	Wall	Concrete	2
	Stair Underside	Metal	1
	Stair Newel Post	Metal	1
	Stair Railing	Metal	1
	Vertical Pipe	Metal	4
6th Floor Garage	Wall	Concrete	2
	Column	Concrete	1
	Elevator Door	Metal	1
	Elevator Buck	Metal	1
5th Floor Garage	Column	Concrete	2
	Wall	Concrete	1
12th Floor Garage Ramp	Wall	Concrete	1
	Elevator Door	Metal	1
1st Floor Garage	Door Buck	Metal	1
7th Floor Training Center	Wall	Concrete	1
	Door	Metal	1
	Door Buck	Metal	1
	Radiator	Metal	1
7th Floor Training Center GYM	Wall	Concrete	2
	Door	Metal	1
	Ceiling	Plaster	1
7th Floor Training Center Bathroom	Window Frame	Metal	1
8th Floor Training Center Private Hallway	Wall	Concrete	1
7th Floor Training Center Corner Cell	Ceiling	Metal	1
7th Floor Training Center Cell	Ceiling	Metal	1
Upper Basement OSY Valves Pump Room	Electrical Panel	Metal	1
	Door Buck	Metal	1
	Door	Metal	1
	Fire Pipe	Metal	4
Lower Basement Electrical Room	Wall	Metal	2
Lower Basement Garage	Wall	Concrete	2
Lower Basement Electrical Room	Door Buck	Metal	1
Lower Basement Garage Roadway Ramp	Wall	Concrete	1
Exterior	Wall	Concrete	2
Exterior-Front of Garage	Gas Pipe	Metal	1
	Foundation	Concrete	1
Exterior- Caldwell Side	Fire Pipe	Metal	1

See *Appendix Table C1* for all XRF reading collected and specific location of each.

NOTE: Lead Based Paint (LBP) via XRF testing is defined as paint having lead at or above 1 mg/cm<sup>2</sup>. However, OSHA *Lead in Construction Standard* applies to substrates coated with paint having *any detectable amount of lead*.

## 2.2 LBP Findings:

The USEPA defines Lead Based Paint as paint having a lead level equal to or exceeding 1.0 m/cm<sup>2</sup>.

2.3 XRF Recommendations:

- **Remove/impact LBP components in accordance with OSHA Lead in Construction Standard.**

### 3 PCBs:

#### 3.1 Fluorescent Light Ballasts:

Fluorescent lights fixtures and associated ballasts historically have contained Polychlorinated Biphenyls (PCBs). Normally, light ballasts are assumed to contain PCBs unless specifically labeled as “non-PCB”.

Light fixtures are as follows:

Area	Fixture size	Qty. of fixtures	Bulb Length	#of bulbs/ fixture	Est ballasts /fixture	Est. total qty. of ballasts.	Total qty. of bulbs
7 <sup>th</sup> floor, 1 <sup>st</sup> floor security office, misc. spaces	2' x 4'	20	4'	3	2	40	60
	2' x 2'	24	2'	3	2	48	72
	1' x 4'	75	4'	1	1	75	75
		<b>Totals</b>				<b>163</b>	<b>207</b>
Parking garage, stairwells						Flood Lights	<b>240</b>

For estimation purposes assume **170 ballasts**.

Ballasts labeled as no PCBs may be disposed of as normal demolition debris. An inspection of each ballast would be required. Alternately, all ballasts may be assumed to contain PCBs and disposed of as PCB bulk product waste.

#### 3.2 Transformers:

Two dry-type transformers are located in the basement mechanical spaces. Dry transformers do not have PCB cooling fluids.

#### 3.3 Caulking:

**Caulking is present in various forms throughout the building.** Noted potential PCB caulking includes the following:

Description	Locations	Est Quan.	Comments
Penthouse exterior wall, near roof level, and around doors	Penthouse	120 ft.	Sample 1205-01C
Column to brick, north and south sides	Parking Garage, all levels	50 ft.	Sample 1205-02C
Wall to brick, north and south sides	Parking Garage, all levels	75 ft.	Sample 1205-03C
Deck centerline double columns	Parking Garage, all levels	400 ft.	Sample 1205-04C
Deck centerline expansion joint (east to west)	Parking Garage, all levels	750 ft.	Not sampled
Exterior wall, deck centerline expansion joint	Parking Garage, all levels	30 ft.	Not sampled
Exterior beneath deck seam approx. 8'	Near ground level, exterior	400 ft.	Not sampled

above ground level, N, W, and S sides			
Exterior of bridge	Bridge	80 ft.	Not sampled
Windows (stairwells, 7 <sup>th</sup> floor exercise spaces, offices, bridge) – includes possible window glazing	Misc.	Approx. 40 windows	Not sampled

Additional PCB containing caulk likely exists on the structure.

As noted above samples were collected of four types of caulking.

<b>Total PCBs in the table below consists of the following:</b>
Aroclor 1016
Aroclor 1221
Aroclor 1232
Aroclor 1242
Aroclor 1248
Aroclor 1254
Aroclor 1260

Sample #	Location/ Description	Analysis	Result (mg/kg)	Limit <sup>(1)</sup>
1205-01C	Penthouse exterior wall, near roof level	PCBs	1.360	50 ppm
1205-02C	Column to brick, north and south sides	PCBs	2.820	50 ppm
1205-03C	Wall to brick, north and south sides	PCBs	3.280	50 ppm
1205-04C	Deck centerline double columns	PCBs	1.950	50 ppm

<sup>(1)</sup> TSCA PCB Bulk Product Waste Limit

All results of caulking sampled are below the limit for TSCA PCB Bulk Product Waste.

Caulking not sampled should be presumed to be PCB Bulk Product Waste unless sampled.

### 3.4 PCB Conclusions and Recommendations:

1. **Dispose of all light ballasts as PCB containing waste unless specifically labeled as “No PCBs”.**
2. **Verify that the disposal facility will accept materials with trace levels of PCBs.**

#### 4 MERCURY:

##### 4.1 Fluorescent Light Bulbs/High-Intensity Floodlights:

Area	Fixture size	Qty. of fixtures	Bulb Length	#of bulbs/ fixture	Est ballasts /fixture	Est. total qty. of ballasts.	Total qty. of bulbs
7 <sup>th</sup> floor, 1 <sup>st</sup> floor security office, misc. spaces	2' x 4'	20	4'	3	2	40	60
	2' x 2'	24	2'	3	2	48	72
	1' x 4'	75	4'	1	1	75	75
		<b>Totals</b>				<b>163</b>	<b>207</b>
Parking garage, stairwells						Flood Lights	<b>240</b>

For estimation purposes, assume 210 florescent light bulbs and 240 floodlights.

Mercury content of florescent bulbs has decreased over recent years. Non-mercury bulbs generally have green tips on the ends. These may contain low levels of mercury but are considered to be non-hazardous.

Although some of the bulbs may contain mercury at levels below disposal regulatory limits, the number of types of bulbs, and the lack of any discernible location pattern of specific types, indicate that further investigation/delineation of possible unregulated bulbs may be cost prohibitive.

Therefore, unless the absence of mercury can be confirmed, all bulbs should be carefully removed, packaged, and disposed of as mercury-containing universal waste.

High-intensity floodlights may contain heavy metal vapors that may be released if the bulb is broken. Any high-intensity bulbs on the site should be carefully removed, packaged to prevent breakage, and disposed of as universal waste. Generally, these exist through the parking garage spaces and stairwells.

##### 4.2 Thermostats, Switches, and Timers:

Thermostats historically contained a mercury bulb that act as a switch for an HVAC system. These bulbs are readily observed when the cover is removed.

Two magnehelic switch gauges are located in the basement pump room. These contain one to two mercury bulbs each.

Thermostats inspected on the 7<sup>th</sup> floor are electronic (no mercury bulbs).

Any thermostats suspected of having a mercury-containing bulb should be disposed of mercury-containing waste.

Although it may be possible to remove the mercury bulbs from the thermostats, the risk of a potential spill for the small quantity of mercury-containing does warrant attempted separate removal of mercury bulbs from the thermostats.

#### 4.3 Mercury Conclusions and Recommendations:

- **All fluorescent bulbs without green tips and high-intensity floodlights should be carefully removed, packaged, and disposed of as mercury-containing universal waste.**
- **Remove, package, and dispose of all suspect thermostats, timers, and switches as mercury-containing universal waste.**

## 5 CHEMICAL STORAGE:

### 5.1 Drums, Tanks, and Chemical Storage:

- Nine (9) 55-gallon drums of Dowtherm Ethylene Glycol anti-freeze are located on the basement level B-L.
- Nine (9) pallets of ice melt product are located on level 2L.

No other significant chemical storage was noted.

### 5.2 Underground Storage Tanks (USTs) and Above Ground Storage Tanks:

No USTs or AST were identified on the property.

This investigation was limited to visual observation of the surface. It did not include sub-surface evaluations (such as Ground-penetrating Radar) or a record research.

### 5.3 Paints, Solvents, Adhesives, and Small Misc. Fluids:

Approximately 15 gallons of paint are located on the 7<sup>th</sup> floor in 1 and 5-gallon containers.

### 5.4 Batteries:

No batteries of concern were identified on the property.

### 5.5 Staining:

No significant staining was noted through the building, other than is typical for a parking garage.

### 5.6 Chemical Storage Conclusions and Recommendations:

- **Remove and dispose of paints, antifreeze, and ice melt product.**
- **Investigate any items not previously identified for proper disposal.**

## 6 **BIOLOGICAL CONCERNS (other than mold):**

### 6.1 Sanitary Sewers:

No open sewers, spills, leaks, or sewer odors were noted.

### 6.2 Bird Feces:

No significant bird feces were observed in the subject area.

### 6.3 Biological Concerns Conclusions and Recommendations:

- **No further action is recommended in regards to potential Biological Concerns in the subject area.**

## 7 OTHER/MISCELLANEOUS:

### 7.1 Mechanical Equipment:

#### 7.1.1 *Boiler Systems:*

Boilers often have anti-corrosion treatment chemicals that would require special disposal procedures.

No boilers were noted within the structure.

#### 7.1.2 *Refrigerant Systems:*

Refrigerants such as Freon require special extraction and disposal procedures.

Several rooftop HVAC units are located on the main roof.

A few household type refrigerators are also present in various spaces (7<sup>th</sup> floor).

#### 7.1.3 *Compressor Systems:*

Compressors often contain various oils and lubricants that should be extracted and properly disposed of prior to demolition of equipment.

No compressors were identified in the structure.

#### 7.1.4 *Elevators:*

Two cable-driven elevators are present in the building. The pit of the main elevator has minimal signs of grease and water.

### 7.2 Other/Miscellaneous Conclusions and Recommendations:

- **Extract refrigerant from associated systems prior to demolition.**

## 8 SUMMARY OF RECOMMENDATIONS:

### 8.1 ACM Recommendations:

- Prepare abatement design documents to identify the locations of ACM and work practices to be employed during this project. This work should be performed by the USEPA AHERA accredited Asbestos Project Designer.
- Third-party asbestos final clearance testing required prior to building demolition or new occupancy. Daily asbestos air sampling during abatement also recommended.
- Any building material that is not listed in this report and/or tested must be assumed to be ACM and treated as ACM until confirmed otherwise via laboratory testing.

### 8.2 LBP in Paint Recommendations:

- Remove/impact LBP components in accordance with OSHA Lead in Construction Standard.

### 8.3 PCB Recommendations:

- Dispose of all light ballasts as PCB containing waste unless specifically labeled as “No PCBs”.
- Verify that disposal facility will accept materials with trace levels of PCBs.

### 8.4 Mercury Recommendations:

- All fluorescent bulbs *without* green tips and high-intensity floodlights should be carefully removed, packaged, and disposed of as mercury-containing universal waste.
- Remove, package, and dispose of all suspect thermostats, timers, and switches as mercury-containing universal waste.

### 8.5 Chemical Storage Recommendations:

- Remove and dispose of paints, antifreeze, and ice melt product.
- Investigate any items not previously identified for proper disposal.

### 8.6 Biological Concerns Recommendations (excluding mold):

- No further action is recommended in regard to potential Biological Concerns in the subject area.

### 8.7 Other/Miscellaneous Recommendations:

- Extract refrigerant from associated systems prior to demolition.

## A. Asbestos (ACM)

- A1. Analytical Methodology
- A2. Table of Sample Results
- A3. Asbestos Laboratory Analytical Reports

## A1. Analytical Methodology:

### Definitions:

ACM: asbestos containing material

RACM: regulated asbestos containing material

VCM: vermiculite containing material

TSI: thermal system insulation (pipe insulation)

SSI: surfacing material (spray-on fireproofing, plaster, etc.)

Miscellaneous finish material: sheetrock, floor tile, roofing, other

NOB: non-organically bound non-friable material (e.g. roofing, floor tile, etc.)

### Friable vs. Non-friable:

1. A friable material is one that can be easily crumbled, pulverized, or reduced to powder by hand pressure. This characteristic of a building material is directly linked to the potential of the material to release asbestos fibers into the air.
2. Non-friable are the materials that are organically bound normally fall into this category as long as they are in good condition. Some of the materials, which would be defined as non-friable material, include floor tiles, roofing materials, mastic, etc. Non-friable ACM are categorized into two (2) categories by USEPA: Category I non-friable materials, such as resilient floor tiles, and roofing materials are not expected to become friable when disturbed. Non-friable ACM, such as laboratory table tops and transit siding/paneling, are considered to be a category II non-friable ACM.
- 3.

### Criteria for Positive Classification as Regulated Asbestos Containing Material (RACM):

#### *Asbestos containing material (ACM)*

The EPA defines ACM as any material having an Asbestos content greater than 1%. If the analytical results for any sample of suspected material indicate that asbestos is present above a level of one percent, the building material is classified as regulated ACM (RACM) which triggers management and/or abatement, if impacted.

#### *Vermiculite (VCM)*

Related to cross-contamination in the mining industry, as well as new concerns about Amphibole minerals with crystalline structure similar to Asbestos, bulk samples found to contain greater than or equal to ten percent Vermiculite require further classification *in NYS/NYC*. Vermiculite is not currently regulated in New Jersey.

### Representative Nature of All Sampling:

The purpose of bulk sampling is to characterize representative materials, not remove and test every square inch of material. The Inspector/Investigator uses a combination of EPA recommended bulk sampling criteria and professional judgment to select representative sampling locations of each suspect material type. In certain rare cases, building materials may appear to be homogeneous (e.g. plaster, roofing, etc.) but vary section to section due to patching, different installation methods floor-to-floor, and other causes. Additional testing beyond normal survey protocol can be required for these scenarios.

**HOMOGENEOUS AREAS:** A homogeneous area is a portion of a building/structure with similar/same installed materials such that bulk analysis results from one area can be applied in the next for the purpose of asbestos quantification.

**'FIRST POSITIVE STOP':** In order to reduce unnecessary survey laboratory analysis costs when samples are collected in groups of three (3) or two (2), as required by EPA sampling criteria, when the first or second sample is reported as positive in a group, then the additional samples are declared positive with no analysis.

**SAMPLING FROM SLAB UP:** Because older/original bottom layer materials are more likely to contain asbestos versus newer layers, materials such as floor tiles and roofing are sampled from the slab up. If a positive lower or middle layer is identified, all materials in the layered system can be declared ACM if they cannot be separated during the abatement process.

**SHEETROCK JOINT COMPOUND TESTING:** Since most sheetrock wallboard systems are painted, it is difficult to impossible to assess where one type of material starts and ends. EPA has published memos concerning composite sampling that were not approved by OSHA which requires discrete sampling. This agency does not recognize composite testing of joint compound for the purpose of preventing employee exposure. NYSDOL also requires separate sampling of joint compound. The PLM analysis method has been generally utilized for this material type, where samples in the trace-1% inconclusive range are also run by TEM-NOB for additional accuracy.

Non-friable asbestos samples collected are analyzed using the TEM-NOB method of analysis, as required by regulation.

Upon completion of the sampling, the samples were submitted to an accredited approved laboratory for analysis. The samples were divided into batches and analyzed by EPA Method 600/MA-82-020, Polarized Light Microscopy with dispersion staining. The percentage of each type of asbestos was determined and any remaining materials were identified. The U.S. Environmental Agency defines ACM as having an asbestos content of greater  $\geq$  than 1%. If the analytical results for any sample of suspected material indicate that asbestos is present above a level of one percent, the building material is considered to contain asbestos.

#### *1. Stereoscope Examination:*

Working under a designated bulk asbestos laboratory hood, a sample is carefully poured onto the stage of the stereoscope for examination to determine if the sample is homogeneous and fibrous.

#### *2. Slide Preparation:*

A slide of each component in the sample is prepared using as little matrix material as possible. Samples are mounted on microscope slides in high dispersion refractive index liquids. For asbestos analysis, the sample is initially mounted in liquids with refractive indexes of ( $\eta$ ) of 1.550, close to that of chrysotile asbestos. Liquids of higher refractive index may also be required for determining other asbestos forms.

### *3. PLM Examination:*

Each slide is examined under a high quality polarized light microscope (20x-55x objective). A dispersion staining objective is also used.

The samples are first examined under plane polarizing light with the condenser set at zero. The morphology and relief of the fibers and matrix materials are observed. Next the analyzer is inserted for examination under the cross polars. Determinations are made if the fibers are isotropic or opaque with the angle of extinction noted. The condenser plate may also be inserted to produce retardation colors, depending on birefringence of the material. The sign of elongation is also determined at this time.

Refractive index is determined by matching a particular fiber with a refractive index liquid of the closest refractive index. The Becke line test is also used to check the refractive index. Dispersion staining is used to further characterize the components of a sample.

### *4. Identification of Asbestos:*

#### *Chrysotile*

Chrysotile, which is the most common asbestos-form, is easily identified in liquid of refractive index 1.550 by its characteristic morphology (fibrous bundles with kinked bends) and dispersion staining colors (blue-magenta).

#### *Amosite*

Amosite is identified in 1.688 refractive index liquid by morphology (straight fibers with broomed ends) and dispersion staining colors (blue-yellow).

#### *Crocidolite*

The straight or bundled fibers of crocidolite (amphibole) are pleochroic; they appear blue-grey under plane polarized light. The fibers show negative sign of elongation and an index of refraction approaching 1.680.

#### *Other Asbestos-Forms*

Other fibrous amphiboles, which differ in refractive index from amosite, are anthophyllite

( $\eta = 1.605$ ), tremolite ( $\eta = 1.605$ ), and actinolite ( $\eta = 1.680$ ).

### *5. TEM/NOB Analysis:*

Due to matrix interference, NJDOL requires all non-friable materials tested (i.e., floor tiles, asphalt roofing, mastics, etc.) undergo TEM (transmission electron microscopy)/NOB EPA 600/R-93/116 (non-organically bound) analysis NY ELAP 198.4 Method. This analysis method, which is conducted by an accredited independent testing laboratory, includes ashing of the sample matrix to reduce binder interference to provide a lower detection limit.

A2. Asbestos Bulk Sampling & Analysis Results of Areas Inspected:

According to EPA definition a material that contains 1% or greater asbestos content is classified as regulated ACM. Representative bulk sampling and analysis was conducted of the following:

Notes and Definitions

- \* Values outside of QC limits
- ND - Indicates compound analyzed for but not detected at or above the MDL
- J - Indicates estimated value for TICs and all results when detected below the RL
- B - Indicates compound found in associated blank
- E - Concentration exceeds highest calibration standard
- D - Indicates result is based on a dilution
- P - Greater than 25% diff. between 2 GC columns.
- MDL - Minimum detection limit
- RL - Reporting limit
- NFL - No Free Liquids
- VC - The container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements.

Methodology Summary

PCB by EPA Method SW846 8082:  
8082A

Wet Chemistry:  
Percent Solids by SM 2540 G

Omega Laboratories, Inc.  
280 Huyler Street  
S. Hackensack, NJ 07606

FILE NUMBER: 99-0200  
LICENSE NUMBER: 29673  
LICENSE CLASS: RESTRICTED  
DATE OF ISSUE: 02/27/2020  
EXPIRATION DATE: 02/28/2021

Duly Authorized Representative – Gary Mellor

This license has been issued in accordance with applicable provisions of Article 30 of the Labor Law of New York State and of the New York State Codes, Rules and Regulations (12 NYCRR Part 56). It is subject to suspension or revocation for a (1) serious violation of state, federal or local laws with regard to the conduct of an asbestos project, or (2) demonstrated lack of responsibility in the conduct of any job involving asbestos or asbestos material.

This license is valid only for the contractor named above and this license or a photocopy must be prominently displayed at the asbestos project worksite. This license verifies that all persons employed by the licensee on an asbestos project in New York State have been issued an Asbestos Certificate, appropriate for the type of work they perform, by the New York State Department of Labor.

## PART 1 GENERAL

### *Section 1.01 Site Description:*

This Asbestos Abatement Work Plan covers the proper and legal removal and disposal of asbestos-containing materials (ACM) by a licensed Asbestos Abatement Contractor prior to full demolition of the structure to grade. This Asbestos Abatement Work Plan is supplementary to the Site Demolition Work Plan (to be provided by GC). **Since the Parking Garage is structurally intact full interior access with coordinated selective demolition and abatement work is anticipated.**

Previous ACM surveys conducted by Omega Environmental in 2020 indicated the presence of ACM throughout each level. This Work Plan addresses activities for the safe removal of ACM from the Parking Garage structure.

The County of Union plans to issue Demolition Specifications for demolition of the designated structure (Elizabethtown Parking Garage) located at Elizabeth Plaza & Caldwell Place, Elizabeth, NJ which is connected to the Union County New Annex Building via 7<sup>th</sup> floor walkway. **See Demolition Work Plan for specific demolition requirements.**

- (a) The Elizabethtown Parking Garage Site consists of approximately 17,350 sq. ft. (foot print) bounded by J. Christian Bollwage parking garage to the north, Union County Dept. of Corrections to the west, an open lot to the east, and Union County New Annex Building (courthouse) to the south. The Structure has approximately seven above-grade elevations plus a basement level with sidewalk access on the west and north sides of the perimeter. The upper 7<sup>th</sup> floor previously served as a Juvenile Detention Center with the lower six levels serving as Parking Garage space for Union County employees. Currently, the upper 7<sup>th</sup> floor is being utilized as temporary storage and locker rooms for Union County employees.
- (b) **The Elizabethtown Parking Garage scheduled to undergo pre-demolition abatement is connected to an occupied Union County Annex building (Courthouse) with a covered/enclosed walkway. In order to determine whether the structures are considered “connected” in terms of NJDCA Sub-Chapter 8 classification, Omega spoke to site representative Connor Lynch of “Lehrer Cumming”. It appears that water and electrical line re-routing would be required prior to abatement to attempt to de-classify the project to NJDOL requirements only. However, a NJDCA representative would have to make a final determination.**
- (c) Selective demolition may be necessary to safely access any concealed ACM. The resulting debris will be separated either manually or mechanically and placed into appropriate containers.
  - Additional testing requirements and waste management procedures shall be addressed in Demolition Work Plan.
- (d) In conjunction with the 2020 asbestos survey, limited PCB and Lead HazMat screening were also performed (**see pages 14-15**).
- (e) Demolition/Abatement Contractor shall perform own progressive safe access inspection to safely stage crews and equipment.

- (f) Omega is providing limited project sequencing information based on projected scope of work (SOW). Final “means and methods” to achieve the project goals are to be determined and implemented by the Abatement Contractor(s).
- (g) **Approximately 10% of the parking garage was not accessible during the survey due to ongoing use by Union County (counting of voting ballots, other access issues).**
- (h) **(Basement) – Destructive sampling of the boilers/MEP was not performed because equipment still in use during the heating season.**
- (i) **Sub-Surface parking garage foundation slab edge(s) potentially covered with ACM tar damp-proofing; further testing is required when exposed later.**
- (j) Regulatory compliance shall include but is not necessarily limited to applicable requirements set forth by the Federal Environmental Protection Agency (EPA); New Jersey Department of Consumer Affairs (NJDCA), New Jersey Department of Labor (NJ-DOL), New Jersey Department of Health (NJ-DOH), New Jersey Department of Environmental Protection (NJ-DEP), and the Local Building and Health Departments.
- (k) The Abatement Contractor shall pay for final clearance air samples which fail to meet the clearance standard. Should a delay occur, due to failure(s) of clearance air testing, all associated expenses such as air sampling labor time and sample analysis costs incurred by the owner (including engineering and laboratory fees) will be the responsibility of and paid by the Abatement Contractor. All abatement work activities, including demobilization, must be completed within the time frame to be determined by the Owner Representative.
- (l) If the project is classified as Sub-Chapter 8, Omega to provide a modified version of the Plan for Work Plan submittal to local Building Department.
- (m) If the Contractor and/or Subcontractor neglects to carry out activities related to the asbestos abatement work, which could cause endangerment to public health, the Owner may act to correct such deficiencies at the cost of the Contractor.
- (n) It is important that no asbestos/lead or other visible dust emission(s) occur at the site perimeter, Otherwise Contractor is responsible for full site and neighboring cleanup.
- (o) Contractor is responsible for their own independent verification of asbestos quantities and field conditions-no change orders will be issued for any pre-existing site conditions.
- (p) Specification is based solely on an asbestos survey performed by Omega Environmental Inc. in specific areas; additional concealed ACM may exist throughout the structure.
- (q) **Because final classification has not been determined Abatement Contractor to provide pricing for both NJDCA non-occupied sub-8 and NJDOL abatement procedures.**
- (r) **The 7<sup>th</sup> floor prison area is currently highly partitioned. If Contractor opts to drive scissor lift(s) up parking garage ramp for ACM SOFP/stucco removal, then separate abatement and selective demolition is likely required to access metal ceiling and ducts.**

*Section 1.02 Primary Contacts:*

A. Site Location:

Elizabethtown Parking Garage  
Elizabethtown Plaza & Caldwell Place  
Elizabeth, NJ 07201

Fax: 201-342-5412

*Section 1.03 Structure/Building Description:*

- (a) **Elizabethtown Parking Garage** is a seven-story concrete structure with a former Juvenile Detention Center on the 7<sup>th</sup> floor. The lower six (6) floors contain the parking spaces. The structure also contains a one level basement. The parking garage has an intact roof deck, steel/concrete structure with an approximate (17,350 sq. ft.) footprint area.
- (b) The structure appears to be currently structurally sound (*low safety risk*), but conditions could change during the project.
- (c) The parking garage exterior appears to be intact with a relatively low to moderate risk of falling façade under normal conditions. However, significant vibrations (such as from heavy equipment) shall be minimized while performing abatement activities.

*Section 1.04 Safety Considerations:*

- (a) **Safety Risk Ratings** – All construction sites have various levels of safety risk. These risks are addressed in the Contractor Site-Specific Health & Safety Plan (HASP) and means & methods.

Section 1.05 Parking Garage Asbestos Abatement Scope of Work:

<b>Table 1: CONSOLIDATED APPROXIMATE ACM QUANTITY SCOPE OF WORK SUMMARY</b>						
Building	Location		Description of ACM	Estimated Removal Quantity	Method of Abatement	Additional Notes
	Floor/Elevation	Area				
Parking Garage	Basement	Sprinkler room	Fittings	3 ln. ft.	NJCA Sub-8 Asbestos Procedures	Variance may be required
		Elevator Room	Fittings	3 ln. ft.		
		Throughout	Ceiling & Wall Texture/Stucco	14, 500 sq. ft.		
		Concealed boiler + other MEP ACM (gasket, etc.)			TBD once equipment shutdown	
	1	Security control bath	Fittings	2 ln. ft.	NJCA Sub-8 Asbestos Procedures	
		Throughout	Ceiling Texture/Stucco	14,000 sq. ft.		
		Throughout	Brick Expansion Joint	32 ln. ft. (visible)**		
	2	Throughout	Ceiling Texture/Stucco	14,000 sq. ft.		
		Throughout	Brick Expansion Joint	32 ln. ft. (visible)**		
	3	Throughout	Ceiling Texture/Stucco	14,000 sq. ft.		
		Throughout	Brick Expansion Joint	32 ln. ft. (visible)**		
	4	Throughout	Ceiling Texture/Stucco	14,000 sq. ft.		
		Throughout	Brick Expansion Joint	32 ln. ft. (visible)**		
	5	Throughout	Ceiling Texture/Stucco	14,000 sq. ft.		
		Throughout	Brick Expansion Joint	32 ln. ft. (visible)**		
	6	Throughout	Ceiling Texture/Stucco	14,000 sq. ft.		
		Throughout	Brick Expansion Joint	32 ln. ft. (visible)**		
	7	Plumbing chase(s)	SOFP	2,300 sq. ft. (throughout)		
	7	Exterior Facade	Brick Expansion Joint	Throughout		
	Main Roof	Roof	Vent flashing	300 sq. ft. (5 vents)	Exterior roof procedure	
Main Roof	Roof	Door caulking	2 doors	Non friable		

Building	Location		Description of ACM	Estimated Removal Quantity	Method of Abatement	Additional Notes
	Floor/Elevation	Area				
Parking Garage	7	Roof top prison yard(s)	Roofing	No access	Exterior roof procedure	Additional testing required when exposed and can be safely accessed
	7	Windows	Caulking/glazing	No access	TBD	
	Below grade	Foundation slab edge	Vapor barrier/mastic	No access	TBD	
** ACM Expansion Joint material is layered between façade sections. Complete access and removal of this ACM may have to be coordinated with demolition						

Abatement Contractor is responsible for field verification of locations and the quantities of ACM.

*Section 1.06 Parking Garage Abatement Procedures:*

- A. Since the subject building is associated with a County facility *N.J.A.C. 5:23 Subchapter 8* requirements could apply and be enforced by the on-site Asbestos Safety Technician (AST) working for an Asbestos Safety Control Monitoring (ASCM) firm (**non-occupied building status 5.23-8.19**) – See notes on job classification, provide pricing for both options.
- B. The Subject structure/building “Elizabethtown Parking Garage” to remain unoccupied during the abatement period (maintenance/plumber/electrician are exempt). Adjoining New Annex to remain occupied.
- C. **The objective of the project is to perform 100% removal of all ACM in the Parking Garage prior to demolition, with possible removal of expansion joint ACM during demolition (NJCA or NJDOL variation likely required).**
- D. Abatement Contractor to establish a safe work zone perimeter. Once established and demolition work commences, only license/trained personnel are permitted to enter the work zone(s).
- E. Work includes necessary selective demolition and protective measures required to access and remove ACM and maintain a safe working environment. Abatement of asbestos-containing materials that are being facilitated by selective demolition, may require **NJCA or NJDOL Variance** approval. The Contractor shall be responsible for the preparation, submittal, and including all filing fees associated with any Site-Specific Variances.
- F. Use of PPE is required at all times when entering and/or entering the worksite.
- G. **(ACM stucco and SOFP throughout 7<sup>th</sup> floor on beams/decks/columns except where patched) Because the Parking Garage is exposed to open air, extensive abatement containment wall building will be required to achieve negative pressure for ACM stucco removal. The 7<sup>th</sup> floor SOFP/ACM abatement areas are currently enclosed.**
- H. **Related to use of the upper floor of the parking garage structure as juvenile prison space, there is a solid continuous metal ceiling above the sheetrock ceiling that has to be cut to access ACM for abatement (exact thickness unknown).**

- I. **(Saw or torch cutting of 7<sup>th</sup> floor metal prison ceiling) – Due to very limited viewing of the concealed metal ceiling, additional probe cuts and/or selective demolition is required to determine if lead-based paint (LBP) potentially exists, where pre-stripping of cut points could be required for “OSHA Lead in Construction Standard (21 CFR 1926.62) compliance.**
- J. **Exterior façade/soffits and/or other components to be checked for additional ACM SOFP including stucco, vapor barrier, or other concealed behind slab edges where they meet columns and/or other locations. Selective exterior/interior façade demolition will likely be required to access all concealed ACM.**
- K. **(ACM Expansion Joints) – Because ACM expansion joint material is not fully accessible (jammed between façade sections)’ full removal of this material may have to be conducted during structural demolition phase(s).**
- L. **(Vertical Enclosed Mechanical Chases on 7<sup>th</sup> floor) – Enclosed mechanical chases with ACM/TSI and ACM SOFP were identified on the 7<sup>th</sup> floor (see prison cell layout drawings with chase highlighted).**
- M. **(Tracing of MEP down from 7<sup>th</sup> floor prison floor through parking garage levels to basement) Because the parking is not heated or cooled, it is most likely that utilities were routed from the basement to the 7<sup>th</sup> floor prison level via large single or double shafts (7<sup>th</sup> floor vertical chases not traced down through 1-6).**
- N. **(Layered Roof Membranes) – Up to six (6) layers of non-ACM roof field with positive ACM roof flashing – two (interior) roof top prison Girls and Boys courtyard areas not accessible during asbestos survey still requires testing.**
- O. Once abatement is completed, the Demolition Contractor can proceed with the removal of Universal Waste and demolition of the structure/building.
- P. Once verified that no suspect ACM remaining, Demolition Contractor to then proceed with demolition activities.

**PART 2:  
SCOPE OF WORK**

**2.01 ACM Abatement Scope of Work**

- (a) The Scope of Work (SOW) includes filing and permitting, all necessary applications, notifications, and fees; insurance; necessary design services; providing skilled, licensed, and certified labor; materials; and equipment necessary for proper preparation, handling, removal, and legal disposal of all identified asbestos-containing materials and contaminated waste from the Property included in the SOW in accordance with all requirements of applicable Federal, State, and local regulations.
- (b) The Contractor shall file notification(s) to applicable Federal, State, and local agencies having jurisdiction over this asbestos abatement project. Failure on behalf of the Contractor for submitting notification shall not result in any extension for the timely results of the completion of the work set forth in the Contract. The Contractor shall be responsible and will be required to pay any administrative penalties imposed on the Owner for actions taken or lack thereof by the Contractor.
- (c) The Contractor shall assume full responsibility and liability for compliance with all applicable Federal, State, and local laws, rules, and regulations pertaining to Work practices, protection of Workers, authorized visitors to the site, persons, and property adjacent to the Work. The contractor is responsible for all fines, penalties, notices of violations suits or claims related to permitting, notifications, asbestos abatement and disposal of ACM addressed to the contractor, his subcontractors, the Owner, or Engineer and will address any proceedings related to these suits, claims or violations on behalf of these parties and incur any legal fees, court fees or final judgments against the Contractor, Subcontractor, Owner or Engineer relating to these proceedings.
- (d) Onsite water/electrical hookup: Demolition/Abatement Contractor(s) to provide own water trucks, fire hydrant connection, and generators and work trailers. Fire Hydrant permit and meter usage may apply. Contractor to contact local water authority for any fire hydrant access.
- (e) The Abatement Contractor shall hold and document daily pre-abatement safety toolbox meetings to review safe work practices and emergency communication programs for the project. The abatement contractor's supervisor and the consultant's project monitor must also ensure that proper fire extinguishing equipment is present. The supervisor shall be knowledgeable in the use of fire extinguishing equipment, and emergency exit plans.
- (f) The Abatement Contractor will provide a waste transport plan to this facility (number of loads per day) or provide an alternate waste transport and disposal option that will allow the project to be completed within 3-4 months or less time and address NJ-DEP waste requirements.
- (g) ACM waste containers will be double-lined as required by NJ-DEP.
- (h) All work identified for the subject Union County Elizabethtown Property shall be completed according to the approved schedule to be submitted by the Demolition/Abatement Contractor to the Owners Representative/GC.
- (i) **Dust control to protect neighboring surroundings and downwind properties is a concern. During all onsite work activities, Contractor needs to have water spray and/or approved EPA safe foam in use during material handling with control of run-off and storm drain protection.**

- (j) Asbestos Abatement/Demolition Contractor is responsible for any Waste Hauling Sub-Contractor(s) they hire. This includes ensuring waste hauler has all appropriate local, state, federal licenses, placards, and permits to transport within and or across state lines.
- (k) Equipment Operators shall be staged outside immediate abatement work area(s) so they can operate equipment in cabs using OSHA procedures supported by licensed Asbestos Abatement Handler ground crew(s).
- (l) Due to the size and scope of this project, the use of a “Decon Trailer” is suggested since the duration of the project would necessitate rebuilding a traditional decon-shed several times.
- (m) The abatement activities shall comply with all aspects of the Contract Documents and Federal, State, and local requirements. Whenever there is a conflict or overlap within this Specification and between applicable Codes and Regulations, the most stringent provision shall apply. **ACM Exclusion Zones must be staged so that unprotected workers are not exposed to airborne or tracked asbestos.**
- (n) Regulatory compliance means compliance with applicable requirements set forth by the U.S. Environmental Protection Agency (EPA); New Jersey Department of Consumer Affairs (NJDCA), New Jersey Department of Labor (NJ-DOL), New Jersey Department of Health (NJ-DOH), New Jersey Department of Environmental Protection (NJ-DEP), and the Local Building and Health Departments.
- (o) Asbestos air and progress third-party monitoring during building asbestos abatement and ACM separation shall be performed by a third party asbestos consulting firm.
- (p) If the Contractor neglects to carry out activities related to the ACM abatement work, which could cause endangerment to public health, the Site Representative may act to correct such deficiencies.
- (q) ACM and non-asbestos containers to be logged and tracked in order to determine eligibility for payment; estimated ACM quantities provided herein are for bidding purposes only. PS&S and Omega make no representations as to the accuracy of quantity estimates.
- (r) While the Omega asbestos survey team accessed the building/structure prior to demolition, access was limited to interior only (no access to building exterior or roof). Therefore, it was not feasible to test every single potential suspect ACM material such that the Contractor has to be willing to accept the delineation limitations.

## 2.02 **Special Handling Procedures**

- a. Health and Safety Procedures described elsewhere are to be followed during the ACM abatement project, as well as requirements set forth in OSHA *Asbestos in Construction Standard (29CFR1926.58)*.

### 2.02.1 **PCB and LBP Hazmat Screening**

- a. Additional PCB testing of stockpile demolition debris is likely required as the project progresses.

<b>Pre-Demolition limited PCB in Caulk Screening Summary</b>			
<b>Building</b>	<b>Sample #</b>	<b>Location/Description</b>	<b>Results (mg/kg)</b>
Parking Garage	1205-01C	Penthouse exterior wall, near roof level	1.360
	1205-02C	Column to brick, north and south sides	2.820
	1205-03C	Wall to brick, north and south sides	3.280
Parking Garage	1205-04C	Deck centerline double columns	1.950
Additional PCB containing caulk likely exists throughout the structure			

- b. Lead-Based Paint (LBP) has been identified on several substrates. Contactor to follow *OSHA Lead in Construction Standard* during all activities if appropriate (see LBP table below).

<b>Pre-Demolition limited LBP Screening Summary</b>			
<b>Parameter Investigated</b>	<b>Suspected Positive Materials</b>	<b>Estimated Total Quantity of Material</b>	<b>Recommended Action</b>
Lead Based Paint (LBP)	Exterior – Roof Entrance by Caldwell Pl – Ladder (Metal)	Two (2)	Conduct demolition activities in accordance with <i>OSHA Lead in Construction Standard</i>
	Exterior – Roof Entrance by Caldwell Pl – Pipe (Metal)	One (1)	
	Exterior – Roof Entrance – Pipe (Metal)	One (1)	
	Exterior – Roof Entrance – Ladder (Metal)	One (1)	
	Staircase 7 <sup>th</sup> Floor – Stair Railing (Metal)	Two (2)	
	Staircase 6 <sup>th</sup> Floor – Stair Underside (Metal)	Two (2)	
	Staircase 6 <sup>th</sup> Floor – Stair Railing (Metal)	Two (2)	
	Staircase 4 <sup>th</sup> Floor – Stair Underside (Metal)	One (1)	
	Staircase by Caldwell Place 1st Floor – Stair Underside (Metal)	One (1)	
	Staircase by Caldwell Place 6th Floor – Vertical Pipe (Metal)	One (1)	
	7th Floor Training Center Private Hallway – Wall (Concrete)	One (1)	
	9th Floor Training Center Private Hallway – Wall (Concrete)	One (1)	
	10th Floor Training Center Private Hallway – Wall (Concrete)	One (1)	

<b>Pre-Demolition limited LBP Screening Summary</b>			
	Upper Basement OSY Valves Pump Room – Fire Pipe (Metal)	Two (2)	

**2.02.2 Large Items – I-Beams, Frames and non-Porous Pipes, eq.**

- a. All ACM that can be safely abated in place will be completed prior to lowering of the structure.
- b. Waste container staging areas shall be on asphalt or other non-exposed soil areas.
- c. Contractor to establish an adequate staging area to clean large metal if ACM is identified on the metal surface.
- d. Non-ACM demolition debris may be stored on-site in new piles, distinct from piles that are yet to be separated. Once space allows, separated non-ACM demolition debris may be loaded into roll-off dumpsters or dump trucks for off-site disposal.
- e. Since the project includes ACM abatement, a full personnel decontamination system shall be located and established on the Property. The location should take into consideration the movement, and separation of ACM and non-ACM debris. It shall also take into consideration the demolition of remaining structures and their potential instability. The Contractor shall be responsible for establishing water supply to the decontamination system and wastewater disposal from the system.

**2.02.3 Debris:**

- a. It is expected that during abatement, debris will be removed as ACM in lined containers according to NJDEP requirements.
- b. Debris (ACM waste, non-ACM debris) shall be removed from the Property. Exterior facade, concrete slab/deck, and roof shall be barricaded to prevent the potential for accidental fall hazards. Perimeter fencing shall remain in place to secure the Property.

**2.02.4 Site Specific Procedures:**

**A. On-site Cleaning Procedure for Segregation of Metal Scrap**

- The scrap metal is expected to be cleaned if applicable during abatement.
- Contractor shall establish an acceptable system for on-site scrap metal segregation, and loading for offsite recycling.

**B. Contractor Procedures regarding Outlier Asbestos by 3<sup>rd</sup> Party Air Monitor**

- Contractor shall establish a system for monitoring ambient air conditions and for responding to asbestos or dust readings which call for immediate corrective action, including:
  1. Upgrade or revise dust control measures.
  2. Re-stage work crews; and/or.
  3. Stop work action.

- Contractor shall use the following parameters for outlier delineation of asbestos air
  1. Asbestos perimeter monitoring: <0.01 f/cc (PCM) and or <70 s/mm<sup>2</sup> (TEM)
  2. Asbestos monitoring inside Property work area(s): <0.01 f/cc (OSHA PEL) inside work area(s).

#### **C. Special Health Safety Requirements**

- No co-mingled ACM debris will be tracked off-site into personal vehicles. Work boots shall be left on-site and not be worn in personal vehicles unless thoroughly decontaminated first and/or bagged.
- Contractor employees and sub-contractors shall decon out at the conclusion of each shift and before lunch break.
- Contractor shall establish a “clean” decon staging area at the project perimeter where the ground has been pre-cleaned and/or covered so that personal footwear can be worn.
- Once an area has been categorized and removed (and there is no risk of re-contamination by ACM removal activities), underlying slabs shall be cleaned so that the area is no longer part of the ACM contamination work zone.
- The ACM contamination work areas shall be delineated and barricaded to avoid cross-contamination of cleaned area(s).

#### **D. Contractor EH&S Site Rules**

- Preparation activities that cause airborne ACM levels to increase have to be avoided until abatement exclusion zones are set up.
- Anyone accessing onto the Property must have received “Asbestos Awareness Training”.
- No materials handling practices shall create additional collapse, trip, flying projectile, or sharp hazards in/around the job site.
- Equipment that makes contact with ACM shall be decontaminated and have air filters changed prior to removal from the Property.
- Work area security will be maintained 24/7 to prevent general public Property access.
- Contractor shall not discharge decontamination water into storm drains except under the terms of a pre-approved Water Management Plan and/or Permit.
- Contractor is responsible for providing electrical power and water (tanker truck and/or obtain fire hydrant connection permit). Generator fueling should not be staged on bare unprotected soil.
- No torch cutting or other hot work permitted without prior approval.

- If any confined space or shoring hazards are encountered, the Contractor is responsible for reporting such conditions to the Owner Representative(s) before proceeding with work.
- Elevation work 4-ft. above ground level requires a Fall Protection Plan and use of fall protection devices.
- Contractor shall provide proof of operators' training and applicable certification for use of any heavy equipment, scissor lift, and/or other equipment.

#### **E. Off-Site Asbestos/Demolition Waste Transport and Disposal Approval**

- The Contractor(s) shall provide information pertaining to proposed ACM and demolition debris off-site disposal facilities and transport companies to the Site Representative for approval.
- After asbestos waste is properly packaged on-site and the container is attached to the waste transport truck with an NJDEP placard, the container cannot be transferred to another waste hauler. The asbestos waste has to be directly transported to the approved asbestos landfill with no load mixing.
- Owner's Representative and Abatement Contractor must maintain records/manifest of all trucks leaving the property with ACM waste.
- Daily toolbox safety briefing with sign-in sheets required.
- Potential onsite safety issues to be addressed in contractor HASP trip hazards, slips, inhalation hazards, skin contact issues, etc.

#### **F. Ground and other Special Environmental Protection**

- All abatement/demolition/washing activities to be placed in pre-approved areas (coordinate with GC).
- Contractor(s) to erect a watertight dike and/or spill berm around washing staging areas to prevent uncontrolled runoff water.
- Any use of chemical-containing products (e.g. dust suppressant foam etc.) requires pre-approval of SDS Sheet.
- Unfiltered ACM or other contaminated water has to be collected by Contractor(s), not discharged to storm drains that have to be protected.
- Contractor to provide appropriate equipment to pump decon water into a temporary holding tank for later reuse within the exclusion zone or to wet outgoing ACM loads as required.
- If "gray water" (non-ACM water) begins to accumulate, the Contractor can then call for a tanker to pump off and dispose of.
- Contractor to have a spill cleanup containers/storage kit(s) available on Property to address any hydraulic fuel/ and other spills.

- Sidewalk curbs and roadways need to be free of any worksite debris. If any debris is found, then Abatement Contractor to immediately clean up the area so as to not potentially expose the public and/or surrounding neighborhood to hazards.

#### **G. Heavy Equipment Decontamination**

- Heavy equipment used to load contaminated ACM debris has to be decontaminated at the conclusion of shift and undergo more thorough service if/when leaving off-site (change the air filter, etc.).

#### **H. Site Security**

- Existing Parking Garage entrance to be maintained locked overnight so that the general public cannot trespass onto the Property.
- Contractor to assign overnight contact in event Security has an issue to address.
- Crew headcount “in/out” shall be recorded at the decon entrance/exit.

#### **I. Contractor Project Submittals**

(Pre-project)

- Copy of NJ Asbestos Abatement License.
- Copy of NJ Asbestos Abatement Filing.
- Asbestos abatement sequence, means, and methods.
- Copies of abatement worker/supervisor licenses, medicals, and fit-tests.
- Approved Contractor HASP and work plan for ACM removal.
- Site Protection Plan.
- Emergency Response Plan (dust reading, fire, flood).
- Dust Control Plan.
- Contractor Waste Transportation and Disposal Plan.

(During-project for progress payments)

- Any ACM filing updates.
- Copies of worker/personal/OSHA air sampling data posted onsite.
- Progress ACM Waste Manifests.
- Copies of load tickets.

- NJ ACM waste fee statement

(Final post-project submittal to release retainage)

- Final Contractor report package to include copies of all the above items.
- Returned landfill copies of waste manifest and proof of NJ ACM waste fee payments.

#### **J. Contractor Project Management**

- Contractor must have an assigned Site Superintendent on the Property during working hours to manage ACM abatement and other crews, and to interface with Owner Representative(s), Consultants, and regulatory agency Inspectors.
- If workers are observed to be onsite smoking, eating in exclusion zone areas, not decontaminating out properly, not wearing correct PPE, or engaging in other non-compliant activities, the Site Superintendent shall be instructed to document said infraction which will result in a warning and/or immediate dismissal from the property. The Owner and Site Representative reserve the right to terminate an employee for not following EH&S Site Rules.
- Contractor shall file notification(s) to applicable Federal, State, and local agencies having jurisdiction over this ACM abatement project. Failure on behalf of the Contractor for submitting notification shall not result in any extension for the timely results of the completion of the work set forth in the Contract. The Contractor shall be responsible and will be required to pay any administrative penalties imposed on the Owner for actions taken or lack thereof by the Contractor.
- If there are any abatement schedule breaks (not anticipated), Abatement Contractor may be required to initiate multiple regulatory filings.
- Upon completion of ACM removal, the Contractor shall provide completed, signed and notarized statements stating all identified ACM within the scope of work have been properly removed in accordance with applicable rules and regulations.
- **Contractor(s) to coordinate water/electricity hookup(s) with County and/or County Representative(s) for abatement.**
- Contractor is responsible for all fines, penalties, notices of violations suits or claims related to permitting, notifications, ACM abatement, and disposal of ACM addressed to the contractor, his subcontractors, the Owner, or Engineer and will address any proceedings related to these suits, claims or violations on behalf of these parties and incur any legal fees, court fees or final judgments against the Contractor, Subcontractor, Owner or Engineer relating to these proceedings.
- Contractor shall hold and document daily pre-abatement safety toolbox meetings to review safe work practices and emergency communication program for the project. The abatement contractor's supervisor and the consultant's project monitor must also ensure that proper fire extinguishing equipment is present. The supervisor shall be knowledgeable in the use of fire extinguishing equipment, and emergency exit plans.

**PART 3**  
**GENERAL ASBESTOS SPECIFICATIONS**

3.01.1 REFERENCE STANDARDS AND NOTICES

A. Except to the extent that more explicit or more stringent requirements are written directly into this Specification, all applicable codes, regulations, and standards have the same force and effect (and are made a part of this specification by reference. Contractor shall assume full responsibility and liability for compliance with all applicable Federal, State, and local regulations pertaining to work practices, hauling, disposal, and protection of workers, visitors to the Property, and persons occupying areas adjacent to the Property. The Contractor is responsible for providing medical examinations and maintaining medical records of personnel as required by the applicable Federal, State, and local regulations. Contractor shall hold the Owner and Owner's Engineer harmless for failure to comply with any applicable work, hauling, disposal, safety, health, or other regulation on the part of himself, his employees, or his subcontractors.

A. Federal Regulations:

- a. 29 CFR 1910.1001, "Asbestos" (OSHA)
- b. 29 CFR 1910.1200, "Hazard Communication" (OSHA)
- c. 29 CFR 1910.134, "Respiratory Protection" (OSHA)
- d. 29 CFR 1910.145, "Specification for Accident Prevention Signs and Tags" (OSHA)
- e. 29 CFR 1926, "Construction Industry" (OSHA)
- f. 29 CFR 1926.1101, "Asbestos, Tremolite, Anthophyllite, and Actinolite" (OSHA)
- g. 29 CFR 1926.500 "Guardrails, Handrails and Covers" (OSHA)
- h. 40 CFR 61, Subpart A, "General Provisions" (EPA)
- i. 40 CFR 61, Subpart M, "National Emission Standard for Asbestos" (EPA)
- j. 49 CFR 171-172, Transportation Standards (DOT)

C. New Jersey Regulations

State requirements which govern ACM abatement work and hauling and disposal of ACM waste materials include but are not necessarily limited to the following:

- a. N.J.A.C. 7:26
- b. N.J.A.C. 12:120
- c. N.J.A.C. 8:60

#### D. Local Requirements

Local agencies which may govern or have certain requirements regarding ACM abatement work or hauling and disposal of ACM waste materials include but are not necessarily limited to the following:

- a. Building Department
- b. Health Department
- c. Fire Department

#### E. Standards and Guidance Documents:

Standards and guidance documents which apply to ACM abatement work or hauling and disposal of ACM waste material include but are not necessarily limited to the following:

- a. American National Standards Institute (ANSI)
  - Fundamentals Governing the Design and Operation of Local Exhaust Systems Publication Z9.2-79
  - American National Standard Institute (ANSI) Z88.2-80, Practices for Respiratory Protection
- b. American Society for Testing and Materials (ASTM)
  - Safety and Health Requirements Relating to Occupational Exposure to Asbestos E 849-82.
- c. Underwriters Laboratories, Inc. (UL)

Standards: 586 (High-Efficiency Particulate Air filter units).

#### F. Notices

- a. Contractor shall send by certified mail, all required notifications to all applicable governing agencies as required by Federal, State, and local regulations. Failure on behalf of the Contractor to file notifications as required shall not result in any extension of the completion date set forth in the Contract. Also, at least 7 days prior to initiation of abatement work, required signs must be posted.
- b. U.S. Environmental Protection Agency: Send Written Notification as required by EPA National Emission Standards for Hazardous Air Pollutants (NESHAP) Asbestos Regulations (40 CFR 61, Subpart M) to the regional Asbestos NESHAP Contact at least 10 working days prior to beginning any work on ACM. Send notification to the following address:

**EPA Region II  
Asbestos NESHAP Contact Air and Waste Management Division  
290 Broadway  
New York, New York 10007**

- c. The following information shall be included in the notification to the NESHAPS contact, at a minimum:
- Name, address, and telephone number of owner or operator;
  - Name, address, telephone number, and asbestos license number of the asbestos abatement contractor;
  - Description of the facility being demolished or renovated, including the size, age, and prior use of the facility;
  - Estimate of the approximate amount of friable ACM present in the facility in terms of linear feet of pipe, and surface area on other facility components. For facilities in which the amount of friable ACM is less than 80 linear meters (260 linear feet) on pipes and less than 15 square meters (160 square feet) on other facility components, explain techniques of estimation;
  - Location of the facility being demolished or renovated;
  - Scheduled starting and completion dates of demolition or renovation;
  - Nature of planned demolition and method(s) to be used;
  - Procedures to be used to comply with the requirements of USEPA National Emission Standards for Hazardous Air Pollutants (NESHAPS) Asbestos Regulations (40 CFR 61 Subpart M);
  - Name and location of the waste disposal site where the friable ACM waste material will be deposited;
  - Name and license number of the waste hauler;
  - The nature of ACM abatement;
  - Amount of asbestos-containing materials to be removed;
  - Update the notification whenever the amount changes by at least 20 percent; and,
  - Re-notify EPA if start date changes from originally given date.
- d. State and Local Agencies: The Contractor shall send written notification as required by State and local regulations and obtain a construction permit for an ACM abatement pursuant to regulatory requirements prior to beginning any work on asbestos-containing materials to all applicable State and local agencies. This is the sole responsibility of the Contractor. Send a notification at least 10 working days prior to beginning any abatement work.
- e. The Contractor shall post all notices required by applicable Federal, State, and local regulations. Maintain two copies of applicable Federal, State, and local regulations and standards. Maintain one copy of each at the worksite. Keep on file in the Contractor's office one copy of each.
- f. The Contractor shall notify other entities at the job site of the nature of the ACM abatement activities, the location of asbestos-containing materials, requirements relative to ACM set forth in these specifications, and applicable regulations. All notification shall first be cleared through the Owner's Representative.

- g. The Contractor shall notify emergency service agencies including fire, ambulance, police, or other agency that may service the abatement work site in case of an emergency. Notification is to include methods of entering the work area, emergency entry and exit locations, modifications to fire notification or firefighting equipment, and other information needed by agencies providing emergency services. The Contractor shall clearly post telephone numbers and locations of emergency services including but not limited to fire, ambulance, doctor, hospital, police, and power, and telephone Companies.

### 3.01.2 QUALITY ASSURANCE

#### A. Qualifications

- a. The Contractor shall be licensed by the New Jersey Department of Labor to perform ACM removal work and shall have a minimum of 5 years of experience in performing such work. The Contractor shall also have had a completion record of work performed on a minimum of five (5) projects of similar nature, size, and scope.
- b. All Contractor personnel involved with ACM removal work must be thoroughly familiar with the standard operating procedures of the Contractor for removal work as well as all applicable Federal and State regulations governing ACM removal work.
- c. The Supervisor and Asbestos Abatement workers shall be accredited in accordance with EPA regulation 40 CFR Part 763, subpart E, Appendix C; and New Jersey Departments of Labor and Health regulations cited as N.J.A.C. 12:120 and 8:60, respectively.

### 3.01.3 SUBMITTALS

- A. Pre-Work Submittals: No later than 7 calendar days prior to mobilization to the Property for initiation of asbestos abatement activities, the Contractor shall submit 3 copies of the documents listed below:
  - a. Valid Contractor's ACM Removal license issued by the New Jersey Department of Labor (NJ-DOL).
  - b. Certificate of insurance covering the work of this Contract.
  - c. Work Schedule:
    - Show the complete sequence of abatement activities and the sequencing of Work within each building section.
    - Show the dates for the beginning and completion of each major element of Work including substantial completion dates for each Work Area, building, or phase.
    - Show the projected percentage of completion for each item, as of the first day of each month.
    - Show final inspection dates.
- B. Project Notifications: As required by Federal, State, and local regulatory agencies together with proof of transmittal (i.e. certified mail return receipt).
- C. Abatement Work Plan: The Contractor shall design, prepare and submit to the Owner for

review and approval, a detailed ACM removal plan for the project in accordance with the applicable regulations and these specifications. The plan shall, at minimum, show limits of containment and work areas, methods of removal, the location of decontamination units, number and location of negative air units, waste routes, waste storage location, entrance and exits, emergency exits, and any necessary details. Work shall not commence until the Owner has reviewed, commented, and approved the Contractor's ACM removal plan. Provide plans which clearly indicate the following:

- a. ACM exclusion zones to be staged back to front so that areas can be cleaned and not re-contaminated.
- b. Locations and types of all decontamination enclosures.
- c. Entrances and exits to ACM Exclusion zones with Asbestos Hazard signs posted.
- e. Proposed location and construction of storage facilities and field trailer(s).
- f. Location of water and electrical connections to available services (water truck, hydrant, generator).
- g. Waste transport routes through the Property.
- h. List any site-specific variances that will be petitioned from the State in order to seek relief from any of the abatement requirements listed herewith.
- i. Name, location, and applicable licenses for the primary and secondary landfill for disposal of asbestos-containing material and asbestos-contaminated waste.
- j. Summary of proposed materials, and equipment to be used.
- k. Certification that vacuums, temporary ventilation equipment, and other equipment to be used meet the ANSI 29.2-79 requirement for airborne fiber filtration.
- l. If rental equipment is to be used in the work area or to transport asbestos-contaminated waste, provide notice to the rental agency stating the intended use of equipment, with a copy to the Owner.
- m. Summary of the Contractor's workforce by disciplines. Include a notarized statement signed by the Contractor documenting that all proposed workers, by name, have received all required medical examinations and have been properly trained and certified in ACM removal work, respirator use, to appropriate EPA and OSHA standards for ACM removal. Include on statement Contractor's compliance with OSHA medical surveillance requirements.
- n. The Contractor shall submit his/her Health and Safety Plan and Standard Operating Procedures for this project for use in complying with the requirements of these Specifications and applicable regulations. The Plan shall include, but shall not be limited to distribution and use of amended water, the sequencing of asbestos work, detailed schedules and dates, shift times, and work activities during that shift, the interface of other trades involved in the performance of work, methods to be used to assure the safety of building occupants and visitors to the Property, security of the work areas, and a detailed

description of the methods to be employed to control airborne fiber concentrations.

- o. A written description of emergency procedures to be followed in case of injury or fire. This section must also include evacuation procedures, sources of medical assistance, and procedures for access by medical personnel.
  - p. Level of respiratory protection intended for each operation for the project based upon personal/OSHA ACM and other exposure monitoring data collected by the Contractor.**
- B. Project Closeout Submittals: Submit the following at the closeout of the Project (no later than 10 calendar days subsequent to final clearance of all abatement areas within a project phase):
- a. OSHA compliance air monitoring records conducted during the Work.
  - b. Daily progress log.
- A list of all Workers used in the performance of the Project, including name, social security number, and NJ DOL certification number. Provide a valid copy of the asbestos certification.
- c. For each worker assigned in the performance of the Project, submit required employee statements including Medical Examination Statement, Worker's Acknowledgment Statement, Respirator Fit Test, and Employee Training Statement.
  - d. Certification for the laboratory that analyzed the OSHA personal air samples.
  - e. A notarized "Release of Liens" in a form acceptable to the Owner. Such notarized release of liens shall certify that all sub-Contractors, labor suppliers, etc. have been paid their pro-rata share of all payments to date for the project, that the Contractor has no basis for further claims, and will not make further claims for payment in any account after the first payment is made to him.
- C. Manifests: Originals of all waste disposal manifests, seals, and disposal logs must be provided within 30 calendar days of final clearance of all abatement areas within a project phase.

#### 3.01.4 PRODUCTS

All products, equipment, and material used by the Contractor shall be of sufficient size, configuration, and quality to perform the tasks required. Specific criteria and/or requirements for products used are discussed in Part 3 - Execution of this specification when appropriate.

#### 3.02.1 EXECUTION

- A. The Contractor shall inspect and verify all ACM planned for removal from the subject Property as described in Part 1 - Section 1.03 of the Specification under the Scope of Work.
- B. The Contractor shall, in areas not easily accessible, use safe means to access and remove ACM.
- C. The Contractor shall demonstrate that his/her ACM removal and waste disposal work does not impact in any way the areas beyond the work area. Any cross-contamination of other areas and

materials shall be the sole responsibility of the Contractor. If it is determined by air or surface dust samples that ACM contamination has occurred as the result of negligence and/or poor work practices of the Contractor, the Contractor shall clean and/or dispose of any contaminated materials at no additional cost to the Owner. The Contractor shall be responsible for any damages claimed or lawsuits brought by persons exposed to such contamination.

- D. Signs shall be posted which meet the specifications set forth in 29 CFR 1926.1101 at all approaches to the work area. Signs shall be posted a sufficient distance from the work area to permit a person to read the sign and take precautionary measures to avoid exposure to asbestos.
- E. Strictly adhere to all precautions necessary to the health and safety of your workers and authorized personnel in accordance with OSHA, EPA, the State of New Jersey, and all local codes. The engineer or Owner's representative on-site is not responsible for the health and safety of the Contractor's personnel.

### 3.02.2 MATERIAL AND EQUIPMENT

The materials and equipment used during all abatement activities shall conform, at a minimum, to required standards of these specifications, applicable regulations, and the following:

- A. Hand power tools used to drill, cut into, or otherwise disturb ACM shall be equipped with HEPA filtered local exhaust ventilation.
- B. Electrical equipment shall be Underwriters Laboratory listed and approved.
- C. Emergency lighting in case of power failure.
- D. If the Contractor opts to stage decon trailer or build on-site decon shed with protection, the construction must satisfy NJDCA/NJDOL requirements.

### 3.02.3 PERSONNEL PROTECTION

- A. Protective Clothing
  - a. Coveralls: Provide sufficient disposable full-body "Tyvek" coveralls for all workers and also for authorized visitors.
  - b. Boots: Provide work boots with non-skid soles, and where required by OSHA, foot protection, for all workers. Provide boots at no cost to workers. Do not allow boots to be removed from the work area for any reason, after being contaminated with asbestos-containing material. Dispose of boots as asbestos-containing waste at the end of the work or seal in 6-mil poly bags (with labels) for transportation to another work area.
  - c. Goggles: Provide eye protection (i.e. goggles) as required by OSHA for all workers involved in scraping, spraying, or any other activity which may potentially cause eye injury. Goggles are not required if full-face respiratory protection is used.
  - d. Gloves: Provide work gloves to all workers and require that they are worn at all times in the work area. Do not remove gloves from the work area and dispose of as ACW at the end of the work.

- e. **Hard Hats:** Provide hard hats to all workers and authorized visitors and require that they are worn at all times in the Work Area. Hard hats shall be worn over the hood of the coveralls.

**B. Respiratory Protection Requirements**

- a. The Contractor shall have a respiratory protection program established, which shall be in compliance with ANSI Z228.2, OSHA 29 CFR 1910 and 1926, 40 CFR 763, Subpart G, and 42 CFR Part 84. A copy of the written program shall be maintained at the job site.
- b. Respiratory protection shall be worn by all individuals inside the ACM Exclusion Zone Work Areas(s) from the initiation of the ACM project until all areas have successfully passed final air clearance monitoring.
- c. Respiratory type shall be determined by onsite Contractor personal/OSHA ACM air monitoring data.
- d. All respiratory protection shall be MSHA/NIOSH approved in accordance with the provisions of 30 CFR Part 11. The Contractor shall provide all respiratory protection.
- e. Workers shall be provided with personally issued and individually marked respirators. Respirators shall not be marked with any equipment that will alter the fit of the respirator in any way. Only waterproof identification markers shall be used.
- f. **Filter Cartridges:** Provide at a minimum HEPA type filters labeled with NIOSH and MSHA certification and color-coded in accordance with ANSI Z228.2.
- g. Use of disposable masks or quarter-face respirators shall not be permitted.
- h. For all ACM abatement work other than preparation activities, non-friable removals and glovebag removal, powered air-purifying respirators with a full facepiece and HEPA filters shall be used as a minimum when the fiber count in the work area is lower than 1 fiber per cubic centimeter (f/cc).
- i. For work areas with fiber count greater than 1 f/cc, type "C" supplied air HEPA filter respirators in pressure-demand mode shall be utilized.
- j. The Contractor shall have on-site a sufficient quantity of respirators and filters for all asbestos workers and authorized visitors.

**3.02.4 TEMPORARY FACILITIES**

- A. Locate temporary services and facilities where they will serve the work area adequately and result in minimum interference with the performance of the work. Relocate, modify, and extend services and facilities as required during the course of work so as to accommodate the work of this Contract.
  - a. The Contractor shall provide new or used materials and equipment that are undamaged and in serviceable condition and provide only materials and equipment that are recognized as being suitable for the intended use, by compliance with appropriate standards.

- b. The Contractor shall provide all heavy equipment, and waste contains, etc. as necessary to accomplish the work of this contract. Scaffolding may be of a standing type such as metal tube and coupler, tubular welded frame, pole or outrigger type, or cantilever type. The type, erection, and use of all scaffolding shall comply with all applicable OSHA provisions. Equip rungs of all metal ladders, etc. with an abrasive non-slip surface. Provide a nonskid surface on all scaffold surfaces subject to foot traffic.

#### B. Water Service

- a. Temporary Water Service Connection: All connections to water systems shall include backflow protection. Valves shall be temperatures and pressure rated for the operation of the temperatures and pressures encountered. After completion of use, connections and fittings shall be removed without damage or alteration to existing water hydrant and equipment.
- b. Water Hoses: Employ heavy-duty abrasion-resistant hoses with pressure ratings greater than the maximum pressure of the water distribution system to provide water into each work area and to each Decontamination Unit. Provide fittings as required to allow for connection to existing wall hydrants or sprouts, as well as temporary water heating equipment, branch piping, showers, shut-off nozzles, and equipment.
- c. Maintain hose connections and outlet valves in leak-proof condition. Where spillage or leakage might damage/flood the surrounding environment, provide a drip pan or collection drum of suitable size to minimize the possibility of water damage/flooding.

#### C. Electrical Service

- a. General: Comply with applicable NEMA, NECA, and UL standards and governing regulations and codes for materials and layout of temporary electric service. Provide a weatherproof, grounded temporary electric power service and distribution system of sufficient size, capacity, and power characteristics to accommodate the performance of work during the construction period. Install temporary lighting adequate to provide sufficient illumination for safe work and traffic conditions in every area of work.
- b. Temporary Power: Provide service with fused disconnects connected to a generator distribution panel, if available. Sub-panel and disconnect shall be sized and equipped to accommodate all electrical equipment required for completion of the work.
- c. Ground Fault Protection: Equip all circuits for any purpose entering Work Areas with ground fault circuit interrupters (GFCI). Locate GFCI's exterior to Work Area so that all circuits are protected prior to entry to Work Area. Provide circuit breaker type GFCI equipped with a test button and reset switch for all circuits to be used for any purpose in work area, decontamination units, exterior, or as otherwise required by national electrical code, and OSHA.
- d. Electrical Power Cords: Use only grounded extension cords; use "hard-service" cords where exposed to abrasion and traffic. Use single length or use waterproof connectors to connect separate lengths of electric cords, if single lengths will not reach areas of work.
- e. Lamps and Light Fixtures: Provide general service incandescent lamps or fluorescent lamps of wattage indicated or required for adequate illumination as required by the work

or this section. Protect lamps with guard cages or tempered glass enclosures, where fixtures are exposed to breakage by construction operations. Provide vapor tight fixtures in the work area and decontamination units. Provide exterior fixtures where fixtures are exposed to the weather or moisture.

- f. Lockout: Lockout all existing power to or through the work area as described below. Unless specifically noted otherwise existing power and lighting circuits to the Work Area are not to be used. All power and lighting to the Work Area and Decontamination facilities are to be provided from a temporary electrical panel described below.
- Lockout power to Work Area by switching off all breakers serving power or lighting circuits in the work area. Label breakers with tape over breaker with the notation "DANGER circuit being worked on". Lock panel and have all keys under control of Contractor's Superintendent or Owner.
  - Lockout power to circuits running through Work Area wherever possible by switching off all breakers serving these circuits. Label breakers with tape over breaker with the notation "DANGER circuit being worked on". Sign and date danger tag. Lock panels and supply keys to Supervisor and Owner. If circuits cannot be shut down for any reason, label at interval 4'-0" on center with tags reading, "DANGER live electric circuit. Electrocutation hazard."
- g. Temporary Electrical Panel: Provide temporary electrical panel sized and equipped to accommodate all electrical equipment and lighting required by the work. Connect temporary panel to generator provided. Protect with circuit breaker or fused disconnect. Locate a temporary panel as directed by the Owner.
- h. If not feasible to run electrical wiring overhead then heavy-duty protective cable mats to be utilized to avoid trips and or cord cut hazards.
- i. Number of Branch Circuits: Provide sufficient branch circuits as required by the work. All branch circuits are to originate at the temporary electrical panel. At a minimum provide the following:
- One Circuit for each HEPA filtered fan unit.
  - For power tools and task lighting, provide one temporary separate 110-120 Volt, 20 Amp circuit, 4-gain outlet (4 outlets per circuit).
- i. All lighting to the Work Area and Decontamination facilities is to be provided from a temporary electrical panel described above. Provide the following or equivalent where natural lighting or existing building lighting does not meet the required light level:
- One 200-watt incandescent lamp per 1000 square feet of floor area, uniformly distributed, for general construction lighting, or equivalent illumination of a similar nature. In corridors and similar traffic areas provide one 100-watt incandescent lamp every 50 feet. In stairways and at ladder runs, provide one lamp minimum per story, located to illuminate each landing and flight. Provide sufficient temporary lighting to ensure proper workmanship everywhere by the combined use of daylight, general lighting, and portable plug-in task lighting.
  - Provide lighting in areas where work is being performed as required to supply a 100-foot candle minimum light level.

- Provide lighting in any area being subjected to visual inspection as required to supply a 100-foot candle minimum light level.
- D. First Aid Supplies: Comply with governing regulations and recognized recommendations within the construction industry.
- E. Fire Extinguisher: Provide Type "A" fire extinguisher for temporary offices and similar spaces where there is minimal danger of electrical or grease-oil-flammable liquid fires. In other locations provide type "ABC" dry chemical extinguisher or a combination of several extinguishers, or a combination of several extinguishers of NFPA recommended types for the exposures in each case.
- F. Installation:
- a. Use qualified tradesmen for the installation of temporary services and facilities. Locate temporary services and facilities where they will serve the entire project adequately and result in minimum interference with the performance of the work.
  - b. Require that tradesmen accomplishing this work be licensed as required by the local authority for the work performed. Relocate, modify and extend services and facilities as required during the course of work so as to accommodate the entire work of the project.
- G. Emergency Lighting: Inside the work area/zone, provide services for emergency lighting in case of power failure.
- H. Tools and Equipment:
- a. Shovels used must be constructed of plastic or rubber.
  - b. Nylon bristle brushes may be used for cleaning. Under no circumstances will steel bristle brushes be allowed.

### 3.02.5 WORKER AND WASTE DECONTAMINATION SYSTEM FOR ACM ABATEMENT

- A. The following requirements shall be followed for the worker decontamination unit:
- a. At all ACM abatement projects, work areas shall be equipped with decontamination facilities consisting of a clean room, a shower room, and an equipment room.
  - b. The decontamination enclosure system chambers shall be constructed to meet the criteria of the Specification. The decontamination enclosure shall be installed watertight to prevent water leaks. The interior shall be lined with two layers of 6-mil fire-retardant plastic sheeting, with a minimum overlap of 16 inches at seams and sealed (airtight) by tape and adhesive. The interior floor shall be sheathed with (2) layers of reinforced fire retardant plastic sheeting with a minimum overlap on the wall of sixteen (16) inches. The contractor shall ensure compliance with local building codes and other regulations governing temporary structures.
  - c. Curtained Doorways: Three overlapping sheets of 6-mil polyethylene shall be placed over a framed doorway and secured along the top of the doorway. Secure the vertical edge of the outer sheets along one vertical side of the doorway and the vertical edge of the center

sheet along the opposite vertical side of the doorway. The sheets shall be weighted so that they close quickly after being released.

- d. Air Locks: Airlocks shall consist of two curtained doorways placed a minimum of three feet apart.
- **CleanRoom:** In this room, persons remove and leave all street clothes and put on clean disposable coveralls. Approved respiratory protection equipment is stored in this area. The floor of the cleanroom must be kept dry at all times. At the end of each shift, the room must be cleaned using wet rags. Also, a lockable door may be installed. No asbestos-containing materials are allowed in this room. The cleanroom shall be equipped with suitable hooks, lockers, shelves, etc. for workers to store personal articles and clothing. **THIS IS NOT A CONTAMINATED AREA.**
  - **Shower Room:** Provide a completely watertight operational shower to be used by cleanly dressed workers heading for the Work area from the cleanroom or for showering workers headed out of the Work Area after dressing in the Equipment Room. The shower must be constructed so that water leakage is minimized. The shower shall have one shower per six full shift abatement people, calculated on the basis of the largest shift. Any leaking water must be cleaned immediately. Showers must be equipped with hot and cold running water, soap and sufficient disposable towels for the number of workers at the job site. Arrange water shut off and drain pump operation controls so that a single individual can shower without assistance from either inside or outside the Work Area. **THIS IS A CONTAMINATED AREA.**
  - Pump waste-water into a polyethylene-lined 55-gallon drum located in the Work Area to be added to the ACM waste. If the water is allowed by the work treatment workers to be pumped into a drain, provide 20 micron and 5-micron wastewater filters in line to drain. Change filters at a minimum of once a day. Locate filters inside the shower unit, so that the shower pan catches the water lost during filter change.
  - **Equipment Room:** Work equipment, footwear, and all other contaminated work clothing are to be left here upon exiting Work Area. A walk-off pan filled with water shall be located in the work area just outside the equipment room for workers to clean foot coverings while exiting the work area. This is a change and transit area for workers. Provide a drop cloth layer of sheet plastic on the floor of the Equipment Room for every shift change. Roll drop cloth layer in upon itself at the end of each shift and dispose of as contaminated waste. **THIS IS A CONTAMINATED AREA.**
  - Each room shall be separated from the other and from the work area by airlocks such as will prevent the free passage of air or ACM fibers and shall be accessible through doorways protected with three (3) overlapping 6 mil polyethylene sheets which shall be weighed, so as to fall into place when people pass through the area. The shower room shall be contiguous to the cleanroom and equipment room. All personnel entering or leaving the work area shall pass through the shower room. The number of showers provided shall satisfy the requirements of OSHA 29 CFR 1910.141. Hot and cold water shall be supplied to the showers. The equipment room (dirty room) shall be situated between the shower room and the work area and separated from both by means of suitable barriers or overlapping flaps such as will prevent the free passage of air or ACM fibers.
  - Decontamination chamber doors shall be of sufficient height and width to enable replacement of equipment, which may fall, and to safely stretch or carry an injured worker from the Property without destruction of the chamber or unnecessary risk to

the integrity of the work area. Such doors must be at least four (4) feet wide, and the distance between sets of doors must be at least four (4) feet.

- e. No person or equipment shall leave the ACM abatement project work area unless first decontaminated by showering, wet washing or HEPA vacuuming to remove all ACM debris. No asbestos-contaminated materials or persons shall enter the cleanroom.
- f. Where feasible, decontamination systems shall abut the work area. In situations where it is not possible, due to unusual conditions, to establish decontamination systems contiguous to the work area, personnel shall be directed to remove visible ACM debris from their persons by HEPA-filtered vacuuming prior to donning clean disposable coveralls while still in the work area and proceeding directly to a remote decontamination system to shower and change clothes.
- g. In specific situations where the asbestos contractor determines that it is not feasible to establish a contiguous decontamination system at a worksite, the asbestos contractor shall utilize a remote decontamination system. Such systems must be operated in conformance with 29 CFR 1926.1101, Appendix F.

#### B. Remote Decontamination Facility

The Contractor shall provide a remote personnel decontamination enclosure system as specified above in section 4.05 A.

### 3.02.6 WORK AREA PREPARATION

- A. General Work Place Preparation Requirements: The following procedures shall be followed during the conduct of abatement activities on large ACM projects:
  - a. The Contractor shall provide proper notification as approved by the Owner and as required under Section 1.03 of this specification.
  - b. No ACM abatement work including preparation shall be performed or continued without having a certified supervisor at the work area.
  - c. Provide and display danger signs at every entrance to the work areas in clearly visible locations indicating that ACM removal work is being conducted and unauthorized and not protected persons should not enter.
  - d. Danger signs must use the following legend:

**DANGER  
ASBESTOS  
CANCER AND LUNG DISEASE HAZARD  
RESPIRATORS AND PROTECTIVE CLOTHING  
ARE REQUIRED IN THIS AREA**

- e. The worker decontamination enclosure system shall be installed or constructed prior to or before disturbing ACM.

- f. The Contractor shall be responsible for cleaning up any visible excrement from birds, animals, etc. in the work areas prior to the preparation of the abatement work areas.
- l. Abatement shall not commence until workplace preparation has been completed.
- m. Emergency and fire exit routes from the work areas shall be maintained, or alternative exits shall be established in accordance with applicable Code(s) and regulations.
- n. Entrances to the PS&S Property that will not be used for worker entry or emergency exits shall be locked to prevent unauthorized entry.

### 3.02.7 CLEAN-UP PROCEDURES

#### A. Preliminary Clean-Up Procedures

The following clean-up requirements shall be followed during the conduct of abatement activities on ACM abatement projects:

- a. Visible accumulations of loose asbestos-containing waste material shall be cleaned up:
  - Whenever sufficient asbestos-containing waste material to fill a single leak-tight container of the type commensurate with the properties of asbestos-containing waste materials has been removed, or
  - At the end of each work shift, whichever shall occur first. Removed material shall be maintained wet until cleaned up.
- b. Visible accumulations of asbestos-containing waste material shall be containerized utilizing non-metallic dustpans and non-metallic squeegees or HEPA vacuums.
- c. Metal shovels shall not be used to pick up or move accumulated asbestos-containing waste material or any other debris in the vicinity of isolation or surface barriers.
- d. Accumulations of dust shall be cleaned off all surfaces of the work area on a daily basis, using HEPA vacuum or wet cleaning methods.
- e. The waste decontamination enclosure system shall be wet cleaned twice-using wet cleaning methods upon completion of waste removal. When the worker decontamination enclosure shower room alternates as a waste container washroom, the shower room shall be washed immediately with cloths or mops saturated with a detergent solution prior to wet cleaning.
- f. The worker decontamination enclosure system shall be wet cleaned/HEPA vacuumed, as appropriate, after each shift change and a meal break.
- g. Excessive water accumulation or flooding in the work area shall require work to stop until the water is collected and disposed of properly.

### 3.02.8 ACM WASTE DISPOSAL

- A. The Contractor shall package, label, and remove all ACM waste from the work area in accordance with New Jersey DEP regulations, all other applicable regulations, and as specified below. Packaging shall be accomplished in a manner that minimizes waste volume but ensures waste containers shall not tear or break.
- B. ACM wastes may include building materials, insulation, disposable clothing and protective equipment, plastic sheeting and tape, exhaust systems or vacuum filters, contractor equipment, or other materials designated by state or local authorities which have been potentially contaminated with ACM and have not been fully cleaned.
- C. Waste Labeling
- a. Warning labels, having waterproof print and permanent adhesive in compliance with OSHA, EPA, and NJDEP/DOT requirements shall be affixed to or printed on the sides of all waste bags or transfer containers. Warning labels shall be conspicuous and legible, and contain the following words:

**DANGER  
CONTAINS ASBESTOS FIBERS  
AVOID CREATING DUST  
CANCER AND LUNG DISEASE HAZARD**

- b. In compliance with NESHAP, 40 CFR, Part 61.150, all waste containers or bags shall be labeled with the following generator information:
- Name of the waste generator
  - Location of where waste was generated
- D. Wetting of Waste: A fine water spray shall be used to keep the top layers of waste in containers thoroughly wet at all times. When a waste bag is full, air within the bags shall be evacuated with a HEPA equipped vacuum and be securely sealed with tape or other secure fastener.
- E. Decontamination of Fiber Drums: The Contractor's use and decontamination of fiber drums shall be in accordance with all applicable codes and regulations.
- F. Waste Container Storage: The container used for the storage of bagged contaminated waste shall be an enclosed dumpster. The dumpster shall have a solid metal roof, solid metal door with a padlock. As a minimum, line the cargo area with two layers of 6-mil polyethylene sheeting to prevent contamination from damaged or leaking containers. Floor sheeting shall be installed first and shall extend up the sidewall 24 inches minimum. Wall sheeting shall be overlapped and taped securely into place. No unbagged contaminated waste or non-ACM waste shall be stored in these dumpsters. Ensure that bags placed in dumpsters are undamaged. Warning signs shall be posted on the Dumpster in accordance with Sections 29 CFR 1926.1101 (k) (1) of the OSHA regulations.
- G. Waste Removal Scheduling: All waste containers shall be decontaminated and removed from the Property before final cleanup is started and exclusion zone barriers are taken down.
- H. Waste Transportation and Disposal

- a. It is the responsibility of the Contractor to determine and ensure that the Contractor and his/her subcontractors comply with 1) current waste handling regulations and 2) the current regulations for transporting and disposing waste at the ultimate disposal landfill. The Contractor must comply fully with these regulations, and with all U.S. Department of Transportation, State, local, and EPA requirements.
- b. The Contractor's waste hauler and disposal contractor shall maintain a valid hazardous waste transporter's permit and identification number; and obtain complete, and fully comply with any other local hazardous waste manifesting requirements.
- c. Exercise care before and during transport to ensure that no unauthorized persons have access to the containerized ACW.
- d. Do not transport ACW on open trucks. Treat and dispose of drums that have been contaminated as asbestos-containing waste.
- e. A copy of ACW manifest forms shall be sent to the Owner after each disposal is completed and all required data and signatures have been inserted.
- f. The Contractor shall return the original Disposal Certificate (landfill receipt) to the Owner within 10 working days of waste shipment from the Property.

### 3.02.9 ALTERNATE WORK PRACTICES

- A. The Contractor shall submit an application for alternate work practices to the Owner or Owner's engineers, and the NJ-DOL as applicable for any alterations, modifications or non-conforming methods intended for ACM removal. The Owner and the NJ-DOL may or may not approve proposed alternative work procedures. The alternative procedures shall be submitted in writing and in advance for review and shall provide equivalent or a greater measure of ACM emission control.

### 3.02.10 AIR MONITORING

#### A. General

The Contractor shall perform all required personal OSHA air monitoring and provide final clearance including visual inspection and air testing. Final clearances shall conform to re-occupancy criteria required by regulations. No individual shall reoccupy the work area of an ACM abatement project within a facility until compliance with the re-occupancy requirements is achieved.

#### B. Personal OSHA Monitoring

- a. The Contractor is solely responsible for performing personal air monitoring as specified by the OSHA 29 CFR 1926.1101 and the OSHA Respiratory Protection Standard 29 CFR 190.34.
- b. A minimum of 20% of all workers in each working category (i.e., gross removal, final clearance, etc.) must be monitored each day of ACM removal activities.

- c. Phase Contrast Microscopy in accordance with NIOSH 7400 shall be used to analyze personal air samples. The Contractor shall arrange and pay for all the costs of the testing. Laboratories used shall be currently enrolled in the American Industrial Hygiene Association Proficiency Analytical Testing Program or an equivalent recognized program.
- d. Results of all OSHA monitoring shall be provided to the Owner within 24 hours after collection of the samples. Work may not be allowed to resume until the Owner receives OSHA monitoring results in a timely fashion.

#### C During Air Sampling

- a. Contingency plan during abatement shall be implemented as described below. These are the minimum requirements that shall be enforced on an asbestos project. These requirements shall not limit the on site Monitor from instituting additional requirements, if necessary, for the prevention of asbestos release.
- b. If the pressure differential drops below 0.01 inches w.c. (*where applicable*) the following procedures shall be implemented:
  - The Contractor shall cease abatement activity in the work area.
  - The Project Monitor and the Contractor supervisor shall investigate and evaluate the engineering controls and determine the source of the pressure loss.
  - The Contractor shall institute corrective action such as additional sealing, critical barrier maintenance and construction, changing of exhaust unit filters, adjustment of make-up air, operation of additional exhaust units or other necessary measures to re-establish an acceptable pressure differential.
- c. If the fiber levels outside the work area exceed 0.01 f/cc criterion, the following procedures shall be implemented:
  - The Project Monitor and the Contractor supervisor shall investigate and evaluate the engineering controls to determine the source of the high air level.
  - An additional set of split samples shall be collected. If the result of the air samples is less than or equal to 0.01 f/cc the no further actions are necessary. If the result of the air sample exceeds 0.01 f/cc criteria, the Contractor, in consultation with the on site Project Monitor, shall choose the option of cleaning and retesting by PCM analysis or analyzing the split sample by TEM analysis. If the result of the TEM analysis exceeds 70 structures per square millimeter, cleaning activities shall be conducted.
  - The decision as to the timing of the cleaning activity shall be made by the on site Project Monitor in consultation with the building Owner/Site Representative and the Contractor.
  - Cleaning shall include, but not be limited to, wet wiping, HEPA vacuum, and misting the air. Cleaning the affected area shall be continued outside of abatement work zone and PCM sampling shall also be continued until the result in the area is equal to or less than 0.010 f/cc by either PCM or TEM analysis.

#### D. Post-Abatement Clearance Criteria and During Abatement Air Sampling

The Contractor shall request the Monitor to conduct final inspection upon completion of each ACM Exclusion Zone work Area.

- a. This final inspection shall include a thorough visual inspection of the worksite and clearance air monitoring. A sufficient number of air samples shall be taken to be representative of the work area. The Monitor retained by the Owner shall perform the final clearance visual inspection.
- b. The pumps shall be calibrated before and after the sample is collected.
- c. For abatement actions greater than or equal to 160 square feet (SF), or greater than or equal to 260 linear feet (LF), clearance air sampling shall be conducted using Transmission Electron Microscopy (TEM) in accordance with 40 CFR 763.90(I)(3) and (4). For abatement actions, less than 250 LF/160 SF, collect five (5) air samples in each work area, which may be analyzed using NIOSH 7400 methodology.
- d. During the abatement, air samples may be analyzed using PCM, in accordance with NIOSH method 7400.
- e. Collect one sample for every 10,000 square feet of work area, with a minimum of five samples.
- f. At a minimum, collect air samples at the following locations:
  - Cleanroom, workers decontamination unit
  - Holding area, Waste decontamination unit
  - Within 5 feet of critical barrier(s)
- g. If the results of outside air samples exceed the 0.01f/cc criterion, work shall be halted and a contingency plan implemented to identify and rectify the source of emission.

#### E. Monitoring During the Abatement

The State of New Jersey does not require that pre-demolition, non-Subchapter 8 work have air monitoring conducted during the course of the ACM abatement. However, it is recommended that all phases of ACM abatement be monitored either full-time or on a part-time basis in order to ensure the Contractor's compliance with the applicable State, Federal and local regulations and requirements and protect the Client from any unforeseen liabilities.

#### 3.02.11. CONTINGENCY PLAN

##### A. Security shall be required as follows:

In high-risk areas, the Contractor shall provide a 24-hour security guard to ensure protection against damage or vandalism to separation barriers, engineering systems, monitoring devices, or other equipment.

#### 3.02.12 POST-PROJECT CLOSE-OUT

- A. The Contractor shall provide all required documentation as required by this specification once his/her work is complete, final clearances passed and asbestos waste disposed of. This should include, but not limited to, a bound copy of the daily log containing log of daily work activities, containment entry/exit logs, copy of recording manometer charts, waste shipment records, personal air monitoring laboratory reports, and chain-of-custody documentation, and project

completion certificate. Final payment shall not be made to the Contractor until all required documentation is submitted and verified.

- B. The Contractor shall remove all equipment, tools, materials, and waste generated off the Property once all work is completed and approved by the Owner or Owner's Representative.

### 3.02.13 DEFINITIONS

The following general definitions are for terms that may be utilized or implied within this specification.

**Adequately Wetted** - "Adequately wetted" means sufficiently mixed or coated with water, amended water or an aqueous solution; or the use of a removal encapsulant to prevent dust emissions.

**Air Exhaust (negative pressure) System** - A portable, powered, local exhaust system equipped with HEPA filtration, capable of maintaining constant low-velocity air flow into the contaminated work area from adjacent, uncontaminated areas and capable of maintaining negative static air pressure under maximum filter load with respect to adjacent, uncontaminated areas.

**Ambient Air Monitoring** - "Ambient air monitoring" shall mean measurement or determination of airborne asbestos fiber concentrations outside but in the general vicinity of the work site.

**Amended Water** - "Amended water," means water to which a chemical wetting agent or removal encapsulant has been added to improve penetration.

**Area Air Sampling** - "Area air sampling" shall mean any form of air sampling or monitoring where the sampling device is placed at some stationary location.

**Asbestos** - "Asbestos" means the asbestos form varieties of actinolite, amosite, anthophyllite, chrysotile, crocidolite, and tremolite.

**Asbestos Abatement** - "Asbestos abatement" means the removal, encapsulation, enclosure, renovation, repair, demolition or other disturbance of asbestos-containing materials.

**Asbestos Abatement Project** - "Asbestos abatement project" means any asbestos abatement performed within a facility involving more than three (3) linear feet or three (3) square feet of asbestos-containing material.

**Asbestos Abatement Worker** - "Asbestos abatement worker" means any employee of an asbestos contractor who engages in asbestos abatement.

**Asbestos Abatement Site Supervisor** - "Asbestos Abatement Site Supervisor" means any individual who is employed or engaged by an asbestos contractor to supervise an asbestos abatement project.

**Asbestos-Containing Material** - "Asbestos-containing material" (ACM) means material composed of asbestos of any type and in an amount greater than one percent by weight, either alone or mixed with other fibrous or non-fibrous material.

**Asbestos-Containing Waste** - "Asbestos-containing waste" (ACW) shall mean asbestos-containing material that has been accumulated during-abatement activities as well as asbestos-contaminated objects requiring disposal as ACW.

**Asbestos Exclusion Zone** - "Where co-mingled or other asbestos-containing material (ACM) has been delineated and loading of such material into lined containers or other direct impact is required, asbestos air concentration values are subject to evaluation; these areas shall be segregated from general site/property areas using temporary fencing with asbestos hazard signage and/or asbestos hazard tape; these areas require asbestos PPE, asbestos handler or other license(s).

**Authorized Asbestos Disposal Facility** - "Authorized Asbestos Disposal Facility" means a location licensed for handling and disposing of asbestos waste and approved by the Owner or Owner's representative.

**Authorized Visitor** - "Authorized visitor" shall mean the Owner and his/her representative, and any representative of a regulatory or other agency having jurisdiction over the project.

**Certificate of Completion** - A Certificate of Completion shall mean the document issued by the Contractor signifying that the asbestos has been removed from the building in conformance with applicable regulations.

**Clean Room** - "Clean room" shall mean an uncontaminated area or room, which is parts of the worker decontamination enclosure system with provisions for storage of workers' street clothes and clean protective equipment.

**Clearance Air Monitoring** - "Clearance air monitoring" shall mean the employment of aggressive sampling techniques with a volume of air collected to determine the airborne concentration of residual fibers, and shall be performed as the final abatement related activity.

**Contractor** - A Contractor means any person or entity, engaged in asbestos abatement work and is licensed by the New Jersey Department of Labor as an asbestos abatement contractor.

**Construction Permit for Asbestos Abatement** - A Construction permit for asbestos abatement means required official approval to commence any asbestos hazard abatement project. This permit is issued by the enforcing agency.

**Critical Barrier** - A Critical barrier means two layers of nominal six mil polyethylene sheeting that completely seals off the work area to prevent the distribution of fibers to the surrounding area, such as the opening between the top of a wall and the underside of ceiling construction, electrical outlets, non-removable lights, HVAC systems, windows, doorways, entranceways, ducts, grilles, grates, diffusers, wall clocks, speaker grilles, floor drains, sink drains, etc.

**Decontamination Unit** - A Decontamination unit means a serial arrangement of rooms or spaces for the purpose of separating the work area from the building environment upon entering the work area and for the cleaning of persons, equipment, and contained waste prior to returning to the clean environment.

**Demolition** - "Demolition" means the wrecking or taking out of any load-supporting structural member of a facility and any related razing, removing or stripping of a building.

**DOT** - "DOT" means the New Jersey Department of Transportation.

**Emergency Asbestos Abatement Project** - "Emergency Asbestos Abatement Project" - means an asbestos abatement project, which was not planned but results from a sudden unexpected event. This includes operations required by non-routine failures of equipment.

**Employee** - An Employee means an asbestos abatement worker having a valid work permit, issued by the New Jersey Department of Labor and employed by the Contractor.

**Encapsulation** - A Encapsulation means the treatment of asbestos-containing materials, with a material that surrounds or embeds asbestos fibers in an adhesive matrix to prevent the release of fibers, as the encapsulant creates a membrane over the surface (bridging encapsulant) or penetrates the material and binds its components together (penetrating encapsulant).

**Enclosure** - Enclosure means the construction of an airtight, impermeable, permanent barrier around asbestos-containing material to control the release of asbestos fibers into the air.

**Engineering Controls** - Engineering Controls - means all methods used to maintain low fiber counts in work areas including, but not limited to, air management, barriers to ensure public safety and methods to confine airborne asbestos fibers to the work area.

**EPA** - "EPA" means the U.S. Environmental Protection Agency.

**Equipment Room** - "Equipment room" shall mean a contaminated area or room which is part of the worker decontamination enclosure system used for the storage of contaminated clothing and equipment.

**Flame-Resistant Polyethylene Sheet** - Flame-Resistant Polyethylene Sheet - means a single polyethylene film in the largest sheet size possible to minimize seams, nominal six mils thick, conforming to requirements set forth by the National Fire Protection Association Standard 701, Small Scale Fire Test for Flame-Resistant Textiles and Films.

**Friable Asbestos-Containing Material** - "Friable asbestos-containing material" means any asbestos-containing material that hand pressure can crumble, pulverize, or reduce to powder when dry and non-friable asbestos-containing material that potentially can be broken, crumbled, pulverized or reduced to powder as a result of asbestos abatement.

**Glove Bag** - "Glove Bag" means a manufactured polyethylene bag type of enclosure with built-in gloves, such as is placed with an air-tight seal around asbestos-containing material and which permits the asbestos-containing material contained by the bag to be removed without releasing asbestos fibers to the atmosphere.

**HEPA Filter** - "HEPA filter" shall mean a high-efficiency particulate air filter capable of trapping and retaining 99.97 percent of particles (asbestos fibers) greater than 0.3 micrometers mass median aerodynamic equivalent diameter.

**HEPA Vacuum Equipment** - "HEPA vacuum equipment" shall mean vacuuming equipment with a high-efficiency particulate air filter capable of trapping and retaining 99.97 percent of particles (asbestos fibers) greater than 0.3 micrometers in mass median aerodynamic equivalent diameter.

**Holding area** - "Holding area" shall mean a chamber in the equipment decontamination enclosure located between the washroom and an uncontaminated area.

**Individual** - "Individual" means any human being.

**Movable Object** - "Movable object" shall mean a unit of equipment or furniture in the work area which can be removed from the work area.

**MSHA** - "MSHA" shall mean the Mine Safety and Health Administration

**NESHAP** - "NESHAP" shall mean the National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61).

**NIOSH** - "NIOSH" shall mean the National Institute for Occupational Safety and Health 4676 Columbia Parkway, Cincinnati, OH 45226.

**Non-Friable Asbestos-Containing Material** - "Non-Friable Asbestos-Containing Material" means any asbestos-containing material that hand pressure cannot crumble, pulverize or reduce to powder when dry.

**OSHA** - "OSHA" means the Occupational Safety and Health Administration of the U.S. Department of Labor.

**Person** - "Person" means any individual, corporation, partnership, firm, association, sole proprietorship, the State of New Jersey or any of its political sub-divisions, or any other entity.

**Personal Protective Equipment** - "Personal protective equipment" (PPE) shall mean appropriate protective clothing, gloves, eye protection, footwear; headgear and approved respiratory protection.

**Phase Contrast Microscopy** - "Phase Contrast Microscopy" (PCM) shall mean the measurement protocol for the assessment of the fiber content of air by NIOSH Method 7400.

**Polarized Light Microscopy** - "Polarized Light Microscopy" (PLM) shall mean the measurement protocol for the assessment of the asbestos content of bulk materials by Interim Method for the Determination of Asbestos form Materials in Bulk Insulation Samples-40 CFR Part 763, Subpart F, Appendix A as amended on September 1, 1982.

**Qualitative Fit Test** - "Qualitative fit test" shall mean the individual test subject's responding, either voluntarily or involuntarily, to a chemical challenge outside the respirator facepiece.

**Quantitative Fit Test** - "Quantitative fit test" shall mean exposing the respirator wearer to a test atmosphere containing an easily detectable, non-toxic aerosol, vapor or gas as the test agent. Instrumentation, which samples the test atmosphere and the air inside the facepiece of the respirator, is used to measure quantitatively the leakage into the respirator.

**Removal** - "Removal" means the taking out or stripping of any asbestos-containing materials from surfaces or structural components of a facility and proper and legal disposal of such material.

**Renovation** - "Renovation" means altering, in any way other than demolition, one or more structural components. Operations in which load-supporting structural members are taken out are excluded.

**Repair** - "Repair" means the restoration of damaged asbestos-containing material; including but not limited to the sealing, patching, enclosing or encapsulating or damaged asbestos-containing material to prevent fiber release.

**Shower Room** - "Shower room" shall mean a room between the cleanroom and the equipment room in the worker decontamination enclosure with hot and cold running water controllable at the tap and arranged from complete showering during decontamination.

**Spot Repair** - "Spot Repair" means any asbestos abatement performed within a facility involving not more than three (3) linear feet or three (3) square feet of asbestos-containing material.

**Structural Component** - "Structural Component" means any pipe, duct, boiler, tank, reactor turbine, furnace or other components at or in a facility or any structural member of a facility.

**Structural Member** - "Structural member" means any load-supporting member of a facility such as beams and load-supporting walls.

**Surface Barriers** - "Surface barriers" shall mean the plasticizing of walls, floors, and fixed objects within the work area to prevent subsequent contamination from abatement work.

**Surfactant** - "Surfactant" shall mean a chemical wetting agent added to water to improve penetration.

**Transmission Electron Microscopy (TEM)** - "Transmission Electron Microscopy (TEM)" shall mean the measurement protocol for the assessment of the asbestos fiber content of air by Interim Transmission Electron Microscopy Analytical Methods-40 CFR Part 763, Subpart E, Appendix A.

**Universal Waste** - "Other regulated waste (fuel oil, batteries, etc.) that has to be further segregated from debris and asbestos waste streams.

**Visible Emissions** - "Visible emissions" shall mean any emissions containing particulate material that are visually detectable without the aid of instruments.

**Visible Residue** - "Visible residue" means any debris or dust on surfaces in areas within the enclosed work area where asbestos abatement has taken place and which is visible to the unaided eye. All visible residues are assumed to contain asbestos.

**Washroom** - "Washroom" shall mean a room between the work area and the holding area in the equipment decontamination enclosure system where equipment and waste containers are wet cleaned and/or HEPA vacuumed prior to disposal.

**Waste Decontamination Enclosure System** - "Waste decontamination enclosure system" shall mean the decontamination enclosure system designated for the controlled transfer of materials and equipment, consisting of a washroom and a holding area.

**Water Column (W.C.)** - W.C. shall mean a unit of measurement for pressure differential.

**Wet Cleaning** - "Wet cleaning" shall mean the removal of asbestos fibers from building surfaces and objects by using cloths, mops, or other cleaning tools that have been dampened with amended water.

**Wet Methods** - "Wet methods" shall mean the use of amended water or removal encapsulant to minimize the generation of fibers during ACM disturbance.

**Work Area** - "Work area" means the specific area or location where the actual asbestos abatement work is being performed or such other areas of a facility which may be hazardous to public health as a result of such asbestos abatement.

**Worker** - "Worker" shall mean asbestos handler and/or asbestos handler supervisor.

**Worker Decontamination Enclosure System** - "Worker decontamination enclosure system" shall mean that portion of a decontamination enclosure system designed for controlled passage of workers, and other individuals and authorized visitors, consisting of a clean room, a shower room, and an equipment room separated from each other and from the work area by airlocks and curtained doorways.

### Abatement Notes:

- Since the subject building is associated with a County facility N.J.A.C. 5:23 Subchapter 8 requirements could apply and be enforced by the on-site Asbestos Safety Technician (AST) working for an Asbestos Safety Control Monitoring (ASCM) firm (non-occupied building status 5.23-8.19) - See notes on job classification, provide pricing for both options.
- The Subject structure/building "Elizabethtown Parking Garage" to remain unoccupied during the abatement period (maintenance/plumber/electrician are exempt). Adjoining New Annex to remain occupied.
- The objective of the project is to perform 100% removal of all ACM in the Parking Garage prior to demolition, with possible removal of expansion joint ACM during demolition (NJDOA or NJDOL variation likely required).
- Abatement Contractor to establish a safe work zone perimeter. Once established and demolition work commences, only license/trained personnel are permitted to enter the work zone(s).
- Work includes necessary selective demolition and protective measures required to access and remove ACM and maintain a safe working environment. Abatement of asbestos-containing materials that are being facilitated by selective demolition, may require NJDOA or NJDOL Variance approval. The Contractor shall be responsible for the preparation, submittal, and including all filing fees associated with any Site-Specific Variances.
- Use of PPE is required at all times when entering and/or entering the worksite.
- (ACM stucco and SOFP throughout 7<sup>th</sup> floor on beams/decks/columns except where patched) Because the Parking Garage is exposed to open air, extensive abatement containment wall building will be required to achieve negative pressure for ACM stucco removal. The 7<sup>th</sup> floor SOFP/ACM abatement areas are currently enclosed.
- Related to use of the upper floor of the parking garage structure as juvenile prison space, there is a solid continuous metal ceiling above the sheetrock ceiling that has to be cut to access ACM for abatement (exact thickness unknown).
- (Saw or torch cutting of 7<sup>th</sup> floor metal prison ceiling) - Due to very limited viewing of the concealed metal ceiling, additional probe cuts and/or selective demolition is required to determine if lead-based paint (LBP) potentially exists, where pre-stripping of cut points could be required for "OSHA Lead in Construction Standard (21 CFR 1926.62) compliance.
- Exterior façade/soffits and/or other components to be checked for additional ACM SOFP including stucco, vapor barrier, or other concealed behind slab edges where they meet columns and/or other locations. Selective exterior/interior façade demolition will likely be required to access all concealed ACM.
- (ACM Expansion Joints) - Because ACM expansion joint material is not fully accessible (jammed between façade sections) full removal of this material may have to be conducted during structural demolition phase(s).
- (Vertical Enclosed Mechanical Chases on 7<sup>th</sup> floor) - Enclosed mechanical chases with ACM/TSI and ACM SOFP were identified on the 7<sup>th</sup> floor (see prison cell layout drawings with chase highlighted).
- (Tracing of MEP down from 7<sup>th</sup> floor prison floor through parking garage levels to basement) Because the parking is not heated or cooled, it is most likely that utilities were routed from the basement to the 7<sup>th</sup> floor prison level via large single or double shafts (7<sup>th</sup> floor vertical chases not traced down through 1-6).
- (Layered Roof Membranes) - Up to six (6) layers of non-ACM roof field with positive ACM roof flashing - two (interior) roof top prison Girls and Boys courtyard areas not accessible during asbestos survey still requires testing.
- Once abatement is completed, the Demolition Contractor can proceed with the removal of Universal Waste and demolition of the structure/building.
- Once verified that no suspect ACM remaining, Demolition Contractor to then proceed with demolition activities.

## Abatement Notes:

- Since the subject building is associated with a County facility N.J.A.C. 5:23 Subchapter 8 requirements could apply and be enforced by the on-site Asbestos Safety Technician (AST) working for an Asbestos Safety Control Monitoring (ASCM) firm (non-occupied building status 5.23-8.19) - See notes on job classification, provide pricing for both options.
- The Subject structure/building "Elizabethtown Parking Garage" to remain unoccupied during the abatement period (maintenance/plumber/electrician are exempt). Adjoining New Annex to remain occupied.
- The objective of the project is to perform 100% removal of all ACM in the Parking Garage prior to demolition, with possible removal of expansion joint ACM during demolition (NJDEA or NJDOL variation likely required).
- Abatement Contractor to establish a safe work zone perimeter. Once established and demolition work commences, only license/trained personnel are permitted to enter the work zone(s).
- Work includes necessary selective demolition and protective measures required to access and remove ACM and maintain a safe working environment. Abatement of asbestos-containing materials that are being facilitated by selective demolition, may require NJDEA or NJDOL Variance approval. The Contractor shall be responsible for the preparation, submittal, and including all filing fees associated with any Site-Specific Variances.
- Use of PPE is required at all times when entering and/or entering the worksite.
- (ACM stucco and SOFP throughout 7<sup>th</sup> floor on beams/decks/columns except where patched) Because the Parking Garage is exposed to open air, extensive abatement containment wall building will be required to achieve negative pressure for ACM stucco removal. The 7<sup>th</sup> floor SOFP/ACM abatement areas are currently enclosed.
- Related to use of the upper floor of the parking garage structure as juvenile prison space, there is a solid continuous metal ceiling above the sheetrock ceiling that has to be cut to access ACM for abatement (exact thickness unknown).
- (Saw or torch cutting of 7<sup>th</sup> floor metal prison ceiling) - Due to very limited viewing of the concealed metal ceiling, additional probe cuts and/or selective demolition is required to determine if lead-based paint (LBP) potentially exists, where pre-stripping of cut points could be required for "OSHA Lead in Construction Standard (21 CFR 1926.62) compliance.
- Exterior façade/soffits and/or other components to be checked for additional ACM SOFP including stucco, vapor barrier, or other concealed behind slab edges where they meet columns and/or other locations. Selective exterior/interior façade demolition will likely be required to access all concealed ACM.
- (ACM Expansion Joints) - Because ACM expansion joint material is not fully accessible (jammed between façade sections) full removal of this material may have to be conducted during structural demolition phase(s).
- (Vertical Enclosed Mechanical Chases on 7<sup>th</sup> floor) - Enclosed mechanical chases with ACM/TSI and ACM SOFP were identified on the 7<sup>th</sup> floor (see prison cell layout drawings with chase highlighted).
- (Tracing of MEP down from 7<sup>th</sup> floor prison floor through parking garage levels to basement) Because the parking is not heated or cooled, it is most likely that utilities were routed from the basement to the 7<sup>th</sup> floor prison level via large single or double shafts (7<sup>th</sup> floor vertical chases not traced down through 1-6).
- (Layered Roof Membranes) - Up to six (6) layers of non-ACM roof field with positive ACM roof flashing - two (interior) roof top prison Girls and Boys courtyard areas not accessible during asbestos survey still requires testing.
- Once abatement is completed, the Demolition Contractor can proceed with the removal of Universal Waste and demolition of the structure/building.
- Once verified that no suspect ACM remaining, Demolition Contractor to then proceed with demolition activities.

Drawing #: 04 of 09

# 4TH FLOOR (TYPICAL LAYOUT FLOORS 2-6)

### Abatement Notes:

1. Since the subject building is associated with a County facility N.J.A.C. 5:23 Subchapter 8 requirements could apply and be enforced by the on-site Asbestos Safety Technician (AST) working for an Asbestos Safety Control Monitoring (ASCM) firm (non-occupied building status 5.23-8.19) - See notes on job classification, provide pricing for both options.
2. The Subject structure/building "Elizabethtown Parking Garage" to remain unoccupied during the abatement period (maintenance/plumber/electrician are exempt), Adjoining New Annex to remain occupied.
3. The objective of the project is to perform 100% removal of all ACM in the Parking Garage prior to demolition, with possible removal of expansion joint ACM during demolition (NJCA or NJDOL variation likely required).
4. Abatement Contractor to establish a safe work zone perimeter. Once established and demolition work commences, only license/trained personnel are permitted to enter the work zone(s).
5. Work includes necessary selective demolition and protective measures required to access and remove ACM and maintain a safe working environment. Abatement of asbestos-containing materials that are being facilitated by selective demolition, may require NJCA or NJDOL Variance approval. The Contractor shall be responsible for the preparation, submittal, and including all filing fees associated with any Site-Specific Variances.
6. Use of PPE is required at all times when entering and/or entering the worksite.
7. (ACM stucco and SOFP throughout 7<sup>th</sup> floor on beams/decks/columns except where patched) Because the Parking Garage is exposed to open air, extensive abatement containment wall building will be required to achieve negative pressure for ACM stucco removal. The 7<sup>th</sup> floor SOFP/ACM abatement areas are currently enclosed.
8. Related to use of the upper floor of the parking garage structure as juvenile prison space, there is a solid continuous metal ceiling above the sheetrock ceiling that has to be cut to access ACM for abatement (exact thickness unknown).
9. (Saw or torch cutting of 7<sup>th</sup> floor metal prison ceiling) - Due to very limited viewing of the concealed metal ceiling, additional probe cuts and/or selective demolition is required to determine if lead-based paint (LBP) potentially exists, where pre-stripping of cut points could be required for "OSHA Lead in Construction Standard (21 CFR 1926.62) compliance.
10. Exterior façade/soffits and/or other components to be checked for additional ACM SOFP including stucco, vapor barrier, or other concealed behind slab edges where they meet columns and/or other locations. Selective exterior/interior façade demolition will likely be required to access all concealed ACM.
11. (ACM Expansion Joints) - Because ACM expansion joint material is not fully accessible (jammed between façade sections) full removal of this material may have to be conducted during structural demolition phase(s).
12. (Vertical Enclosed Mechanical Chases on 7<sup>th</sup> floor) - Enclosed mechanical chases with ACM/TSI and ACM SOFP were identified on the 7<sup>th</sup> floor (see prison cell layout drawings with chase highlighted).
13. (Tracing of MEP down from 7<sup>th</sup> floor prison floor through parking garage levels to basement) Because the parking is not heated or cooled, it is most likely that utilities were routed from the basement to the 7<sup>th</sup> floor prison level via large single or double shafts (7<sup>th</sup> floor vertical chases not traced down through 1-6).
14. (Layered Roof Membranes) - Up to six (6) layers of non-ACM roof field with positive ACM roof flashing - two (interior) roof top prison Girls and Boys courtyard areas not accessible during asbestos survey still requires testing.
15. Once abatement is completed, the Demolition Contractor can proceed with the removal of Universal Waste and demolition of the structure/building.
16. Once verified that no suspect ACM remaining, Demolition Contractor to then proceed with demolition activities.

## **DEMOLITION CHECKLIST**

**THE FOLLOWING LIST OF REQUIREMENTS MUST BE MET BEFORE A DEMOLITION PERMIT CAN BE ISSUED:**

- 1) A certification from an ENVIRONMENTAL AGENCY attesting to the status of asbestos disturbance.
- 2) Proof of buried tank removal or closure.
- 3) Proof of disconnection and removal of appurtenances from Water Company.
- 4) Proof of disconnection and removal of appurtenances from Electric Utility Company.
- 5) Proof of disconnection and removal of appurtenances from Gas Company;
- 6) Proof of disconnection and removal of appurtenances from Cable Company and Telephone Company.
- 7) Sewer line must be capped off. (Plumbing Permit Required)
  - a) *Inspection of cap off must be conducted by Plumbing Inspector prior to demolition.*
- 8) Certificate of Abatement for pest control treatment.
  - a) *Compliance certificate must be obtained from the Health & Human Services Department*
- 9) *Neighboring property owners must be notified at least **fourteen (14)** days prior to the commencement of demolition by regular and certified mail. Proof of notification to neighbors is required by this office.*
- 10) *Use of cutting torch – Permit required from Elizabeth Fire Prevention Bureau (908) 820-4040.*
- 11) *Footings, foundations and slabs must be removed and inspected before clean fill is installed.*
- 12) *Site must be left with grade the same as grounding grade.*
- 13) *Must Provide TEMPORARY FENCE surrounding the entire demolition area. Silt fence or bails of straw.*
- 14) *A dumpster must be placed on site during the entire demolition process & removed within 24 hours after completion.*
- 15) *Sidewalks must be kept in safe condition at all times, in the discretion of the Bureau of Construction & must be free of debris and must not hinder or obstruct the pedestrian traffic.*
- 16) *A portable toilet facility must be located on site and maintained in a sanitary condition for the duration of the demolition and must be removed within 24 hours after the completion of the demolition.*

**PHASING NOTES**

**PHASE 1 - INSTALLATION OF NEW WATER SERVICE IN THE EXISTING ANNEX BUILDING**

- INSTALL NEW WATER SUPPLY FROM STREET TIE-IN TO ANNEX BASEMENT.
- INSTALL NEW METER, BACKFLOW PREVENTER AND BOOSTER PUMP IN ANNEX BASEMENT.
- INSTALL NEW WATER MAIN FROM BASEMENT TO PENTHOUSE.
- SHUT OFF ANNEX WATER SERVICE IN GARAGE BASEMENT IN PREPARATION FOR NEW ANNEX SYSTEM TIE-IN.
- DRAIN, DISCONNECT AND CAP EXISTING CITY WATER SUPPLY FROM GARAGE IN CEILING OF ANNEX 4TH FLOOR JURY ROOM.
- DRAIN, DISCONNECT AND CAP EXISTING DHW AND DHWR IN CEILING OF ANNEX 4TH FLOOR JURY ROOM. THIS PIPING PREVIOUSLY SUPPLIED DOMESTIC HOT WATER TO THE GARAGE TOP FLOOR JUVENILE CENTER.
- TIE-IN NEW ANNEX WATER MAIN IN PENTHOUSE AS SHOWN ON ANNEX NEW WATER SERVICE DRAWINGS.

**PHASE 2 - DEMOLITION OF THE EXISTING SKY BRIDGE**

- ONCE ANNEX PIPING MODIFICATIONS ARE COMPLETED, DEMOLISH ALL WATER PIPING UNDER FLOOR OF SKY BRIDGE IN PREPARATION OF DEMOLITION OF STRUCTURE. PIPING INCLUDES DOMESTIC COLD WATER SUPPLY, DOMESTIC HOT WATER SUPPLY, DOMESTIC HOT WATER RETURN AND FIRE PROTECTION WATER SUPPLY.
- ELECTRICAL CONTRACTOR SHALL IDENTIFY AND DISCONNECT ANY INCIDENTAL LINE/LOW VOLTAGE SYSTEMS AND ASSOCIATED EXISTING INFRASTRUCTURE CONTAINED WITHIN THE SKYBRIDGE AND DERIVED FROM THE ANNEX BUILDING. CONTRACTOR SHALL COORDINATE SEALANT OF WALL PENETRATIONS AND SAFE OFF/LABEL IN RESPECTIVE PANELS IN THE ANNEX BUILDING.
- REMOVE ALL HAZARDOUS MATERIAL AND DEMOLISH SKYBRIDGE STRUCTURE IN ITS ENTIRETY AFTER THE DEMOLITION OF ALL THE ITEMS ABOVE.

**PHASE 3 - DEMOLITION OF EXISTING PARKING DECK**

- DEMOLISH ALL EXISTING PLUMBING AND FIRE PROTECTION PIPING AS NOTED ON DRAWING PD-100 "PLUMBING EXISTING GARAGE BASEMENT DEMOLITION PLAN".
- DEMOLISH ALL EXISTING UNDERGROUND ELECTRICAL, FIRE ALARM AND COMMUNICATIONS SYSTEMS AS NOTED ON DRAWING ED-200 "ELECTRICAL EXISTING GARAGE BASEMENT DEMOLITION PLAN".
- REMOVE ALL HAZARDOUS INCLUDING ASBESTOS AS INCLUDED ON THE SPECIFICATIONS.
- DEMOLISH BUILDING STRUCTURE IN ITS ENTIRETY. REFER TO DEMOLITION NOTES ON SHEET AD-100 AND SHEETS AD-101, AD-102, AD-103 AND AD-104 FOR MORE INFORMATION.

**NOTE:**

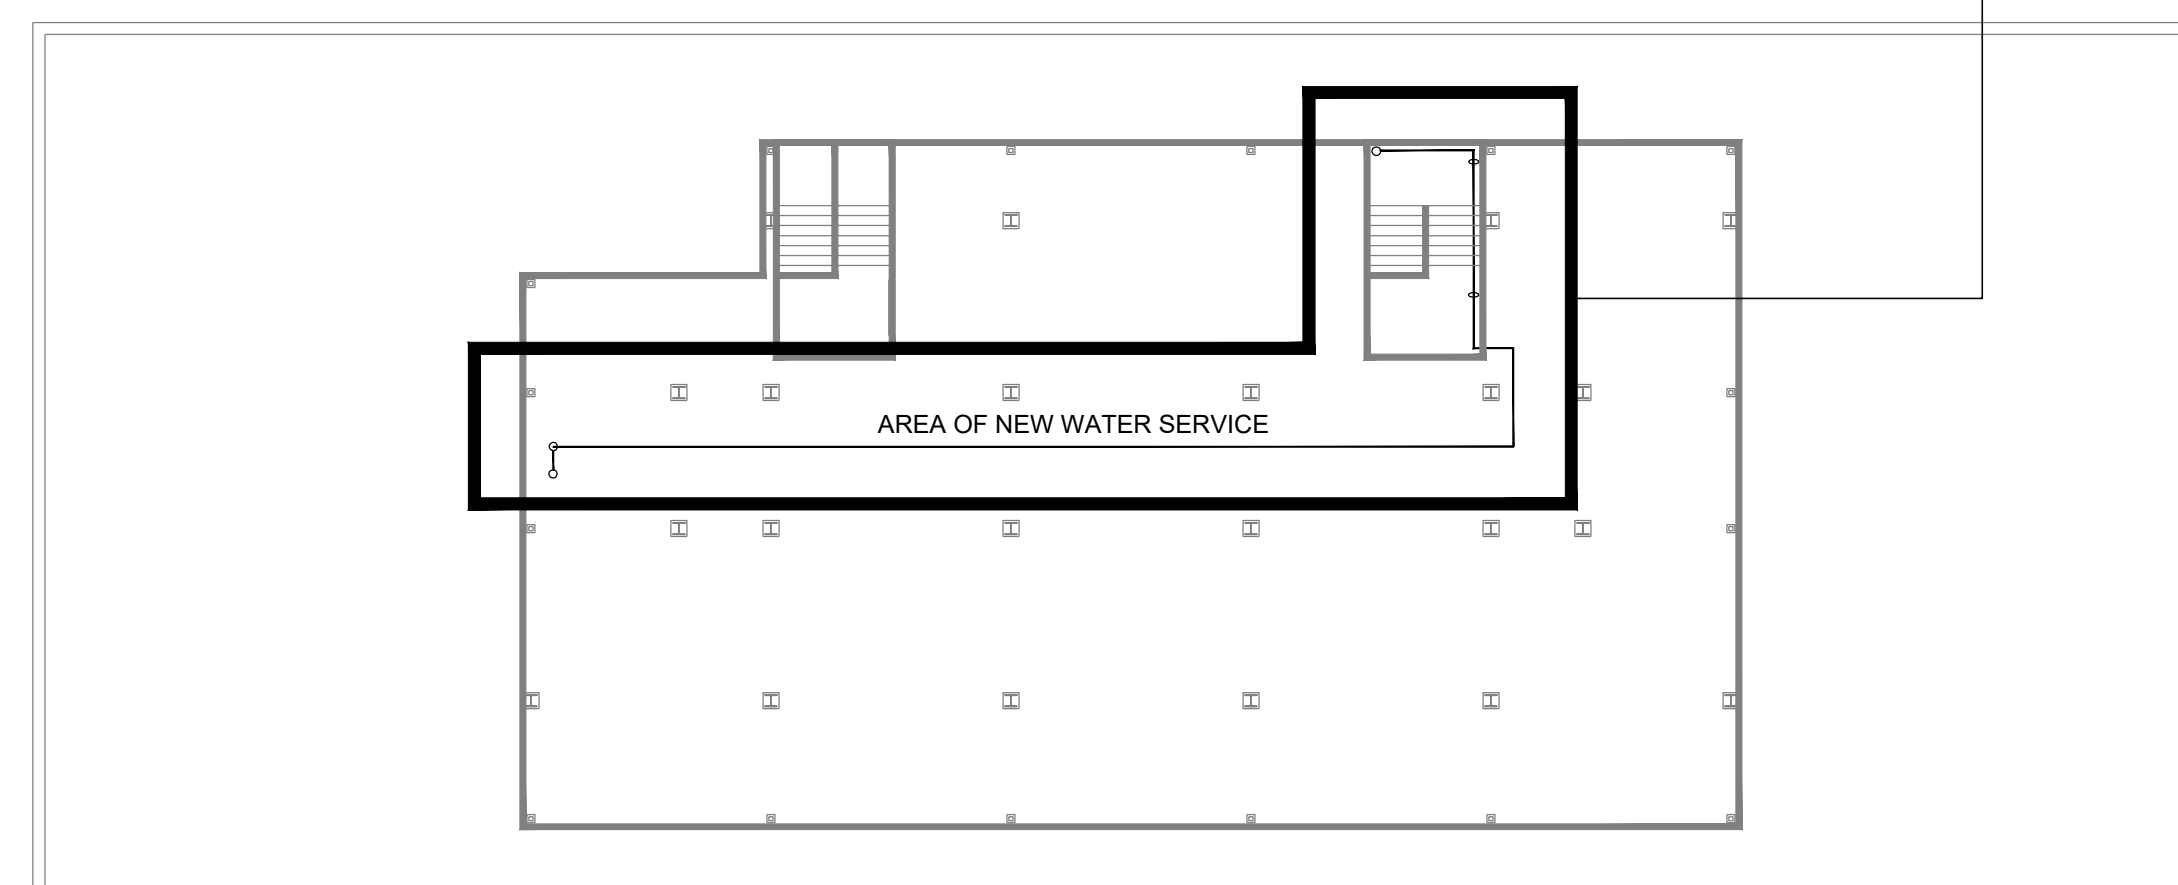

THE WORK SHALL BE PHASED IN ACCORDANCE WITH THE PHASING PLANS AND NOTES. THE CONTRACTOR SHALL NOTIFY THE OWNER AND CONSTRUCTION MANAGER AT LEAST TWO WEEKS IN ADVANCE OF STARTING THE NEXT PHASE. ANY DEVIATION FROM THE PHASING PLANS SHALL BE APPROVED BY THE OWNER AND CONSTRUCTION MANAGER. ALL WORK IN A SPECIFIC PHASE MUST BE ENTIRELY COMPLETED PRIOR TO STARTING THE NEXT PHASE.

### LIST OF PERMITS/APPROVALS REQUIRED

AGENCY	PERMIT / APPROVALS	STATUS
CITY OF ELIZABETH PLANNING BOARD	COURTESY SITE PLAN REVIEW	SUBMITTED
SOMERSET-UNION SOIL CONSERVATION DISTRICT	SOIL EROSION AND SEDIMENT CONTROL CERTIFICATION	TO BE SUBMITTED

### PROPERTY OWNER

UNION COUNTY  
10 ELIZABETHTOWN PLAZA  
ELIZABETH, NJ 07202

### CIVIL ENGINEER / SURVEYOR:

PAULUS SOKOLOWSKI AND SARTOR, LLC  
3 MOUNTAINVIEW ROAD  
WARREN, NJ 07059  
TELEPHONE: (732) 560-9700

**REFERENCE AND BASE INFORMATION NOTES**

1. TOPOGRAPHIC, PLANIMETRIC AND UTILITY INFORMATION SHOWN IS PER PLAN ENTITLED "TOPOGRAPHIC SURVEY" PREPARED BY PS&S LLC., DATED 10/12/2020.

2. HORIZONTAL CONTROL IS BASED ON NEW JERSEY STATE PLANE COORDINATE SYSTEM NAD 83. VERTICAL CONTROL IS BASED ON NAVD 88 DATUM.

3. EXCEPT WHERE SPECIFICALLY NOTED, EXISTING FEATURES ARE SHOWN IN HALF TONE AND PROPOSED FEATURES ARE SHOWN IN FULL TONE.

4. GEOTECHNICAL INVESTIGATION REPORT, PREPARED BY REMINGTON & VERNICK ENGINEERS, DATED DECEMBER 14, 2020.

**GENERAL NOTES**

1. THE OFFICE OF THE MUNICIPAL ENGINEER SHALL BE NOTIFIED IN ADVANCE OF COMMENCEMENT OF CONSTRUCTION OF ANY IMPROVEMENTS UNDER ITS JURISDICTION.

2. CONTRACTOR SHALL COORDINATE UTILITY MARKOUTS 72 HOURS PRIOR TO ANY DISTURBANCE.

3. ALL SOIL EROSION CONTROL MEASURES MUST BE INSTALLED PRIOR TO THE START OF ANY CONSTRUCTION AND ARE SUBJECT TO INSPECTION BY THE LOCAL SOIL CONSERVATION DISTRICT.

4. THE CONTRACTOR SHALL PROVIDE SUCH TEMPORARY DRAINAGE, SOIL EROSION, AND DUST CONTROL MEASURES AS MAY BE DIRECTED BY THE MUNICIPAL ENGINEER OR OTHER AGENCIES OR DEPARTMENTS TO SATISFY ENVIRONMENTAL CONCERNS.

5. THE INSTALLATION OF UTILITIES MUST BE COORDINATED WITH BUILDING IMPROVEMENTS TO ASSURE THE WELL-BEING OF LIFE AND PROPERTY DURING CONSTRUCTION. WATER SERVICE IS A PRIMARY NEED AND MUST BE SCHEDULED ACCORDINGLY. WATER SUPPLY AND HYDRANT CONNECTIONS ARE TO BE ESTABLISHED AS A PRIORITY DURING INITIAL SITE DEVELOPMENT TO ASSURE ADEQUATE WATER FOR FIREFIGHTING DURING ALL PHASES OF CONSTRUCTION.

6. AS INDICATED IN THE "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES" SUFFICIENT CONSTRUCTION WARNING SIGNS ARE TO BE PROVIDED AND MAINTAINED BY CONTRACTORS PERFORMING CONSTRUCTION WORK. SAID SIGNS ARE TO BE MAINTAINED UNTIL CONSTRUCTION IS COMPLETED AND APPROVED BY THE APPROPRIATE MUNICIPAL INSPECTION PERSONNEL. NO CONSTRUCTION THAT IN ANY WAY INTERFERES WITH ROADWAY TRAFFIC SHALL COMMENCE UNTIL THE APPROPRIATE CONSTRUCTION WARNING SIGNS ARE INSTALLED AND INSPECTED BY THE MUNICIPAL ENGINEER. ALL SUCH SIGNAGE, STRIPING, PARKING AND TRAFFIC CIRCULATION SHALL BE IN ACCORDANCE WITH THE "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES", AS AMENDED, AS WELL AS THE REQUIREMENTS OF THE MUNICIPALITY AND NJDOT.

7. CONTRACTOR SHALL COMPLY WITH THE REQUIREMENTS OF THE MUNICIPAL CONSTRUCTION GUIDELINES FOR STREET OPENINGS WITHIN THE PUBLIC RIGHT OF WAY.

8. ALL ROADWAYS ARE TO BE PASSABLE FOR FIRE DEPARTMENT USE DURING CONSTRUCTION. ANY ROADWAY CLOSURE OR RELOCATION SHALL BE COORDINATED BY THE CONTRACTOR WITH THE FIRE DEPARTMENT TO ENSURE ADEQUATE FIRE PROTECTION FOR ALL AREAS AT ALL TIMES. THE CONTRACTOR SHALL BE RESPONSIBLE FOR INSTALLING WARNING SIGNS, BARRICADES, AND ANY AND ALL SAFETY MEASURES AS MAY BE REQUIRED BY LOCAL CODES, OSHA AND/OR MUTCD.

9. LOCATION OF EXISTING INLETS, CATCH BASINS AND MANHOLES MUST BE FIELD VERIFIED BEFORE WORK COMMENCEMENT. ANY CONFLICTING INFORMATION FROM THAT SHOWN SHALL BE BROUGHT TO THE IMMEDIATE ATTENTION OF THE ENGINEER.

10. SUBSTITUTIONS OF PROPRIETARY MATERIAL AND/OR PRODUCT SPECIFICATIONS THAT NOTE "OR EQUAL" MUST BE APPROVED BY THE DESIGN ENGINEER. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO DEMONSTRATE TO THE SATISFACTION OF THE DESIGN ENGINEER THAT THE SUBSTITUTION IS EQUAL.

11. IT IS NOT THE INTENT OF THESE PLANS TO PROVIDE REINFORCING STEEL AND CONCRETE DESIGNS FOR ANY PRE-CAST OR POURED-IN-PLACE CONCRETE STRUCTURES, OTHER THAN THE REINFORCING STEEL AND CONCRETE DESIGNS SPECIFICALLY NOTED ON THESE PLANS. ANY REINFORCING STEEL AND CONCRETE DESIGN MUST BE SUPPLIED, SIGNED & SEALED BY THE PRE-CAST MANUFACTURER OR A RETAILABLE LICENSED STRUCTURAL ENGINEER IN THE STATE OF NEW JERSEY REPRESENTING THE CONTRACTOR AND SHALL BE INCLUDED IN THE SHOP DRAWING SUBMITTAL SUBJECT TO REVIEW BY PS&S.

12. THE CONTRACTOR SHALL PREPARE AS-BUILT DRAWINGS FOR ALL IMPROVEMENTS INSTALLED DURING CONSTRUCTION, ETC. AS-BUILT DRAWINGS MUST BE SIGNED & SEALED BY A NJ PROFESSIONAL LAND SURVEYOR. THE AS-BUILT SURVEY DRAWINGS MUST COMPLY WITH UTILITY OWNER STANDARDS/REQUIREMENTS. COPIES SHALL BE SUBMITTED TO UTILITY COMPANY AND/OR OWNER.

13. ALL CONSTRUCTION SHOWN HEREIN SHALL CONFORM TO THE CITY OF ELIZABETH AND/OR COUNTY OF UNION STANDARDS, CONSTRUCTION DETAILS, AND SPECIFICATIONS APPLICABLE AS WELL AS THE NJDOT STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION, LATEST EDITION, UNLESS SPECIFICALLY NOTED OTHERWISE. IN CASE OF CONFLICT, THE MORE RESTRICTIVE SHALL GOVERN. CONTRACTOR SHALL NOTIFY DESIGN ENGINEER OF ALL CONFLICTS.

14. CONTRACTOR TO REPLACE CONCRETE AROUND UTILITY STRUCTURES AS REQUIRED.

**NOTES ON THE USE OF PLANS**

1. UNLESS THESE DRAWINGS ARE SPECIFICALLY DESIGNATED AS "CONSTRUCTION ISSUE," THESE DRAWINGS OR THE IMPROVEMENTS DEPICTED HEREIN SHALL NOT BE USED FOR CONSTRUCTION. CONTRACTORS SHALL NOTIFY THE DESIGN ENGINEER TO OBTAIN CONSTRUCTION DOCUMENTS.

2. ALL DIMENSIONS MUST BE VERIFIED BY THE CONTRACTOR. NOTIFY PAULUS, SOKOLOWSKI AND SARTOR OF ANY CONFLICTS, ERRORS, AMBIGUITIES OR DISCREPANCIES IN THE CONTRACT DRAWINGS OR SPECIFICATIONS BEFORE PROCEEDING WITH CONSTRUCTION.

3. INFORMATION FOR DESIGN LAYOUT IS CONTAINED SOLELY IN THE WRITTEN DIMENSIONS, BEARINGS, AND ANGLES CONTAINED ON THE DRAWINGS. DO NOT SCALE THE DRAWINGS TO DETERMINE DIMENSIONS..

4. THESE CONTRACT DRAWINGS CONTAIN DATA INTENDED SPECIFICALLY FOR THE NOTED PROJECT AND CLIENT. THEY ARE NOT INTENDED FOR USE ON EXTENSIONS OF THIS PROJECT OR FOR REUSE ON ANY OTHER PROJECT. THE COPYING AND/OR MODIFICATION OF THIS DOCUMENT OR ANY OTHER PORTION THEREOF WITHOUT THE WRITTEN PERMISSION OF PAULUS, SOKOLOWSKI, AND SARTOR IS PROHIBITED.

5. THIS DIMENSIONAL INFORMATION IS NOT WARRANTED NOR SHOULD IT BE CONSIDERED AS COMPLETE FOR EVERY ASPECT OF THE LAYOUT. STANDARD PRACTICE REQUIRES THAT THE LAYOUT PERSON CHECK THE DIMENSIONAL DATA CONSISTENCY AND TO MAKE SURVEY CALCULATIONS WHICH ARE CUSTOMARY FOR CONSTRUCTION LAYOUT. IN THE EVENT A QUESTION OR INCONSISTENCY IS DISCOVERED, THE USER SHOULD IMMEDIATELY NOTIFY THE ENGINEER OF RECORD.

6. THE GRAPHICAL INFORMATION CONTAINED IN ELECTRONIC FILES IS INTENDED AS DRAWING DATA ONLY. IT IS NOT INTENDED TO SERVE AS SURVEY LAYOUT DATA.

7. ALL SITEWORK UTILITIES TO BE INSTALLED BY SITE CONTRACTOR TO A POINT (5) FIVE FEET FROM THE BUILDING STRUCTURE IN ACCORDANCE WITH INDUSTRY STANDARDS UNLESS SPECIFICALLY SHOWN OTHERWISE. SITE CONTRACTOR TO COORDINATE WITH BUILDING TRADES CONTRACTOR TO ENSURE COORDINATION OF UTILITY CONNECTION LOCATIONS AND MATERIAL SPECIFICATIONS. REPORT ANY DISCREPANCIES IMMEDIATELY TO THE ENGINEER OF RECORD.

8. ALL DIMENSIONAL INFORMATION SHOWN HEREON INDICATING BUILDINGS IS BASED UPON FACE OF BUILDING. ROADWAY DIMENSIONS ARE TO INSIDE FACE OF CURBING. ALL SIDEWALK DIMENSIONS ARE TO OUTSIDE FACE OF CURBING.

**STORMWATER POLLUTION PREVENTION PLAN (SPPP) WASTE CONTROL COMPONENT GENERAL NOTES**

1. CONTRACTOR TO STORE ANY PESTICIDES, FERTILIZERS, FUELS, LUBRICANTS, PETROLEUM PRODUCTS, ANTI-FREEZE, PAINTS AND PAINT THINNERS, CLEANING SOLVENTS AND ACIDS, DETERGENTS, CHEMICAL ADDITIVES, AND CONCRETE CURING COMPOUNDS IN SUITABLE SAFE CONTAINERS IN A DRY AND COVERED AREA. CONTRACTOR TO ADHERE TO PRODUCT MANUFACTURERS' DIRECTION REGARDING APPLICATION USES AND METHODS BEING APPLIED.

2. CONTRACTOR SHALL CONFORM TO THE STATE SOLID WASTE MANAGEMENT ACT, N.J.S.A. 13:1E-1 ET SEQ., AND ITS IMPLEMENTING RULES AT N.J.A.C. 7:26, 7:26A, AND 7:26G; THE NEW JERSEY PESTICIDE CONTROL CODE AT N.J.A.C. 7:30; THE STATE LITTER STATUTE (N.J.S.A. 13:1E-99.3); AND OSHA REQUIREMENTS FOR SANITATION AT 29 C.F.R. 1926 FOR SITE BUILDING WASTE MATERIAL AND RUBBLE AND OTHER CONSTRUCTION SITE WASTES, INCLUDING LITTER AND HAZARDOUS AND SANITARY WASTES. CONSTRUCTION SITES SHALL HAVE ONE OR MORE DESIGNATED WASTE COLLECTION AREAS ONSITE AND AN ADEQUATE NUMBER OF CONTAINERS FOR WASTE. STAGED WASTE CONTAINERS SHALL BE MAINTAINED SO AS TO PREVENT WASTE MATERIALS FROM OVERFLOWING, LEAKING, OR BLOWING OUT OF THE CONTAINER. SPILLS, LEAKS, AND OVERFLOWS, WHICH DO OCCUR, SHALL BE CLEANUP IMMEDIATELY.

3. RESPONSIBILITIES OF PERMITTEE OR OWNER REPRESENTATIVE:

a. THE PERMITTEE OR CLIENT REPRESENTED SHALL CONDUCT AND DOCUMENT WEEKLY INSPECTIONS REPORTS OF THE AREAS OF INDUSTRIAL ACTIVITY OR SMALL CONSTRUCTION ACTIVITIES TO IDENTIFY AREAS CONTRIBUTING TO THE STORMWATER DISCHARGE AUTHORIZED BY THIS PERMIT AND EVALUATE WHETHER THE REGULATED ACTIVITIES, IDENTIFIED UNDER THE 563 CONSTRUCTION ACTIVITY STORMWATER NARRATIVE REQUIREMENTS E.T., IS BEING PROPERLY IMPLEMENTED AND MAINTAINED, OR WHETHER ADDITIONAL MEASURES ARE NEEDED FOR THE REGULATED ACTIVITY.

b. IN THE EVENT THAT THE INDUSTRIAL ACTIVITIES OR SMALL CONSTRUCTION ACTIVITIES ON-SITE ARE CEASED OR ARE ANTICIPATED TO CEASE FOR A PERIOD OF SIX (6) MONTHS OR GREATER THE PERMITTEE MAY SEEK A SUSPENSION OF THE ROUTINE INSPECTION REQUIREMENT OF THE PERMIT OR REDUCTION IN FREQUENCY TO MONTHLY WITH THE WRITTEN APPROVAL OF THE SOIL CONSERVATION DISTRICT OFFICE OVERSEEING THE PROJECT ON A FORM PROVIDED BY THE DEPARTMENT.

4. CONSTRUCTION SITE WASTES INCLUDE BUT ARE NOT LIMITED TO THE FOLLOWING:

a. "CONSTRUCTION AND DEMOLITION WASTE," AS DEFINED IN N.J.A.C. 7:26-1.4 AS FOLLOWS: "WASTE BUILDING MATERIAL AND RUBBLE RESULTING FROM CONSTRUCTION, REMODELING, REPAIR, AND DEMOLITION OPERATIONS ON HOUSES, COMMERCIAL BUILDINGS, PAVEMENTS AND OTHER STRUCTURES. THE FOLLOWING ARE EXAMPLES OF MATERIALS THAT MAY BE FOUND IN CONSTRUCTION AND DEMOLITION WASTE: TREATED AND UNTREATED WOOD, FLOORING, TREE PARTS, TREE STUMPS AND BRUSH; CONCRETE, ASPHALT, BRICKS, BLOCKS AND OTHER MASONRY; PLASTER AND WALLBOARD; ROOFING MATERIALS; CORRUGATED CARDBOARD AND MISCELLANEOUS PAPER; FERROUS AND NON-FERROUS METAL; NON-ASBESTOS BUILDING INSULATION; PLASTIC SCRAP; DIRT; CARPETS AND PADDING; GLASS (WINDOW AND DOOR); AND OTHER MISCELLANEOUS MATERIALS; BUT SHALL NOT INCLUDE OTHER SOLID WASTE TYPES."

i. ANY WASTE BUILDING MATERIAL AND RUBBLE RESULTING FROM SUCH OPERATIONS THAT IS HAZARDOUS FOR PURPOSES OF N.J.A.C. 7:26G (THE HAZARDOUS WASTE RULES).

ii. DISCARDED (INCLUDING SPILLED) PESTICIDES, FERTILIZERS, FUELS, LUBRICANTS, PETROLEUM PRODUCTS, ANTI-FREEZE, PAINTS AND PAINT THINNERS, PAINT CHIPS AND SANDBLASTING GRITS, CLEANING SOLVENTS, ACIDS FOR CLEANING MASONRY SURFACES, DETERGENTS, CHEMICAL ADDITIVES USED FOR SOIL STABILIZATION (E.G., CALCIUM CHLORIDE), AND CONCRETE CURING COMPOUNDS.

iii. OTHER "LITTER," AS DEFINED AT N.J.S.A. 13:1E-215.D AS FOLLOWS: "ANY USED OR UNCONSUMED SUBSTANCE OR WASTE MATERIAL WHICH HAS BEEN DISCARDED WHETHER MADE OF ALUMINUM, GLASS, PAPER, RUBBER, PAPER, OR OTHER NATURAL OR SYNTHETIC MATERIAL, OR ANY COMBINATION THEREOF, INCLUDING, BUT NOT LIMITED TO, ANY BOTTLE, JAR OR CAN, OR ANY TOP, CAP OR DETACHABLE TAB OF ANY BOTTLE, JAR OR CAN, ANY UNLIT CIGARETTE, CIGAR, MATCH OR ANY FLAMING OR BLOWING MATERIAL, OR ANY GARBAGE, TRASH, REFUSE, DEBRIS, RUBBISH, GRASS CLIPPINGS OR OTHER LAWN OR GARDEN WASTE, NEWSPAPERS, MAGAZINES, GLASS, METAL, PLASTIC OR PAPER CONTAINERS OR OTHER PACKAGING OR CONSTRUCTION MATERIAL, BUT DOES NOT INCLUDE THE WASTE OF THE PRIMARY PROCESSES OF MINING OR OTHER EXTRACTION PROCESSES, LOGGING, SAWMILLING, FARMING OR MANUFACTURING."

iv. SANITARY SEWAGE AND SEPTAGE.

v. CONTAMINATED SOILS ENCOUNTERED OR DISCOVERED DURING EARTHMOVING ACTIVITIES OR DURING THE CLEANUP OF A LEAK OR DISCHARGE OF A HAZARDOUS SUBSTANCE.

c. SANITARY SEWAGE/SEPTAGE DISPOSAL - DISCHARGES OF RAW SANITARY SEWAGE OR SEPTAGE ONSITE ARE STRICTLY PROHIBITED. ADEQUATE FACILITIES WITH PROPER DISPOSAL SHALL BE PROVIDED AND MAINTAINED ONSITE FOR ALL WORKERS AND OTHER SANITARY NEEDS.

5. SPILLS; DISCHARGES OF HAZARDOUS SUBSTANCES; FEDERALLY REPORTABLE RELEASES.

a. SPILL KITS SHALL BE AVAILABLE ONSITE FOR ANY MATERIALS THAT ARE LISTED IN 4.g.i. ABOVE AND USED OR APPLIED ONSITE. ALL SPILLS OF SUCH MATERIAL SHALL BE CONTAINED AND CLEANED UP IMMEDIATELY. CLEANED UP MATERIALS SHALL BE PROPERLY DISPOSED OF.

b. DISCHARGES OF HAZARDOUS SUBSTANCES (AS DEFINED IN N.J.A.C. 7:1E-1.6) IN CONSTRUCTION SITE WASTES ARE SUBJECT TO THE PROVISIONS OF THE SPILL COMPENSATION AND CONTROL ACT, N.J.S.A. 58:10-23.11 ET SEQ., AND OF DEPARTMENT RULES FOR DISCHARGES OF PETROLEUM AND OTHER HAZARDOUS SUBSTANCES AT N.J.A.C. 7:1E. NO DISCHARGE OF HAZARDOUS SUBSTANCES RESULTING FROM AN ONSITE SPILL SHALL BE DEEMED TO BE "PURSUANT TO AND IN COMPLIANCE WITH [THIS] PERMIT" WITHIN THE MEANING OF THE SPILL COMPENSATION AND CONTROL ACT AT N.J.S.A. 58:10-23.11C.

c. RELEASES IN EXCESS OF REPORTABLE QUANTITIES (RQ) ESTABLISHED UNDER 40 C.F.R. 110, 117, AND 302 THAT OCCUR WITHIN A 24-HR PERIOD MUST BE REPORTED TO THE NATIONAL RESPONSE CENTER (800 424-8802).

**STORM SEWER NOTES**

1. ALL ON-SITE STORM SEWER PIPING SHALL BE ADS HIGH DENSITY POLYETHYLENE PIPE (HDPE) OR APPROVED EQUAL UNLESS NOTED OTHERWISE.

2. ALL STORM SEWER CROSSINGS WITH 18 INCHES OR LESS OF CLEARANCE TO THE SANITARY SEWER SYSTEM SHALL HAVE A CONCRETE CRADLE ON THE UPPER PIPE AND CONCRETE ENCASEMENT ON THE LOWER PIPE AS PER THE PIPE CROSSING DETAIL.

3. BUILDING ROOF DRAIN SYSTEMS SHALL CONNECT TO SITE STORM SEWER SYSTEM UNLESS NOTED OTHERWISE.

4. PROVIDE BICYCLE SAFE GRATES ON ALL STORM SEWER INLETS AND ADA COMPLIANT GRATES ON ALL INLETS WITHIN PEDESTRIAN WALKS

5. ALL ONSITE STORMWATER FACILITIES SHALL BE MAINTAINED BY THE PROPERTY OWNER IN ACCORDANCE WITH NJDEP STANDARD MAINTENANCE REQUIREMENTS.

6. THE MINIMUM DEPTH OF COVER SHALL BE 2'-0" FOR ALL HDPE STORM SEWER PIPES OR PER MANUFACTURERS MINIMUM RECOMMENDED DEPTHS FOR HS-20 LOADING.

7. UNLESS OTHERWISE NOTED, ALL STORM SEWER STRUCTURES SHALL BE PRECAST CONCRETE WITH A MINIMUM H-25 LOAD RATING. ALL STORM SEWER FRAMES, INLET GRATES, AND MANHOLE COVERS SHALL BE UNPAINTED AND UNCOATED HEAVY DUTY H-20 LOADING CAST IRON BY CAMPBELL FOUNDRY OR APPROVED EQUAL.

8. UNLESS OTHERWISE NOTED OR INFERRED BY INVERT ELEVATIONS, PIPE CROWN ELEVATIONS SHALL BE MATCHED IN ALL MANHOLES AND INLETS.

**BARRIER FREE ACCESS NOTES**

1. CONTRACTORS SHALL EXERCISE APPROPRIATE CARE AND PRECISION IN THE CONSTRUCTION OF PEDESTRIAN ACCESSIBLE ROUTES FROM SITE ARRIVAL POINTS TO ACCESSIBLE BUILDING ENTRANCES AND FACILITIES. FEDERAL LAWS, AS WELL AS STATE/LOCAL BUILDING CODES REQUIRE MANDATORY COMPLIANCE WITH ACCESSIBILITY DESIGN STANDARDS FOR NEW CONSTRUCTION AND EXISTING FACILITIES (ALTERED OR REMODELED) FOR INDIVIDUALS WITH DISABILITIES. TYPICAL SITE CONSTRUCTION DETAILS OF ACCESSIBLE ROUTES INCLUDE, BUT ARE NOT LIMITED TO, PARKING, SIDEWALKS, RAMPS, RAILINGS, ETC. THESE COMPONENTS (AS CONSTRUCTED) MUST COMPLY WITH THE CURRENT EDITION OF THE ADA STANDARDS FOR ACCESSIBLE DESIGN, THE NEW JERSEY UNIFORM CONSTRUCTION CODE, BARRIER FREE SUBCODE N.J.A.C. 5:23-7, AND OTHERS. SEVERAL OF THE SPECIFIC ACCESSIBLE ROUTE CONSTRUCTION STANDARDS FOR TRAVEL FROM PARKING SPACES, PUBLIC TRANSPORTATION, PEDESTRIAN ACCESS AND INTER-BUILDING ACCESS, TO POINTS OF ACCESSIBLE BUILDING ENTRANCE/EGRESS, INCLUDE, BUT ARE NOT LIMITED TO:

a. PARKING SPACES AND PARKING AISLES - SLOPE SHALL NOT EXCEED 1:50 (NOMINALLY 2.0%) IN ANY DIRECTION.

b. CURB RAMPS - SLOPE SHALL NOT EXCEED 1:12 (8.3%) FOR A MAXIMUM OF SIX (6) FEET.

c. LANDINGS - SHALL BE PROVIDED AT EACH END OF RAMPS, POSITIVE DRAINAGE SHALL BE PROVIDED, AND CROSS SLOPE SHALL NOT EXCEED 1:50 (NOMINALLY 2.0%)

d. PATH OF TRAVEL ALONG ACCESSIBLE ROUTE - SHALL PROVIDE A 36 INCH OR GREATER UNOBSTRUCTED WIDTH OF TRAVEL. (CAR OVERHANGS CANNOT REDUCE THIS MINIMUM WIDTH). THE SLOPE SHALL BE NO GREATER THAN 1:20 (5.0%) IN THE DIRECTION OF TRAVEL, AND SHALL NOT EXCEED 1:50 (NOMINALLY 2.0%) IN CROSS SLOPE. WHERE PATH OF TRAVEL WILL BE GREATER THAN 1:20 (5.0%), AN ADA RAMP WITH A MAXIMUM SLOPE OF 1:12 (8.3%), FOR A MAXIMUM DISTANCE OF 30 FEET, SHALL BE PROVIDED. THE RAMP SHALL HAVE ADA HAND RAILS AND "LEVEL" LANDINGS ON EACH END THAT ARE CROSS SLOPED NO MORE THAN 1:50 (NOMINALLY 2.0%) FOR POSITIVE DRAINAGE.

e. DOORWAYS - SHALL HAVE A "LEVEL" LANDING AREA ON THE EXTERIOR SIDE OF THE DOOR THAT IS SLOPED NO MORE THAN 1:50 (NOMINALLY 2.0%) FOR POSITIVE DRAINAGE. THIS LANDING AREA SHALL BE NO LESS THAN 60 INCHES (5 FEET) LONG, EXCEPT WHERE OTHERWISE PERMITTED BY ADA STANDARDS FOR ALTERNATIVE DOORWAY OPENING CONDITIONS (SEE ICC/ANSI A117.1-2003 AND OTHER REFERENCES INCORPORATED BY CODE).

2. IT IS RECOMMENDED THAT PRIOR TO CONSTRUCTION OF SITE IMPROVEMENTS RELATED TO PEDESTRIAN ACCESSIBILITY, THAT THE CONTRACTOR REVIEW SPECIFIC CONSTRUCTION DETAILS WITH THE LOCAL BUILDING CODE OFFICIAL, OWNER'S CONSTRUCTION MANAGER, AND ENGINEER PRIOR TO COMMENCING WORK TO VERIFY CODE COMPLIANCE WITH CURRENT BUILDING CODE STANDARDS.

**SHOP DRAWING SUBMITTALS**

1. THE CONTRACTOR SHALL SUBMIT ALL SHOP DRAWINGS FOR ALL COMPONENTS OF A UNIT OF CONSTRUCTION (EG. PRECAST STRUCTURE WITH FRAME AND CASTING, PIPE MATERIAL, JOINT TYPE, AND LADDER RUNGS).

2. SUBSTITUTIONS OF PROPRIETARY MATERIAL AND/OR PRODUCT SPECIFICATIONS THAT NOTE "OR EQUAL" MUST BE APPROVED BY THE DESIGN ENGINEER. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO DEMONSTRATE TO THE SATISFACTION OF THE DESIGN ENGINEER THAT THE SUBSTITUTION IS EQUAL AND ACCEPTABLE.

3. SHOP DRAWINGS AND OTHER SUBMITTALS SHALL BE PROVIDED A MINIMUM OF 12 DAYS IN ADVANCE OF CONTRACTOR'S NEED.

4. INVERT ELEVATIONS AS INDICATED ON SHOP DRAWINGS WILL BE VERIFIED. STRUCTURE OPENINGS WILL NOT BE REVIEWED AND ARE THE RESPONSIBILITY OF THE CONTRACTOR.

**UTILITY INSTALLATION NOTES**

1. ATTENTION OF THE CONTRACTOR IS DIRECTED TO THE FACT THAT THE LOCATION OF KNOWN UTILITY STRUCTURES AND FACILITIES THAT MAY BE ENCOUNTERED WITHIN AND ADJACENT TO THE LIMITS OF WORK AS SHOWN ON THE PLANS IS APPROXIMATE. THE ACCURACY AND COMPLETENESS OF THIS INFORMATION IS NOT GUARANTEED BY THE ENGINEER. THE CONTRACTOR SHALL VERIFY IN THE FIELD ALL THE FACTS CONCERNING THE UTILITY INFORMATION, LOCATIONS AND OTHER CONSTRUCTION OBSTACLES PRIOR TO CONSTRUCTION. FURTHER, THE CONTRACTOR SHALL NOTIFY THE ENGINEER IN WRITING PRIOR TO CONSTRUCTION OF ANY DISCREPANCIES WHICH MAY AFFECT PROJECT DESIGN AND/OR SCOPE. PS&S ASSUMES NO LIABILITY FOR ANY OF THE EXISTING UTILITY INFORMATION SHOWN HEREIN, EXISTING UTILITY LINE LOCATIONS ARE SHOWN FOR SCHEMATIC PURPOSES ONLY AND MAY NOT REPRESENT ALL EXISTING UTILITIES.

2. EXISTING STREET SURFACES AND OTHER SURFACES DISTURBED BY THE CONSTRUCTION OF FACILITIES FOR THIS PROJECT SHALL BE RESTORED BY THE CONTRACTOR IN ACCORDANCE WITH THE REQUIREMENTS OF THE CITY OF ELIZABETH.

3. ADDITIONAL EASEMENTS NOT SHOWN ON THE PLANS MAY BE NECESSARY FOR THE PLACEMENT OF UTILITY STRUCTURES. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO VERIFY THE EXISTENCE OF ANY REQUIRED EASEMENT. PAULUS, SOKOLOWSKI, AND SARTOR ASSUMES NO LIABILITY FOR ANY OF THE EASEMENT INFORMATION SHOWN HEREIN. EASEMENTS SHOWN ON THESE PLANS ARE FOR SCHEMATIC PURPOSES AND MAY NOT REFLECT ALL EASEMENTS. ALL EASEMENT INFORMATION SHALL BE VERIFIED BY THE CONTRACTOR AND ALL EASEMENT LOCATIONS INDICATED IN THE FIELD BY SURVEY.

4. ALL EXISTING UTILITY MANHOLE RIMS, VALVE BOXES, ETC. TO BE RESET IN ACCORDANCE WITH THE REQUIREMENTS OF THE APPLICABLE UTILITY COMPANY OR AS PER THE CITY OF ELIZABETH REQUIREMENTS.

5. TRENCH DETAILS ARE INTENDED TO PROVIDE INFORMATION REGARDING BACKFILLING MATERIALS AND GENERAL MATERIAL DEPTHS AND PAYMENT LIMITS ONLY. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE MEANS AND METHODS OF CONSTRUCTION AND SHALL PROVIDE APPROPRIATE SAFETY MEASURES, SHEETING, AND BRACING AS MAY BE REQUIRED DUE TO FIELD CONDITIONS. THE CONTRACTOR SHALL COMPLY WITH ALL APPLICABLE OSHA STANDARDS AND DETAILS FOR TRENCH EXCAVATION. THE DESIGN ENGINEER ASSUMES NO RESPONSIBILITY OR LIABILITY FOR FIELD CONDITIONS, TRENCHING OR BACKFILLING OPERATIONS DURING CONSTRUCTION.

6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR DEWATERING AND PRECLUDING ANY PONDING OF WATER IN ALL AREAS, EXCEPT AS SPECIFIED ON THE SOIL EROSION AND SEDIMENT CONTROL PERMIT DOCUMENTS.

7. ALL NEW UTILITIES SHALL BE INSTALLED UNDERGROUND, EXCEPT WHERE OTHERWISE NOTED.

8. UTILITIES LOCATED WITHIN ROADWAYS SHALL BE CONSTRUCTED PRIOR TO THE CONSTRUCTION OF THE ROADWAYS.

9. THE CONTRACTOR SHALL REQUEST UTILITY MARKOUTS AT LEAST SEVENTY-TWO (72) HOURS PRIOR TO ANY SITE DISTURBANCE. CONTRACTOR MUST NOTIFY "NEW JERSEY ONE-CALL" (800-272-1000) PRIOR TO ANY EXCAVATION OR GRADING ACTIVITY.

10. CONTRACTOR SHALL MAINTAIN AND PROTECT ALL EXISTING SURFACE AND SUBSURFACE UTILITIES DURING CONSTRUCTION OPERATION ACTIVITIES.

1. TOPOGRAPHIC, PLANIMETRIC AND UTILITY INFORMATION SHOWN PER A PLAN ENTITLED "TOPOGRAPHIC SURVEY" PREPARED BY PS&S, LLC., DATED 10/12/20.
  2. HORIZONTAL DATUM IS BASED ON NEW JERSEY STATE PLANE COORDINATE SYSTEM, NAD-1983.
  3. VERTICAL DATUM IS BASED ON NORTH AMERICAN VERTICAL DATUM, NAVD-1988.

**DEMOLITION NOTES**

- PRIOR TO THE START OF GRADING AND CLEARING OPERATIONS, THE CONTRACTOR SHALL INSTALL TEMPORARY CONSTRUCTION FENCING ALONG THE LIMITS OF DISTURBANCE LINE TO DELINEATE THE PROTECTED AREAS FROM DAMAGE. FENCING TO BE COORDINATED WITH OWNER.
- FEDERAL AND STATE LAWS MANDATE REMOVAL AND DISPOSAL OF CERTAIN HAZARDOUS MATERIALS PRIOR TO DEMOLITION OF A STRUCTURE. AS SUCH THE CONTRACTOR MUST REVIEW AND ADHERE TO THE REQUIREMENTS CONTAINED IN THE HAZARDOUS MATERIAL BUILDING INVESTIGATION REPORT AND ABATEMENT PLAN PREPARED BY OTHERS PRIOR TO ANY BUILDING DEMOLITION ACTIVITIES. TESTING AND DISPOSAL OF ALL BUILDING MATERIALS TO BE DEMOLISHED AND REMOVED SHALL BE UNDERTAKEN IN ACCORDANCE WITH THE APPLICABLE NJDEP REGULATIONS AND THE HAZARDOUS MATERIALS BUILDING MATERIALS INVESTIGATION REPORT AND ABATEMENT PLAN. THE HAZARDOUS MATERIALS BUILDING MATERIALS INVESTIGATION REPORT AND ABATEMENT PLAN WILL IDENTIFY THE LOCATIONS AND QUANTITIES OF ANY HAZARDOUS MATERIALS THAT WILL REQUIRE REMOVAL PRIOR TO BUILDING DEMOLITION. THE DEMOLITION CONTRACTOR WILL BE RESPONSIBLE FOR RETAINING THE SERVICES OF APPROPRIATELY LICENSED SUBCONTRACTOR(S) AND/OR CONSULTANTS TO PERFORM THE REQUIRED REMOVALS, INTERIOR AIR MONITORING AND POST-REMOVAL TESTING OF HAZARDOUS BUILDING MATERIALS PRIOR TO BUILDING DEMOLITION.
- ALL EXISTING STRUCTURES AND UTILITIES NOT INDICATED TO BE REMOVED SHALL BE LOCATED, IDENTIFIED AND PROTECTED FROM DAMAGE THROUGHOUT THE CONSTRUCTION PERIOD. ALL STRUCTURES DAMAGED DURING CONSTRUCTION SHALL BE REPAIRED AT THE CONTRACTOR'S EXPENSE AND TO THE SATISFACTION OF THE OWNER. PROVIDE TEMPORARY SERVICES DURING INTERRUPTIONS TO EXISTING UTILITIES AS ACCEPTABLE TO THE OWNER.
- ALL TEMPORARY STORAGE EQUIPMENT/DUMPSTERS PROVIDED BY THE CONTRACTOR SHALL BE MAINTAINED PROPERLY AND DISPOSED BY THE CONTRACTOR UPON COMPLETION OF THE WORK. LOCATIONS TO BE A MINIMUM OF 15 FEET FROM BUILDINGS AND AS APPROVED BY THE OWNER.
- ANY UTILITIES NOT SHOWN ON THE PLANS BUT UNCOVERED IN THE FIELD SHALL BE VERIFIED FOR ITS STATUS (ACTIVE OR ABANDONED). THE UTILITIES CONFIRMED ABANDONED SHALL BE COMPLETELY REMOVED (WITHIN THE LIMITS OF THE WORK) AND DISPOSED OF OFF SITE AS PART OF THIS WORK. ANY DISRUPTION TO ACTIVE UTILITIES MUST BE REPAIRED BY THE CONTRACTOR WITHIN 24 HOURS OF THE DISRUPTION AT THE CONTRACTOR'S EXPENSE AND TO THE SATISFACTION OF THE OWNER.
- ALL MATERIAL REMOVED SHALL BE SEGREGATED BY MATERIAL TYPE AND DISPOSED OF PER LOCAL, NJDEP, USEPA, AND OTHER APPLICABLE REGULATORY AUTHORITY REGULATIONS.
- IF HAZARDOUS MATERIALS ARE ENCOUNTERED DURING DEMOLITION, THE CONTRACTOR SHALL IMMEDIATELY STOP WORK AND REPORT SUCH FINDINGS TO THE OWNER'S REPRESENTATIVE WHO WILL ARRANGE FOR TESTING AND BE RESPONSIBLE FOR THE PERFORMANCE OF ANY SERVICES IN CONNECTION WITH IDENTIFYING OR THE REMOVAL OF SUCH MATERIALS.
- DEWATERING: PREVENT SURFACE WATER AND SUBSURFACE OR GROUND WATER FROM FLOWING INTO EXCAVATIONS AND FROM FLOODING PROJECT SITE AND SURROUNDING AREAS. CONTRACTOR SHALL BE RESPONSIBLE FOR DEVELOPING AND IMPLEMENTING MEANS AND METHODS NECESSARY TO DEWATER THE PROJECT SITE AND FACILITATE COMPACTION OF BACKFILL AS REQUIRED.
- DO NOT ALLOW WATER TO ACCUMULATE IN EXCAVATIONS. REMOVE WATER TO PREVENT SOFTENING OF BOTTOMS AND SOIL CHANGES DETRIMENTAL TO STABILITY OF SUBGRADE. PROVIDE AND MAINTAIN PUMPS, WELL POINTS, SUMPS, SUCTION AND DISCHARGE LINES, AND OTHER DEWATERING SYSTEM COMPONENTS NECESSARY TO CONVEY WATER AWAY FROM EXCAVATIONS. DEWATERING SYSTEMS SHALL BE INSTALLED AND OPERATED SUCH THAT UPWARD FLOW OF GROUNDWATER IS PREVENTED AND THE BEARING STRENGTH OF THE SUBGRADE SOIL IS NOT AFFECTED.
- CONTRACTOR SHALL PROVIDE ADEQUATE TEMPORARY COVER (CRUSHED STONE, STEEL PLATES OR OTHER MEANS) OVER ALL ACTIVE UNDERGROUND UTILITY PIPING DURING CONSTRUCTION IN ORDER TO PROTECT PIPING WHICH MAY NOT HAVE ENOUGH COVER (BELOW FINISHED GRADE) TO WITHSTAND CONSTRUCTION EQUIPMENT LOAD.
- BEGINNING OF DEMOLITION/CONSTRUCTION SHALL INDICATE THAT THE CONTRACTOR ACCEPTS THE EXISTING CONDITIONS.
- TEMPORARY STAGING AREA FOR THE PROPOSED WORK SHALL BE AS DIRECTED BY THE OWNER.
- TRENCH EXCAVATION, IF REQUIRED FOR UTILITIES IN PAVED AREAS, SHALL BE BACK FILLED WITH COMPACTED DENSE GRADED AGGREGATE CONFORMING TO NJDOT SPECIFICATION SECTION 901 UP TO PAVEMENT SUBBASE.
- BITUMINOUS PAVEMENT CONSTRUCTION/REPAIR, IF REQUIRED, SHALL BE IN ACCORDANCE WITH NJDOT AND PROJECT SPECIFICATIONS/DETAILS.
- THE CONTRACTOR SHALL NOTIFY THE OWNER'S REPRESENTATIVE, MUNICIPAL ENGINEER, AND "SUPER SNOOPER" (1-800-272-1000) AT LEAST 72 HOURS PRIOR TO ANY SITE DISTURBANCE.
- CONTRACTOR MUST PERFORM FIRST 6-FEET DEEP SOFT DIG TRENCH ALONG PERIMETER OF PROPOSED EXCAVATION LIMIT AND PROPERLY CUT OFF OR REROUTE ACTIVE UTILITY TO AVOID ANY UNDERGROUND UTILITY DAMAGE.
- CONTRACTOR TO PROVIDE TEMPORARY STORM DRAINAGE MEASURES UNTIL CONSTRUCTION COMPLETION.
- THE CONTRACTOR SHALL TAKE EXTREME PRECAUTION DURING THE DEMOLITION IN PROXIMITY OF EXISTING UTILITIES TO BE PROTECTED. PROPOSED SHEETING AND SHORING SYSTEM, IF NECESSARY, SHALL BE DESIGNED, SIGNED AND SEALED BY A PROFESSIONAL ENGINEER LICENSED IN THE STATE OF NEW JERSEY AND SHALL BE SUBMITTED TO OWNER FOR REVIEW.
- UNLESS INDICATED OTHERWISE, EXISTING BUILDING WALLS, FOOTINGS, SLABS, COLUMNS, WALLS, BASEMENT, RAMPS AND STEPS TO BE ENTIRELY DEMOLISHED AND REMOVED.
- DURING DEMOLITION OR EXCAVATION, MINIMUM AREA SHALL BE DISTURBED BEYOND THE LIMIT OF DISTURBANCE, AS INDICATED IN THE DRAWING. VERTICAL WALLS OF EXCAVATION TO CONFORM TO O.S.H.A. REQUIREMENTS.
- THE CONTRACTOR SHALL ENSURE THAT ANY AREA DISTURBED DURING GRADING OR DEMOLITION ACTIVITY OR ANY BACKFILL THAT MAY BE REQUIRED TO ACHIEVE FINAL GRADE SHALL BE PLACED IN A CONTROLLED MANNER AS A COMPACTED CLEAN FILL. ALL EXCAVATED/DISTURBED AREAS SHALL BE BACKFILLED WITH CLEAN FILL, AS DESCRIBED IN "NOTES ON EARTHWORK", NOTE NO. 9. UNLESS INDICATED OTHERWISE, ANY PAVED AREA DISTURBED FOR THE PURPOSES OF UTILITY CUT AND CAP WITHIN THE CITY R.O.W. SHALL BE RESTORED TO MATCH THE EXISTING CONDITION IN ACCORDANCE WITH THE CITY REQUIREMENTS.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR DEWATERING, DUST CONTROL AND ASSOCIATED MONITORING THROUGHOUT THE BUILDING DEMOLITION AND POST DEMOLITION SITE IMPROVEMENT PROCESS IN ACCORDANCE WITH REQUIREMENTS OF CITY OF ELIZABETH AND OTHER APPLICABLE REGULATORY AUTHORITIES.
- ALL EXISTING STREET SIGNAGE SHALL BE MAINTAINED DURING DEMOLITION AND REPLACED AS REQUIRED BY CITY.
- CONTRACTOR SHALL COORDINATE SOILS/EARTHWORK MANAGEMENT PLANS (EXCAVATION AND CLEAN FILL) WITH OWNER ON-SITE ASSIGNED REPRESENTATIVE PRIOR TO DEMOLITION/CONSTRUCTION.
- POST DEMOLITION, DISTURBED AREAS WITHIN AND ADJACENT TO THE EXISTING BUILDING FOOTPRINT SHALL BE BACKFILLED TO THE PROPOSED SUBGRADE ELEVATION (6" BELOW PROPOSED FINISHED GRADE) IN ACCORDANCE WITH THE "NOTES ON EARTHWORK", USING CLEAN FILL MATERIAL (SEE "NOTES ON EARTHWORK", NOTE NO. 9). SURFACE COVER SHALL BE INSTALLED IN ACCORDANCE WITH THE PROPOSED FINISHED GRADE.
- THE SITE DEMOLITION PLAN IS IN GENERAL INTENDED TO INDICATE UTILITIES DISCONNECT AND/OR REMOVAL, EXISTING BUILDINGS AND SITE DEMOLITION, AND POST DEMOLITION SITE CONDITION. PS&S ASSUMES NO RESPONSIBILITY OR LIABILITY FOR THE MEANS AND METHODS OF DEMOLITION, DEWATERING, IMPACT OF ANY EXISTING HAZARDOUS MATERIALS ON DEMOLITION ACTIVITIES AND MEASURES TO ABATE, CONTROL OR CONTAIN THEM AND TO PREVENT THE EXPOSURE OF THE SAME IN ACCORDANCE WITH APPLICABLE REGULATORY AUTHORITY REQUIREMENTS. IT IS ASSUMED THAT CONTRACTOR SHALL COORDINATE WITH THE CITY OF ELIZABETH AND OTHER APPLICABLE REGULATORY AUTHORITIES AS NECESSARY AND SHALL BE RESPONSIBLE FOR ALL DEMOLITION ACTIVITIES.
- THE CONTRACTOR SHALL INSTALL TEMPORARY FENCING ALONG THE PERIMETER OF THE ACTIVE WORK AREA ZONES. FENCING SHALL HAVE LOCKABLE GATES FOR ENTRY OF VEHICLES AT THE STABILIZED CONSTRUCTION ENTRANCE. LOCATION OF FENCING SHALL BE COORDINATED WITH OWNER.
- CONTRACTOR SHALL OBTAIN WRITTEN APPROVAL FOR ANY WORK BEYOND LIMIT OF DISTURBANCE LINE PRIOR TO THE START OF CONSTRUCTION.

**ADDITIONAL DEMOLITION NOTES**

- ALL CONSTRUCTION SHOWN HEREIN SHALL CONFORM TO MUNICIPAL AND/OR COUNTY STANDARDS, CONSTRUCTION DETAILS, AND SPECIFICATIONS APPLICABLE AS WELL AS THE NJDOT STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION, LATEST EDITION, UNLESS SPECIFICALLY NOTED OTHERWISE. IN CASE OF CONFLICT, THE MORE RESTRICTIVE SHALL GOVERN. CONTRACTOR SHALL NOTIFY DESIGN ENGINEER OF ALL CONFLICTS.
- THE CONTRACTOR SHALL SUBMIT A DETAILED SCHEDULE SHOWING STARTING AND COMPLETION DATES FOR ALL ASPECTS OF THE WORK. THE SCHEDULE SHALL ADHERE TO ALL REQUIREMENTS OF CONTRACT DOCUMENTS.
- ALL WORK AND MATERIALS SHALL MEET THE APPLICABLE REQUIREMENTS OF ALL LOCAL, COUNTY AND STATE JURISDICTIONS, AND THE FOLLOWING:
  - NEC - NATIONAL ELECTRICAL CODE
  - OSHA - OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION REGULATIONS
  - BOCA - BUILDING OFFICIALS AND CODE ADMINISTRATORS
  - IEEC - INSTITUTE OF ELECTRICAL AND ELECTRONICS ENGINEERS
  - ANSI - AMERICAN NATIONAL STANDARDS INSTITUTE
  - NJDOT - NEW JERSEY DEPARTMENT OF TRANSPORTATION
  - MUTCD - MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES
  - NJDEP - NEW JERSEY DEPARTMENT OF ENVIRONMENTAL PROTECTION
  - IBC - INDUSTRIALIZED BUILDINGS COMMISSION
- BEFORE SUBMITTING PROPOSALS, EACH BIDDER SHALL VISIT THE SITE OF THE WORK TO BECOME ACQUAINTED WITH EXISTING CONDITIONS AND LIMITATIONS. FAILURE TO DO SO SHALL IN NO MANNER RELIEVE THE CONTRACTOR FROM THE OBLIGATIONS OF THE DRAWINGS, SPECIFICATIONS AND/OR CONTRACT, AS STATED OR IMPLIED.
- CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, EQUIPMENT AND SERVICES AND PERFORM ALL OPERATIONS REQUIRED FOR THE WORK AS INDICATED ON THE DRAWINGS, AND THE PROJECT BID SPECIFICATIONS.
- ALL EXISTING STRUCTURES AND UTILITIES NOT INDICATED TO BE REMOVED SHALL BE LOCATED, IDENTIFIED, SUPPORTED AND PROTECTED FROM DAMAGE THROUGHOUT THE CONSTRUCTION PERIOD. ALL STRUCTURES DAMAGED DURING CONSTRUCTION SHALL BE REPAIRED AT THE CONTRACTOR'S EXPENSE AND TO THE SATISFACTION OF THE HOA.
- FOLLOWING NOTIFICATION TO UNION COUNTY, THE CONTRACTOR SHALL COORDINATE WITH THE OWNER TO OBTAIN THE NECESSARY PERMITS FROM THE OFFICE OF THE MUNICIPAL ENGINEER PRIOR TO THE START OF WORK.
- CONTRACTOR WILL PROVIDE A HEALTH AND SAFETY PLAN TO THE UNION COUNTY WITHIN TWO (2) WEEKS OF CONTRACT AWARD AND PRIOR TO COMMENCEMENT OF WORK.
- REGULAR WORK HOURS FOR THE PROJECT ARE 7:00 A.M. TO 4:00 P.M., MONDAY THROUGH FRIDAY.
- THE LOCATIONS OF EXISTING UNDERGROUND UTILITIES, INLETS AND OTHER UTILITY STRUCTURES ARE APPROXIMATE BASED ON EXISTING RECORD DOCUMENTS PROVIDED AND SUBJECT TO FIELD VERIFICATION BY THE CONTRACTOR PRIOR TO COMMENCEMENT OF WORK. CAUTION SHALL BE OBSERVED AT ALL TIMES AS UNDERGROUND AND OVERHEAD LINES MAY EXIST WHICH ARE NOT SHOWN HEREIN. REPORT ANY DISCREPANCIES TO THE OWNER, PRIOR TO COMMENCEMENT OF WORK.
- THE CONTRACTOR SHALL CONTACT THE OWNER PRIOR TO THE START OF CONSTRUCTION TO REVIEW THE CONTRACTOR'S PROJECT SCHEDULE AND TO COORDINATE ALL SITE ACTIVITIES.
- PRIOR TO THE COMMENCEMENT OF ANY SITE WORK ACTIVITIES, THE CONTRACTOR SHALL DETERMINE THE ACTUAL PHYSICAL LOCATION AND DEPTH OF ALL EXISTING UTILITIES WITHIN THE PROPOSED PROJECT AREA.
- UNLESS OTHERWISE NOTED, ALL EXISTING PAVED AND UNPAVED/LANDSCAPED OR GRASSY SURFACE DISTURBED DURING CONSTRUCTION SHALL BE RESTORED TO MATCH EXISTING CONDITIONS IN ACCORDANCE WITH THE REQUIREMENTS OF THE MUNICIPAL ENGINEER.
- DEMOLITION WORK PLAN:** CONTRACTOR SHALL PREPARE AND SUBMIT A DEMOLITION WORK PLAN THAT PROVIDES A DETAILED SUMMARY OF THE CONTRACTOR'S PROPOSED MEANS AND METHODS, AS WELL AS OTHER COMPONENTS AS DESCRIBED HEREIN.
- PERMITS:** CONTRACTOR SHALL WORK WITH THE OWNER TO SECURE AND MAINTAIN THE DEMOLITION PERMITS AND ASSOCIATED ROAD OPENING PERMITS IN ACCORDANCE WITH THE CITY OF ELIZABETH (CITY) AND OTHER APPLICABLE REGULATIONS, INCLUDING US EPA "NOTIFICATION OF DEMOLITION AND RENOVATION" WHICH SHALL BE SUBMITTED TO THE NEW JERSEY DEPARTMENT OF HEALTH.
- INSURANCE:** CONTRACTOR SHALL PROVIDE A COPY OF A CURRENT CERTIFICATE OF INSURANCE AND ANY SUBCONTRACTOR'S CERTIFICATE OF INSURANCE. POLICIES WILL NEED TO INCLUDE WORKER'S COMPENSATION, COMPREHENSIVE GENERAL LIABILITY, AUTOMOBILE LIABILITY AND ENVIRONMENTAL / ASBESTOS AND POLLUTION LIABILITY. COVERAGE SHALL BE WRITTEN ON AN OCCURRENCE BASIS WITH A M. BEST A-RATED COMPANIES. THE INSURANCE POLICY LIMITS SHALL BE AS REQUIRED BY UNION COUNTY AND SHALL ADD A HOLD HARMLESS INSURANCE STATEMENT AS REQUIRED BY UNION COUNTY.
- LICENSES:** CONTRACTOR SHALL SUBMIT TO THE OWNER AND THE CITY ALL CURRENT LICENSES. LICENSES CURRENT FOR THE DURATION OF PROJECT. ALL EMPLOYEES ON SITE MUST BE PROPERLY LICENSED IN ACCORDANCE WITH STATE STATUTES.
- TEMPORARY FACILITIES:** CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING ALL TEMPORARY FACILITIES AS DEEMED NECESSARY BY PROJECT REQUIREMENTS INCLUDING, BUT NOT LIMITED TO THAT INDICATED IN THE SITE DEMOLITION PLAN.
- WASTE MANAGEMENT PLAN:** CONTRACTOR SHALL SUBMIT A WASTE MANAGEMENT PLAN DETAILING ANTICIPATED WASTE STREAMS, HANDLING, PROCESSING AND PACKAGING OF WASTE STREAMS AND DISPOSITION OF WASTE STREAMS. THE WASTE MANAGEMENT PLAN CAN BE INCLUDED IN THE CONTRACTOR'S CONSTRUCTION WORK PLAN.
- MANIFESTS:** THE CONTRACTOR SHALL PROVIDE APPROPRIATE WASTE DISPOSAL MANIFESTS TO BE EXECUTED BY THE COMPANY OR THEIR DESIGNATED REPRESENTATIVE COMPANY.
- DEMOLITION WASTE:** UNLESS OTHERWISE INDICATED, DEMOLITION WASTE BECOMES PROPERTY OF CONTRACTOR.
- HISTORIC ITEMS, RELICS, ANTIQUES, AND SIMILAR OBJECTS INCLUDING, BUT NOT LIMITED TO, CORNERSTONES AND THEIR CONTENTS, COMMEMORATIVE PLAQUES AND TABLETS, AND OTHER ITEMS OF INTEREST OR VALUE TO UNION COUNTY THAT MAY BE ENCOUNTERED AND/OR IDENTIFIED BY THE OWNER DURING DEMOLITION, REMAIN THE PROPERTY OF UNION COUNTY. CONTRACTOR SHALL CAREFULLY HANDLE IN A MANNER TO PREVENT DAMAGE AND PROMPTLY RETURN TO THE OWNER.**
- PROJECT KICKOFF MEETING:** CONTRACTOR SHALL CONDUCT A MEETING AT PROJECT SITE FOLLOWING AWARD OF CONTRACT AND PRIOR TO ABATEMENT/DEMOLITION TO:
  - INSPECT AND DISCUSS CONDITION OF CONSTRUCTION TO BE DEMOLISHED.
  - REVIEW STRUCTURAL LOAD LIMITATIONS OF EXISTING STRUCTURES.
  - REVIEW AND FINALIZE BUILDING DEMOLITION SCHEDULE AND VERIFY AVAILABILITY OF DEMOLITION PERSONNEL, EQUIPMENT, AND FACILITIES NEEDED TO MAKE PROGRESS AND AVOID DELAYS AND HAZARDS.
  - REVIEW AND FINALIZE PROTECTION REQUIREMENTS.
  - REVIEW PROCEDURES FOR NOISE CONTROL, VIBRATION CONTROL AND DUST CONTROL.
  - REVIEW PROCEDURES FOR PROTECTION OF ADJACENT BUILDINGS.
  - REVIEW ITEMS TO BE SALVAGED AND RETURNED TO THE OWNER.
  - REVIEW THE DEMOLITION METHOD.
- HEALTH AND SAFETY PLAN (HASP):** THE CONTRACTOR SHALL DEVELOP A SITE-SPECIFIC HASP FOR THEIR OPERATIONS THAT MEETS THE REQUIREMENTS OF APPLICABLE FEDERAL, STATE, AND LOCAL REQUIREMENTS AS WELL AS ANY UNION COUNTY REQUIREMENTS. THE CONTRACTOR SHALL IMPLEMENT THIS PLAN TAKING PRECAUTIONS AS NECESSARY TO PROTECT THE PUBLIC AND WORK FORCE PERSONNEL FROM POTENTIAL HAZARDS. THE CONTRACTOR SHALL HANDLE ALL WASTES IN ACCORDANCE WITH APPLICABLE FEDERAL, STATE AND LOCAL REQUIREMENTS.
- EXPLOSIVES:** USE OF EXPLOSIVES IS NOT PERMITTED.
- DISPOSAL OF DEMOLISHED MATERIALS**
  - REMOVE DEMOLITION WASTE MATERIALS FROM PROJECT SITE AND LEGALLY DISPOSE OF THEM IN AN APPROVED LANDFILL OR RECYCLING FACILITY ACCEPTABLE TO UNION COUNTY AND AUTHORITIES HAVING JURISDICTION.
    - DO NOT ALLOW DEMOLISHED MATERIALS TO ACCUMULATE ON-SITE.
    - REMOVE AND TRANSPORT DEBRIS IN A MANNER THAT WILL PREVENT SPILLAGE ON ADJACENT SURFACES AND AREAS.
  - REMOVE SURPLUS SOIL MATERIAL, UNSUITABLE TOPSOIL, OBSTRUCTIONS,

**EARTHWORK NOTES**

- UPON COMPLETION OF EXCAVATION TO THE PROPOSED SUBGRADE, ALL SUBGRADE SURFACES SHALL BE MOISTURE CONDITIONED AS NECESSARY AND COMPACTED TO 95 PERCENT OF THE MODIFIED PROCTOR MAXIMUM DRY DENSITY (ASTM D1557).
- UNSATURABLE MATERIALS, INCLUDING DEBRIS AND REMNANT TOP SOIL, SHALL BE COMPLETELY REMOVED AND REPLACED WITH CLEAN FILL COMPACTED IN ACCORDANCE WITH NOTE 1, ABOVE.
- STRUCTURAL FILL AND BACKFILL MATERIAL SHALL BE PLACED IN MAXIMUM EIGHT INCH THICK LOOSE LIFTS, MOISTURE CONDITIONED AS REQUIRED AND COMPACTED TO AT LEAST 95 PERCENT OF THE MODIFIED PROCTOR MAXIMUM DRY DENSITY.
- SLOPING FRONT TO RECEIVE FILL SHALL BE FREE OF VEGETATION, EXISTING FILL AND LOOSE OR DISTURBED MATERIAL. USE SMALLER HAND-OPERATED EQUIPMENT, WITH THINNER LIFTS, IF NECESSARY, TO ACHIEVE COMPACTION.
- CLEAN FILL MATERIAL PLACED ON SLOPING GROUND SHALL BE KEYED AND BENCHED INTO EXISTING SLOPES.
- IF FILL OPERATIONS ARE CONDUCTED DURING PERIODS OF FREEZING WEATHER, NO FILL SHALL BE PLACED ON SNOW, ICE OR FROZEN SUBGRADE AND THAT NO FROZEN FILL SHALL BE PLACED.
- DURING CONSTRUCTION, PROPER EROSION AND SEDIMENT CONTROL MEASURES MUST BE IMPLEMENTED. PROPER TEMPORARY AND PERMANENT EROSION CONTROL MEASURES SHALL BE IMPLEMENTED.
- CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR ALL MEANS AND METHODS, CONSTRUCTION HEALTH AND SAFETY MEASURES, SURVEY CONTROL, DIMENSIONS AND QUALITY CONTROL. QUALIFIED GEOTECHNICAL PERSONNEL SHALL OBSERVE AND DOCUMENT SUBGRADE PREPARATION, COMPACTION AND EARTHWORK.
- THE CONTRACTOR SHALL PROCURE CERTIFIED CLEAN FILL IN ACCORDANCE WITH "NJDEP FILL MATERIAL GUIDELINES FOR SRP SITES", THE NJDEP TECHNICAL REQUIREMENTS FOR SITE REMEDIATION 7:266 5.2, AND AS APPROVED BY THE OWNER. THE CONTRACTOR SHALL PROVIDE THE SAMPLING DOCUMENTATION AND DOCUMENTATION ESTABLISHING THAT THE FILL IS CLEAN VIRGIN MATERIAL FROM THE BORROW SOURCE (QUARRY) OR ORIGIN. IMPORTED CLEAN FILL WILL CONSIST OF WELL GRADED SOIL OR GRAVEL MEETING THE REQUIREMENTS OF NJDOT STANDARD SPECIFICATION SECTION 901.11 SOIL AGGREGATE WITH 1-5 DESIGNATION. FILL MATERIAL SHALL BE FREE FROM FROZEN MATERIALS, PERISHABLE RUBBISH, PEAT, CLAY LUMPS, AND OTHER UNSATISFACTORY SOIL OR MATERIALS.

**REFERENCE NOTES:**

- TOPOGRAPHIC, PLANIMETRIC AND UTILITY INFORMATION SHOWN PER A PLAN ENTITLED "TOPOGRAPHIC SURVEY" PREPARED BY PS&S, LLC., DATED 10/12/20.
- HORIZONTAL DATUM IS BASED ON NEW JERSEY STATE PLANE COORDINATE SYSTEM, NAD-1983.
- VERTICAL DATUM IS BASED ON NORTH AMERICAN VERTICAL DATUM, NAVD-1988.

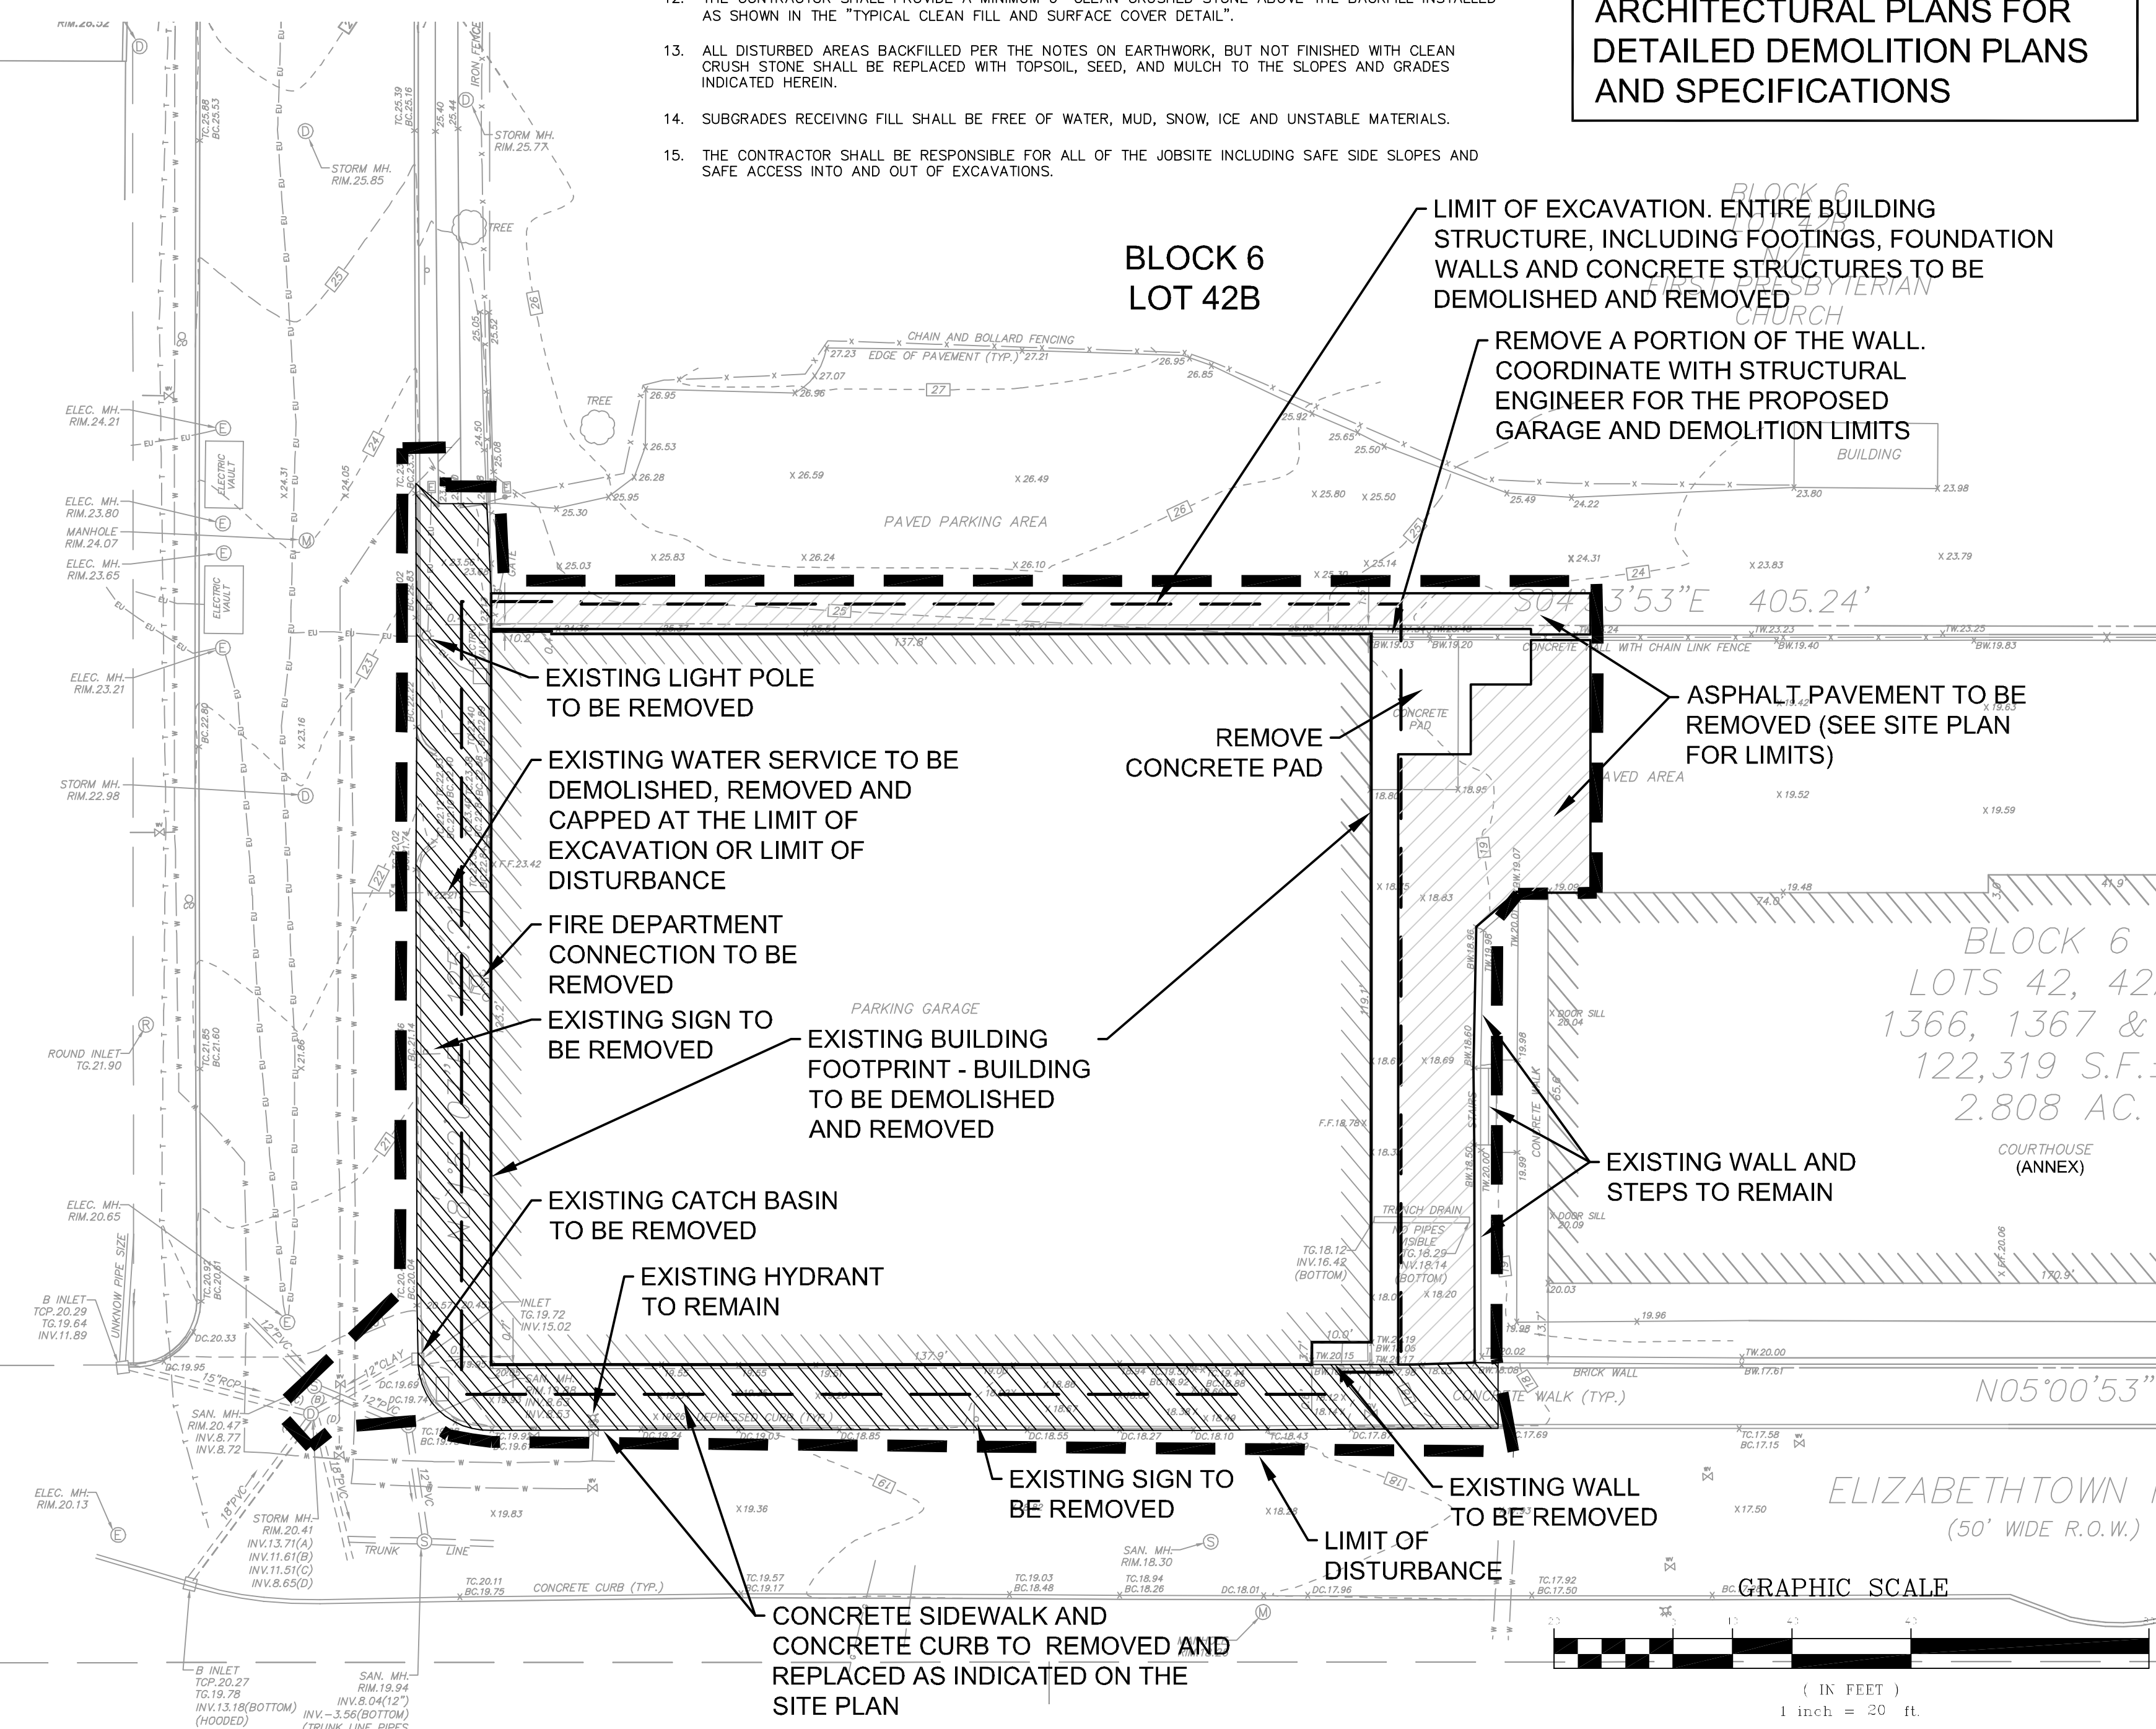

SUBGRADE FILL (1-5)		PERCENT FINER (BY WEIGHT)	
U.S. STANDARD SIEVESIZE	2"	75	100
No. 4	70 - 100	30	80
No. 50	10 - 35	5	12
No. 200	5 - 12		

- IF THERE IS ANY TEMPORARY BRACING REQUIRED TO PROTECT ADJACENT ROADWAYS, PARKING AREAS AND SAFEGUARD UTILITIES, THESE BRACING SYSTEMS SHALL BE DESIGNED BY A STRUCTURAL ENGINEER (RETAINED BY THE CONTRACTOR) LICENSED IN THE STATE OF NEW JERSEY. PRIOR TO DEMOLITION, SIGNED AND SEAL CALCULATIONS WITH DRAWINGS SHALL BE FORWARDED TO THE CITY ENGINEER FOR REVIEW.
- IF ANY ENVIRONMENTAL REMEDIAL EXCAVATION IS REQUIRED, THE LIMITS OF THE EXCAVATION WILL BE OBSERVED BY THE OWNER ON-SITE REPRESENTATIVE FOR ANY EVIDENCE OF CONTAMINATION. THE CONTRACTOR SHALL NOT BE PERMITTED TO COMMENCE BACKFILLING UNTIL THE FINAL LIMITS OF THE EXCAVATION ARE REVIEWED AND APPROVED BY THE OWNER ON-SITE REPRESENTATIVE. THE CONTRACTOR SHOULD ASSUME THAT POST EXCAVATION SAMPLES WILL BE RUN ON A 48-HOUR TURNAROUND TIME, AND THAT BACKFILLING CAN COMMENCE UPON RECEIPT OF ACCEPTABLE RESULTS.
- THE CONTRACTOR WILL ASSIST THE OWNER ON-SITE REPRESENTATIVE WITH THE COLLECTION OF POST EXCAVATION SAMPLES, AS NECESSARY.
- THE CONTRACTOR SHALL PROVIDE A MINIMUM 6" CLEAN CRUSHED STONE ABOVE THE BACKFILL INSTALLED AS SHOWN IN THE "TYPICAL CLEAN FILL AND SURFACE COVER DETAIL".
- ALL DISTURBED AREAS BACKFILLED PER THE NOTES ON EARTHWORK, BUT NOT FINISHED WITH CLEAN CRUSH STONE SHALL BE REPLACED WITH TOPSOIL, SEED, AND MULCH TO THE SLOPES AND GRADES INDICATED HEREIN.
- SUBGRADES RECEIVING FILL SHALL BE FREE OF WATER, MUD, SNOW, ICE AND UNSTABLE MATERIALS.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL OF THE JOBSITE INCLUDING SAFE SIDE SLOPES AND SAFE ACCESS INTO AND OUT OF EXCAVATIONS.

CITY OF ELIZABETH, NEW JERSEY

SHEET TITLE

SOIL EROSION AND  
SEDIMENT CONTROL  
PLAN

PROJECT NO.: 03009-003 DRAWN BY: AM  
SCALE: 1" = 20' CHECKED BY: PAR  
DATE: 11-30-2020 SHEET OF  
SHEET NO. C-8

**SOMERSET-UNION SOIL CONSERVATION NOTES**

1. ALL SOIL EROSION AND SEDIMENT CONTROL PRACTICES SHALL BE INSTALLED PRIOR TO ANY MAJOR SOIL DISTURBANCES, OR IN THEIR PROPER SEQUENCE AND MAINTAINED UNTIL PERMANENT PROTECTION IS ESTABLISHED.
2. ANY DISTURBED AREAS THAT WILL BE LEFT EXPOSED MORE THAN 30 DAYS AND NOT SUBJECT TO CONSTRUCTION TRAFFIC, WILL IMMEDIATELY RECEIVE A TEMPORARY SEEDING. IF THE SEASON PREVENTS THE ESTABLISHMENT OF A TEMPORARY COVER, THE DISTURBED AREAS WILL BE MULCHED WITH STRAW, OR EQUIVALENT MATERIAL, AT A RATE OF TWO (2) TONS PER ACRE, ACCORDING TO NJ STATE STANDARDS
3. PERMANENT VEGETATION SHALL BE SEED OR SODED ON ALL EXPOSED AREAS WITHIN TEN (10) DAYS AFTER FINAL GRADING. MULCH WILL BE USED FOR PROTECTION UNTIL SEEDING IS ESTABLISHED
4. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE NJ STATE STANDARDS FOR SOIL EROSION AND SEDIMENT CONTROL IN NEW JERSEY, 7<sup>TH</sup> EDITION LAST REVISED JANUARY 2014
5. A SUB-BASE COURSE WILL BE APPLIED IMMEDIATELY FOLLOWING ROUGH GRADING AND INSTALLATION OF IMPROVEMENTS IN ORDER TO STABILIZE STREETS, ROADS, DRIVEWAYS AND PARKING AREAS IN AREAS WHERE NO UTILITIES ARE PRESENT, THE SUB-BASE SHALL BE INSTALLED WITHIN 15 DAYS OR PRELIMINARY GRADING.
6. IMMEDIATELY FOLLOWING INITIAL DISTURBANCE OR ROUGH GRADING ALL CRITICAL AREAS SUBJECT TO EROSION (I.E.: STEEP SLOPES, ROADWAY EMBANKMENTS) WILL RECEIVE A TEMPORARY SEEDING IN COMBINATION WITH STRAW MULCH OR A SUITABLE EQUIVALENT, AT A RATE OF TWO (2) TONS PER ACRE, ACCORDING TO THE NJ STATE STANDARDS.
7. ANY STEEP SLOPES RECEIVING PIPELINE INSTALLATION WILL BE BACKFILLED AND STABILIZED DAILY, AS THE INSTALLATION PROCEEDS (I.E.: SLOPES GREATER THAN 3:1)
8. TRAFFIC CONTROL STANDARDS REQUIRE THE INSTALLATION OF A 50'X30'X6"PAD OF 1 1/2" OR 2" STONE, AT ALL CONSTRUCTION DRIVEWAYS, IMMEDIATELY AFTER INITIAL SITE DISTURBANCE.
9. THE SOMERSET-UNION SOIL CONSERVATION DISTRICT SHALL BE NOTIFIED IN WRITING 48 HOURS IN ADVANCE OF ANY LAND DISTURBING ACTIVITY.
10. AT THE TIME WHEN THE SITE PREPARATION FOR PERMANENT VEGETATIVE STABILIZATION IS GOING TO BE ACCOMPLISHED, ANY SOIL THAT WILL NOT PROVIDE A SUITABLE ENVIRONMENT TO SUPPORT ADEQUATE VEGETATIVE GROUND COVER, SHALL BE REMOVED OR TREATED IN SUCH A WAY THAT WILL PERMANENTLY ADJUST THE SOIL CONDITIONS AND RENDER IT SUITABLE FOR VEGETATIVE GROUND COVER. IF THE REMOVAL OR TREATMENT OF THE SOIL WILL NOT PROVIDE SUITABLE CONDITIONS, NON-VEGETATIVE MEANS OF PERMANENT GROUND STABILIZATION WILL HAVE TO BE EMPLOYED. TOPSOIL SHOULD BE HANDLED ONLY WHEN IT IS DRY ENOUGH TO WORK WITHOUT DAMAGING THE SOIL STRUCTURE. A UNIFORM APPLICATION TO A DEPTH OF 5 INCHES (UNSETTLED) IS REQUIRED ON ALL SITES.
11. IN THAT N.J.A.C. 4:24-39 ET SEQ., REQUIRES THAT NO CERTIFICATE OF OCCUPANCY BE ISSUED BEFORE THE PROVISIONS OF THE CERTIFIED PLAN FOR SOIL EROSION AND SEDIMENT CONTROL HAVE BEEN COMPLIED WITH FOR PERMANENT MEASURES, ALL SITE WORK FOR SITE PLANS AND ALL WORK AROUND INDIVIDUAL LOTS IN SUBDIVISIONS, WILL HAVE TO BE COMPLETED PRIOR TO THE DISTRICT ISSUING A REPORT OF COMPLIANCE FOR THE ISSUANCE OF A CERTIFICATE OF OCCUPANCY BY THE MUNICIPALITY.
12. CONDUIT OUTLET PROTECTION MUST BE INSTALLED AT ALL REQUIRED OUTFALLS PRIOR TO THE DRAINAGE SYSTEM BECOMING OPERATIONAL.
13. ANY CHANGES TO THE CERTIFIED SOIL EROSION AND SEDIMENT CONTROL PLAN WILL REQUIRE THE SUBMISSION OF REVISED SOIL EROSION AND SEDIMENT CONTROL PLANS TO THE DISTRICT FOR RE-CERTIFICATION. THE REVISED PLANS MUST MEET ALL CURRENT NJ STATE SOIL EROSION & SEDIMENT CONTROL STANDARDS.
14. THE SOMERSET-UNION SOIL CONSERVATION DISTRICT SHALL BE NOTIFIED OF ANY CHANGES IN OWNERSHIP.
15. MULCHING TO THE NJ STANDARDS IS REQUIRED FOR OBTAINING A CONDITIONAL REPORT OF COMPLIANCE. CONDITIONALS ARE ONLY ISSUED WHEN THE SEASON PROHIBITS SEEDING.
16. CONTRACTOR IS RESPONSIBLE FOR KEEPING ALL ADJACENT ROADS CLEAN DURING LIFE OF CONSTRUCTION PROJECT.
17. THE DEVELOPER SHALL BE RESPONSIBLE FOR REMEDIATING ANY EROSION OR SEDIMENT PROBLEMS THAT ARISE AS A RESULT OF ONGOING CONSTRUCTION AT THE REQUEST OF THE SOMERSET-UNION SOIL CONSERVATION DISTRICT.
18. HYDRO SEEDING IS A TWO-STEP PROCESS. THE FIRST STEP INCLUDES SEED, FERTILIZER, LIME, ETC., ALONG WITH MINIMAL AMOUNTS OF MULCH TO PROMOTE CONSISTENCY. GOOD SEED TO SOIL CONTACT, AND GIVE A VISUAL INDICATION OF COVERAGE. UPON COMPLETION OF SEEDING OPERATION, HYDRO-MULCH SHOULD BE APPLIED AT A RATE OF 1500 LBS. PER ACRE IN SECOND STEP. THE USE OF HYDRO-MULCH, AS OPPOSED TO STRAW, IS LIMITED TO OPTIMUM SEEDING DATES AS LISTED IN THE NJ STANDARDS.

NOTE: INDIVIDUAL LOT ACCESS POINTS MAY REQUIRE STABILIZATION. THICKNESS SHOWN IS FOR STONE CONSTRUCTION ENTRANCES ONLY (TYP.).

TABLE OF LENGTHS OF CONSTRUCTION EXITS ON SLOPING ROADBEDS

PERCENT SLOPE OF ROADWAY	LENGTH OF STONE REQUIRED	
	COARSE GRAINED SOILS	FINE GRAINED SOILS
0 TO 2%	50 ft.	100ft.
2 TO 5%	100ft.	200ft.
> 5%	ENTIRE SURFACE STABILIZED WITH FABC BASE COURSE (NOTE 1)	

1. AS PRESCRIBED BY LOCAL ORDINANCE OR OTHER GOVERNING AUTHORITY

**STABILIZED CONSTRUCTION ACCESS (IF AND WHERE DIRECTED)**

NOT TO SCALE

**MAINTENANCE**

THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO ROADWAYS. THIS MAY REQUIRE PERIODIC TOP DRESSING WITH ADDITIONAL STONE OR ADDITIONAL LENGTH AS CONDITIONS DEMAND AND REPAIR AND/OR CLEANOUT OF ANY MEASURES USED TO TRAP SEDIMENT. ALL SEDIMENT SPILLED, DROPPED, WASHED, OR TRACKED ONTO ROADWAYS (PUBLIC OR PRIVATE) OR OTHER IMPERVIOUS SURFACES MUST BE REMOVED IMMEDIATELY.

WHERE ACCUMULATION OF DUST/SEDIMENT IS INADEQUATELY CLEANED OR REMOVED BY CONVENTIONAL METHODS, A POWER BROOM OR STREET SWEEPER WILL BE REQUIRED TO CLEAN PAVED OR IMPERVIOUS SURFACES. ALL OTHER ACCESS POINTS WHICH ARE NOT STABILIZED SHALL BE BLOCKED OFF.

**SILT FENCE DETAIL**

NOT TO SCALE

**DESIGN CRITERIA**

- STONE SIZE – USE ASTM C-33, SIZE No. 2 (2 1/2 TO 1 1/2") OR 3 (2 TO 1"). USE CLEAN CRUSHED ANGULAR STONE. CRUSHED CONCRETE OF SIMILAR SIZE MAY BE SUBSTITUTED BUT WILL REQUIRE MORE FREQUENT UPGRADING AND MAINTENANCE.
- THICKNESS – NOT LESS THAN SIX (6) INCHES.
- WIDTH – NOT LESS THAN FULL WIDTH OF POINTS OF INGRESS OR EGRESS.
- LENGTH – 50 FEET MINIMUM WHERE THE SOILS ARE COURSE GRAINED (SANDS OR GRAVEL) OR 100 FEET MINIMUM WHERE SOILS ARE FINE GRAINED (CLAYS OR SILTS), EXCEPT WHERE TRAVELED LENGTH IS LESS THAN 50 OR 100 FEET RESPECTIVELY. THESE LENGTHS MAY BE INCREASED WHERE FIELD CONDITIONS DICTATE. STORMWATER FROM UP-SLOPE AREAS SHALL BE DIVERTED AWAY FROM THE STABILIZED PAD (SEE "STANDARDS FOR SOIL EROSION AND SEDIMENT CONTROL IN NJ" FOR DIVERSIONS, PG. 15-1). WHERE DIVERSION IS NOT POSSIBLE, THE LENGTH OF THE STABILIZED PAD SHALL BE AS SHOWN IN TABLE BELOW, WHERE THE SLOPE OF THE ACCESS ROAD EXCEEDS 5%. A STABILIZED BASE COURSE OF FINE AGGREGATE BITUMINOUS CONCRETE (FABC) SHALL BE INSTALLED. THE TYPE AND THICKNESS OF THE FABC AND USE OF A DENSE GRADE AGGREGATE SUB-BASE SHALL BE AS PRESCRIBED BY LOCAL MUNICIPAL ORDINANCE OR OTHER GOVERNING AUTHORITY. AT POORLY DRAINED LOCATIONS, SUBSURFACE DRAINAGE GRAVEL FILTER OR GEOTEXTILE SHALL BE INSTALLED BEFORE INSTALLING THE STABILIZED CONSTRUCTION ENTRANCE.

**CONSTRUCTION SEQUENCE**

1. CONTACT THE SOMERSET-UNION SOIL CONSERVATION DISTRICT A MINIMUM OF 72 HOURS PRIOR TO ANY SOIL DISTURBANCE TO ARRANGE A PRECONSTRUCTION MEETING. 3 DAYS
2. INSTALL SOIL EROSION AND SEDIMENT CONTROL MEASURES AS SHOWN ON THE PLAN. DISTURB ONLY THE MINIMUM AREA NEEDED TO INSTALL ALL MEASURES. 5 DAYS
3. DISCONNECT EXISTING UTILITIES. 2 WEEKS
4. DEMOLISH EXISTING GARAGE. 8 WEEKS
5. ROUGH GRADE SITE AND INSTALL UNDERGROUND UTILITIES. 4 WEEKS
6. CONSTRUCT PROPOSED GARAGE BUILDING FOUNDATION AND SUPERSTRUCTURE. 6 MONTHS
7. CONSTRUCT CURB, SIDEWALK, PAVING AND FINISH GRADING. 8 WEEK
8. INSTALL LANDSCAPING. 2 WEEKS
9. REMOVE ALL SEDIMENT FILTERS, ACCUMULATED SEDIMENT, SILT FENCES. 2 WEEKS
10. CONTACT SOMERSET-UNION SOIL CONSERVATION DISTRICT FOR FINAL INSPECTION. 1 WEEK

NOTES: SEQUENCE OF CONSTRUCTION IS APPROXIMATE AND IS SUBJECT TO WEATHER CONDITIONS, LABOR AND MATERIAL AVAILABILITY.

THE ORIGINAL SOMERSET-UNION SOIL CONSERVATION DISTRICT CERTIFICATION AND PLANS MUST BE AVAILABLE AT THE SITE AT ALL TIMES.

**DUST CONTROL SPECIFICATIONS**

Wind erosion shall be controlled utilizing a combination of methods as deemed appropriate for the specific site conditions. As a general rule, the smallest practical area of the site will be disturbed at any one point in time. Areas that are disturbed and which will not be subject to vehicular traffic for a period of one week or greater shall be stabilized using one of the following dust control methods. Mulches – See note for Stabilization with Mulches.

Vegetative Cover – See notes for: Temporary Vegetative Cover, Permanent Vegetative Cover and permanent Stabilization with Sod.

Spray-On Adhesives – On mineral soils (not effective on muck soils). Keep traffic off these areas.

	Water Dilution	Type of Nozzle	Apply Gallons/Acre
Anionic asphalt emulsion	7 : 1	Coarse Spray	1,200
Latex emulsion	12.5 : 1	Fine Spray	235
Resin in water	4 : 1	Fine Spray	300

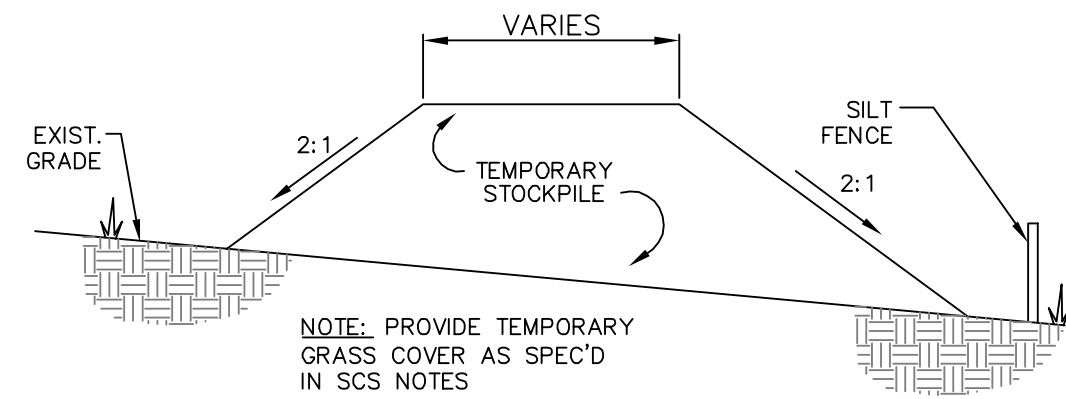

Tillage – To roughen surface and bring clods to the surface. This is a temporary emergency measure which should be used before soil blowing starts. Begin plowing on windward side of equipment which may produce the desired effect.

Sprinkling – Site is sprinkled until the surface is wet.

Barriers – Solid board fences, snow fences, burlap fences, crate walls, bales of hay and similar material can be used to control air currents and soil blowing.

Calcium Chloride – Shall be in the form of loose, dry granules or flakes fine enough to feed through commonly used spreaders at a rate that will keep surface moist but not cause pollution or plant damage. If used on steeper slopes, then use other practices to prevent washing into streams or accumulation around plants.

Stone – Cover surface with crushed stone or coarse gravel.

### BASEMENT DEMOLITION PLAN

PROJECT TITLE:

**UNION COUNTY PARKING GARAGE BUILDING -H**  
 ELIZABETHTOWN PLAZA  
 ELIZABETH NJ, 07202

SUBMISSION:  
 ISSUED FOR BIDDING

DATE	REVISIONS	BY	CHKD

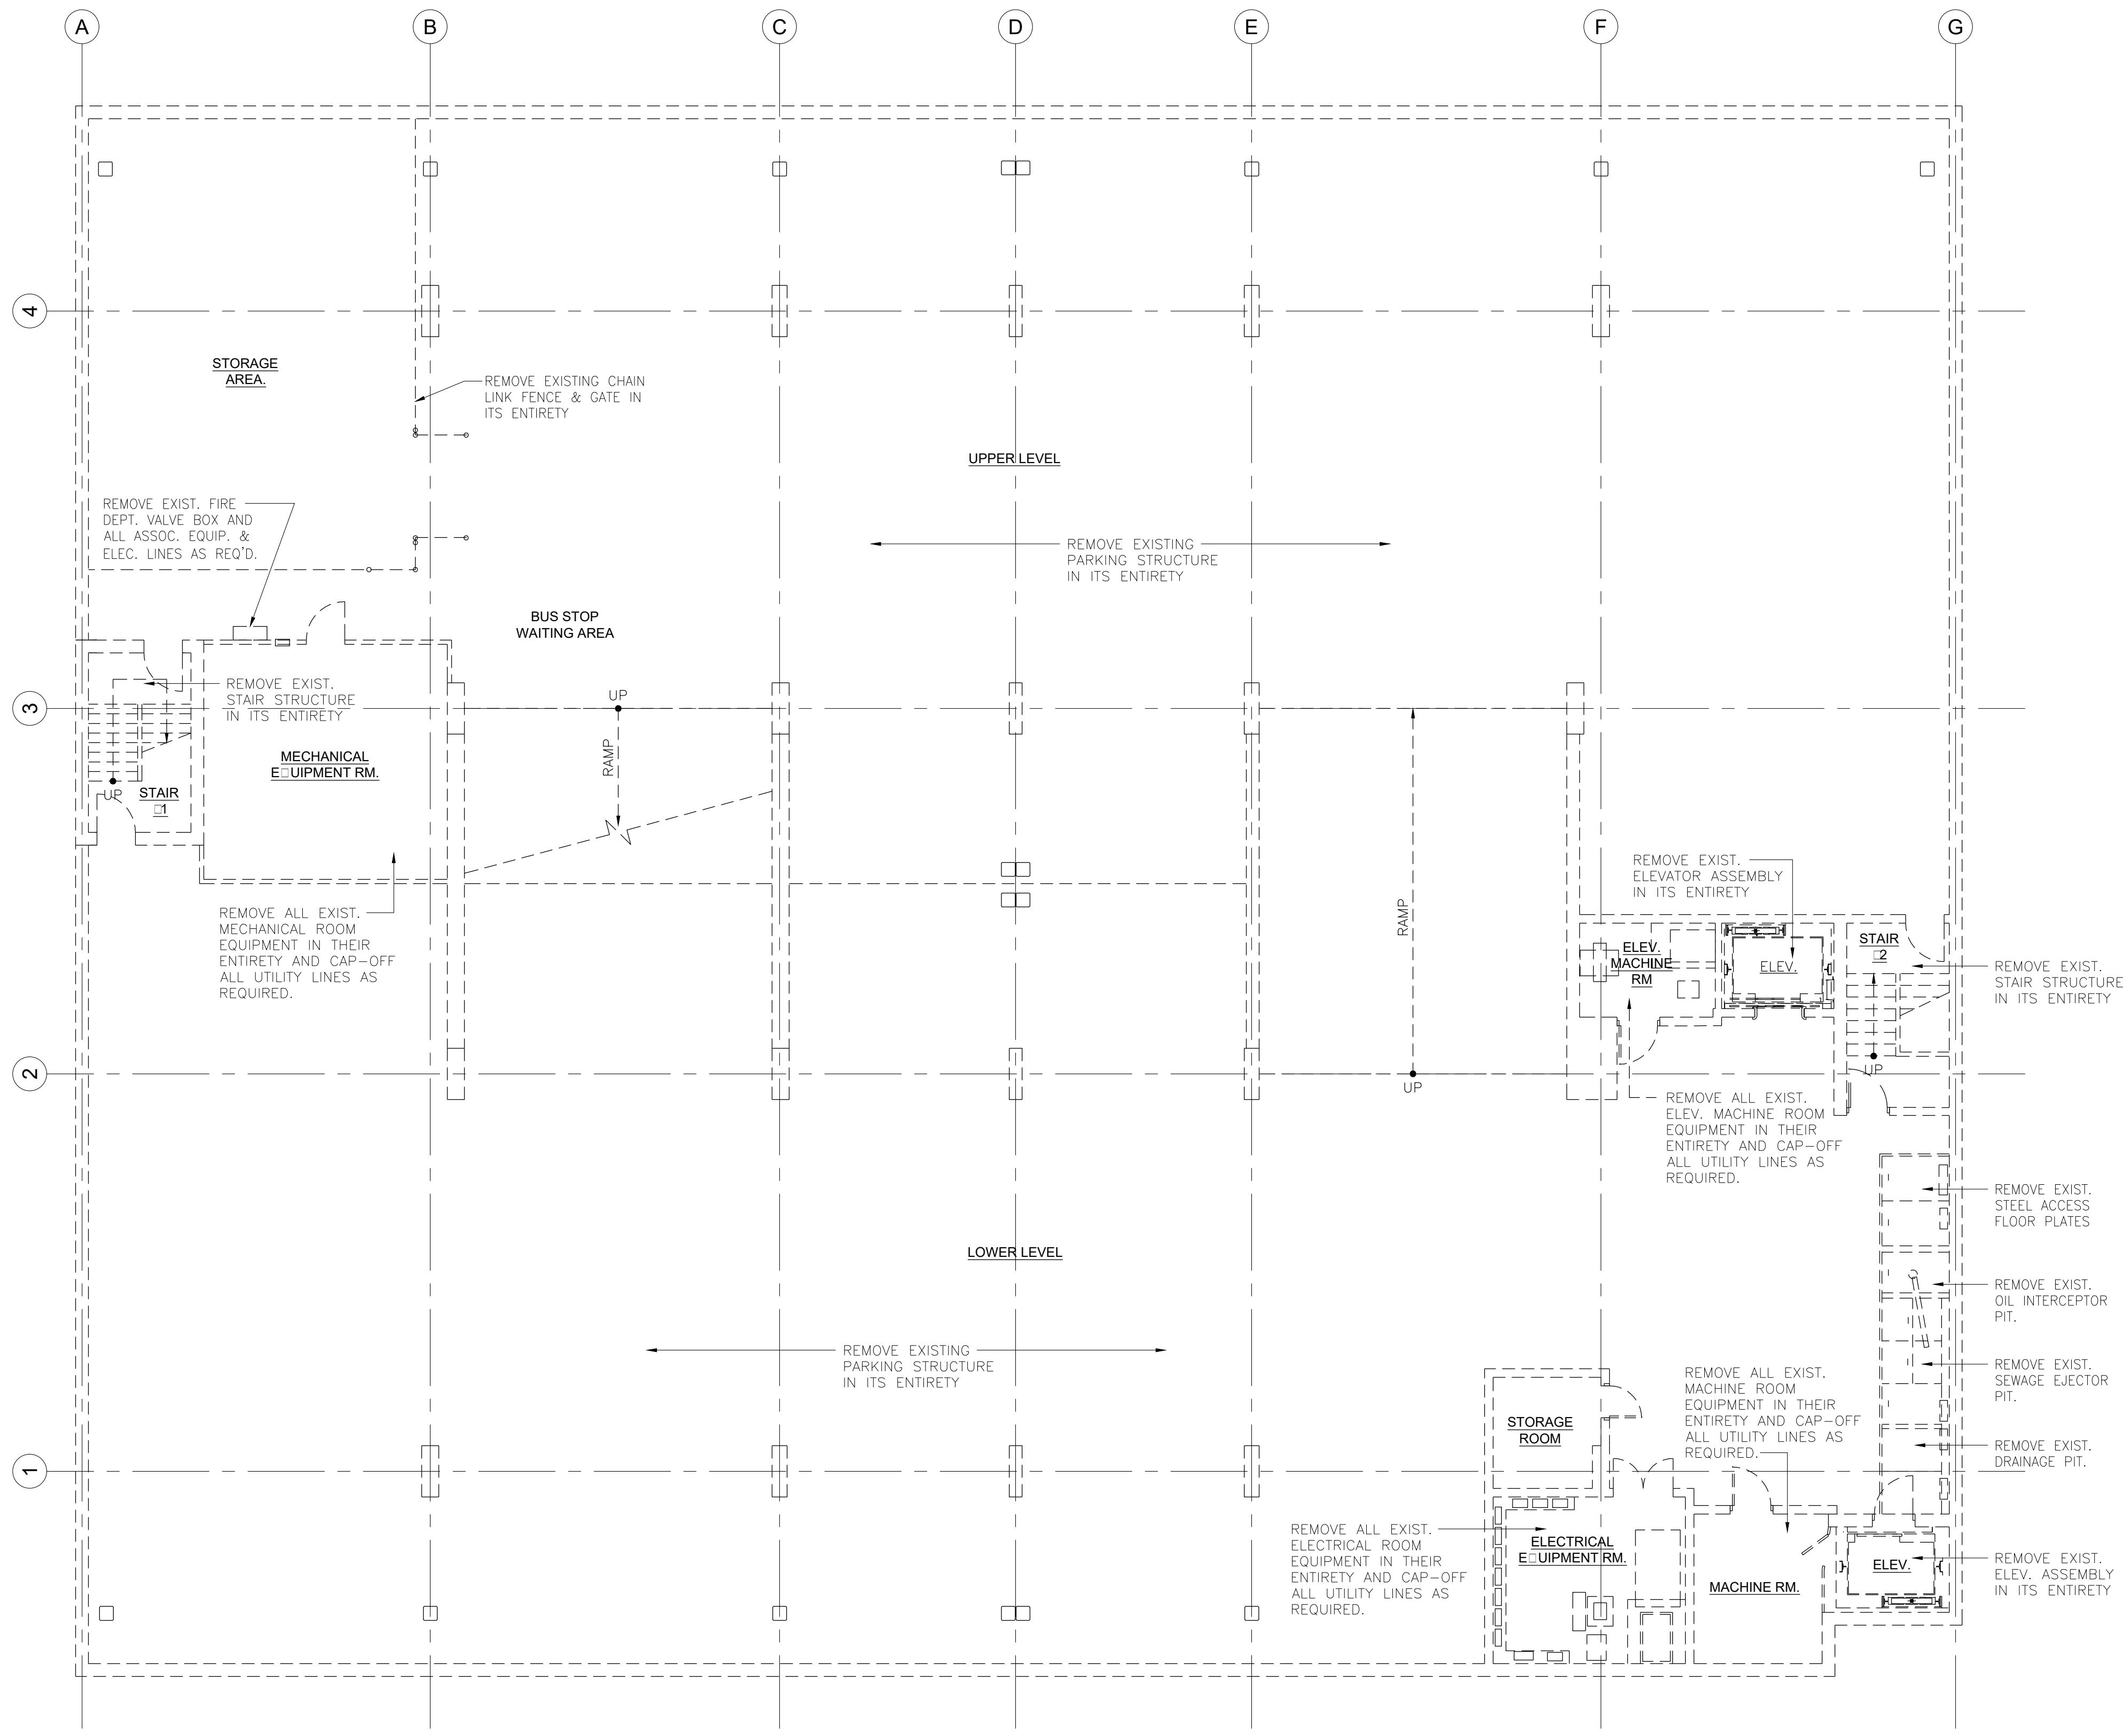

Date: 06.04.2021  
 Scale: AS SHOWN  
 Drawn by: RG  
 Checked by: RM  
 Job No.: 2201565  
 Drawing No.:

# AD-100

### DEMOLITION NOTES

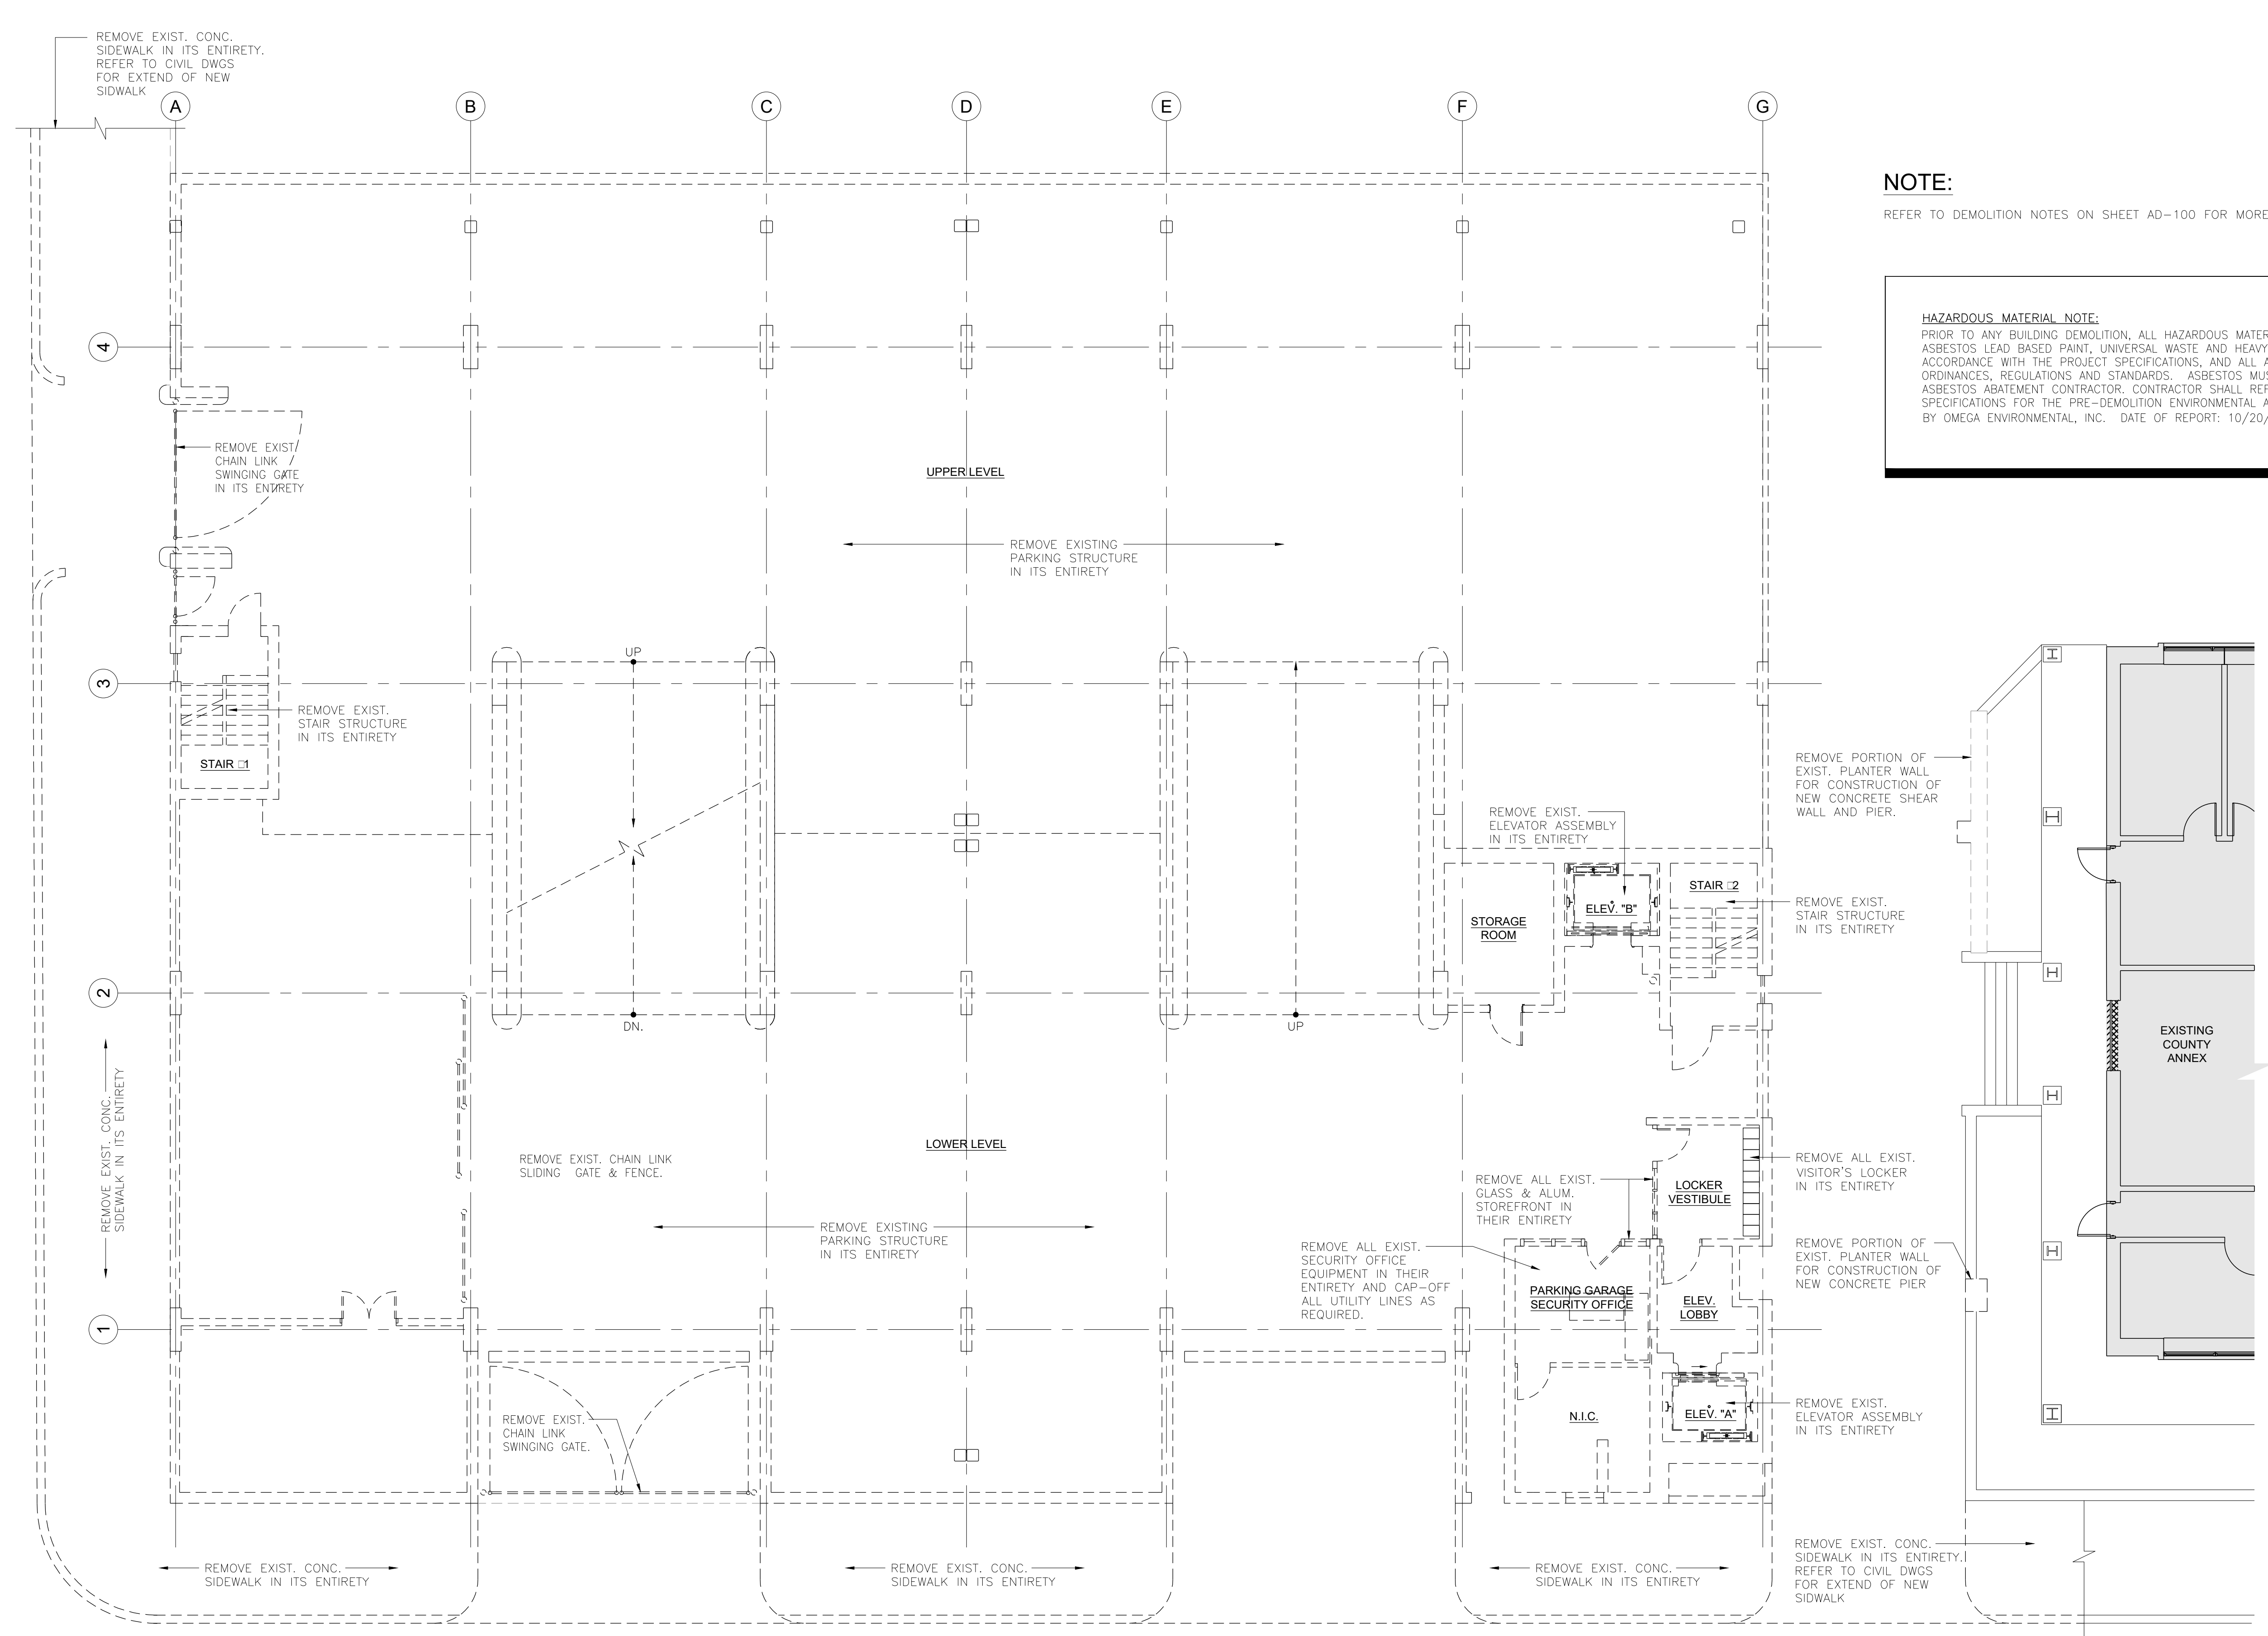

1. THE UNION COUNTY PARKING DECK BUILDING AT THE CORNER OF CALDWELL PLACE AND ELIZABETHTOWN PLAZA, ELIZABETH, NJ 07202 SHALL BE DEMOLISHED IN ITS ENTIRETY. THE DEMOLITION SHALL INCLUDE THE FOLLOWING: THE BASEMENT AND THE FIRST THROUGH THE SEVENTH FLOOR STRUCTURES, INCLUDING FOUNDATIONS AND FOOTINGS, SLABS, WALLS, COLUMNS, STAIRS, ETC. DEMOLISH THE BASEMENT FOUNDATION WALLS, CONCRETE FLOOR SLABS AND FOOTINGS. REMOVE ALL LANDSCAPING, CONCRETE SIDEWALKS, PAVEMENT, ETC. AS REQUIRED TO FACILITATE THE DEMOLITION WORK.	14. MAINTAIN ACCESS TO EXISTING WALKWAYS, EXITS, AND OTHER FACILITIES USED BY OCCUPANTS OF ADJACENT BUILDINGS. DO NOT CLOSE OR OBSTRUCT WALKWAYS, EXITS, OR OTHER FACILITIES USED BY OCCUPANTS OF ADJACENT BUILDINGS AND PUBLIC WITHOUT WRITTEN PERMISSION FROM AUTHORITIES HAVING JURISDICTION.
2. THE CONTRACTOR SHALL VERIFY LOCATION OF ALL UNDERGROUND UTILITIES PRIOR TO START OF EXCAVATION AND DEMOLITION WORK. ALL DEMOLITION OPERATIONS SHALL BE COORDINATED WITH THE APPLICABLE UTILITY COMPANY WHERE REQUIRED. ALL EXISTING UTILITY CONNECTIONS SHALL BE DISCONNECTED AND CAPPED PRIOR TO COMMENCING ANY DEMOLITION WORK.	15. THE CONTRACTOR TO CONDUCT BUILDING DEMOLITION AND DEBRIS-REMOVAL OPERATIONS TO ENSURE MINIMUM INTERFERENCE WITH ROADS, STREETS, WALKS, WALKWAYS, AND OTHER ADJACENT OCCUPIED AND USED FACILITIES. DO NOT CLOSE OR OBSTRUCT STREETS, WALKS, WALKWAYS, OR OTHER ADJACENT OCCUPIED OR USED FACILITIES.
3. THE CONTRACTOR SHALL OBTAIN AND PAY FOR ALL REQUIRED DEMOLITION PERMITS REQUIRED BY FEDERAL, STATE, AND LOCAL JURISDICTIONS FOR ALL PHASES OF OPERATIONS PRIOR TO BEGINNING OF ANY WORK. THE BUILDING SHALL BE VACATED PRIOR TO COMMENCING DEMOLITION.	16. PROCEED WITH DEMOLITION OF STRUCTURAL FRAMING MEMBERS SYSTEMATICALLY, FROM HIGHER TO LOWER LEVEL. COMPLETE BUILDING DEMOLITION OPERATIONS ABOVE EACH FLOOR OR TIER BEFORE DISTURBING SUPPORTING MEMBERS ON THE NEXT LOWER LEVEL. REMOVE DEBRIS FROM ELEVATED PORTIONS OF THE BUILDING BY CHUTE, HOIST, OR OTHER DEVICE THAT WILL CONVEY DEBRIS TO GRADE LEVEL IN A CONTROLLED DESCENT. REMOVE STRUCTURAL FRAMING MEMBERS AND LOWER TO GROUND BY METHOD SUITABLE TO MINIMIZE GROUND IMPACT AND DUST GENERATION. DEMOLISH AND REMOVE EXISTING UTILITIES AND BELOW-GRADE UTILITY STRUCTURES, AND PERMANENTLY CAP & SEAL ALL UTILITIES TO REMAIN IN PLACE.
4. THE CONTRACTOR SHALL CAREFULLY MAKE ALL INVESTIGATIONS IN THE FIELD PRIOR TO SUBMITTING THEIR BIDS. JOBSITE INSPECTION SHALL BE CONDUCTED TO EXAMINE EXISTING CONDITIONS, TO DETERMINE NATURE AND SCOPE OF WORK OR ANY DIFFICULTIES THAT MIGHT ARISE AT TIME OF WORK. THEIR BID SHALL REFLECT ALL WORK NECESSARY FOR THE COMPLETE DEMOLITION OF EXISTING STRUCTURE AS SPECIFIED IN THIS CONTRACT.	17. COMPLETELY FILL BELOW-GRADE AREAS AND VOIDS RESULTING FROM BUILDING DEMOLITION OPERATION WITH SATISFACTORY SOIL MATERIALS. UNIFORMLY ROUGH GRADE AREA OF DEMOLISHED CONSTRUCTION TO A SMOOTH SURFACE. FREE FROM IRREGULAR SURFACE CHANGES. PROVIDE SMOOTH TRANSITION BETWEEN ADJACENT EXISTING GRADES AND NEW GRADES.
5. THE CONTRACTOR IS TO PROVIDE ALL LABOR, MATERIALS AND EQUIPMENT TO PERFORM A COMPLETE JOB. THE CONTRACTOR SHALL SUBMIT A DEMOLITION PLAN, WITH PROPOSED PHASING, TO THE ARCHITECT & OWNER'S REPRESENTATIVE PRIOR TO BEGINNING WORK. THE PLAN SHALL INCLUDE A SCHEDULE OF DEMOLITION ACTIVITIES, DETAILED COORDINATION OF UTILITIES SHUTOFFS AND MATERIALS STAGING AREAS.	18. THE CONTRACTOR SHALL CONSPICUOUSLY LOCATE SIGNAGE TO INDICATE THE LOCATION OF DEMOLITION AREAS. THE SIGNAGE WILL CONSIST OF 2" TALL BLACK LETTERING ON AN ORANGE BACKGROUND AND WILL READ AS FOLLOWS: "KEEP OUT CONSTRUCTION AREA CONTRACTOR EMPLOYEES ONLY".
6. ALL DAMAGES TO EXISTING ADJACENT STRUCTURE SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO REPAIR SUCH DAMAGES AT THEIR OWN EXPENSE.	19. REMOVE ALL EXISTING CONCRETE STEPS, RAMPS AND RAILINGS IN THEIR ENTIRETY.
7. DEMOLITION PLAN SHOWS APPROXIMATE LAYOUT OF EXISTING PARTITIONS AND ARE NOT INTENDED TO REPRESENT "AS BUILT" CONDITIONS. ALL INFORMATION MUST BE VERIFIED ON SITE.	21. DASHED LINES INDICATE ITEMS TO BE REMOVED. THESE IDENTIFIED ITEMS DO NOT RELIEVE THE CONTRACTOR AND ANY ADDITIONAL WORK OF SIMILAR SCOPE AND NATURE IDENTIFIED THROUGH FIELD INVESTIGATIONS.
8. PRIOR TO DEMOLITION AND REMOVALS, ALL UTILITIES AND APPURTENANCES INCLUDING GAS, WATER SANITARY, STORM WATER, ELECTRIC, TELEPHONE, CABLE, ETC. ARE TO BE REMOVED AND CAPPED AT THE LIMITS OF THE DEMOLITION (PROPERTY LIMITS) UNLESS OTHERWISE NOTED.	22. THE CONTRACTOR TO INSTALL TEMPORARY CHAIN-LINK FENCE, IN 6' HEIGHT, AS INDICATED IN SPECIFICATION SECTION 015000, TO ENCLOSE AND SECURE THE PROJECT SITE. PROVIDE GATES AT CONSTRUCTION ENTRANCES.
9. UNLESS OTHERWISE INDICATED, DEMOLITION WASTE BECOMES PROPERTY OF THE CONTRACTOR. HISTORIC ITEMS, RELICS, ANTIQUES, AND SIMILAR OBJECTS INCLUDING, BUT NOT LIMITED TO, CORNERSTONES AND THEIR CONTENTS, COMMEMORATIVE PLAQUES AND TABLETS, AND OTHER ITEMS OF INTEREST OR VALUE TO OWNER THAT MAY BE UNCOVERED DURING DEMOLITION REMAIN THE PROPERTY OF THE OWNER. CAREFULLY SALVAGE IN A MANNER TO PREVENT DAMAGE AND PROMPTLY RETURN TO OWNER.	23. IT IS THE CONTRACTOR'S RESPONSIBILITY TO NOTIFY THE OWNER'S REPRESENTATIVE & ARCHITECT OF ANY POTENTIAL PROBLEMS THAT MAY INTERFERE WITH THE WORK PRIOR TO STARTING CONSTRUCTION.
10. THE CONTRACTOR SHALL DISPOSE OF ALL DEMOLITION DEBRIS IN ACCORDANCE WITH ALL FEDERAL, STATE AND LOCAL ORDINANCES. THE CONTRACTOR SHALL COORDINATE THE LOCATION AND TRANSPORTATION ACTIVITIES OF DUMPSTERS AND CONTAINERS WITH THE OWNER'S REPRESENTATIVE.	24. AT ALL LOCATIONS OF UNDERGROUND DEMOLITION, CONTRACTOR SHALL DESIGN, PROVIDE, MONITOR AND MAINTAIN EXCAVATION SUPPORT AND PROTECTION SYSTEMS CAPABLE OF SUPPORTING EXCAVATING SIDEWALLS, AND OF RESISTING SOIL AND HYDROSTATIC PRESSURE AND SUPERIMPOSED AND CONSTRUCTION LOADS TYPICAL.
11. THE CONTRACTOR SHALL EXCAVATE TO FACILITATE THE REMOVAL OF ANY NEUTRALIZATION TANK AND ASSOCIATED TANK LINES BY THE HAZARDOUS REMOVAL CONTRACTOR. THE CONTRACTOR SHALL BACKFILL AFTER REMOVALS, REFER TO THE TECHNICAL SPECIFICATIONS FOR ENVIRONMENTAL REMEDIATION. BACKFILL THE AREA AND TRENCHES WITH SATISFACTORY SOIL MATERIALS. UNIFORMLY ROUGH GRADE AREA OF DEMOLISHED CONSTRUCTION TO A SMOOTH SURFACE. FREE FROM IRREGULAR SURFACE CHANGES. PROVIDE SMOOTH TRANSITION BETWEEN ADJACENT EXISTING GRADES AND NEW GRADES.	25. THE DEMOLITION WORK SHALL INCLUDE BUT NOT BE LIMITED TO CONCRETE, MASONRY, LUMBER, WALLS, ROOF, FLOORING, FLOOR COVERINGS, WINDOWS, DOORS, MILLWORK/CASEWORK, PLUMBING FIXTURES AND PIPING, ALL AMENITIES INCLUDING FURNITURE, APPLIANCES, FUME HOODS, HVAC EQUIPMENT AND DUCTWORK, ELECTRICAL EQUIPMENT, CONDUITS, LIGHTING, ETC.
12. IF MATERIALS ARE DISCOVERED DURING DEMOLITION, THE GENERAL CONTRACTOR SHALL LEGALLY DISPOSE OF IT. THE CONTRACTOR SHALL SUBMIT RECEIPT AND ACCEPTANCE OF HAZARDOUS WASTES BY A LANDFILL FACILITY LICENSED TO ACCEPT HAZARDOUS WASTES TO THE OWNER'S REPRESENTATIVE.	26. EXCAVATE AND REMOVE ALL UNDERGROUND ELECTRICAL LINES THAT CONNECT TO THE BUILDING AS REQUIRED. BACKFILL THE TRENCHES WITH SATISFACTORY SOIL MATERIALS. UNIFORMLY ROUGH GRADE AREA OF DEMOLISHED CONSTRUCTION TO A SMOOTH SURFACE. FREE FROM IRREGULAR SURFACE CHANGES. PROVIDE SMOOTH TRANSITION BETWEEN ADJACENT EXISTING GRADES AND NEW GRADES.
13. THE BUILDING IMMEDIATELY ADJACENT TO THE DEMOLITION SHALL NOT BE DISRUPTED.	27. EXCAVATED MATERIAL SHALL BE REDIRECTED ON-SITE AND PROPERLY GRADED OR LEGALLY REMOVED OFF-SITE TO A DISPOSAL AREA, AT THE CONTRACTOR'S EXPENSE. MATERIAL REMOVAL OFF-SITE SHALL BE PROPERLY DOCUMENTED AND MANIFESTED.
	28. NEW WATER SERVICE ROOM IN ANNEX BUILDING AND ALL ASSOCIATED WORK SHALL BE COMPLETED PRIOR TO DEMOLITION OF THE SKY BRIDGE AND PARKING GARAGE.
	29. REMOVE ALL ROOFTOP UNITS/EQUIPMENT INCLUDING ALL ASSOCIATED UTILITY LINES IN THEIR ENTIRETY.

SIGNAGE GENERAL NOTES:

- A. SCHEDULE NOTES:  
 1. SEE SHEETS A-700 THROUGH A-706 FOR SIGN LOCATION PLANS  
 2. ALL SURFACE MOUNTED SIGNS SHALL NOT EXTEND BEYOND EDGE OF PRECAST WALLS AND COLUMNS.  
 3. CONFIRM ALL SIGN LOCATIONS WITH ARCHITECT BEFORE INSTALLATION.
- B. TYPICAL PEDESTRIAN SIGNS (ROOM ID, STAIR ID, EXIT EGRESS IDENTIFICATION SIGNS):  
 1. TYPEFONT: ARIAL  
 2. SIGN SHALL BE BACKGROUND COLOR-REVERSE PAINTED IN COLORS INDICATED.  
 3. SIGN TO BE ADA COMPLIANT WITH ICC/ANSI A117.1 INCLUDING TACTILE TEXT AND BRAILLE REQUIREMENTS.  
 4. CENTER ALL SYMBOLS AND TEXT ON SIGN HORIZONTALLY AND VERTICALLY, U.N.O.  
 5. MATERIAL: 1/4" THICKNESS, U.N.O. CLEAR NON-GLARE, EXTERIOR GRADE PHOTOPOLYMER.  
 6. SYMBOLS AND PICTOGRAMS: SHALL HAVE A NON-GLARE FINISH AND COMPLY WITH ICC/ANSI A117.1.  
 7. SIGNS MOUNTED TO GLASS SURFACES TO BE ADHERED WITH EXTERIOR GRADE V.H.B. TAPE.  
 8. LAMINATE SIGN TO A ALUMINUM BACKING WHEN POST MOUNTED. SEE NOTE C.4.
- C. TYPICAL DIRECTIONAL / TRAFFIC SIGNS  
 1. TYPEFONT: ARIAL NARROW BOLD, U.N.O. SEE SIGN DETAILS AND SCHEDULE FOR TEXT HEIGHTS.  
 2. BACKGROUND AS NOTED IN DETAILS SHALL BE SILK SCREENED OVER REFLECTIVE BACKGROUND (3M ENGINEER GRADE "SCOTCHLITE" #3290 REFLECTIVE SHEETING, OR APPROVED EQUAL) U.N.O.  
 3. REFLECTIVE SYMBOLS AND TEXT SHALL BE REVERSED STENCILED RESULTING FROM BACKGROUND COLOR APPLICATION OVER REFLECTIVE SHEETING.  
 4. BACKING MATERIALS FOR SIGNS SHALL BE 0.080 THICK ALUMINUM, U.N.O. PAINT EDGES AND BACKS OF ALUMINUM SIGNS THAT ARE DIRECTLY TO THE STRUCTURE FOR CATHODIC AND CORROSION PROTECTION.  
 5. MOUNT ALL SIGNS PLUMB AND LEVEL. OVERHEAD CLEARANCE HEIGHT SHALL NOT ENCR OACH INTO THE VERTICAL CLEARANCE REQUIREMENTS OF THE PARKING FACILITY.  
 6. SIGNAGE CONTRACTOR TO VERIFY LOCATIONS OF SIGNAGE IN THE FIELD WITH THE ARCHITECT PRIOR TO INSTALLATION.  
 7. WHERE SIGNS ARE MOUNTED BACK-TO-BACK, INCREASE THE WIDTH OF THE SMALLER SIGN TO MATCH THE LARGER.
- D. ILLUMINATED SIGNS  
 1. POWER INFORMATION TO SIGN LOCATIONS TO BE PROVIDED BY ELECTRICAL ENGINEER. SEE ELECTRICAL DRAWINGS.  
 SIGNAGE CONTRACTOR TO COORDINATE THE ELECTRICAL COMPONENTS OF SIGNS WITH THE PROVIDED POWER SUPPLY.  
 2. ALL ELECTRICAL SUPPLY COMPONENTS INCLUDING BUT NOT LIMITED TO JUNCTION BOXES, TRANSFORMERS AND CONDUIT ARE TO BE CONCEALED AND NOT VISIBLE FROM THE BUILDING EXTERIOR.

**FOUNDATION/TIER 1 FLOOR PLAN**

SCALE: 1/8" = 1'-0"

**NOTES:**

- 1) FINISHED FLOOR ELEVATION VARIES, SEE PLAN AND COORDINATE WITH ARCHITECTURAL DRAWINGS (ACTUAL ELEVATION +18.20').
- 2) ( ) INDICATES TOP OF FOUNDATION ELEVATION RELATIVE TO DATUM ELEVATION 0.00'.
- 3) SEE S-200 FOR COLUMN, PIER, FOOTING AND GRADE BEAM SCHEDULES AND PILE CAP INFORMATION.
- 4) FOUNDATIONS, COLUMNS AND PIERS ARE CENTERED ON THE GRID LINE, UNLESS NOTED OTHERWISE, SEE ARCH. DRAWINGS.
- 5) P/C MFR. TO DESIGN ALL WALLS, SPANDREL PANELS, & CONNECTIONS FOR A VEHICULAR IMPACT FORCE OF 6,000 POUNDS @ 1'-6" TO 2'-3" ABOVE FINISHED FLOOR PER IBC/ASCE-7.
- 6) SEE ARCHITECTURAL DRAWINGS FOR ALL DIMENSIONS & ELEVATIONS. DIMENSIONS & ELEVATIONS ON THIS DRAWING ARE FOR CONVENIENCE ONLY AND MUST BE CHECKED WITH THE ARCHITECTURAL DRAWINGS FOR ACCURACY. DIMENSIONS & ELEVATIONS ON THE ARCHITECTURAL DRAWINGS GOVERN.
- 7) [ ] INDICATES TOP OF PIER ELEVATION RELATIVE TO RELEVATION +18.20'. ALL TOP OF PIER ELEVATIONS NOT SHOWN SEE ARCH. & COORDINATE W/ P/C MFR.

- 8) FOOTINGS AND PIERS SUPPORTING MORE THAN ONE COLUMN SHALL BE CENTERED BETWEEN THEM IN BOTH DIRECTIONS, UNLESS NOTED OTHERWISE.
- 9) [Symbol] INDICATES P/C CONCRETE SHEARWALL, SEE SCHEDULE ON S-500.
- 10) SEE DRAWING SHEETS S-500 & S-501 FOR SHEARWALL LOADING DIAGRAMS.
- 11) 'PCC\_' INDICATES PRECAST CONCRETE COLUMN, SEE PLAN DETAILS ON SHEET S-303 FOR INFO.
- 12) ALL CONNECTIONS OF STEEL FRAMING TO PRECAST ELEMENTS SHALL UTILIZE A PRECAST WALL 'E' ('PCWP'). THIS EMBEDDED WALL 'E' SHALL BE DESIGNED BY THE PRECAST MANUFACTURER FOR MINIMUM UNFACTORED REACTIONS SHOWN ON PLAN. ANY EXPOSED WALL 'E'S SHALL BE HOT-DIPPED GALVANIZED.
- 13) COORDINATE ALL UNDERGROUND UTILITY REQUIREMENTS WITH CIVIL/MEP DRAWINGS. ALL UTILITIES SHALL BE ABOVE/BELOW GRADE BEAM/PILE CAP AND NOT LOCATED WITHIN FOUNDATION ELEMENTS.
- 14) 'SCI' INDICATES HSS12x12x1/2 W/ 3/4x18x1'-6" BASE PLATE W/ (4) 3/4" ANCHOR BOLTS.
- 15) AT 12" C.I.P. WALLS PROVIDE #6 @ 12" VERT. & #5 @ 12" HORIZ., U.N.O.
- 16) [Symbol] 'X.XX' INDICATES ACTUAL ELEVATION OF SLAB ON GRADE; THESE ELEVATIONS ARE SHOWN FOR INFORMATION ONLY. ALL TOP OF SLAB ELEVATIONS AND SLOPES AND MUST BE COORDINATED WITH ARCH./CIVIL DRAWINGS.
- 17) SEE ARCH/MEP DOCUMENTS FOR ALL WATERSTOP AND WATERPROOFING REQUIREMENTS.
- 18) PERIMETER RETAINING WALLS TO BE BACKFILLED FULL PER GEOTECHNICAL REQUIREMENTS PRIOR TO SETTING PRECAST ELEMENTS. SEE GEOTECHNICAL ENGINEERING REPORT FOR ALL REQUIREMENTS.
- 19) 'RWC' INDICATES RAINWATER CONDUCTOR LOCATION. TOP OF PILE CAP TO BE (-2.00') BELOW SLAB ON GRADE (MIN.). COORDINATE WITH LOCATIONS SHOWN ON CIVIL/PLUMBING DRAWINGS.
- 20) ALL FOOTING SHALL BEAR ON ON ROCK (16,000 PSF BEARING CAPACITY); IF NOT, PROVIDE LEAN CONCRETE TTD TO REACH ROCK ELEVATION.
- 21) COORDINATE W/ PRECAST MFR. FOR P/C COLUMN & SPANDREL ELEVATION & CONNECTION TO C.I.P. COLUMN & WALLS.
- 22) 'PUI' INDICATES HSS6x6x3/8 W/ 3/4x8x1'-0" BASE PLATE W/ (4) 3/4" ANCHORS RODS, ON THICKENED SLAB. 'PUIA' INDICATES HSS6x6x3/8 W/ 3/4x8x1'-0" BASE PLATE W/ (4) 3/4" ANCHORS RODS, ON GRADE BEAM.
- 23) 'MP' INDICATES EMBEDDED WALL 'E', PROVIDE 15 KIP REACTION.

## TIER 5 - 7 FLOOR FRAMING PLAN

SCALE: 1/8" = 1'-0"

- NOTES:
- SEE PLAN FOR FINISHED FLOOR ELEVATIONS RELATIVE TO ELEVATION 18.20'. COORDINATE ALL ELEVATIONS WITH ARCHITECTURAL DRAWINGS.
  - SEE ARCHITECTURAL DRAWINGS FOR DIMENSIONS NOT INDICATED.
  - SEE ARCHITECTURAL DRAWINGS FOR ALL DIMENSIONS. DIMENSIONS ON THIS DRAWING ARE FOR CONVENIENCE ONLY AND MUST BE CHECKED WITH THE ARCHITECTURAL DRAWINGS FOR ACCURACY. DIMENSIONS ON THE ARCHITECTURAL DRAWINGS GOVERN.
  - INDICATES PRECAST CONCRETE SHEARWALL, SEE SCHEDULE ON SHEET S-500 AND S-501.
  - SEE DRAWING SHEETS S-600 FOR SHEARWALL LOADING DIAGRAMS.
  - 'PCWP' INDICATES EMBEDDED WALL IN P/C MFR. FOR REACTIONS INDICATED ON PLAN. ANY EXPOSED E'S SHALL BE HOT-DIP GALVANIZED.
  - SEE ARCH./MEP DOCUMENTS FOR ALL WATERSTOP AND WATERPROOFING REQUIREMENTS.
  - 'PCG-' INDICATES P/C GIRDER TO BE DESIGNED BY P/C MFR.

- PRECAST MANUFACTURER TO COORDINATE DESIGN OF DOUBLE TEES TO ACCOMMODATE WEIGHT OF PRECAST BOLLARDS, COORDINATE WITH ARCH. DRAWINGS.
- 'X-XX' INDICATES TOP OF DOUBLE TEE ELEVATION WITH RESPECT TO FLOOR ELEVATION; THESE ELEVATIONS ARE SHOWN FOR INFORMATION ONLY. ALL ELEVATIONS AND SLOPES MUST BE COORDINATED WITH ARCH./CIVIL DRAWINGS.
- INDICATES SPAN OF 8' SOLID CORE PRECAST PLANK WITH 2" TOPPING REINFORCED WITH 6x6 - W1.4XW1.4 WWP.
- P/C MFR. TO DESIGN ALL WALLS, SPANDREL PANELS & CONNECTIONS FOR A VEHICULAR IMPACT FORCE OF 6,000 LBS @ 1'-6" TO 2'-3" ABOVE FINISHED FLOOR PER IBC/ASCE-7.
- COORDINATE ALL CAST-IN-PLACE EMBED E'S REQUIRED FOR MISCELLANEOUS STAIR AND ELEVATOR COMPONENTS WITH STAIR/ELEVATOR MFR. AS REQUIRED.
- PERIMETER RETAINING WALLS TO BE BACKFILLED FULL PER GEOTECHNICAL REQUIREMENTS PRIOR TO SETTING PRECAST ELEMENTS. SEE GEOTECHNICAL ENGINEERING REPORT FOR ALL REQUIREMENTS.
- 'WP' INDICATES EMBEDDED WALL IN P/C WALL. PROVIDE 15 KIP REACTION.

- DUNNAGE FRAMING PLAN**  
SCALE: 1/8" = 1'-0"
- NOTES:  
 1) TOP OF STEEL BEAM ELEVATION 3'-6" ABOVE FIN. FLR. ELEVATION. COORDINATE w/ MECH. DRAWINGS.  
 2) "G1" INDICATES SPAN OF PRESSURE LOCK TYPE "WB" MFR. BY IKG INDUSTRIES. MAIN BARS TO BE 1 1/2"x3/16" o/c & CROSS BARS TO BE RECTANGULAR FLUSH, SPACED @ 4" o/c.  
 3) ALL EXTERIOR EXPOSED DUNNAGE STEEL MEMBERS, PLATES & HARDWARE SHALL BE HOT DIP GALVANIZED.  
 4) UNIT TO BE CENTERED ON STRUCTURAL MEMBERS. COORDINATE ALL DIMENSIONS w/ MECH. PRIOR TO ANY FABRICATION.  
 5) "44" INDICATES 4x4x3/8.  
 6) "K" INDICATES KNEE BRACE, SEE TYPICAL DETAIL.  
 7) SEE ARCH. DRAWINGS FOR HANDRAIL INFORMATION.

**TIER 8 FLOOR FRAMING PLAN**  
SCALE: 1/8" = 1'-0"

- NOTES:  
 1) SEE PLAN FOR FINISHED FLOOR ELEVATIONS RELATIVE TO ELEVATION 18.20'. COORDINATE ALL ELEVATIONS WITH ARCHITECTURAL DRAWINGS.  
 2) SEE ARCHITECTURAL DRAWINGS FOR DIMENSIONS NOT INDICATED.  
 3) SEE ARCHITECTURAL DRAWINGS FOR ALL DIMENSIONS. DIMENSIONS ON THIS DRAWING ARE FOR CONVENIENCE ONLY AND MUST BE CHECKED WITH THE ARCHITECTURAL DRAWINGS FOR ACCURACY. DIMENSIONS ON THE ARCHITECTURAL DRAWINGS GOVERN.  
 4) [Symbol] INDICATES PRECAST CONCRETE SHEARWALL, SEE SCHEDULE ON SHEET S-500 AND S-501.  
 5) SEE DRAWING SHEETS S-600 FOR SHEARWALL LOADING DIAGRAMS.  
 6) "PCWP" INDICATES EMBEDDED WALL & DESIGNED BY P/C MFR. FOR REACTIONS INDICATED ON PLAN. ANY EXPOSED E'S SHALL BE HOT-DIP GALVANIZED.  
 7) SEE ARCH./MEP DOCUMENTS FOR ALL WATERSTOP AND WATERPROOFING REQUIREMENTS.  
 8) "PCG\_" INDICATES P/C GIRDER TO BE DESIGNED BY P/C MFR.

- 9) PRECAST MANUFACTURER TO COORDINATE DESIGN OF DOUBLE TEES TO ACCOMMODATE WEIGHT OF PRECAST BOLLARDS, COORDINATE WITH ARCH. DRAWINGS.  
 10) [Symbol] INDICATES TOP OF DOUBLE TEE ELEVATION WITH RESPECT TO FLOOR ELEVATION; THESE ELEVATIONS ARE SHOWN FOR INFORMATION ONLY. ALL ELEVATIONS AND SLOPES MUST BE COORDINATED WITH ARCH./CIVIL DRAWINGS.  
 11) [Symbol] INDICATES SPAN OF 8" SOLID CORE PRECAST PLANK WITH 2" TOPPING REINFORCED WITH 6x6 - W1.4xW1.4 WWP.  
 12) P/C MFR. TO DESIGN ALL WALLS, SPANDREL PANELS & CONNECTIONS FOR A VEHICULAR IMPACT FORCE OF 6,000 LBS @ 1'-6" TO 2'-3" ABOVE FINISHED FLOOR PER IBC/ASCE-7.  
 13) COORDINATE ALL CAST-IN-PLACE EMBED E'S REQUIRED FOR MISCELLANEOUS STAIR AND ELEVATOR COMPONENTS WITH STAIR/ELEVATOR MFR. AS REQUIRED.  
 14) PERIMETER RETAINING WALLS TO BE BACKFILLED FULL PER GEOTECHNICAL REQUIREMENTS PRIOR TO SETTING PRECAST ELEMENTS. SEE GEOTECHNICAL ENGINEERING REPORT FOR ALL REQUIREMENTS.  
 15) "WP" INDICATES EMBEDDED WALL & IN P/C WALL. PROVIDE 15 KIP REACTION.

**REQUIRED SPECIAL INSPECTIONS AND TESTS OF CONCRETE CONSTRUCTION - TABLE 1705.3**

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTION	REFERENCED STANDARD *	IBC REFERENCE
1. INSPECT REINFORCEMENT, INCLUDING PRESTRESSING TENDONS, AND VERIFY PLACEMENT.	-	X	ACI 318: Ch. 20, 25.2, 25.3, 26.6.1-26.6.3	1908.4
2. REINFORCING BAR WELDING: a. VERIFY WELDABILITY OF REINFORCING BARS OTHER THAN ASTM A706; b. INSPECT SINGLE-PASS FILLET WELDS, MAXIMUM 5/16"; AND c. INSPECT ALL OTHER WELDS.	-  X	X  X	ANS D1.4 ACI 318: 26.6.4	-
3. INSPECT ANCHORS CAST IN CONCRETE.	-	X	ACI 318:17.8.2	-
4. INSPECT ANCHORS POST-INSTALLED IN HARDENED CONCRETE MEMBERS. <sup>b</sup> a. ADHESIVE ANCHORS INSTALLED IN HORIZONTALLY OR UPWARDLY INCLINED ORIENTATIONS TO RESIST SUSTAINED TENSION LOADS. b. MECHANICAL ANCHORS AND ADHESIVE ANCHORS NOT DEFINED IN 4.a.	X  -	  X	ACI 318: 17.8.2.4 ACI 318: 17.8.2	-
5. VERIFY USE OF REQUIRED DESIGN MIX	-	X	ACI 318: Ch. 19, 26.4.3, 26.4.4	1904.1, 1904.2, 1908.2, 1908.3
6. PRIOR TO CONCRETE PLACEMENT, FABRICATE SPECIMENS FOR STRENGTH TESTS, PERFORM SLUMP AND AIR CONTENT TESTS, AND DETERMINE THE TEMPERATURE OF THE CONCRETE.	X	-	ASTM C172 ASTM C31 ACI 318: 26.5, 26.12	1908.10
7. INSPECT CONCRETE AND SHOTCRETE PLACEMENT FOR PROPER APPLICATION TECHNIQUES.	X	-	ACI 318: 26.5	1908.6, 1908.7, 1908.8
8. VERIFY MAINTENANCE OF SPECIFIED CURING TEMPERATURE AND TECHNIQUES.	-	X	ACI 318: 26.5.3-26.5.5	1908.9
9. INSPECT PRESTRESSED CONCRETE FOR: a. APPLICATION OF PRESTRESSING FORCES; AND b. GROUTING OF BONDED PRESTRESSING TENDONS.	X  X	-  -	ACI 318: 26.10	-
10. INSPECT ERECTION OF PRECAST CONCRETE MEMBERS.	-	X	ACI 318: Ch. 26.9	-
11. VERIFY IN-SITU CONCRETE STRENGTH, PRIOR TO STRESSING OF TENDONS IN POST-TENSIONED CONCRETE AND PRIOR TO REMOVAL OF SHORES AND FORMS FROM BEAMS AND STRUCTURAL SLABS.	-	X	ACI 318: 26.11.2	-
12. INSPECT FORMWORK FOR SHAPE, LOCATION AND DIMENSIONS OF THE CONCRETE MEMBER BEING FORMED.	-	X	ACI 318: 26.11.2(b)	-

a - WHERE APPLICABLE, SEE SECTION 1705.12, SPECIAL INSPECTIONS FOR SEISMIC RESISTANCE.

b - SPECIFIC REQUIREMENTS FOR SPECIAL INSPECTION SHALL BE INCLUDED IN THE RESEARCH REPORT FOR THE ANCHOR ISSUED BY AN APPROVED SOURCE IN ACCORDANCE WITH IT&2 IN ACI 318, OR OTHER QUALIFICATION PROCEDURES WHERE SPECIFIC REQUIREMENTS ARE NOT PROVIDED. SPECIAL INSPECTION REQUIREMENTS SHALL BE SPECIFIED BY THE REGISTERED DESIGN PROFESSIONAL AND SHALL BE APPROVED BY THE BUILDING OFFICIAL PRIOR TO THE COMMENCEMENT OF THE WORK.

**INSPECTION TASKS PRIOR TO WELDING - TABLE N5.4-1**

INSPECTION TASKS PRIOR TO WELDING	QC	QA
WELDER QUALIFICATION RECORDS AND CONTINUITY RECORDS	P	O
WPS AVAILABLE	P	P
MANUFACTURER CERTIFICATIONS FOR WELDING CONSUMABLES AVAILABLE	P	P
MATERIAL IDENTIFICATION (TYPE/GRADE)	O	O
WELDER IDENTIFICATION SYSTEM <sup>a</sup>	O	O
FIT-UP OF GROOVE WELDS (INCLUDE JOINT GEOMETRY) • JOINT PREPARATIONS • DIMENSIONS (ALIGNMENT, ROOT OPENING, ROOT FACE, BEVEL) • CLEANLINESS (CONDITION OF STEEL SURFACES) • TACKING (TACK WELD QUALITY & LOCATION) • BACKING TYPE AND FIT (IF APPLICABLE)	O	O
FIT-UP OF CJP GROOVE WELDS OF HSS T-, Y- AND K-JOINTS WITHOUT BACKING (INCLUDING JOINT GEOMETRY) • JOINT PREPARATIONS • DIMENSIONS (ALIGNMENT, ROOT OPENING, ROOT FACE, BEVEL) • CLEANLINESS (CONDITION OF STEEL SURFACES) • TACKING (TACK WELD QUALITY & LOCATION)	P	O
CONFIGURATION AND FINISH OF ACCESS HOLES	O	O
FIT-UP OF FILLET WELDS • DIMENSIONS (ALIGNMENT, GAPS AT ROOT) • CLEANLINESS (CONDITION OF STEEL SURFACES) • TACKING (TACK WELD QUALITY & LOCATION)	O	O
CHECK WELDING EQUIPMENT	O	-

a - THE FABRICATOR OR ERECTOR, AS APPLICABLE, SHALL MAINTAIN A SYSTEM BY WHICH A WELDER WHO HAS WELDED A JOINT OR MEMBER CAN BE IDENTIFIED. STAMPS, IF USED, SHALL BE THE LOW-STRESS TYPE.

O - OBSERVE THESE ITEMS ON A RANDOM BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS.

P - PERFORM THESE TASKS FOR EACH WELDED JOINT OR MEMBER.

**REQUIRED SPECIAL INSPECTIONS AND TESTS OF SOILS - TABLE 1705.6**

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTION
1. VERIFY MATERIALS BELOW SHALLOW FOUNDATIONS ARE ADEQUATE TO ACHIEVE THE DESIGN BEARING CAPACITY.	-	X
2. VERIFY EXCAVATIONS ARE EXTENDED TO PROPER DEPTH AND HAVE REACHED PROPER MATERIAL.	-	X
3. PERFORM CLASSIFICATION AND TESTING OF COMPACTED FILL MATERIALS.	-	X
4. VERIFY USE OF PROPER MATERIALS, DENSITIES AND LIFT THICKNESSES DURING PLACEMENT AND COMPACTION OF COMPACTED FILL.	X	-
5. PRIOR TO PLACEMENT OF COMPACTED FILL, INSPECT SUBGRADE AND VERIFY THAT SITE HAS BEEN PREPARED PROPERLY.	-	X

**INSPECTION TASKS DURING WELDING - TABLE N5.4-2**

INSPECTION TASKS DURING WELDING	QC	QA
CONTROL AND HANDLING OF WELDING CONSUMABLES • PACKAGING • EXPOSURE CONTROL	O	O
NO WELDING OVER CRACKED TACK WELDS	O	O
ENVIRONMENTAL CONDITIONS • WIND SPEED WITHIN LIMITS • PRECIPITATION AND TEMPERATURE	O	O
WPS FOLLOWED • SETTINGS ON WELDING EQUIPMENT • TRAVEL SPEED • SELECTED WELDING MATERIALS • SHIELDING GAS TYPE/FLOW RATE • PREHEAT APPLIED • INTERPASS TEMPERATURE MAINTAINED (MIN/MAX.) • PROPER POSITION (F, V, H, OH)	O	O
WELDING TECHNIQUES • INTERPASS AND FINAL CLEANING • EACH PASS WITHIN PROFILE LIMITATIONS • EACH PASS MEETS QUALITY REQUIREMENTS	O	O
PLACEMENT AND INSTALLATION OF STEEL HEADED STUD ANCHORS	P	P

O - OBSERVE THESE ITEMS ON A RANDOM BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS.

P - PERFORM THESE TASKS FOR EACH WELDED JOINT OR MEMBER.

**REQUIRED SPECIAL INSPECTIONS OF OPEN-WEB STEEL JOISTS AND JOIST GIRDERS - TABLE 1705.2.3**

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTION	REFERENCED STANDARD *
1. INSTALLATION OF OPEN-WEB STEEL JOISTS AND JOIST GIRDERS			
a. END CONNECTIONS - WELDING OR BOLTED	-	X	SJI SPECIFICATIONS LISTED IN SECTION 2207.1.
b. BRIDGING - HORIZONTAL OR DIAGONAL	-	-	-
1. STANDARD BRIDGING.	-	X	SJI SPECIFICATIONS LISTED IN SECTION 2207.1.
2. BRIDGING THAT DIFFERS FROM THE SJI SPECIFICATIONS LISTED IN SECTION 2207.1.	-	X	-

a - WHERE APPLICABLE, SEE SECTION 1705.12, SPECIAL INSPECTIONS FOR SEISMIC RESISTANCE.

**INSPECTION TASKS AFTER WELDING - TABLE N5.4-3**

INSPECTION TASKS AFTER WELDING	QC	QA
WELDS CLEANED	O	O
SIZE, LENGTH AND LOCATION OF WELDS	P	P
WELDS MEET VISUAL ACCEPTANCE CRITERIA • CRACK PROHIBITION • WELD/BASE-METAL FUSION • CRATER CROSS SECTION • WELD PROFILES • WELD SIZE • UNDERCUT • POROSITY	P	P
ARC STRIKES	P	P
k-AREA <sup>a</sup>	P	P
WELD ACCESS HOLES IN ROLLED HEAVY SHAPES AND BUILT-UP HEAVY SHAPES <sup>b</sup>	P	P
BACKING REMOVED AND WELD TABS REMOVED (IF REQUIRED)	P	P
REPAIR ACTIVITIES	P	P
DOCUMENT ACCEPTANCE OR REJECTION OF WELDED JOINT OR MEMBER	P	P
NO PROHIBITED WELDS HAVE BEEN ADDED WITHOUT THE APPROVAL OF THE EOR.	O	O

a - WHEN WELDING OF DOUBLER PLATES, CONTINUITY PLATES OR STIFFENERS HAS BEEN PERFORMED IN THE k-AREA, VISUALLY INSPECT THE WEB k-AREA FOR CRACKS WITHIN 3 IN. (75 mm) OF THE WELD.

b - AFTER ROLLED HEAVY SHAPES (SEE SECTION A3.1c) AND BUILT-UP HEAVY SHAPES (SEE SECTION A3.1d) ARE WELDED, VISUALLY INSPECT THE WELD ACCESS HOLES FOR CRACKS.

O - OBSERVE THESE ITEMS ON A RANDOM BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS.

P - PERFORM THESE TASKS FOR EACH WELDED JOINT OR MEMBER.

**INSPECTION TASKS PRIOR TO BOLTING - TABLE N5.6-1**

INSPECTION TASKS PRIOR TO BOLTING	QC	QA
MANUFACTURER'S CERTIFICATIONS AVAILABLE FOR FASTENER MATERIALS	O	P
FASTENERS MARKED IN ACCORDANCE WITH ASTM REQUIREMENTS	O	O
CORRECT FASTENERS SELECTED FOR THE JOINT DETAIL (GRADE, TYPE, BOLT LENGTH IF THREADS ARE TO BE EXCLUDED FROM THE SHEAR PLANE)	O	O
CORRECT BOLTING PROCEDURE SELECTED FOR JOINT DETAIL	O	O
CONNECTING ELEMENTS, INCLUDING THE APPROPRIATE FAYING SURFACE CONDITION AND HOLE PREPARATION, IF SPECIFIED, MEET APPLICABLE REQUIREMENTS	O	O
PRE-INSTALLATION VERIFICATION TESTING BY INSTALLATION PERSONNEL OBSERVED AND DOCUMENTED FOR FASTENER ASSEMBLIES AND METHODS USED	P	O
PROPER STORAGE PROVIDED FOR BOLTS, NUTS, WASHERS AND OTHER FASTENER COMPONENTS	O	O

O - OBSERVE THESE ITEMS ON A RANDOM BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS.

P - PERFORM THESE TASKS FOR EACH BOLTED CONNECTION.

**INSPECTION TASKS DURING BOLTING - TABLE N5.6-2**

INSPECTION TASKS DURING BOLTING	QC	QA
FASTENER ASSEMBLIES PLACED IN ALL HOLES AND WASHERS AND NUTS ARE POSITIONED AS REQUIRED.	O	O
JOINT BROUGHT TO THE SNUG-TIGHT CONDITION PRIOR TO THE PRETENSIONING OPERATION	O	O
FASTENER COMPONENT NOT TURNED BY THE WRENCH PREVENTED FROM ROTATING	O	O
FASTENERS ARE PRETENSIONED IN ACCORDANCE WITH THE RSCC SPECIFICATION, PROGRESSING SYSTEMATICALLY FROM THE MOST RIGID POINT TOWARD THE FREE EDGES	O	O

O - OBSERVE THESE ITEMS ON A RANDOM BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS.

P - PERFORM THESE TASKS FOR EACH BOLTED CONNECTION.

**INSPECTION TASKS AFTER BOLTING - TABLE N5.6-3**

INSPECTION TASKS AFTER BOLTING	QC	QA
DOCUMENT ACCEPTANCE OR REJECTION OF BOLTED CONNECTIONS	P	P

O - OBSERVE THESE ITEMS ON A RANDOM BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS.

P - PERFORM THESE TASKS FOR EACH BOLTED CONNECTION.

**INSPECTION OR EXECUTION TASKS AFTER WELDING - ANSI/SDI TABLE 1.5**

TASK	QC	QA
VERIFY SIZE AND LOCATION OF WELDS, INCLUDING SUPPORT, SIDELAP, AND PERIMETER WELDS.	P	P
WELDS MEET VISUAL ACCEPTANCE CRITERIA.	P	P
VERIFY REPAIR ACTIVITIES.	P	P
DOCUMENT ACCEPTANCE OR REJECTION OF WELDS.	P	P

O - INSPECT THESE ITEMS ON AN INTERMITTENT BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS. FREQUENCY OF OBSERVATIONS SHALL BE ADEQUATE TO CONFIRM THAT THE WORK HAS BEEN PERFORMED IN ACCORDANCE WITH THE APPLICABLE DOCUMENTS.  
P - PERFORM THESE TASKS PRIOR TO FINAL ACCEPTANCE FOR EACH ITEM OR ELEMENT.

**INSPECTION OR EXECUTION TASKS PRIOR TO MECHANICAL FASTENING - ANSI/SDI TABLE 1.6**

TASK	QC	QA
MANUFACTURER INSTALLATION INSTRUCTIONS AVAILABLE FOR MECHANICAL FASTENERS.	O	O
PROPER TOOLS AVAILABLE FOR FASTENER INSTALLATION.	O	O
PROPER STORAGE FOR MECHANICAL FASTENERS.	O	O

O - INSPECT THESE ITEMS ON AN INTERMITTENT BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS. FREQUENCY OF OBSERVATIONS SHALL BE ADEQUATE TO CONFIRM THAT THE WORK HAS BEEN PERFORMED IN ACCORDANCE WITH THE APPLICABLE DOCUMENTS.  
P - PERFORM THESE TASKS PRIOR TO FINAL ACCEPTANCE FOR EACH ITEM OR ELEMENT.

**INSPECTION OR EXECUTION TASKS DURING MECHANICAL FASTENING - ANSI/SDI TABLE 1.7**

TASK	QC	QA
FASTENERS ARE POSITIONED AS REQUIRED.	O	O
FASTENERS ARE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S INSTRUCTIONS.	O	O

O - INSPECT THESE ITEMS ON AN INTERMITTENT BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS. FREQUENCY OF OBSERVATIONS SHALL BE ADEQUATE TO CONFIRM THAT THE WORK HAS BEEN PERFORMED IN ACCORDANCE WITH THE APPLICABLE DOCUMENTS.  
P - PERFORM THESE TASKS PRIOR TO FINAL ACCEPTANCE FOR EACH ITEM OR ELEMENT.

**INSPECTION OR EXECUTION TASKS AFTER MECHANICAL FASTENING - ANSI/SDI TABLE 1.8**

TASK	QC	QA
CHECK SPACING, TYPE, AND INSTALLATION OF SUPPORT FASTENERS.	P	P
CHECK SPACING, TYPE, AND INSTALLATION OF SIDELAP FASTENERS.	P	P
CHECK SPACING, TYPE, AND INSTALLATION OF PERIMETER FASTENERS.	P	P
VERIFY REPAIR ACTIVITIES.	P	P
DOCUMENT ACCEPTANCE OR REJECTION OF MECHANICAL FASTENERS.	P	P

O - INSPECT THESE ITEMS ON AN INTERMITTENT BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS. FREQUENCY OF OBSERVATIONS SHALL BE ADEQUATE TO CONFIRM THAT THE WORK HAS BEEN PERFORMED IN ACCORDANCE WITH THE APPLICABLE DOCUMENTS.  
P - PERFORM THESE TASKS PRIOR TO FINAL ACCEPTANCE FOR EACH ITEM OR ELEMENT.

**INSPECTION OR EXECUTION TASKS PRIOR TO DECK PLACEMENT - ANSI/SDI TABLE 1.1**

TASK	QC	QA
VERIFY COMPLIANCE OF MATERIALS (DECK AND ALL DECK ACCESSORIES) WITH CONSTRUCTION DOCUMENTS, INCLUDING PROFILES, MATERIAL PROPERTIES, AND BASE METAL THICKNESS.	P	P
DOCUMENT ACCEPTANCE OR REJECTION OF DECK AND DECK ACCESSORIES	P	P

O - INSPECT THESE ITEMS ON AN INTERMITTENT BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS. FREQUENCY OF OBSERVATIONS SHALL BE ADEQUATE TO CONFIRM THAT THE WORK HAS BEEN PERFORMED IN ACCORDANCE WITH THE APPLICABLE DOCUMENTS.  
P - PERFORM THESE TASKS PRIOR TO FINAL ACCEPTANCE FOR EACH ITEM OR ELEMENT.

**INSPECTION OR EXECUTION TASKS AFTER DECK PLACEMENT - ANSI/SDI TABLE 1.2**

TASK	QC	QA
VERIFY COMPLIANCE OF DECK AND ALL DECK ACCESSORIES INSTALLATION WITH CONSTRUCTION DOCUMENTS.	P	P
VERIFY ALL DECK MATERIALS ARE REPRESENTED BY THE MILL CERTIFICATIONS THAT COMPLY WITH THE CONSTRUCTION DOCUMENTS.	-	P
DOCUMENT ACCEPTANCE OR REJECTION OF INSTALLATION OF DECK AND DECK ACCESSORIES.	P	P

USE OF QUALIFIED WELDERS.	O	O
CONTROL AND HANDLING OF WELDING CONSUMABLES.	O	O
ENVIRONMENTAL CONDITIONS (WIND SPEED, MOISTURE, TEMPERATURE).	O	O
WPS FOLLOWED.	O	O

O - INSPECT THESE ITEMS ON AN INTERMITTENT BASIS. OPERATIONS NEED NOT BE DELAYED PENDING THESE INSPECTIONS. FREQUENCY OF OBSERVATIONS SHALL BE ADEQUATE TO CONFIRM THAT THE WORK HAS BEEN PERFORMED IN ACCORDANCE WITH THE APPLICABLE DOCUMENTS.  
P - PERFORM THESE TASKS PRIOR TO FINAL ACCEPTANCE FOR EACH ITEM OR ELEMENT.

**SPECIAL INSPECTION REQUIREMENTS - IBC 2018 EDITION**

1. THE QUALIFIED AGENCY AND PERSONNEL RETAINED FOR THESE SPECIAL INSPECTION SERVICES SHALL BE APPROVED BY THE OWNER, THE ARCHITECT AND THE ENGINEER OF RECORD PRIOR TO START OF CONSTRUCTION. AN OUTLINE OF THE SCOPE OF SERVICES TO BE PERFORMED BY THE INSPECTING AGENCY IS TO BE SUBMITTED PRIOR TO START OF CONSTRUCTION.

2. IN ACCORDANCE WITH SECTION 1705 OF THE INTERNATIONAL BUILDING CODE 2018 EDITION, WITH LOCAL AMMENDMENTS PER xxxxxx, PERIODIC AND/OR CONTINUOUS INSPECTIONS OF THE CONSTRUCTION PROGRESS SHALL BE MADE BY AN INDEPENDENT APPROVED AGENCY IN ACCORDANCE WITH THE FOLLOWING REQUIREMENTS:

STEEL CONSTRUCTION	SECTION 1705.2, TABLE 1705.2.3
CONCRETE CONSTRUCTION	SECTION 1705.3, TABLE 1705.3
SOILS	SECTION 1705.6, TABLE 1705.6

**STRUCTURAL OBSERVATIONS**

1. STRUCTURAL OBSERVATIONS SHALL BE PROVIDED BY A REGISTERED DESIGN PROFESSIONAL OTHER THAN THE ENGINEER OF RECORD. THE DESIGNATED PROFESSIONAL SHALL PERFORM VISUAL OBSERVATIONS OF THE STRUCTURAL SYSTEM AT SIGNIFICANT CONSTRUCTION STAGES AND AT THE COMPLETION OF THE STRUCTURAL SYSTEM FOR GENERAL CONFORMANCE TO THE APPROVED CONSTRUCTION DOCUMENTS. ANY OBSERVED DEFICIENCIES SHALL BE REPORTED IN WRITING TO THE OWNER, THE CODE ENFORCEMENT OFFICIAL, THE ARCHITECT AND THE ENGINEER OF RECORD.

2. AT THE CONCLUSION OF THE WORK, THE DESIGNATED PROFESSIONAL SHALL SUBMIT A WRITTEN STATEMENT TO THE CODE ENFORCEMENT OFFICIAL, INDICATING THAT THE BUILDING WAS CONSTRUCTED IN CONFORMITY WITH THE PLANS FILED WITH THE BUILDING DEPARTMENT, ALL NECESSARY SITE VISITS HAVE BEEN MADE AND THAT ANY REPORTED DEFICIENCIES HAVE BEEN RESOLVED TO THE BEST OF HIS KNOWLEDGE.

3. PRIOR TO THE START OF CONSTRUCTION, THE DESIGNATED INSPECTION AGENCY SHALL SUBMIT A PROPOSED INSPECTION AND TESTING SCHEDULE TO THE ARCHITECT AND ENGINEER OF RECORD FOR REVIEW AND APPROVAL.

**TYPICAL WALL OPENING REINFORCING DETAIL**  
 (CAST IN PLACE CONCRETE SECTION)  
 (NOTE: Ld PER TABLES FOR DEVELOPMENT LENGTH)

**TYPICAL CONCRETE CURB DETAIL**  
 (FOR CURB DIMENSIONS 'W' & 'H' SEE ARCH. DWGS.)

**TYPICAL CHANGE IN WALL THICKNESS DETAIL**

- NOTES:**
- THE SCHEDULE INCLUDES SPLICE AND DEVELOPMENT LENGTHS WHICH SATISFY THE PROJECT REQUIREMENTS AND THE FOLLOWING CRITERIA:  
 $f_y = 60,000 \text{ psi}$  (75,000 psi FOR #14 AND #18 BARS).  
 CONCRETE WEIGHT = 150 lb/cu.ft.  
 TENSION DEVELOPMENT AND LAP SPLICE LENGTHS ARE DIVIDED INTO TWO CATEGORIES WHICH SHALL BE APPLIED AS FOLLOWS:  
 CATEGORY I - CLEAR SPACING OF BARS BEING DEVELOPED OR SPLICED NOT LESS THAN  $db$ , CLEAR COVER NOT LESS THAN  $db$ , AND BEAM STIRRUPS OR COLUMN TIES THROUGHOUT  $L_d$  NOT LESS THAN THE CODE MINIMUM OR  
 CLEAR SPACING OF BARS BEING DEVELOPED OR SPLICED NOT LESS THAN  $2db$  & CLEAR COVER NOT LESS THAN  $db$ .  
 CATEGORY II - BARS NOT COVERED BY CATEGORY I
  - USE COMPRESSION LAP SPLICE LENGTH (LCS) AT ALL COLUMN SPLICE LOCATIONS NOT SPECIFICALLY DETAILED AND UNLESS INDICATED OTHERWISE ON PLANS OR DETAILS. USE TENSION LAP SPLICE LENGTH (LTS) FOR ALL OTHER SPLICES (UNLESS OTHERWISE SHOWN ON DRAWINGS).
  - THE STANDARD LAP SPLICE ( $0.0005 \times F_y \times D$ ) IS USED FOR COMPRESSION SPLICES AND THE CLASS 'B' SPLICE IS USED FOR TENSION SPLICES. THE CONTRACTOR MAY SUBMIT LESSER SPLICE LENGTHS FOR REVIEW AND APPROVAL AT THE SAME TIME PROVIDING THE FOLLOWING INFORMATION:
    - DETAILS PREPARED AND SUBMITTED BY THE CONTRACTOR INDICATING LOCATION AND PROPOSED LAYOUT OF REBARS AND LENGTHS OF SPLICES.
    - WHERE THE SIZE AND NUMBER OF TIES OR SPIRALS PERMIT THE REDUCTION OF LAP LENGTH, THOSE BARS SHALL BE INDICATED ON THE DETAILS.
    - WHERE COMPUTED STRESS VALUES PERMIT THE REDUCTION OF LAP LENGTH, COMPUTATIONS SHALL BE SUBMITTED FOR REVIEW.
    - THE APPLICABLE SECTION OF THE ACI CODE PERMITTING THE LESSER SPLICE LENGTH SHALL BE INDICATED ON THE SUBMITTED MATERIAL.
  - TOP BARS ARE HORIZONTAL BARS PLACED SO THAT MORE THAN 12 INCHES OF CONCRETE IS CAST IN THE MEMBER BELOW THE BAR.
  - WHERE BARS OF DIFFERENT SIZE ARE TO BE SPLICED, THE SPLICE LENGTH FOR ALL BARS SHALL BE THAT REQUIRED FOR THE LARGEST.
  - WHEN LIGHTWEIGHT CONCRETE IS USED, THE VALUES LISTED IN THE TABLE FOR TENSION DEVELOPMENT + LAP SPLICE LENGTHS SHALL BE INCREASED BY 30%.
  - WHEN REINFORCING BARS ARE EPOXY-COATED, ALL VALUES IN THE TABLE SHALL BE INCREASED BY 50%.
  - COMBINATIONS OF EFFECTS DUE TO CONCRETE WEIGHT AND EPOXY BARS ARE CUMULATIVE. LD SHALL BE MULTIPLIED BY EACH FACTOR TO FIND THE CORRECT VALUE.
  - ACI DOES NOT PERMIT LAP SPLICES OF #14 OR #18 BARS. BARS OF THIS SIZE SHALL BE COUPLED BY ACCEPTABLE MECHANICAL MEANS, WHICH ARE RATED TO DEVELOP 125 PERCENT OF  $F_y$  OF THE BAR.

**TABLE OF DEVELOPMENT AND LAP SPLICE LENGTH (IN INCHES)**

BAR SIZE	COMPRESSION		TENSION ( $f'_c = 4,000 \text{ psi}$ )								TENSION ( $f'_c = 6,000 \text{ psi}$ )

TYPICAL CONCRETE BEAM DETAIL

TYPICAL CONCRETE BEAM SECTIONS

- NOTES:
- 1) Ld IS PER TABLES FOR DEVELOPMENT LENGTH.
  - 2) SEE BEAM SCHEDULES FOR SIZE & NUMBER OF TOP BARS, BOTTOM BARS & STIRRUPS.
  - 3) IF BEAM IS MORE THAN 6' WIDER THAN COLUMN ON EITHER SIDE, PROVIDE STIRRUPS OVER COLUMN.
  - 4) CONTINUOUS TOP BARS MAY HAVE A CLASS 'B' LAP SPLICE (LAP=LTS) AT MIDSPAN OF BEAM. CONTINUOUS BOTTOM BARS MAY HAVE A CLASS 'B' LAP SPLICE (LAP=LTS) AT MIDDLE OF SUPPORT.
  - 5) NOT MORE THAN 50% OF BOTTOM BARS MAY BE TERMINATED 1/8L FROM FACE OF EACH SUPPORT. PROVIDE 1/4 OF THE GREATER OF THE BOTTOM LEFT OR BOTTOM RIGHT BARS, BUT A MINIMUM OF (2) BARS, MUST BE CONTINUOUS.
  - 6) LONGITUDINAL BARS MAY ONLY BE PLACED IN MULTIPLE LAYERS IF NOTED IN SCHEDULE. PROVIDE 1" CLEAR BETWEEN LAYERS.
  - 7) 1/6 OF THE GREATER OF THE TOP LEFT OR TOP RIGHT BARS, BUT MINIMUM OF (2) BARS, MUST BE CONTINUOUS.

TYPICAL CONCRETE COLUMN DETAILS

- NOTES:
- 1) FOR CLEAR DISTANCE BETWEEN VERTICAL BARS OF  $a \leq 6'$  ALTERNATE INTERMEDIATE TIES MAY BE OMITTED.
  - 2) TOTAL NO. OF BARS SHOULD BE SPACED AROUND PERIMETER IN SUCH A WAY AS TO ACHIEVE APPROXIMATELY EQUAL SPACING.
  - 3) THE ABOVE DETAILS APPLY ALSO AT PIERS.
  - 4) MIN. CLEAR VERTICAL BAR SPACING SHALL BE PER REINFORCEMENT DEVELOPMENT LENGTH TABLE.
  - 5) ALTERNATE THE LOCATION OF THE 90° AND 135° HOOKS ON SUCCESSIVE SETS OF TIES.
  - 6) SEE TABLE OF COLUMN TIE SPACING THIS DRAWING.

**SECOND TIER PLAN DIAPHRAGM REINFORCING**

SCALE: 1/16" = 1'-0"

NOTES:

- 1) LAP ALL SPLICES PER GENERAL NOTES.
- 2) PROVIDE 6x6-W1.4xW1.4 WWF AT A MINIMUM IN ALL WASHES. WWF SHOULD BE FLAT, NOT ROLLED.
- 3) MINIMUM DIAPHRAGM REINFORCEMENT CAST IN THE WASHES SHALL BE AS SHOWN ON THIS PLAN.
- 4) LONGITUDINAL DIAPHRAGM REINFORCEMENT (PARALLEL TO SPAN OF DOUBLE TEE) SHALL BE CAST IN FLANGES OF DOUBLE TEE AS REQUIRED BY THE PRECAST MANUFACTURERS DESIGN.
- 5) CONNECTION OF DIAPHRAGM REINFORCEMENT (CAST IN FLANGE OF DOUBLE TEES OR LOOSE IN WASHES) TO ENSURE CONTINUITY BETWEEN DOUBLE TEES AND LOAD TRANSFER TO SHEAR WALLS SHALL BE PROVIDED BY THE PRECAST MFR.
- 6) ALL DIAPHRAGM REINFORCEMENT MUST BE CONTINUOUS, LAP PER GENERAL NOTES. COORDINATE W/ PRECAST MFR. AS REQUIRED WHERE ITEMS SUCH AS THE FOLLOWING ARE REQUIRED: SLEEVES THROUGH COLUMNS, CONNECTIONS TO PRECAST, OVERLAPPING WASHES AT STEPPED PRECAST, ETC.

**SECOND TIER CAST-IN-PLACE WASH PLAN**

SCALE: 1/16" = 1'-0"

NOTES:

- 1) PROVIDE 6x6-W1.4xW1.4 WWF AT A MINIMUM IN ALL WASHES. WWF SHOULD BE FLAT, NOT ROLLED. SEE DIAPHRAGM PLAN FOR ADDITIONAL REINF./INFO.
- 2) PROVIDE TOOLED CONTROL JOINTS (NOT SAW CUT) IN ALL CAST-IN-PLACE WASHES, SEE DETAILS THIS SHEET. TOOLED CONTROL JOINTS SHALL BE GREATER THAN 1" AND 1/4 OF SLAB DEPTH (DO NOT INTERRUPT MESH). CONTRACTOR TO SUBMIT SHOP DRAWING INDICATED TOOLED CONTROL JOINT PATTERN FOR REVIEW PRIOR TO CONSTRUCTION.
- 3) SEE ARCHITECTURAL DRAWINGS & SPECS FOR ALL WATERPROOFING AND SEALANT/CAULKING REQUIREMENTS.
- 4) ALL CAST-IN-PLACE WASH AND HEARING SLAB CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 5,000 PSI.
- 5) WASHES SHOWN ARE CONCEPTUAL ONLY FOR DRAINAGE; COORDINATE FINAL EXTENTS WITH PRECAST MANUFACTURER FOR LIMITATIONS OF TEES REQUIRED ADDITIONAL CAST-IN-PLACE TOPPING, ETC.

TYPICAL GARAGE FLOOR PLAN DIAPHRAGM REINFORCING

SCALE: 1/16" = 1'-0"

NOTES:

- 1) PROVIDE AT ALL LEVELS OF P/C GARAGE.
- 2) LAP ALL SPLICES PER GENERAL NOTES.
- 3) PROVIDE 6x6-W1.4xW1.4 WKF AT A MINIMUM IN ALL WASHES. WKF SHOULD BE FLAT, NOT ROLLED. SEE DIAPHRAGM PLAN FOR ADDITIONAL REINFORCING INFORMATION.
- 4) MINIMUM DIAPHRAGM REINFORCEMENT CAST IN THE WASHES SHALL BE AS SHOWN ON THIS PLAN.
- 5) LONGITUDINAL DIAPHRAGM REINFORCEMENT (PARALLEL TO SPAN OF DOUBLE TEE) SHALL BE CAST IN FLANGES OF DOUBLE TEE AS REQUIRED BY THE PRECAST MANUFACTURER'S DESIGN.
- 6) CONNECTION OF DIAPHRAGM REINFORCEMENT (CAST IN FLANGE OF DOUBLE TEE OR LOOSE IN WASHES) TO ENSURE CONTINUITY BETWEEN DOUBLE TEES AND LOAD TRANSFER TO SHEAR WALLS SHALL BE PROVIDED BY THE PRECAST MANUFACTURER.
- 7) ALL DIAPHRAGM REINFORCEMENT MUST BE CONTINUOUS, LAP PER GENERAL NOTES. COORDINATE W/ PRECAST MANUFACTURER AS REQUIRED WHERE ITEMS SUCH AS THE FOLLOWING ARE REQUIRED: SLEEVES, THROUGH COLUMNS, CONNECTIONS TO PRECAST, OVERLAPPING WASHES AT STEPPED PRECAST ETC.

TYPICAL GARAGE FLOOR CAST-IN-PLACE WASH PLAN

SCALE: 1/16" = 1'-0"

NOTES:

- 1) PROVIDE AT ALL LEVELS OF P/C GARAGE.
- 2) PROVIDE 6x6-W1.4xW1.4 WKF AT A MINIMUM IN ALL WASHES. WKF SHOULD BE FLAT, NOT ROLLED. SEE DIAPHRAGM PLAN FOR ADDITIONAL REINFORCING INFORMATION.
- 3) PROVIDE TOOLED CONTROL JOINTS (DO NOT SAW CUT) IN ALL CAST-IN-PLACE WASHES, SEE DETAILS THIS SHEET. TOOLED CONTROL JOINTS SHALL BE GREATER THAN 1" AND 1/4 OF SLAB DEPTH (DO NOT INTERRUPT MESH). CONTRACTOR TO SUBMIT SHOP DRAWINGS INDICATING CONTROL JOINT PATTERN FOR REVIEW PRIOR TO CONSTRUCTION.
- 4) SEE ARCHITECTURAL DRAWINGS AND SPECIFICATIONS FOR ALL WATERPROOFING AND SEALANT/CAULKING REQUIREMENTS
- 5) ALL CAST-IN-PLACE WASH AND WEARING SLAB CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 5,000 PSI.
- 6) WASHES SHOWN ARE CONCEPTUAL ONLY, FOR DRAINAGE, COORDINATE FINAL EXTENTS WITH PRECAST MANUFACTURER FOR LIMITATIONS OF TEES REQUIRED ADDITIONAL CAST-IN-PLACE TOPPING ETC.

**MEPP DEMOLITION NOTES:**

**1. GENERAL NOTES:**

- A. REFER TO FRONT END DOCUMENTS, DIVISION 01 SPECIFICATIONS AND SUPPLEMENTAL REQUIREMENTS OF THE CONTRACT FOR ALL APPLICABLE REQUIREMENTS AS IT PERTAINS TO THE DEMOLITION OF THE EXISTING GARAGE AND CONNECTING BRIDGE.
- B. REFER TO DIVISION 01 SPECIFICATIONS FOR SUMMARY OF WORK, PROJECT SCHEDULING REQUIREMENTS INCLUDING PHASING OF DEMOLITION AND HAZARDOUS MATERIAL REMOVAL, PROTECTION REQUIREMENTS, TEMPORARY FACILITIES AND OTHER GENERAL REQUIREMENTS.
- C. REFER TO PROJECT MANUAL INCLUDING RESPECTIVE TECHNICAL SECTIONS FOR REQUIREMENTS AS THEY PERTAIN TO THE DEMOLITION ACTIVITIES OF THE EXISTING GARAGE AND ANNEX BRIDGE.
- D. CONTRACTOR SHALL COORDINATE, SCHEDULE AND OBTAIN APPROVAL FOR ALL UTILITY SHUTDOWNS AND SYSTEM DRAINING WITH THE OWNER, THE OWNER'S REPRESENTATIVE AND THE RESPECTIVE UTILITY COMPANY PRIOR TO COMMENCING WORK. DEMOLITION ACTIVITIES SHALL NOT DISRUPT ADJACENT PROPERTY UTILITY SERVICES UNLESS AUTHORIZED IN WRITING BY THE OWNER.
- E. CONTRACTOR SHALL FIELD VERIFY ALL UTILITIES, EQUIPMENT, PIPING SYSTEMS, ETC., AND THEIR POINTS OF ENTRANCE AND EXIT OF THE EXISTING GARAGE PRIOR TO DEMOLITION ACTIVITIES. CONTRACTOR SHALL FIELD VERIFY AND MARK OUT ALL POINTS OF ISOLATION AND TAG ACCORDINGLY PRIOR TO DEMOLITION ACTIVITIES.
- F. CONTRACTOR SHALL NOT COMMENCE DEMOLITION ACTIVITIES UNTIL HAZARDOUS MATERIAL REMEDIATION HAS BEEN COMPLETED AND VERIFIED COMPLETE BY THE HAZARDOUS MATERIALS PROFESSIONAL.
- G. CONTRACTOR SHALL BE RESPONSIBLE TO PROPERLY DISPOSE OR RECYCLE ALL REMOVED EQUIPMENT, REFRIGERANTS, BALLASTS, ETC., IN ACCORDANCE WITH NEW JERSEY ENVIRONMENTAL PROTECTION AGENCY REQUIREMENTS.

**2. HVAC DEMOLITION - SCOPE OF WORK:**

- A. CONTRACTOR SHALL VERIFY IN FIELD ALL MECHANICAL EQUIPMENT, PIPING SYSTEMS AND DUCT DISTRIBUTION SYSTEMS THAT ARE TO BE REMOVED PRIOR TO THE EXISTING PARKING GARAGE AND ANNEX BRIDGE DEMOLITION. CONTRACTOR SHALL COORDINATE WITH THE OWNER'S REPRESENTATIVE FOR THE DISPOSAL / REMOVAL OF ALL MECHANICAL EQUIPMENT. CONTRACTOR SHALL COMPLETE A DETAILED RECORD OF EXISTING MECHANICAL EQUIPMENT TO BE REMOVED AND MAKE NOTATION AS TO CONDITION AND PROVIDE TO OWNER'S REPRESENTATIVE. OWNER SHALL MAKE FINAL DECISION ON DISPOSAL OR RETAINAGE OF MECHANICAL EQUIPMENT FOR OWNER USE ELSEWHERE.
- B. CONTRACTOR SHALL REMOVE EXISTING MECHANICAL EQUIPMENT (ROOFTOP UNITS, UNIT HEATERS, SPLIT-SYSTEMS, SUPPLY AND/OR EXHAUST FANS AND OTHER MISCELLANEOUS MECHANICAL EQUIPMENT) LOCATED THROUGHOUT THE EXISTING PARKING GARAGE AND ANNEX BRIDGE UNDER THE DIRECTION OF THE OWNER'S REPRESENTATIVE AFTER UTILITIES HAVE BEEN VERIFIED AS DISCONNECTED AND CAPPED. CONTRACTOR SHALL ISOLATE WITH ISOLATION VALVE AND CAP ANY PIPING (NATURAL GAS, HEATING HOT WATER, ETC.) TO ALLOW FOR THE MECHANICAL EQUIPMENT DEMOLITION AND THE DEMOLITION ACTIVITIES OF THE EXISTING GARAGE AND ANNEX BRIDGE TO BE COMPLETED.
- C. CONTRACTOR SHALL REMOVE OR CAP ALL EXISTING DUCTWORK WITHIN THE EXISTING GARAGE AT THE DIRECTION OF THE OWNER'S REPRESENTATIVE AND AS REQUIRED TO ALLOW FOR THE DEMOLITION ACTIVITIES OF THE EXISTING GARAGE AND ANNEX BRIDGE TO BE COMPLETED. IF DUCTWORK REMOVAL IS REQUIRED, THEN REMOVE CORRESPONDING AIR DEVICES.
- D. COORDINATE ALL MECHANICAL EQUIPMENT REMOVAL WITH OTHER TRADES SO THAT REMOVAL CAN BE COMPLETED IN A SAFE MANNER.

**1 MECHANICAL - NEW GARAGE FIRST FLOOR PLAN**  
 M-101 SCALE: 1/8" = 1'-0"

NOTE: GARAGE IS NATURALLY VENTILATED IN ACCORDANCE WITH IBC 2018, 406.5.2. REFER TO ARCHITECTURAL DRAWINGS FOR AREA CALCULATIONS.

**NEW WORK SYSTEM NOTES:**

**1. GENERAL NOTES:**

- A. REFER TO MECHANICAL & ELECTRICAL LEAD SHEETS, M-001 & E-001 FOR "NOTES" THAT PERTAIN TO THE SCOPE OF THIS PROJECT.
- B. REFER TO DWG M-301 AND M-302 FOR SCHEDULES AND M-401 FOR MECHANICAL DETAILS PERTAINING TO THIS PROJECT.
- C. CONTRACTOR SHALL PROVIDE ALL REQUIRED PIPING, VALVES & APPURTENANCES TO PROVIDE A COMPLETE WORKING SYSTEM.
- D. COORDINATION OF ALL BUILDING-SIDE HVAC WORK WITH THE OWNER'S HVAC PERSONNEL IS A REQUIREMENT OF THIS PROJECT.
- E. CONTRACTOR SHALL INSTALL ALL (N)EQUIPMENT IN STRICT ACCORDANCE WITH THE MANUFACTURER'S WRITTEN INSTRUCTIONS AND SHALL MAINTAIN ALL CLEARANCES (INSTALLATION AND MAINTENANCE) AS NOTED WITHIN THE WRITTEN INSTRUCTIONS.

**2. NEW WORK KEYED NOTES:**

GENERAL: NEW WORK NOTES ARE INDICATED WITH THE FOLLOWING SYMBOL (1) AND ARE NUMBERED AS FOLLOWS:

- (1) CONTRACTOR SHALL FURNISH AND INSTALL CASSETTE-TYPE IDU IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN SCHEDULE AND SPECIFICATIONS. PROVIDE OUTSIDE AIR INTAKE KIT AND MOD. INTERLOCK MOD WITH IDU SUCH THAT THE MOD IS OPEN WHEN THE IDU OPERATES. COORDINATE FINAL LOCATION WITH ARCHITECTURAL REFLECTED CEILING PLAN. PROVIDE WITH SPRING VIBRATION ISOLATORS (BASIS OF DESIGN: VMC GROUP OR APPROVED EQUAL) WITH THREADED ROD HANGERS AND HARDWARE TO PROVIDE MIN 1" DEFLECTION. FURNISH AND INSTALL PROGRAMMABLE THERMOSTAT SUPPLIED BY EQUIPMENT VENDOR IN LOCATION AS INDICATED ON PLAN AT 48°F. SET THERMOSTAT AT 72°F WITH HEATING SETPOINT AT 70°F AND COOLING SETPOINT AT 74°F.
- (2) CONTRACTOR SHALL FURNISH AND INSTALL DUCTED IDU IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN SCHEDULE AND SPECIFICATIONS. PROVIDE MANUFACTURER SUPPLIED ZONING KIT. UNIT AND DUCTWORK SHALL BE MOUNTED TIGHT TO STRUCTURE. PROVIDE WITH SPRING VIBRATION ISOLATORS (BASIS OF DESIGN: VMC GROUP OR APPROVED EQUAL) WITH THREADED ROD HANGERS AND HARDWARE TO PROVIDE MIN 1" DEFLECTION. FURNISH AND INSTALL PROGRAMMABLE THERMOSTAT SUPPLIED BY EQUIPMENT VENDOR IN LOCATION AS INDICATED ON PLAN AT 48°F. SET THERMOSTAT AT 72°F WITH HEATING SETPOINT AT 70°F AND COOLING SETPOINT AT 74°F.
- (3) CONTRACTOR SHALL FURNISH AND INSTALL CONDENSING UNIT IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN THE SCHEDULE AND SPECIFICATIONS. PROVIDE MANUFACTURER'S WALL BRACKET. CONDENSING UNIT SHALL BE LOCATED 36" AFF TO BOTTOM OF UNIT. COORDINATE REFRIGERANT ROUTE WITH MANUFACTURER AND SUBMIT TO ENGINEER FOR REVIEW PRIOR TO INSTALLATION. ALL REFRIGERANT SIZING SHALL BE IN ACCORDANCE WITH MANUFACTURER RECOMMENDATIONS. CONTRACTOR SHALL FURNISH AND INSTALL POWER AND CONTROL WIRING BETWEEN CONDENSING UNIT AND INDOOR UNIT(S) PER MANUFACTURER REQUIREMENTS TO PROVIDE A COMPLETE AND WORKING SYSTEM.
- (4) CONTRACTOR SHALL FURNISH AND INSTALL WALL MOUNTED AC UNIT IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN THE SCHEDULE AND SPECIFICATIONS. PROVIDE UNIT WITH DIAPHRAGM STYLE CONDENSATE PUMP AND ROUTE TO NEAREST INDIRECT WASTE.
- (5) CONTRACTOR SHALL FURNISH AND INSTALL CABINET UNIT HEATER IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN THE SCHEDULE AND SPECIFICATIONS. PROVIDE WITH INTEGRAL THERMOSTAT SET AT 70°F (ADJUSTABLE). COORDINATE FINAL LOCATION FOR CUH WITH ARCHITECTURAL REFLECTED CEILING PLAN.
- (6) CONTRACTOR SHALL FURNISH AND INSTALL EXHAUST FAN IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN THE SCHEDULE AND SPECIFICATIONS. COORDINATE FINAL LOCATION WITH ARCHITECTURAL REFLECTED CEILING PLAN. PROVIDE WITH MOD AND INTERLOCK MOD WITH FAN SUCH THAT MOD IS OPEN WHEN FAN OPERATES. PROVIDE LINE VOLTAGE THERMOSTAT IN LOCATION AS SHOWN. THERMOSTAT SHALL INDEX THE FAN ON UPON A RISE IN SPACE TEMPERATURE ABOVE SETPOINT (90°F, ADJUSTABLE).
- (7) CONTRACTOR SHALL FURNISH AND INSTALL EXHAUST FAN IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN THE SCHEDULE AND SPECIFICATIONS. COORDINATE FINAL LOCATION WITH ARCHITECTURAL REFLECTED CEILING PLAN. PROVIDE WITH MOD AND INTERLOCK MOD WITH FAN SUCH THAT MOD IS OPEN WHEN FAN OPERATES.
- (8) CONTRACTOR SHALL FURNISH AND INSTALL UNIT HEATER IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN THE SCHEDULE AND SPECIFICATIONS. PROVIDE MANUFACTURER WALL BRACKET AND MOUNT UNITS AT 8'-0" AFF. PROVIDE WITH INTEGRAL THERMOSTAT SET AT 65°F (ADJ).

1 MECHANICAL - NEW GARAGE PARTIAL FIRST FLOOR PLAN  
 M-101A SCALE: 1/8" = 1'-0"  
 SCALE BAR: 1/8"=1'-0"

NEW WORK SYSTEM NOTES:

1. GENERAL NOTES:

- A. REFER TO MECHANICAL & ELECTRICAL LEAD SHEETS, M-001 & E-001 FOR "NOTES" THAT PERTAIN TO THE SCOPE OF THIS PROJECT.
- B. REFER TO DWG M-301 AND M-302 FOR SCHEDULES AND M-401 FOR MECHANICAL DETAILS PERTAINING TO THIS PROJECT.
- C. CONTRACTOR SHALL PROVIDE ALL REQUIRED PIPING, VALVES & APPURTENANCES TO PROVIDE A COMPLETE WORKING SYSTEM.
- D. COORDINATION OF ALL BUILDING-SIDE HVAC WORK WITH THE OWNER'S HVAC PERSONNEL IS A REQUIREMENT OF THIS PROJECT.
- E. CONTRACTOR SHALL INSTALL ALL (N)EQUIPMENT IN STRICT ACCORDANCE WITH THE MANUFACTURER'S WRITTEN INSTRUCTIONS AND SHALL MAINTAIN ALL CLEARANCES (INSTALLATION AND MAINTENANCE) AS NOTED WITHIN THE WRITTEN INSTRUCTIONS.

2. NEW WORK KEYED NOTES:

GENERAL: NEW WORK NOTES ARE INDICATED WITH THE FOLLOWING SYMBOL (1) AND ARE NUMBERED AS FOLLOWS:

- (1) CONTRACTOR SHALL FURNISH AND INSTALL EXHAUST FAN IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN THE SCHEDULE AND SPECIFICATIONS. COORDINATE FINAL LOCATION WITH ARCHITECTURAL REFLECTED CEILING PLAN. PROVIDE WITH MOD AND INTERLOCK MOD WITH FAN SUCH THAT MOD IS OPEN WHEN FAN OPERATES. PROVIDE LINE VOLTAGE THERMOSTAT IN LOCATION AS SHOWN. THERMOSTAT SHALL INDEX THE FAN ON UPON A RISE IN SPACE TEMPERATURE ABOVE SETPOINT (90F, ADJUSTABLE).
- (2) CONTRACTOR SHALL FURNISH AND INSTALL UNIT HEATER IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN THE SCHEDULE AND SPECIFICATIONS. PROVIDE MANUFACTURER WALL BRACKET AND MOUNT UNITS AT 8'-0" AFF. PROVIDE WITH INTEGRAL THERMOSTAT SET AT 65F (ADJUSTABLE).

**2. NEW WORK KEYED NOTES:**

GENERAL: NEW WORK NOTES ARE INDICATED WITH THE FOLLOWING SYMBOL AND ARE NUMBERED AS FOLLOWS:

- ① CONTRACTOR SHALL FURNISH AND INSTALL CONDENSING UNIT IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN THE SCHEDULE AND SPECIFICATIONS. PROVIDE MANUFACTURER'S WALL BRACKET. CONDENSING UNIT SHALL BE LOCATED 36" AFF TO BOTTOM OF UNIT. COORDINATE REFRIGERANT ROUTE WITH MANUFACTURER AND SUBMIT TO ENGINEER FOR REVIEW PRIOR TO INSTALLATION. ALL REFRIGERANT SIZING SHALL BE IN ACCORDANCE WITH MANUFACTURER RECOMMENDATIONS. CONTRACTOR SHALL FURNISH AND INSTALL POWER AND CONTROL WIRING BETWEEN CONDENSING UNIT AND INDOOR UNIT PER MANUFACTURER'S REQUIREMENTS TO PROVIDE A COMPLETE AND WORKING SYSTEM.
- ② CONTRACTOR SHALL FURNISH AND INSTALL WALL MOUNTED AC UNIT IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN THE SCHEDULE AND SPECIFICATIONS. PROVIDE UNIT WITH DIAPHRAGM STYLE CONDENSATE PUMP AND ROUTE TO NEAREST INDIRECT WASTE.
- ③ CONTRACTOR SHALL FURNISH AND INSTALL UNIT HEATER IN LOCATION AS SHOWN AND WITH CHARACTERISTICS AS NOTED IN THE SCHEDULE AND SPECIFICATIONS. PROVIDE MANUFACTURER WALL BRACKET AND MOUNT UNITS AT 8'-0" AFF. PROVIDE WITH INTEGRAL THERMOSTAT SET AT 65F (ADJUSTABLE).

- NOTES:
1. PROVIDE MOTOR OPERATED BACKDRAFT DAMPER. INTERLOCK DAMPER OPERATION WITH EXHAUST FAN OPERATION. MOTORIZED DAMPER TO HAVE SAME VOLTAGE AS FAN.
  2. PROVIDE WITH NEOPRENE VIBRATION ISOLATION HANGERS.
  3. PROVIDE WITH SPEED CONTROLLER.
  4. PROVIDE FAN UL LISTED FOR EMERGENCY SMOKE CONTROL.
  5. PROVIDE WITH 18" MINIMUM ROOF CURB.
  6. PROVIDE FACTORY MOUNTED PRE-WIRED DISCONNECT SWITCH.
  7. PROVIDE BIRDSCREEN.

AIR TERMINAL DEVICE SCHEDULE

- 1 AIR COOLED CONDENSING UNIT
- 2 COMPRESSOR ACCESS PANEL
- 3 BACK-SEATED REFRIGERANT VALVE
- 4 REFRIGERANT SUCTION LINE WITH INSULATION
- 5 SIGHT GLASS WITH MOISTURE INDICATOR
- 6 REFRIGERANT LIQUID LINE
- 7 CONDUIT-POWER/CONTROL
- 8 REFRIGERANT GAUGE CONNECTION
- 9 CONDENSER COIL
- 10 COIL GUARD
- 11 FAN GUARD
- 12 EQUIPMENT SUPPORTS

**1 TYPICAL CONDENSING UNIT PIPING DETAIL**

M-401 SCALE: N.T.S.  
NOTES:

1. CONTRACTOR SHALL COORDINATE FINAL CONNECTIONS WITH MANUFACTURER'S INSTRUCTIONS.
2. CONTRACTOR SHALL ANCHOR CONDENSING UNIT TO EQUIPMENT SUPPORTS PER MANUFACTURER'S INSTRUCTIONS.
3. FOR WALL MOUNTED CONDENSING UNITS CONTRACTOR SHALL FURNISH AND INSTALL ALL PIPING SPECIALTIES AND MOUNT UNIT TO WALL UTILIZING MANUFACTURER'S WALL BRACKET WITH EXPANSION ANCHORS SUITABLE FOR THE EQUIPMENT LOADS.

**2 PIPE CURB INSTALLATION DETAIL**

M-401 SCALE: N.T.S.  
NOTES:

1. FINAL FINISH AND SEALING OF PIPE CURBS SHALL BE IN ACCORDANCE WITH METHODS APPROVED BY ROOFING MANUFACTURER OF THE ROOFING SYSTEM. REFER TO ARCHITECTURAL DRAWINGS FOR ADDITIONAL REQUIREMENTS.
2. PIPE CURBS TO BE UTILIZED FOR BOTH MECHANICAL AND ELECTRICAL SERVICES.

**3 EQUIPMENT SUPPORT DETAIL**

M-401 SCALE: N.T.S.

- NOTES:
1. VERIFY ALL ROOFING MATERIALS AND FLASHING REQUIREMENTS WITH ARCHITECTURAL DRAWINGS.
  2. POSITIVELY ANCHOR EQUIPMENT TO EQUIPMENT SUPPORT AND EQUIPMENT SUPPORT TO STRUCTURE PER MFG'S INSTRUCTIONS AND TO MEET WIND RESTRAINT REQUIREMENT OF IBC 2018. REFER TO SPEC 230548 FOR ADDITIONAL REQUIREMENTS.

**4 DOWNBLAST FAN DETAIL**

M-402 SCALE: N.T.S.

- NOTES:
1. VERIFY ALL ROOFING MATERIALS WITH ARCHITECTURAL PLANS AND SPECIFICATIONS.
  2. POSITIVELY ANCHOR EQUIPMENT TO EQUIPMENT ROOF CURBS AND ROOF CURB TO STRUCTURE PER MANUFACTURER'S INSTRUCTIONS AND TO MEET WIND RESTRAINT REQUIREMENTS OF IBC 2018. REFER TO SPECIFICATION 230548 FOR ADDITIONAL REQUIREMENTS.

**5 ROOF MOUNTED UPBLAST EXHAUST FAN**

M-401 NOT TO SCALE

- NOTES:
1. VERIFY ALL ROOFING MATERIALS WITH ARCHITECTURAL PLANS AND SPECIFICATIONS.
  2. POSITIVELY ANCHOR EQUIPMENT TO EQUIPMENT ROOF CURBS AND ROOF CURB TO STRUCTURE PER MANUFACTURER'S INSTRUCTIONS AND TO MEET WIND RESTRAINT REQUIREMENTS OF IBC 2018. REFER TO SPECIFICATION 230548 FOR ADDITIONAL REQUIREMENTS.

**6 WALL PENETRATION DETAIL**

M-401 SCALE: N.T.S.

- NOTES:
1. FOR GYP. BOARD WALLS PROVIDE MIN. 16 GAUGE GALV. STEEL SLEEVE W/ LOCK-TYPE LONGITUDINAL SEAM.

ELECTRICAL SYMBOLS, NOTES, AND ABBREVIATIONS

Table with columns for SYMBOL and DESCRIPTION. Includes General Symbols for Duplex Receptacles, Junction Boxes, Wiring, Grounding, and various detectors.

Table titled 'MOUNTING HEIGHT CHART - ELECTRICAL EQUIPMENT'. Columns: Mounting Height (AFT), Equipment Symbol, Description of Equipment, Remarks. Lists heights from 12'-0" to 1'-6" for various fixtures and devices.

Table titled 'ABBREVIATIONS'. Columns: Abbreviation, Full Name. Lists abbreviations for floor levels, conduit, switches, equipment, and materials.

GENERAL SYMBOLS CONT'D

Table with columns for SYMBOL and DESCRIPTION. Includes symbols for POTS line, alarm devices, and various control symbols.

GENERAL ELECTRICAL PROJECT NOTES

- List of 28 project notes covering legend symbols, mounting heights, equipment specifications, and installation requirements.

LIGHTNING PROTECTION SYSTEM NOTES

- Notes for the lightning protection system, including risk assessment requirements and installation standards.

Drawing No. E-001

EMERGENCY GENERATOR PURPOSES:

THE PURPOSE OF THE EMERGENCY GENERATOR:

- A. EMERGENCY POWER ATS:
A.A. EMERGENCY LIGHTING AND EXIT SIGNS
A.B. FIRE ALARM SYSTEM AND ASSOCIATED ACCESSORIES
A.C. ELEVATORS
B. OPTIONAL STANDBY ATS:
B.A. POWER THE ELEVATORS
B.B. HEAT TRACING
B.C. IT EQUIPMENT
B.D. MOTORIZED GATES

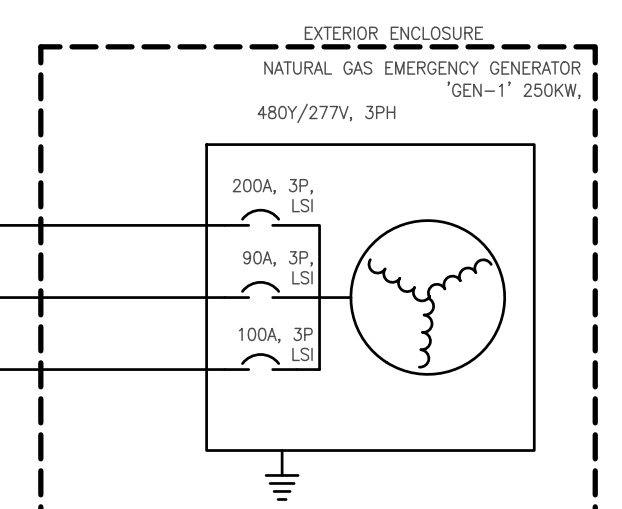

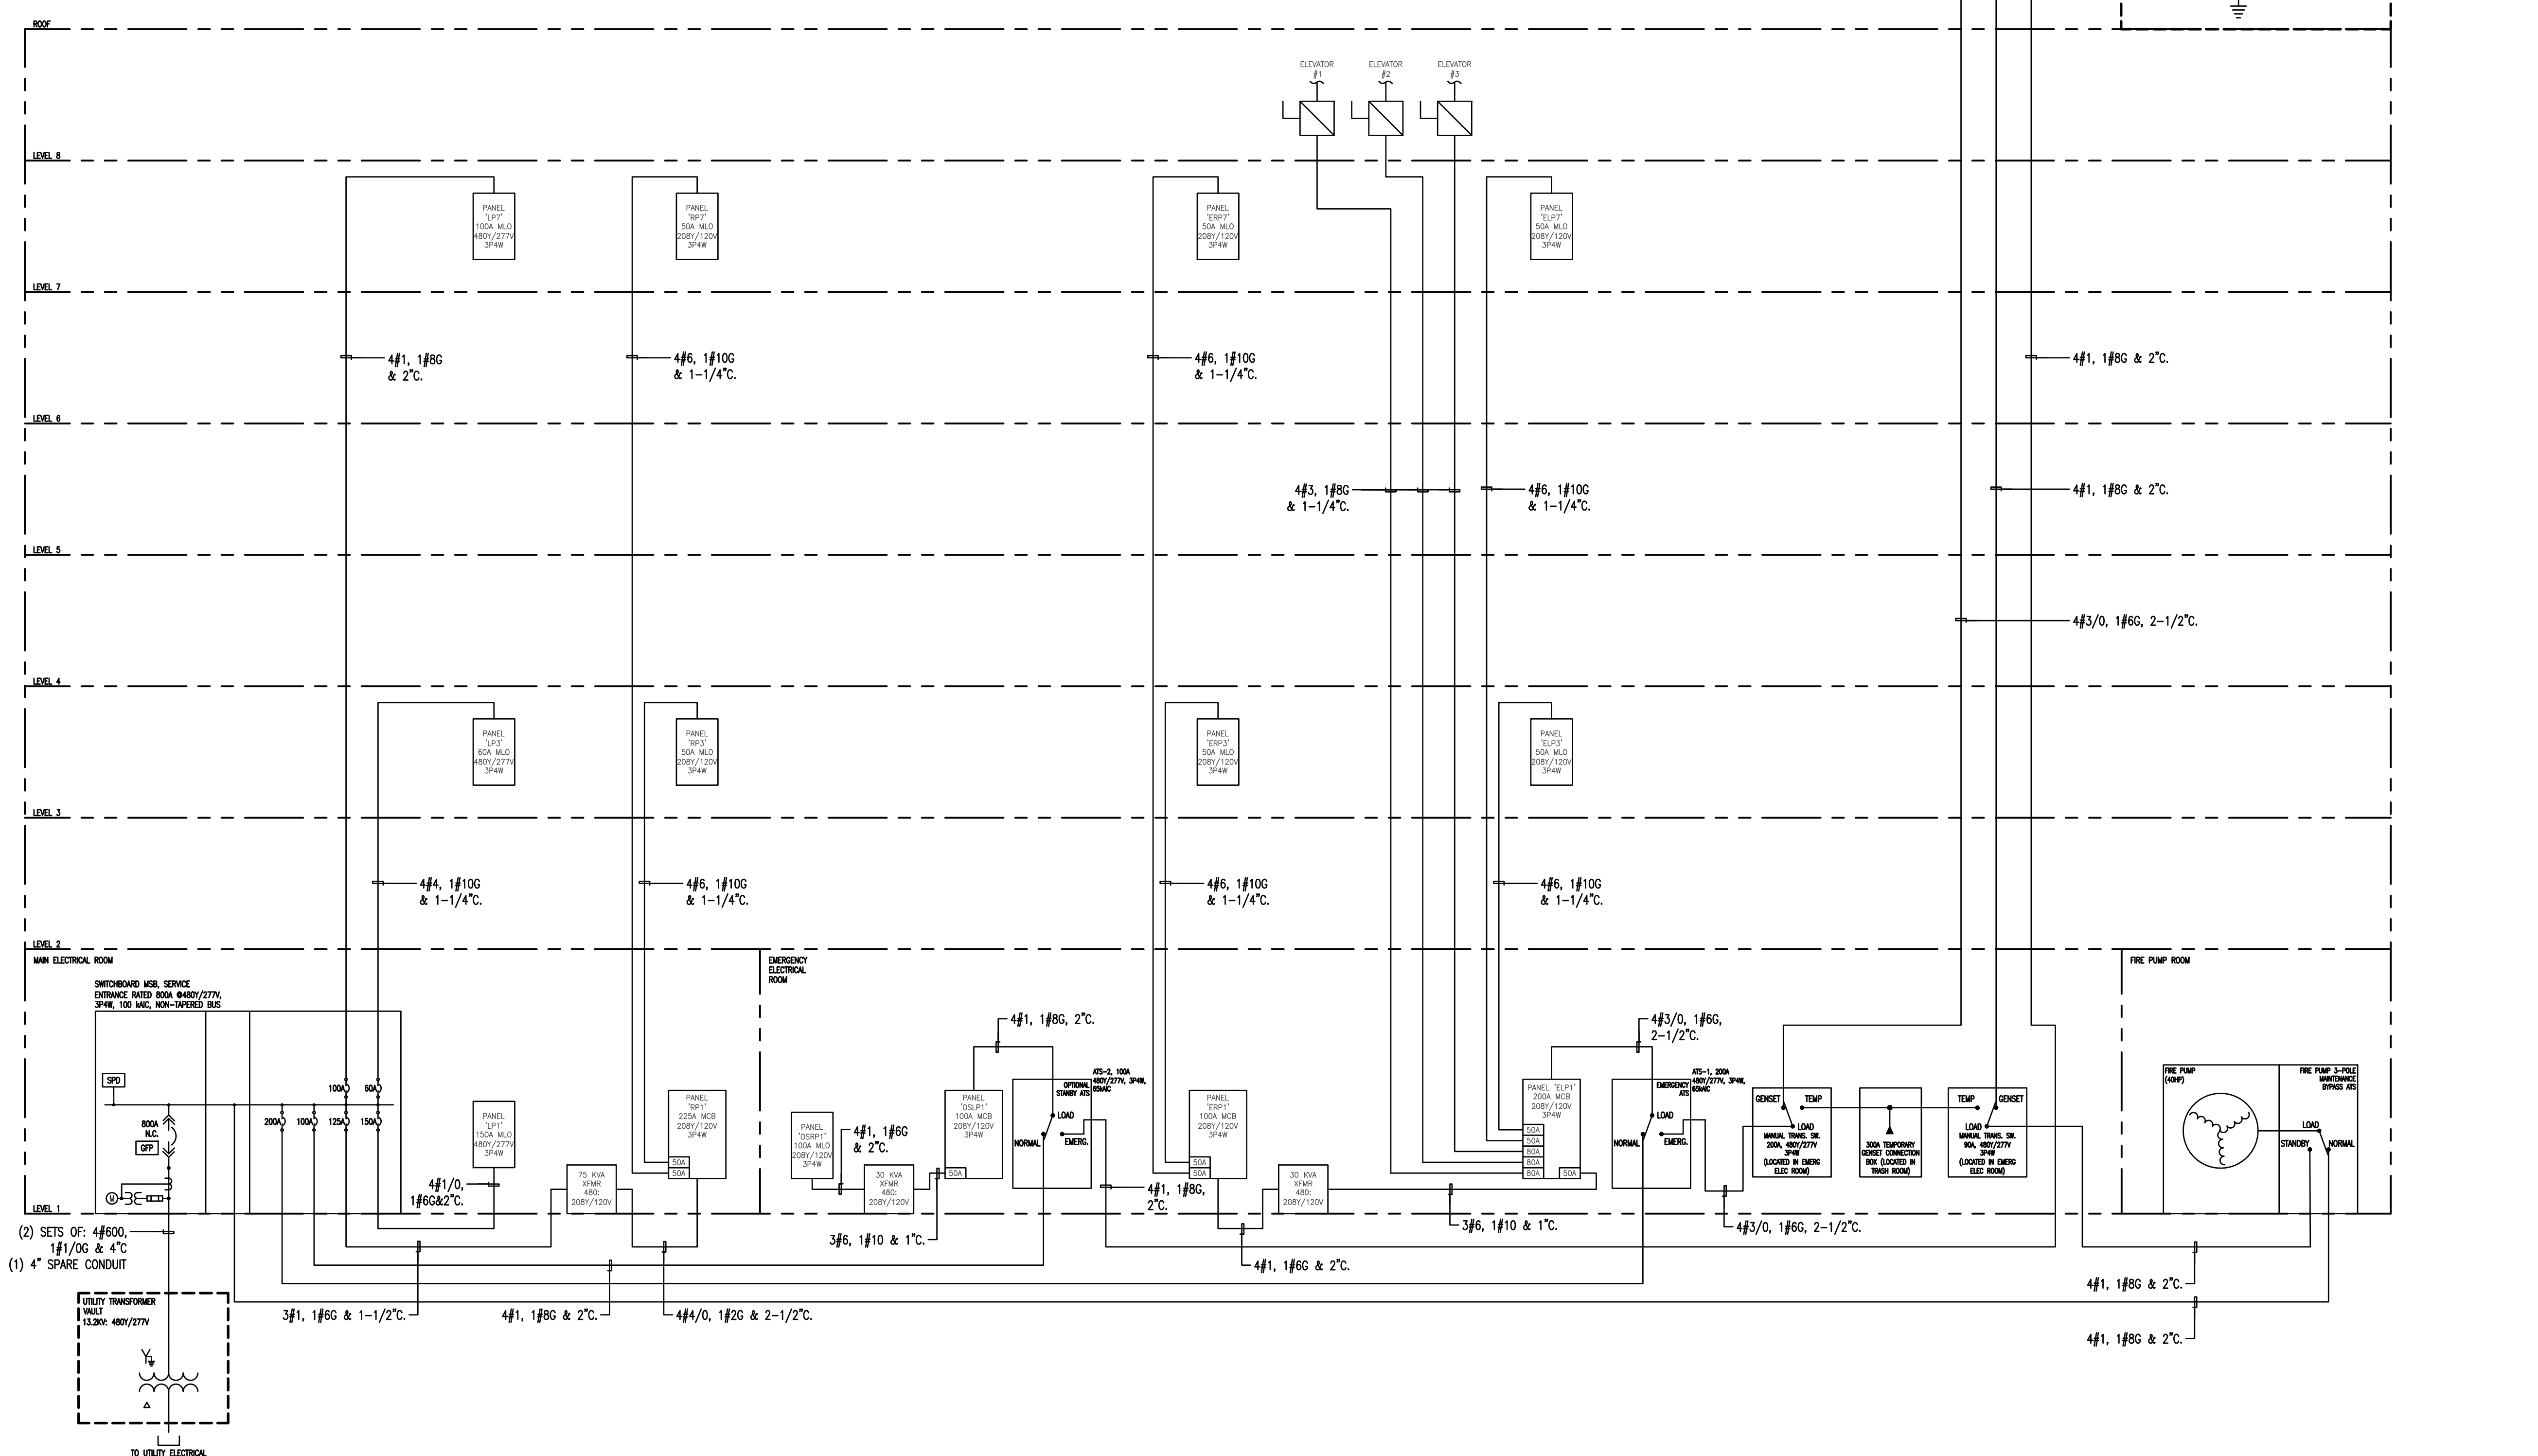

EMERGENCY GENERATOR SEQUENCES OF OPERATION:

- UTILITY POWER OUTAGE:
A. UPON LOSS OF UTILITY POWER:
A.A. THE EMERGENCY GENERATOR WILL BE ENERGIZED.
A.B. THE EMERGENCY ATS WILL TRANSFER FROM THE NORMAL FEED TO THE GENERATOR FEED.
A.C. EMERGENCY LOADS WILL BE ENERGIZED WITHIN 10 SECONDS OF THE LOSS OF POWER.
A.D. AFTER THE EMERGENCY POWER LOADS ARE ENERGIZED, THE OPTIONAL STANDBY ATS WILL TRANSFER FROM THE NORMAL FEED TO THE GENERATOR FEED.
A.E. THE OPTIONAL STANDBY LOADS SHALL BE ENERGIZED WITHIN 2 MINUTES OF THE LOSS OF POWER TO ENSURE THAT THE MDF ROOM AND IDF CLOSET UPS WILL BE ABLE TO CARRY THROUGH THE OUTAGE WITHOUT LOSS OF POWER TO THE ASSOCIATED COMPUTER EQUIPMENT.
A.F. PERSONNEL TO PERFORM AN ORDERLY EVACUATION OF THE BUILDING.
B. UPON RESTORATION OF UTILITY POWER:
B.A. AFTER A TIME DELAY TO ENSURE THAT THE UTILITY POWER IS STABILIZED, THE OPTIONAL STANDBY ATS WILL TRANSFER FROM THE GENERATOR FEED TO THE NORMAL FEED.
B.B. AFTER A TIME DELAY, THE EMERGENCY ATS WILL TRANSFER FROM THE GENERATOR FEED TO THE NORMAL FEED.
B.C. THE GENERATOR SHALL RUN THROUGH THE MANUFACTURER RECOMMENDED COOLDOWN AND SHUTDOWN CYCLE.
B.D. PROVISIONS SHALL BE PROVIDED TO ADJUST THE TIME DELAYS DESCRIBED ABOVE TO MEET AHJ SPECIFIC REQUIREMENTS.
B.E. PERSONNEL MAY RE-OCCUPY THE BUILDING UPON APPROVAL BY THE AHJ.

SELECTIVE COORDINATION ELECTRICAL NOTES:

- PER NEC 2017, 700.32, THE EMERGENCY ELECTRICAL SYSTEM OVERCURRENT DEVICES SHALL BE SELECTIVELY COORDINATED WITH ALL SUPPLY SIDE DEVICES. ALL NEW OVERCURRENT DEVICES TO BE PROVIDED FOR THIS PROJECT SHALL BE SELECTED IN ACCORDANCE WITH THIS NEC REQUIREMENT.
1. THE STUDY SHALL BE PERFORMED USING THE LATEST ANSI/IEEE STANDARDS.
2. INCLUDE A DESCRIPTION OF THE PROGRAM/ANALYSIS TOOL BEING UTILIZED FOR THE SHORT CIRCUIT AND COORDINATION STUDY.
3. THE CONTRACTOR SHALL INCLUDE IN HIS PRICE, THE INCORPORATION OF TWO REVISIONS TO THE SELECTIVE COORDINATION AND SHORT CIRCUIT STUDIES AT NO ADDITIONAL CHARGE TO THE CLIENT.
4. THE SELECTIVE COORDINATION STUDY SHALL SHOW SELECTIVE COORDINATION OF THE REQUIRED DEVICES AND PROVIDE RECOMMENDATIONS ON HOW TO ACHIEVE SELECTIVE COORDINATION. A STUDY THAT DOES NOT PROVE THAT SELECTIVE COORDINATION EXISTS, SHALL BE CONSIDERED INCOMPLETE AND WILL BE REJECTED. REVISION OF THE STUDY SHALL NOT BE INCLUDED AS ONE OF THE TWO REVISIONS DESCRIBED ABOVE.
5. THE SHORT CIRCUIT STUDY SHALL SHOW ADEQUATE WITHSTAND AND INTERRUPTING RATINGS OF ALL ELECTRICAL DISTRIBUTION EQUIPMENT THAT IS PART OF THIS STUDY. A STUDY THAT DOES NOT PROVE THAT ALL EQUIPMENT ACHIEVES ADEQUATE SHORT CIRCUIT RATINGS, SHALL BE CONSIDERED INCOMPLETE AND WILL BE REJECTED. REVISION OF THE STUDY SHALL NOT BE INCLUDED AS ONE OF THE TWO REVISIONS DESCRIBED ABOVE.

- 6. SUBMIT (3) COPIES OF THE STUDY FOR REVIEW BY THE ENGINEER. THE REPORT SHALL INCLUDE A ONE LINE IMPEDANCE DIAGRAM WHICH SHALL INCLUDE THE PERTINENT EQUIPMENT DATA AND IDENTIFY ALL ASSOCIATED BUSES, A LIST OF FAULT CONTRIBUTORS, A LIST OF FAULT LEVELS AT EACH BUS FOR THREE PHASE BOLTED FAULTS AND GROUND FAULTS, EQUIPMENT CONFIRMATION DATA INCLUDING FEEDER CIRCUIT LENGTH, CONFIRMATION OF EQUIPMENT INTERRUPTING RATINGS, RECOMMENDATIONS ON REQUIRED CHANGES, TIME CURRENT PLOTS WHICH GRAPHICALLY ILLUSTRATE PROTECTIVE DEVICE DESIGN PERFORMANCE VERSUS EQUIPMENT OPERATING CHARACTERISTICS WHERE APPLICABLE, AND A DETAILED LIST OF PROTECTIVE DEVICE SETTINGS.
7. SUBMIT PRIOR TO THE PURCHASE OF ANY EQUIPMENT TO ENSURE THAT THE REQUIRED INTERRUPTING CURRENT RATINGS AND DUTIES WILL BE SUSTAINED.

E-002 SCALE: NONE

E-002

**1 TYPICAL CONDUIT PENETRATION DETAIL #1**  
E-003 SCALE: NONE

- NOTES:**
- USE THIS DETAIL WHERE CONDUITS PASS THRU FIRE RATED WALL.
  - WHERE CONDUITS PASS THRU FOUNDATION WALLS, FLOOR SLAB ON EARTH, ROOF, CONCRETE BEAM, BRICK WALL, OR WATER PROOF FLOORS, USE PIPE FITTING.
  - FIRESTOPPING OF CONDUIT PENETRATIONS SHALL UTILIZE THE CORRECT UL STANDARD FOR THE SPECIFIC WALL/FLOOR/CEILING TYPES AND RATINGS.

**2 TYPICAL CONDUIT PENETRATION DETAIL #2**  
E-003 SCALE: NONE

- NOTES:**
- FIRESTOPPING OF CONDUIT PENETRATIONS SHALL UTILIZE THE CORRECT UL STANDARD FOR THE SPECIFIC WALL/FLOOR/CEILING TYPES AND RATINGS.

**3 TYPICAL CONDUIT PENETRATION DETAIL #3**  
E-003 SCALE: NONE

- NOTES:**
- FOR SLEEVE DIAMETER USE MANUFACTURER'S SIZE RECOMMENDATION.
  - FIRESTOPPING OF CONDUIT PENETRATIONS SHALL UTILIZE THE CORRECT UL STANDARD FOR THE SPECIFIC WALL/FLOOR/CEILING TYPES AND RATINGS.

**4 TYPICAL CONDUIT PENETRATION DETAIL #4**  
E-003 SCALE: NONE

- NOTES:**
- USE THIS DETAIL WHERE CONDUITS PENETRATE A WATERPROOF SLAB, EG, TOILETS, BATHROOMS, KITCHENS JANITORS CLOSET, ETC.
  - FIRE STOPPING OF CONDUIT PENETRATIONS SHALL UTILIZE THE CORRECT UL STANDARD FOR THE SPECIFIC WALL/FLOOR/CEILING TYPES AND RATINGS.

- NOTE:**
- DISTANCE FROM FACE OF EQUIPMENT PER NEC 110.26 (A)(1): 3'-0" MINIMUM CLEARANCE FOR ELECTRICAL EQUIPMENT AT 208Y/120V, 3'-6" MINIMUM CLEARANCE FOR ELECTRICAL EQUIPMENT AT 480Y/277V. NOTE: MINIMUM CLEARANCE INCREASED TO 4'-0" IF THERE ARE EXPOSED LIVE PARTS ON BOTH SIDE OF THE WORKING SPACE. ELECTRICAL EQUIPMENT DOOR MUST BE ABLE TO OPEN TO 90 DEGREES MINIMUM.
  - DEDICATED EQUIPMENT SPACE, ABOVE AND BELOW THE ELECTRICAL EQUIPMENT, SHALL BE PROVIDED AS DESCRIBED IN NEC 110.26(E)(1). THE SPACE EQUAL TO THE WIDTH AND DEPTH OF THE EQUIPMENT AND EXTENDING FROM THE FLOOR TO A HEIGHT OF 6'-0" ABOVE THE EQUIPMENT OR TO THE STRUCTURAL CEILING, WHICHEVER IS LOWER, SHALL BE DEDICATED TO THE ELECTRICAL INSTALLATION. NO PIPING, DUCTS, LEAK PROTECTION APPARATUS, OR OTHER EQUIPMENT FOREIGN TO THE ELECTRICAL INSTALLATION SHALL BE LOCATED IN THIS ZONE. SEE NEC 110.26 FOR EXCEPTIONS AND FURTHER INFORMATION.

**GROUNDING NOTES:**

- GROUNDING SYSTEM DIAGRAM IS TYPICAL AND IS INTENDED TO DEPICT THE GROUNDING AND BONDING OF THE BUILDING ELECTRICAL DISTRIBUTION SYSTEM. ELECTRICAL CONTRACTOR SHALL APPLY THE MEANS AND METHODS SHOWN FOR THE ACTUAL BUILDING DISTRIBUTION SYSTEM WHERE APPLICABLE. ALL GROUNDING SYSTEM EQUIPMENT AND MATERIALS SHALL BE INSTALLED IN ACCORDANCE WITH THE REQUIREMENTS OF THE NATIONAL ELECTRICAL CODE - 2017.
- THE GROUNDING ELECTRODE SYSTEM FOR THE BUILDING SHALL INCLUDE THE CONNECTION TO A MAIN METAL WATER PIPING SYSTEM, A DRIVEN GROUND ROD, A CONNECTION TO THE BUILDING STEEL, AND CONNECTION TO A CONCRETE ENCASED ELECTRODE.
- REFER TO THE BUILDING SINGLE LINE DIAGRAM AND NEC 250.66 FOR THE SELECTED SIZE OF THE GROUNDING ELECTRODE CONDUCTOR.
- THE GROUNDING ELECTRODE CONDUCTOR SHALL BE AN INSULATED COPPER CONDUCTOR GREEN IN COLOR.
- GROUNDING NEUTRAL CONDUCTORS SHALL BE AN INSULATED COPPER CONDUCTOR GRAY OR WHITE IN COLOR.
- EQUIPMENT GROUNDING CONDUCTORS SHALL BE AN INSULATED COPPER CONDUCTOR GREEN IN COLOR.
- BONDING JUMPERS WHERE REQUIRED PER THE NEC SHALL BE COPPER CONDUCTORS. BONDING JUMPERS LESS THAN SIX FEET IN LENGTH MAY BE BARE CONDUCTORS. JUMPERS LONGER THAN SIX FEET IN LENGTH SHALL BE INSTALLED IN RACEWAY AND SHALL BE INSULATED CONDUCTORS GREEN IN COLOR.
- REFER TO THE NATIONAL ELECTRICAL CODE TABLE 250.122 FOR EQUIPMENT GROUNDING CONDUCTOR SIZING, WHERE NOT INDICATED IN THE GROUNDING SYSTEM DIAGRAM OR SHOWN ON THE BUILDING SINGLE LINE DIAGRAM.
- THE ELECTRICAL CONTRACTOR SHALL PROVIDE GROUNDING OF THE BUILDING STRUCTURAL STEEL IN ACCORDANCE THE PROJECT SPECIFICATIONS AND THE STRUCTURAL COLUMN GROUNDING SHOWN ON THE POWER PLANS.
- INSTALL GROUNDING ELECTRODE SYSTEM PER NEC 250.53.
- PER NEC 250.58, WHERE AN AC SYSTEM IS CONNECTED TO A GROUNDING ELECTRODE IN OR AT A BUILDING OR STRUCTURE, THE SAME ELECTRODE SHALL BE USED TO GROUND CONDUCTOR ENCLOSURES AND EQUIPMENT IN OR ON THAT BUILDING OR STRUCTURE, WHERE SEPARATE SERVICES, FEEDERS, OR BRANCH CIRCUITS SUPPLY A BUILDING AND ARE REQUIRED TO BE CONNECTED TO A GROUNDING ELECTRODE(S), THE SAME GROUNDING ELECTRODE(S) SHALL BE USED. TWO OR MORE GROUNDING ELECTRODES THAT ARE BONDED TOGETHER SHALL BE CONSIDERED AS A SINGLE GROUNDING ELECTRODE SYSTEM IN THIS SENSE.
- EXPOSED, NORMALLY NON-CURRENT-CARRYING METAL PARTS OF FIXED EQUIPMENT SUPPLIED BY OR ENCLOSING CONDUCTORS OR COMPONENTS THAT ARE LIKELY TO BECOME ENERGIZED SHALL BE CONNECTED TO AN EQUIPMENT GROUNDING CONDUCTOR AS REQUIRED BY NEC 250.110.
- PIPING SYSTEMS AND EXPOSED STRUCTURAL METAL SHALL BE BONDED AS REQUIRED BY NEC 250.104.
- THE LIGHTNING PROTECTION SYSTEM GROUND TERMINALS SHALL BE BONDED TO THE BUILDING OR STRUCTURE GROUNDING ELECTRODE SYSTEM AS REQUIRED BY NEC 250.106. SEE DRAWING E-503 FOR FURTHER INFORMATION.
- PROVIDE BONDING JUMPER BETWEEN COLD AND HOT WATER PIPING AT EACH WATER HEATER.

**LIGHTNING PROTECTION SYSTEM NOTE:**

1. THE ELECTRICAL CONTRACTOR SHALL FURNISH AND INSTALL A COMPLETE LIGHTNING PROTECTION SYSTEM FOR ALL AFFECTED ROOFTOP EQUIPMENT. ALL EQUIPMENT MATERIALS AND INSTALLATION SHALL BE IN ACCORDANCE WITH THE LATEST REQUIREMENTS OF THE NATIONAL FIRE PROTECTION ASSOCIATION ARTICLE 780 AND UL STANDARD 96A. ALL LIGHTNING PROTECTION EQUIPMENT SHALL BE NEW AND LABELED. INSTALLATION SHALL BE PERFORMED BY OR UNDER THE SUPERVISION OF A CERTIFIED MASTER INSTALLER. SHOP DRAWINGS SHOWING THE SIZE AND LOCATION OF ALL EQUIPMENT SHALL BE SUBMITTED TO THE ENGINEER FOR APPROVAL PRIOR TO THE START OF WORK.

E-007 **TYPICAL HEAT TRACE DETAIL**  
SCALE: NONE

- NOTES:**
1. ALL CONDUIT, WIRE, JUNCTION BOXES, ETC. TO BE FURNISHED AND INSTALLED BY ELECTRICAL CONTRACTOR.
  2. HEAT TRACING FOR ALL PIPING TO BE RAYCHEM MODEL SXL-CR/CT WITH POWER CONNECTION KITS, SPLICE KITS AND GLASS TAPE AS REQUIRED. HEAT TRACE TO BE FM APPROVED.
  3. E.C. SHALL ASSURE THAT THE HEAT TRACE INSTALLATION CONFORMS TO NEC. ARTICLE 427.

**ELECTRICAL GENERAL DEMOLITION NOTES**

1. GENERAL NOTES:
  - A. THE ELECTRICAL CONTRACTOR SHALL ACCOMPLISH COMPLETE ELECTRICAL DEMOLITION OF ALL ELECTRICAL EQUIPMENT/DEVICES ASSOCIATED WITH THE REMOVAL OF MECHANICAL EQUIPMENT IDENTIFIED ON PLAN.
  - B. DEMOLITION OF THESE DEVICES SHALL INCLUDE, BUT NOT BE LIMITED TO, COMPLETE REMOVAL OF ALL BRANCH CIRCUIT POWER WIRING AND ASSOCIATED CONDUIT AND BOX SYSTEMS FROM THE AFFECTED MECHANICAL EQUIPMENT BACK TO THE PANEL OF ORIGIN. REMOVE EXISTING DISCONNECT SWITCHES, STARTERS AND OTHER ELECTRICAL EQUIPMENT ASSOCIATED WITH THE MECHANICAL EQUIPMENT AND SYSTEMS BEING DEMOLISHED.
  - C. ALL EQUIPMENT AND MATERIALS TO BE DEMOLISHED SHALL BE TURNED OVER TO THE OWNER FOR FUTURE USE.
  - D. THE ELECTRICAL CONTRACTOR SHALL MAKE AN ON SITE INSPECTION OF THE PROJECT AREA TO DETERMINE A FULL SCOPE OF DEMOLITION WORK BEFORE SUBMITTING A PROPOSAL.
  - E. ALL DEMOLISHED MATERIAL SHALL BE REMOVED FROM THE SITE BY THE ELECTRICAL CONTRACTOR. THE CONTRACTOR IS TO RECYCLE WHEREVER POSSIBLE. COORDINATE ALL REMOVAL AND DISPOSAL WITH THE OWNER WHO RESERVES THE RIGHT TO SALVAGE ANY HVAC OR ELECTRICAL COMPONENTS.
  - F. ALL POWER SHUT DOWNS MUST BE COORDINATED WITH THE OWNER'S REPRESENTATIVE.
  - G. ALL DEMOLITION WORK SHALL BE DONE IN A SAFE AND ORDERLY MANNER AND IN ACCORDANCE WITH THE N.E.C., OSHA AND STATE REGULATIONS.
  - H. THE ELECTRICAL CONTRACTOR SHALL COORDINATE THE REMOVAL OF EQUIPMENT WITH OTHER TRADES SO AS NOT TO AFFECT THE OPERATION OF EXISTING SYSTEMS.

**ELECTRICAL KEYED DEMOLITION NOTES**

GENERAL: DEMOLITION NOTES ARE INDICATED WITH THE FOLLOWING SYMBOL AND ARE NUMBERED AS FOLLOWS:

- ELECTRICAL CONTRACTOR SHALL DEMOLISH/REMOVE ALL NECESSARY DEVICES INCLUDING LIGHTING, RECEPTACLES, BACKBOXES, DATA FIXTURES, WIRING, RACEWAY AND ASSOCIATED CONDUCTORS/CONDUIT, AS REQUIRED.

  - E. ALL DEMOLISHED MATERIAL SHALL BE REMOVED FROM THE SITE BY THE ELECTRICAL CONTRACTOR. THE CONTRACTOR IS TO RECYCLE WHEREVER POSSIBLE. COORDINATE ALL REMOVAL AND DISPOSAL WITH THE OWNER WHO RESERVES THE RIGHT TO SALVAGE ANY HVAC OR ELECTRICAL COMPONENTS.
  - F. ALL POWER SHUT DOWNS MUST BE COORDINATED WITH THE OWNER'S REPRESENTATIVE.
  - G. ALL DEMOLITION WORK SHALL BE DONE IN A SAFE AND ORDERLY MANNER AND IN ACCORDANCE WITH THE N.E.C., OSHA AND STATE REGULATIONS.
  - H. THE ELECTRICAL CONTRACTOR SHALL COORDINATE THE REMOVAL OF EQUIPMENT WITH OTHER TRADES SO AS NOT TO AFFECT THE OPERATION OF EXISTING SYSTEMS.

**ELECTRICAL KEYED DEMOLITION NOTES**

- GENERAL: DEMOLITION NOTES ARE INDICATED WITH THE FOLLOWING SYMBOL AND ARE NUMBERED AS FOLLOWS:
- 1 DEMOLISH AND REMOVE EXISTING CONDUCTORS/CONDUIT AND JUNCTION BOXES BACK TO SOURCE TO ACCOMMODATE DEMOLITION OF EXISTING GARAGE.

1 ELECTRICAL - NEW GARAGE FIRST FLOOR PLAN - POWER  
 E-101 SCALE: 1/8"=1'-0"  
 SCALE BAR: 1/8"=1'-0"

NEW WORK SYSTEM NOTES:

1. GENERAL NOTES:
  - A. REFER TO ELECTRICAL LEAD SHEETS, E-001 FOR 'NOTES' THAT PERTAIN TO THE SCOPE OF THIS PROJECT.
  - B. REFER TO BOOK SPECIFICATIONS FOR PROJECT DETAILS AND EXECUTION REQUIREMENTS.
  - C. REFER TO DRAWING E-008 THROUGH E-010 FOR PANEL SCHEDULES.
  - D. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE 2017 EDITION OF THE NATIONAL ELECTRICAL CODE.
  - E. ELECTRICAL CONTRACTOR SHALL INSTALL ALL (N) EQUIPMENT IN STRICT ACCORDANCE WITH THE MANUFACTURER'S WRITTEN INSTRUCTIONS AND SHALL MAINTAIN ALL CLEARANCES AS NOTED WITHIN THE WRITTEN INSTRUCTIONS.
  - F. ELECTRICAL CONTRACTOR TO PROVIDE AND INSTALL ALL ELECTRICAL EQUIPMENT, WIRING AND RACEWAY, AND MAKE ALL CONNECTIONS TO/FROM PANELBOARDS, DISCONNECT SWITCHES, ADJUSTABLE SPEED DRIVES, MOTOR STARTERS, AND THE END USE EQUIPMENT NECESSARY FOR A FULLY OPERATIONAL SYSTEM. COORDINATE WITH MECHANICAL CONTRACTOR.
  - G. ALL RACEWAYS PENETRATING FIRE RATED PARTITIONS, WALLS, AND CEILING SHALL BE SEALED USING APPROVED FIRE RATED SEALANT TO MATCH THE REQUIRED WALL FIRE RATING.
  - H. ALL POWER SHUT DOWNS MUST BE COORDINATED WITH THE OWNER'S REPRESENTATIVE.
  - I. THE ELECTRICAL CONTRACTOR SHALL MAKE AN ON SITE INSPECTION TO DETERMINE THE FULL SCOPE OF WORK AND WORKING CONDITIONS BEFORE SUBMITTING A PROPOSAL.
  - J. ALL CIRCUIT BREAKERS SERVING HVAC EQUIPMENT SHALL BE UL LISTED AS 'HACR'.
  - K. THE DRAWINGS ARE DIAGRAMMATIC. EXACT LOCATION OF EQUIPMENT, WIRING AND RACEWAYS SHALL BE DETERMINED BY CONTRACTOR SUBJECT TO ARCHITECT APPROVAL.
  - L. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE ELECTRICAL CHARACTERISTICS OF ALL NEW EQUIPMENT, MOTORS, ETC. BEFORE INSTALLING CABLING AND RACEWAY. IF THERE ARE ANY DISCREPANCIES BETWEEN THE ACTUAL RATING OF EQUIPMENT AT THE SITE AND THE DRAWINGS, THEN THE ENGINEER SHALL BE NOTIFIED.
  - M. THE CONTRACTOR SHALL SUBMIT TO THE OWNER: CERTIFICATES OF INSPECTION FOR THE ELECTRICAL INSTALLATION FROM AN APPROVED INSPECTION AGENCY UPON COMPLETION OF ELECTRICAL WORK.
  - N. THE ELECTRICAL SYSTEM SHALL BE TESTED FOR PROPER GROUNDING AND OPERATION. TEST HALL VERIFY THAT THE SYSTEM HAS NO SHORT CIRCUITS, OPENS, OVERLOADS, OR PANEL IMBALANCES. THE CONTRACTOR SHALL FURNISH ALL LABOR, MATERIALS AND TEST INSTRUMENTS. ALL EQUIPMENT AND WIRING SYSTEMS SHALL BE GROUNDED IN ACCORDANCE WITH THE REQUIREMENTS OF THE NATIONAL ELECTRICAL CODE.
  - O. ALL WORK SHALL BE INSTALLED SO AS TO BE READILY ACCESSIBLE FOR OPERATION MAINTENANCE, AND REPAIR. MINOR DEVIATIONS FROM THE PLANS MAY BE MADE TO ACCOMPLISH THIS, SUBJECT TO THE APPROVAL OF THE ENGINEER.
  - P. THE ELECTRICAL CONTRACTOR SHALL USE MAXIMUM OF 6' OF FLEXIBLE CONDUIT FOR FOR EQUIPMENT SUBJECT TO VIBRATION, NOISE TRANSMISSION, OR MOVEMENT, AND FOR ALL MOTORS. USE LIQUID TIGHT FLEXIBLE CONDUIT IN WET OR DAMP LOCATIONS. INSTALL SEPARATE GROUND CONDUCTOR ACROSS FLEXIBLE CONNECTIONS.
  - Q. ALL WIRING SHALL BE COPPER CONDUCTOR WITH 600 VOLT TYPE THIN, OR THIN INSULATION IN CONDUIT. THE MINIMUM SIZE WIRE FOR POWER CIRCUITS SHALL BE #12 AWG. SOLID CONDUCTORS SHALL BE USED FOR NUMBER 10 AND 12; STRANDED CONDUCTORS SHALL BE USED FOR NUMBER 8 AND LARGER. THE CONTRACTOR MAY USE METAL CLAD TYPE 'MC' WHERE ALLOWED BY THE NATIONAL ELECTRICAL CODE AND APPROVED FOR USE BY THE AUTHORITIES HAVING JURISDICTION.
  - R. ALL MATERIALS AND EQUIPMENT FURNISHED FOR THIS PROJECT SHALL BE NEW, LISTED, AND APPROVED BY UL.
  - S. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS, INSPECTIONS, LICENSES AND PAY UTILITY COMPANY FEES.
  - T. ALL FUSED AND NON-FUSED DISCONNECT SWITCHES SHALL HAVE: 600 VOLT RATING FOR 480 VOLT CIRCUITS. SIZE FUSES TO COMPLY WITH NAMEPLATE RATING OF EQUIPMENT SERVED.

2. NEW WORK KEYED NOTES:

GENERAL: NEW WORK NOTES ARE INDICATED WITH THE FOLLOWING SYMBOL (1) AND ARE NUMBERED AS FOLLOWS:

- 1 PROVIDE AND INSTALL CODE BLUE TELEPHONE STATION IN ACCORDANCE WITH THE MANUFACTURER'S INSTALLATION INSTRUCTIONS. PROVIDE AND INSTALL POWER AND DATA TO EACH CODE BLUE TELEPHONE STATION. COORDINATE FINAL EQUIPMENT SELECTIONS WITH THE OWNERS. PROVIDE REMOTE CODE BLUE TELEPHONE SIGN PURCHASED FROM THE MANUFACTURER AND REMOTE CODE BLUE LIGHT TO BE MOUNTED IMMEDIATELY AROUND THE CORNER FROM THE CODE BLUE TELEPHONE MAIN UNIT. COORDINATE FINAL LOCATIONS WITH THE OWNER.
- 2 PROVIDE POWER FOR NEW WATER HEATER. REFER TO PLUMBING DRAWINGS FOR ADDITIONAL DETAILS.
- 3 PROVIDE POWER FOR NEW FM200 SYSTEM. REFER TO FIRE PROTECTION DRAWINGS FOR ADDITIONAL DETAILS.
- 4 ELECTRICAL CONTRACTOR SHALL COORDINATE FINAL LOCATION OF HEAT TRACE WITH PLUMBING DRAWINGS.
- 5 PROVIDE UNDERGROUND CONDUIT IN THIS AREA FOR VEHICLE SENSE LOOP AS REQUIRED. COORDINATE FINAL STUB UP LOCATION WITH GATE MANUFACTURER.
- 6 PROVIDE AND INSTALL ALL INTERCONNECTING WIRING IN CONDUIT FROM CU TO ASSOCIATED AC. PROVIDE LOCAL DISCONNECTING MEANS AS REQUIRED AND RECOMMENDED BY MANUFACTURER. COORDINATE ALL REQUIREMENTS WITH MANUFACTURER.
- 7 ELEVATOR DISCONNECT SHALL MEET THE REQUIREMENTS OF NEC 620.51. DISCONNECT VOLTAGE AND CURRENT RATINGS FOR MAIN AND AUXILIARY CONTACT RATED FOR USE WITH 24VDC AT UP TO 2 AMPS. ALL ELEVATOR RELATED DISCONNECTS REQUIRE PERMANENTLY-MOUNTED LOCKING MECHANISMS AND SHALL BE CONSPICUOUSLY LABELED WITH ELEVATOR NUMBER, CIRCUITS BEING DISCONNECTED AND LOADS ASSOCIATED WITH THE CIRCUIT BEING DISCONNECTED. THIS INCLUDES MAIN ELEVATOR DISCONNECT, AUXILIARY ELEVATOR DISCONNECT, ELEVATOR LIGHTING CIRCUIT DISCONNECT AND BRANCH CIRCUIT BREAKERS THAT SERVE ANY AND ALL EQUIPMENT WITHIN THE ELEVATOR HOISTWAY.
- 8 COORDINATE EXPRESS ELEVATOR FUNCTION FOR JUDGES ON AUTHORIZED CARD READ WITH ELEVATOR CONTROLS.
- 9 ELECTRICAL CONTRACTOR SHALL PROVIDE AND INSTALL HEAT TRACING AND ASSOCIATED POWER SUPPLIES ON WET FIRE SPRINKLER MAIN IN EXPOSED CEILING AREAS. COORDINATE FINAL MOUNTING LOCATION AND REQUIREMENTS WITH FIRE PROTECTION CONTRACTOR. REFER TO DETAIL 6/E-007 FOR ADDITIONAL INFORMATION.

  - P. THE ELECTRICAL CONTRACTOR SHALL USE MAXIMUM OF 6' OF FLEXIBLE CONDUIT FOR EQUIPMENT SUBJECT TO VIBRATION, NOISE TRANSMISSION, OR MOVEMENT, AND FOR ALL MOTORS. USE LIQUID TIGHT FLEXIBLE CONDUIT IN WET OR DAMP LOCATIONS. INSTALL SEPARATE GROUND CONDUCTOR ACROSS FLEXIBLE CONNECTIONS.
  - Q. ALL WIRING SHALL BE COPPER CONDUCTOR WITH 600 VOLT TYPE THHN, OR THWN INSULATION IN CONDUIT. THE MINIMUM SIZE WIRE FOR POWER CIRCUITS SHALL BE #12 AWG. SOLID CONDUCTORS SHALL BE USED FOR NUMBER 10 AND 12; STRANDED CONDUCTORS SHALL BE USED FOR NUMBER 8 AND LARGER. THE CONTRACTOR MAY USE METAL CLAD TYPE "MC" WHERE ALLOWED BY THE NATIONAL ELECTRICAL CODE AND APPROVED FOR USE BY THE AUTHORITIES HAVING JURISDICTION.
  - R. ALL MATERIALS AND EQUIPMENT FURNISHED FOR THIS PROJECT SHALL BE NEW, LISTED, AND APPROVED BY UL.
  - S. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS, INSPECTIONS, LICENSES AND PAY UTILITY COMPANY FEES.
  - T. ALL FUSED AND NON-FUSED DISCONNECT SWITCHES SHALL HAVE: 600 VOLT RATING FOR 480 VOLT CIRCUITS. SIZE FUSES TO COMPLY WITH NAMEPLATE RATING OF EQUIPMENT SERVED.

**NEW WORK SYSTEM NOTES:**

- 1. GENERAL NOTES:
  - A. REFER TO ELECTRICAL LEAD SHEETS, E-001 FOR 'NOTES' THAT PERTAIN TO THE SCOPE OF THIS PROJECT.
  - B. REFER TO BOOK SPECIFICATIONS FOR PROJECT DETAILS AND EXECUTION REQUIREMENTS.
  - C. REFER TO DRAWING E-008 THROUGH E-009 FOR PANEL SCHEDULES.
  - D. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE 2017 EDITION OF THE NATIONAL ELECTRICAL CODE.
  - E. ELECTRICAL CONTRACTOR SHALL INSTALL ALL (N) EQUIPMENT IN STRICT ACCORDANCE WITH THE MANUFACTURER'S WRITTEN INSTRUCTIONS AND SHALL MAINTAIN ALL CLEARANCES AS NOTED WITHIN THE WRITTEN INSTRUCTIONS.
  - F. ELECTRICAL CONTRACTOR TO PROVIDE AND INSTALL ALL ELECTRICAL EQUIPMENT, WIRING AND RACEWAY, AND MAKE ALL CONNECTIONS TO/FROM PANELBOARDS, DISCONNECT SWITCHES, ADJUSTABLE SPEED DRIVES, MOTOR STARTERS, AND THE END USE EQUIPMENT NECESSARY FOR A FULLY OPERATIONAL SYSTEM. COORDINATE WITH MECHANICAL CONTRACTOR.
  - G. ALL RACEWAYS PENETRATING FIRE RATED PARTITIONS, WALLS, AND CEILINGS SHALL BE SEALED USING APPROVED FIRE RATED SEALANT TO MATCH THE REQUIRED WALL FIRE RATING.
  - H. ALL POWER SHUT DOWNS MUST BE COORDINATED WITH THE OWNER'S REPRESENTATIVE.
  - I. THE ELECTRICAL CONTRACTOR SHALL MAKE AN ON SITE INSPECTION TO DETERMINE THE FULL SCOPE OF WORK AND WORKING CONDITIONS BEFORE SUBMITTING A PROPOSAL.
  - J. ALL CIRCUIT BREAKERS SERVING HVAC EQUIPMENT SHALL BE UL LISTED AS 'HACR'.
  - K. THE DRAWINGS ARE DIAGRAMMATIC. EXACT LOCATION OF EQUIPMENT, WIRING AND RACEWAYS SHALL BE DETERMINED BY CONTRACTOR SUBJECT TO ARCHITECT APPROVAL.
  - L. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE ELECTRICAL CHARACTERISTICS OF ALL NEW EQUIPMENT, MOTORS, ETC. BEFORE INSTALLING CABLING AND RACEWAY. IF THERE ARE ANY DISCREPANCIES BETWEEN THE ACTUAL RATING OF EQUIPMENT AT THE SITE AND THE DRAWINGS, THEN THE ENGINEER SHALL BE NOTIFIED.
  - M. THE CONTRACTOR SHALL SUBMIT TO THE OWNER: CERTIFICATES OF INSPECTION FOR THE ELECTRICAL INSTALLATION FROM AN APPROVED INSPECTION AGENCY UPON COMPLETION OF ELECTRICAL WORK.
  - N. THE ELECTRICAL SYSTEM SHALL BE TESTED FOR PROPER GROUNDING AND OPERATION. TEST SHALL VERIFY THAT THE SYSTEM HAS NO SHORT CIRCUITS, OPENS, OVERLOADS, OR PANEL IMBALANCES. THE CONTRACTOR SHALL FURNISH ALL LABOR, MATERIALS AND TEST INSTRUMENTS. ALL EQUIPMENT AND WIRING SYSTEMS SHALL BE GROUNDED IN ACCORDANCE WITH THE REQUIREMENTS OF THE NATIONAL ELECTRICAL CODE.
  - O. ALL WORK SHALL BE INSTALLED SO AS TO BE READILY ACCESSIBLE FOR OPERATION MAINTENANCE AND REPAIR. MINOR DEVIATIONS FROM THE PLANS MAY BE MADE TO ACCOMPLISH THIS, SUBJECT TO THE APPROVAL OF THE ENGINEER.
  - P. THE ELECTRICAL CONTRACTOR SHALL USE MAXIMUM OF 6' OF FLEXIBLE CONDUIT FOR EQUIPMENT SUBJECT TO VIBRATION, NOISE TRANSMISSION, OR MOVEMENT, AND FOR ALL MOTORS. USE LIQUID TIGHT FLEXIBLE CONDUIT IN WET OR DAMP LOCATIONS. INSTALL SEPARATE GROUND CONDUCTOR ACROSS FLEXIBLE CONNECTIONS.
  - Q. ALL WIRING SHALL BE COPPER CONDUCTOR WITH 600 VOLT TYPE THHN, OR THWN INSULATION IN CONDUIT. THE MINIMUM SIZE WIRE FOR POWER CIRCUITS SHALL BE #12 AWG. SOLID CONDUCTORS SHALL BE USED FOR NUMBER 10 AND 12; STRANDED CONDUCTORS SHALL BE USED FOR NUMBER 8 AND LARGER. THE CONTRACTOR MAY USE METAL CLAD TYPE 'MC' WHERE ALLOWED BY THE NATIONAL ELECTRICAL CODE AND APPROVED FOR USE BY THE AUTHORITIES HAVING JURISDICTION.
  - R. ALL MATERIALS AND EQUIPMENT FURNISHED FOR THIS PROJECT SHALL BE NEW, LISTED, AND APPROVED BY UL.
  - S. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS, INSPECTIONS, LICENSES AND PAY UTILITY COMPANY FEES.
  - T. ALL FUSED AND NON-FUSED DISCONNECT SWITCHES SHALL HAVE: 600 VOLT RATING FOR 480 VOLT CIRCUITS. SIZE FUSES TO COMPLY WITH NAMEPLATE RATING OF EQUIPMENT SERVED.

**2. NEW WORK KEYED NOTES:**

GENERAL: NEW WORK NOTES ARE INDICATED WITH THE FOLLOWING SYMBOL (⊖) AND ARE NUMBERED AS FOLLOWS:

- ① PROVIDE AND INSTALL CODE BLUE TELEPHONE STATION IN ACCORDANCE WITH THE MANUFACTURER'S INSTALLATION INSTRUCTIONS. PROVIDE AND INSTALL POWER AND DATA TO EACH CODE BLUE TELEPHONE STATION. COORDINATE FINAL EQUIPMENT SELECTIONS WITH THE OWNERS. PROVIDE REMOTE CODE BLUE TELEPHONE SIGN PURCHASED FROM THE MANUFACTURER AND REMOTE CODE BLUE LIGHT TO BE MOUNTED IMMEDIATELY AROUND THE CORNER FROM THE CODE BLUE TELEPHONE MAIN UNIT. COORDINATE FINAL LOCATIONS WITH THE OWNER.
- ② PROVIDE AND INSTALL ALL INTERCONNECTING WIRING IN CONDUIT FROM CU TO ASSOCIATED AC. PROVIDE LOCAL DISCONNECTING MEANS AS REQUIRED AND RECOMMENDED BY MANUFACTURER. COORDINATE ALL REQUIREMENTS WITH MANUFACTURER.
- ③ ELEVATOR DISCONNECT SHALL MEET THE REQUIREMENTS OF NEC 620.51. DISCONNECT VOLTAGE AND CURRENT RATINGS FOR MAIN AND AUXILIARY CONTACT RATED FOR USE WITH 240VAC AT UP TO 2 AMPS. ALL ELEVATOR RELATED DISCONNECTS REQUIRE PERMANENTLY-MOUNTED LOCKING MECHANISMS AND SHALL BE CONSPICUOUSLY LABELED WITH ELEVATOR NUMBER, CIRCUITS BEING DISCONNECTED AND LOADS ASSOCIATED WITH THE CIRCUIT BEING DISCONNECTED. THIS INCLUDES MAIN ELEVATOR DISCONNECT, AUXILIARY ELEVATOR DISCONNECT, ELEVATOR LIGHTING CIRCUIT DISCONNECT AND BRANCH CIRCUIT BREAKERS THAT SERVE ANY AND ALL EQUIPMENT WITHIN THE ELEVATOR HOISTWAY.

**1 ELECTRICAL - NEW GARAGE SECOND FLOOR PLAN - LIGHTING**  
 E-202 SCALE: 1/8"=1'-0"

**NEW WORK SYSTEM NOTES:**

1. GENERAL NOTES:
  - A. REFER TO ELECTRICAL LEAD SHEETS, E-001 FOR "NOTES" THAT PERTAIN TO THE SCOPE OF THIS PROJECT.
  - B. REFER TO BOOK SPECIFICATIONS FOR PROJECT DETAILS AND EXECUTION REQUIREMENTS.
  - C. REFER TO DRAWING E-008 THROUGH E-009 FOR PANEL SCHEDULES.
  - D. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE 2017 EDITION OF THE NATIONAL ELECTRICAL CODE.
  - E. ELECTRICAL CONTRACTOR SHALL PROVIDE ALL REQUIRED CONDUITS, RACEWAYS, CONDUCTORS, AND OTHER EQUIPMENT NECESSARY TO PROVIDE A COMPLETE WORKING SYSTEM.
  - F. ELECTRICAL CONTRACTOR SHALL INSTALL ALL (N) EQUIPMENT IN STRICT ACCORDANCE WITH THE MANUFACTURER'S WRITTEN INSTRUCTIONS AND SHALL MAINTAIN ALL CLEARANCES AS NOTED WITHIN THE WRITTEN INSTRUCTIONS.
  - G. ELECTRICAL CONTRACTOR TO PROVIDE AND INSTALL ALL ELECTRICAL EQUIPMENT, WIRING AND RACEWAY, AND MAKE ALL CONNECTIONS TO/FROM PANELBOARDS, DISCONNECT SWITCHES, ADJUSTABLE SPEED DRIVES, MOTOR STARTERS, AND THE END USE EQUIPMENT NECESSARY FOR A FULLY OPERATIONAL SYSTEM. COORDINATE WITH MECHANICAL CONTRACTOR.
  - H. ALL RACEWAYS PENETRATING FIRE RATED PARTITIONS, WALLS, AND CEILING SHALL BE SEALED USING APPROVED FIRE RATED SEALANT TO MATCH THE REQUIRED WALL FIRE RATING.
  - I. ALL POWER SHUT DOWNS MUST BE COORDINATED WITH THE OWNER'S REPRESENTATIVE.

- GENERAL LIGHTNING PROTECTION SYSTEM NOTES:
1. THIS DRAWING IS DIAGRAMMATIC AND INDICATES THE VARIOUS ELEMENTS FOR THE LIGHTNING PROTECTION SYSTEM. LIGHTNING PROTECTION SYSTEM ELEMENTS INCLUDE BUT ARE NOT LIMITED TO: INTERCONNECTING ROOF-TOP AIR TERMINALS, GROUNDING TERMINATIONS, CONDUCTORS INTERCONNECTING THE ROOF-TOP AIR TERMINALS & GROUNDS, BUILDING GROUNDING LOOP, METALLIC BODY INTERCONNECTIONS, AND SURGE SUPPRESSION.
  2. IN ACCORDANCE WITH SPECIFICATION SECTION 284113, SUBMIT FOR REVIEW BY THE ENGINEER, A COMPLETE SUBMITTAL PACKAGE DETAILING THE PROPOSED LIGHTNING PROTECTION SYSTEM AND COMPONENTS. THE SUBMITTAL SHALL BE BASED ON ACTUAL ARCHITECTURAL ROOF PLANS AND SECTIONS, ARCHITECTURAL ELEVATION DRAWINGS, AND ROOF MOUNTED EQUIPMENT. THE PROPOSED LIGHTNING PROTECTION SYSTEM SHALL BE IN ACCORDANCE WITH NFPA 780 GUIDELINES & UL96A.
  3. UPON COMPLETION OF THE LIGHTNING PROTECTION SYSTEM INSTALLATION, APPLICATION SHALL BE MADE TO UNDERWRITERS LABORATORIES, INC. FOR INSPECTION AND ISSUANCE OF THE UL MASTER LABEL.
  4. PROVIDE TRANSIENT VOLTAGE SURGE PROTECTION DEVICES FOR ALL INCOMING BUILDING SERVICES. THIS INCLUDES BUT IS NOT LIMITED TO ELECTRICAL SERVICE, TELECOMMUNICATIONS SERVICES, CABLE SERVICE, ETC.
  5. REFER TO SHEET E-300 FOR BUILDING GROUND RING REQUIREMENTS. THE LIGHTNING PROTECTION SYSTEM SHALL BE COMMONLY BONDED TO THE BUILDING GROUND RING.

**NEW WORK SYSTEM NOTES:**

1. GENERAL NOTES:
  - A. REFER TO ELECTRICAL LEAD SHEETS, E-001 FOR 'NOTES' THAT PERTAIN TO THE SCOPE OF THIS PROJECT.
  - B. REFER TO BOOK SPECIFICATIONS FOR PROJECT DETAILS AND EXECUTION REQUIREMENTS.
  - C. REFER TO DRAWING E-008 THROUGH E-009 FOR PANEL SCHEDULES.
  - D. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE 2017 EDITION OF THE NATIONAL ELECTRICAL CODE.
  - E. ELECTRICAL CONTRACTOR SHALL INSTALL ALL (N) EQUIPMENT IN STRICT ACCORDANCE WITH THE MANUFACTURER'S WRITTEN INSTRUCTIONS AND SHALL MAINTAIN ALL CLEARANCES AS NOTED WITHIN THE WRITTEN INSTRUCTIONS.
  - F. ELECTRICAL CONTRACTOR TO PROVIDE AND INSTALL ALL ELECTRICAL EQUIPMENT, WIRING AND RACEWAY, AND MAKE ALL CONNECTIONS TO/FROM PANELBOARDS, DISCONNECT SWITCHES, ADJUSTABLE SPEED DRIVES, MOTOR STARTERS, AND THE END USE EQUIPMENT NECESSARY FOR A FULLY OPERATIONAL SYSTEM. COORDINATE WITH MECHANICAL CONTRACTOR.
  - G. ALL RACEWAYS PENETRATING FIRE RATED PARTITIONS, WALLS, AND CEILINGS SHALL BE SEALED USING APPROVED FIRE RATED SEALANT TO MATCH THE REQUIRED WALL FIRE RATING.
  - H. ALL POWER SHUT DOWNS MUST BE COORDINATED WITH THE OWNER'S REPRESENTATIVE.
  - I. THE ELECTRICAL CONTRACTOR SHALL MAKE AN ON SITE INSPECTION TO DETERMINE THE FULL SCOPE OF WORK AND WORKING CONDITIONS BEFORE SUBMITTING A PROPOSAL.
  - J. ALL CIRCUIT BREAKERS SERVING HVAC EQUIPMENT SHALL BE UL LISTED AS 'HACR'.
  - K. THE DRAWINGS ARE DIAGRAMMATIC. EXACT LOCATION OF EQUIPMENT, WIRING AND RACEWAYS SHALL BE DETERMINED BY CONTRACTOR SUBJECT TO ARCHITECT APPROVAL.
  - L. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE ELECTRICAL CHARACTERISTICS OF ALL NEW EQUIPMENT, MOTORS, ETC. BEFORE INSTALLING CABLING AND RACEWAY. IF THERE ARE ANY DISCREPANCIES BETWEEN THE ACTUAL RATING OF EQUIPMENT AT THE SITE AND THE DRAWINGS, THEN THE ENGINEER SHALL BE NOTIFIED.
  - M. THE CONTRACTOR SHALL SUBMIT TO THE OWNER: CERTIFICATES OF INSPECTION FOR THE ELECTRICAL INSTALLATION FROM AN APPROVED INSPECTION AGENCY UPON COMPLETION OF ELECTRICAL WORK.
  - N. THE ELECTRICAL SYSTEM SHALL BE TESTED FOR PROPER GROUNDING AND OPERATION. TEST SHALL VERIFY THAT THE SYSTEM HAS NO SHORT CIRCUITS, OPENS, OVERLOADS, OR PANEL IMBALANCES. THE CONTRACTOR SHALL FURNISH ALL LABOR, MATERIALS AND TEST INSTRUMENTS. ALL EQUIPMENT AND WIRING SYSTEMS SHALL BE GROUNDED IN ACCORDANCE WITH THE REQUIREMENTS OF THE NATIONAL ELECTRICAL CODE.
  - O. ALL WORK SHALL BE INSTALLED SO AS TO BE READILY ACCESSIBLE FOR OPERATION MAINTENANCE AND REPAIR. MINOR DEVIATIONS FROM THE PLANS MAY BE MADE TO ACCOMPLISH THIS, SUBJECT TO THE APPROVAL OF THE ENGINEER.
  - P. THE ELECTRICAL CONTRACTOR SHALL USE MAXIMUM OF 6' OF FLEXIBLE CONDUIT FOR EQUIPMENT SUBJECT TO VIBRATION, NOISE TRANSMISSION, OR MOVEMENT, AND FOR ALL MOTORS. USE LIQUID TIGHT FLEXIBLE CONDUIT IN WET OR DAMP LOCATIONS. INSTALL SEPARATE GROUND CONDUCTOR ACROSS FLEXIBLE CONNECTIONS.
  - Q. ALL WIRING SHALL BE COPPER CONDUCTOR WITH 600 VOLT TYPE THHN, OR THWN INSULATION IN CONDUIT. THE MINIMUM SIZE WIRE FOR POWER CIRCUITS SHALL BE #12 AWG. SOLID CONDUCTORS SHALL BE USED FOR NUMBER 10 AND 12; STRANDED CONDUCTORS SHALL BE USED FOR NUMBER 8 AND LARGER. THE CONTRACTOR MAY USE METAL CLAD TYPE 'MC' WHERE ALLOWED BY THE NATIONAL ELECTRICAL CODE AND APPROVED FOR USE BY THE AUTHORITIES HAVING JURISDICTION.
  - R. ALL MATERIALS AND EQUIPMENT FURNISHED FOR THIS PROJECT SHALL BE NEW, LISTED, AND APPROVED BY UL.
  - S. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS, INSPECTIONS, LICENSES AND PAY UTILITY COMPANY FEES.
  - T. ALL FUSED AND NON-FUSED DISCONNECT SWITCHES SHALL HAVE: 600 VOLT RATING FOR 480 VOLT CIRCUITS. SIZE FUSES TO COMPLY WITH NAMEPLATE RATING OF EQUIPMENT SERVED.

2. NEW WORK KEYED NOTES:
 

GENERAL: NEW WORK NOTES ARE INDICATED WITH THE FOLLOWING SYMBOL (⊖) AND ARE NUMBERED AS FOLLOWS:

  - (1) PROVIDE AND INSTALL NEW EXTERIOR CODE BLUE TELEPHONE STATION IN ACCORDANCE WITH THE MANUFACTURER'S INSTALLATION INSTRUCTIONS. PROVIDE AND INSTALL UNDERGROUND POWER AND DATA CODE BLUE TELEPHONE STATION. COORDINATE FINAL EQUIPMENT SELECTIONS WITH THE OWNERS. COORDINATE FINAL LOCATION WITH THE OWNER.
  - (2) PROVIDE (3) 4" CONDUIT FOR NEW ELECTRICAL SERVICE TO NEW GARAGE FROM EXISTING UTILITY TRANSFORMER VAULT. COORDINATE FINAL CONNECTION REQUIREMENTS WITH UTILITY.

HANGERS & SUPPORTS	
1. HANGERS AND ANCHORS SHALL BE SECURELY ATTACHED TO BUILDING CONSTRUCTION AT SUFFICIENTLY CLOSE INTERVALS TO SUPPORT PIPING AND ITS CONTENTS.	
A.	VERTICAL PIPING FOR CAST IRON SHALL BE SUPPORT AT BASE AND AT EACH STORY HEIGHT.
B.	VERTICAL PIPING FOR COPPER SHALL BE SUPPORTED AT EACH STORY HEIGHT BUT NOT MORE THAN 10 FOOT INTERVALS.
C.	HORIZONTAL PIPING FOR COPPER SHALL BE SUPPORTED AT 6 FOOT INTERVALS FOR PIPE SIZES 1-1/4" AND SMALL AND AT 10 FOOT INTERVALS FOR PIPE SIZES 1-1/2" AND LARGER. WHERE PIPE IS SUSPENDED BY NON-RIGID HANGERS MORE THAN 18" LONG, PROVIDE LATERAL SUPPORT.
2. ALL SUPPORTS IN CONTACT WITH COPPER PIPING SHALL BE PLASTIC COATED.	
3. INSTALL METAL SHIELDS ON HANGERS SUPPORTING INSULATED PIPE.	
4. ALL DOMESTIC WATER AND SANITARY WASTE PIPE SUPPORTS SHALL BE IN ACCORDANCE WITH NSPC CHAPTER 8 MSS SP-58, 69 & 89.	
5. PLUMBING SYSTEMS SHALL BE INSTALLED SO AS TO PREVENT STRAINS & STRESS WHICH WILL EXCEED STRUCTURAL STRENGTH OF PIPE. PROVISIONS SHALL BE MADE FOR EXPANSION & CONTRACTION OF PIPING.	
6. HANGERS, ANCHORS, AND SUPPORTS SHALL BE OF METAL OTHER MATERIAL OF SUFFICIENT STRENGTH TO SUPPORT THE PIPING AND ITS CONTENTS IS ACCEPTABLE. ALL SUPPORTS AND FASTENERS LOCATED OUTSIDE OR IN CORROSIVE AREAS SHALL BE GALVANIZED.	
7. MINIMUM ROD DIAMETER FOR SINGLE RIGID SUPPORTS SHALL BE AS FOLLOWS: FOR 1-1/4" THRU 2" PIPE: 3/8" DIAMETER FOR 2-1/2" AND 3" PIPE: 1/2" DIAMETER FOR 4" AND 5" PIPE: 5/8" DIAMETER FOR 6" PIPE: 3/4" DIAMETER FOR 8" PIPE: 7/8" DIAMETER FOR 14" THRU 18" PIPE: 1" DIAMETER RODS MAY BE REDUCED ONE SIZE FOR DOUBLE ROD HANGERS (3/8" DIA. MIN.)

NOTES	
THE FOLLOWING NOTES APPLY TO ALL "P" PLUMBING DRAWINGS:	
1. THE ENTIRE PLUMBING INSTALLATION SHALL CONFORM TO THE NATIONAL STANDARD PLUMBING CODE 2018 EDITION, INTERNATIONAL FUEL GAS CODE 2018 EDITION, 2018 FGI GUIDELINES AND LOCAL AUTHORITIES HAVING JURISDICTION AND THE CITY OF ELIZABETH, NJ. NOTIFY CITY BUILDING CODE ENFORCEMENT FOR ALL REQUIRED INSPECTIONS.	
2. PRIOR TO STARTING CONSTRUCTION, DETERMINE EXACT ELEVATION, SIZE, DEPTH AND LOCATION OF NEW UTILITIES WHERE CONNECTIONS ARE TO BE MADE OR INTERSECTIONS OCCUR. NOTIFY ARCHITECT OR ENGINEER OF ANY DISCREPANCY BETWEEN DRAWINGS AND ACTUAL FIELD CONDITIONS. WORK BACK TOWARD BUILDING FROM UTILITY CONNECTION FOR ALL PIPING SYSTEMS.	
3. VERIFY WITH OWNER, PRIOR TO STARTING CONSTRUCTION, THE LOCATION OF ALL ON-SITE UNDERGROUND UTILITIES THAT WILL BE AFFECTED BY THIS WORK.	
4. INSTALL ALL WATER HAMMER ARRESTORS IN ACCORDANCE WITH THE LATEST "PLUMBING AND DRAINAGE INSTITUTE STANDARDS" FOR WATER HAMMER ARRESTORS.	
5. PROVIDE AND LOCATE ACCESS PANELS IN NON ACCESSIBLE CEILINGS AND WALLS FOR ALL VALVES, WATER HAMMER ARRESTORS, CLEANOUTS AND ALL OTHER ITEMS THAT REQUIRE ACCESS TO PROPERLY MAINTAIN OR SERVICE THE BUILDING.	
6. COORDINATE PLUMBING WORK WITH ALL OTHER TRADES FOR CLEARANCES, ACCESS AND STRUCTURAL INTERFERENCES PRIOR TO INSTALLATION OF ANY SYSTEMS.	
7. DOMESTIC WATER PIPE FOR ABOVE GROUND USE SHALL BE ASTM B88 TYPE "L" SEAMLESS COPPER TUBE WITH SOLDER JOINT FITTINGS USING 95-5 SOLDER PER ASTM B32. ALL WATER SERVICE PIPING SHALL BE WATER RATED FOR NOT LESS THAN 200 PSI @ 73°F. ALL WATER DISTRIBUTION PIPING SHALL BE WATER RATED FOR NOT LESS THAN 100 PSI @ 180°F.	
8. DRAWINGS ARE DIAGRAMMATIC AND INDICATE GENERAL ARRANGEMENT OF SYSTEMS AND WORK. ROUTING IS DIAGRAMMATIC AND APPROXIMATE. ALL REQUIRED OFFSETS, RISE AND DROPS ARE NOT NECESSARILY SHOWN. SUBMISSION BY THE PLUMBING CONTRACTOR SHALL BE CONSIDERED AS EVIDENCE THAT THE P.C. HAS INCLUDED IN HIS OR HER BID PRICE, INSTALLATION OF ALL PLUMBING SYSTEMS COORDINATED WITH G.C. AND ALL TRADES.	
9. DOMESTIC WATER PIPING SHALL BE FLUSHED WITH WATER UNTIL NO DIRTY WATER APPEARS AT THE POINTS OF OUTLETS.	
10. POTABLE WATER PIPING SHALL BE DISINFECTED PRIOR TO USE PER NATIONAL STANDARD PLUMBING CODE. THE PIPING SHALL BE FILLED WITH A WATER CHLORINE SOLUTION CONTAINING AT LEAST 50 PARTS PER MILLION OF CHLORINE AND SHALL BE VALVED OFF FOR 24 HOURS OR FILLED WITH A WATER CHLORINE SOLUTION CONTAINING AT LEAST 200 PARTS PER MILLION OF CHLORINE AND ALLOWED TO STAND FOR AT LEAST 3 HOURS. FOLLOWING THE ALLOWED STANDING TIME, THE SYSTEM SHALL BE FLUSHED WITH POTABLE WATER UNTIL NO CHLORINE REMAINS IN THE SYSTEM. PROVIDE RESULTS OF DISINFECTION TO OWNER WHEN COMPLETE. STERILIZATION WORK SHALL COMPLY WITH NSPC 2015 SECTION 10.9.2, PARAGRAPH A1 TO A9.	
11. DOMESTIC WATER PIPE SHALL CONSIST OF A HYDROSTATIC PRESSURE TEST OF 25 PSIG ABOVE THE WORKING PRESSURE UNDER WHICH IT IS OPERATED FOR NOT LESS THAN 60 MIN.	
12. IF LEAKS OCCUR DURING TESTING, REPAIRS SHALL BE MADE AND SYSTEM RETESTED UNTIL NO EVIDENCE OF LEAKS EXISTS FOR THE DURATION OF THE TEST.	
13. DOMESTIC WATER PIPE SHALL BE INSULATED WITH 1" THICK FIBERGLASS PREFORMED INSULATION WITH VAPOR JACKET AND SELF SEALING TAPE, EQUAL TO OWENS-CORNING ASJ/SSL-2. PIPING IN EXTERIOR WALLS SHALL HAVE 2" THICK INSULATION. DOMESTIC WATER PIPE MAY BE INSULATED WITH AP/ARMAFLEX 55 (SELF-SEAL) FLEXIBLE ELASTOMERIC THERMAL INSULATION, 1/2" THICKNESS, OR APPROVED EQUAL PIPING IN EXTERIOR WALLS SHALL HAVE 1" THICK INSULATION.	
PLUMBING DEMOLITION NOTES	
1. EXISTING SERVICES INDICATED ON THESE DRAWINGS WERE DERIVED FROM EXISTING DRAWINGS AND LIMITED FIELD OBSERVATIONS. THESE DRAWINGS MAY NOT BE INCLUSIVE OF SERVICES THAT EXIST IN THE PROJECT AREA. CONTRACTOR SHALL VERIFY SERVICES, LOCATION, TYPE, AND SIZE PRIOR TO ANY CONSTRUCTION. DEVIATIONS IMPACTING WORK SHOWN ON THESE DOCUMENTS SHALL BE REPORTED TO THE ARCHITECT FOR COORDINATION PRIOR TO CONSTRUCTION.	
2. EXISTING SERVICES, EQUIPMENT, AND FIXTURES TO REMAIN OR TO BE RELOCATED SHALL BE REPAIRED TO ORIGINAL OPERATION OR REPLACED, SHOULD THEY BE DAMAGED DURING CONSTRUCTION.	
3. ALL EXISTING WORK NOT SHOWN ON THESE DRAWINGS (UNLESS NOTED OTHERWISE) SHALL REMAIN AS IS.	
4. ALL PENETRATIONS OR OPENINGS FROM REMOVED PIPES THROUGH EXISTING BUILDING WALLS AND FLOORS SHALL BE SLEEVED AND/OR PATCHED TO MATCH ORIGINAL. SEE ARCHITECTURAL DRAWINGS FOR FINAL FINISHES.	
5. CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGE TO EXISTING PIPING, FIXTURES, MED GAS OUTLETS OR EQUIPMENT DUE TO NEW CONSTRUCTION AND SHALL RESTORE EXISTING WORK TO ITS ORIGINAL CONDITION AT NO COST TO THE OWNER.	
6. CONTINUITY OF SERVICES: EXISTING BUILDINGS WILL REMAIN IN USE DURING CONSTRUCTION OPERATIONS. WHEN AN INTERRUPTION OF AN EXISTING SERVICE IS NECESSARY, CONTRACTOR SHALL COORDINATE WITH AUTHORIZED HOSPITAL PERSONNEL BEFORE MAKING THE NECESSARY INTERRUPTION.

- DEMOLITION NOTES:**
- GENERAL NOTES:
    - REFER TO FRONT END DOCUMENTS, DIVISION 01 SPECIFICATIONS AND SUPPLEMENTAL REQUIREMENTS OF THE CONTRACT FOR ALL APPLICABLE REQUIREMENTS AS IT PERTAINS TO THE DEMOLITION OF THE EXISTING GARAGE AND CONNECTING BRIDGE.
    - REFER TO DIVISION 01 SPECIFICATIONS FOR SUMMARY OF WORK, PROJECT SCHEDULING REQUIREMENTS INCLUDING PHASING OF DEMOLITION AND HAZARDOUS MATERIAL REMOVAL, PROTECTION REQUIREMENTS, TEMPORARY FACILITIES AND OTHER GENERAL REQUIREMENTS.
    - REFER TO PROJECT MANUAL INCLUDING RESPECTIVE TECHNICAL SECTIONS FOR REQUIREMENTS AS THEY PERTAIN TO THE DEMOLITION ACTIVITIES OF THE EXISTING GARAGE AND ANNEX BRIDGE.
    - CONTRACTOR SHALL COORDINATE, SCHEDULE AND OBTAIN APPROVAL FOR ALL UTILITY SHUTDOWNS AND SYSTEM DRAINING WITH THE OWNER, THE OWNER'S REPRESENTATIVE AND THE RESPECTIVE UTILITY COMPANY PRIOR TO COMMENCING WORK. DEMOLITION ACTIVITIES SHALL NOT DISRUPT ADJACENT PROPERTY UTILITY SERVICES UNLESS AUTHORIZED IN WRITING BY THE OWNER.
    - CONTRACTOR SHALL FIELD VERIFY ALL UTILITIES, EQUIPMENT, PIPING SYSTEMS, ETC., AND THEIR POINTS OF ENTRANCE AND EXIT OF THE EXISTING GARAGE PRIOR TO DEMOLITION ACTIVITIES. CONTRACTOR SHALL FIELD VERIFY AND MARK OUT ALL POINTS OF ISOLATION AND TAG ACCORDINGLY PRIOR TO DEMOLITION ACTIVITIES.
    - CONTRACTOR SHALL NOT COMMENCE DEMOLITION ACTIVITIES UNTIL HAZARDOUS MATERIAL REMEDIATION HAS BEEN COMPLETED AND VERIFIED COMPLETE BY THE HAZARDOUS MATERIALS PROFESSIONAL.
    - CONTRACTOR SHALL BE RESPONSIBLE TO PROPERLY DISPOSE OR RECYCLE ALL REMOVED EQUIPMENT, REFRIGERANTS, BALLASTS, ETC., IN ACCORDANCE WITH NEW JERSEY ENVIRONMENTAL PROTECTION AGENCY REQUIREMENTS.
  - PLUMBING DEMOLITION - SCOPE OF WORK:
    - CONTRACTOR SHALL DEMOLISH ALL FIXTURES, PIPING, EQUIPMENT, AND ALL RELATED APPURTENANCES WITHIN THE EXISTING TO BE DEMOLISHED GARAGE. ONLY MAJOR EQUIPMENT AND CONNECTIONS TO SITE ARE SHOWN ON PLAN.
  - FIRE PROTECTION DEMOLITION - SCOPE OF WORK:
    - CONTRACTOR SHALL DEMOLISH ALL PIPING, VALVES, AND ALL RELATED APPURTENANCES WITHIN THE EXISTING TO BE DEMOLISHED GARAGE. ONLY MAJOR EQUIPMENT AND CONNECTIONS TO SITE ARE SHOWN ON PLAN.

CALDWELL PLACE

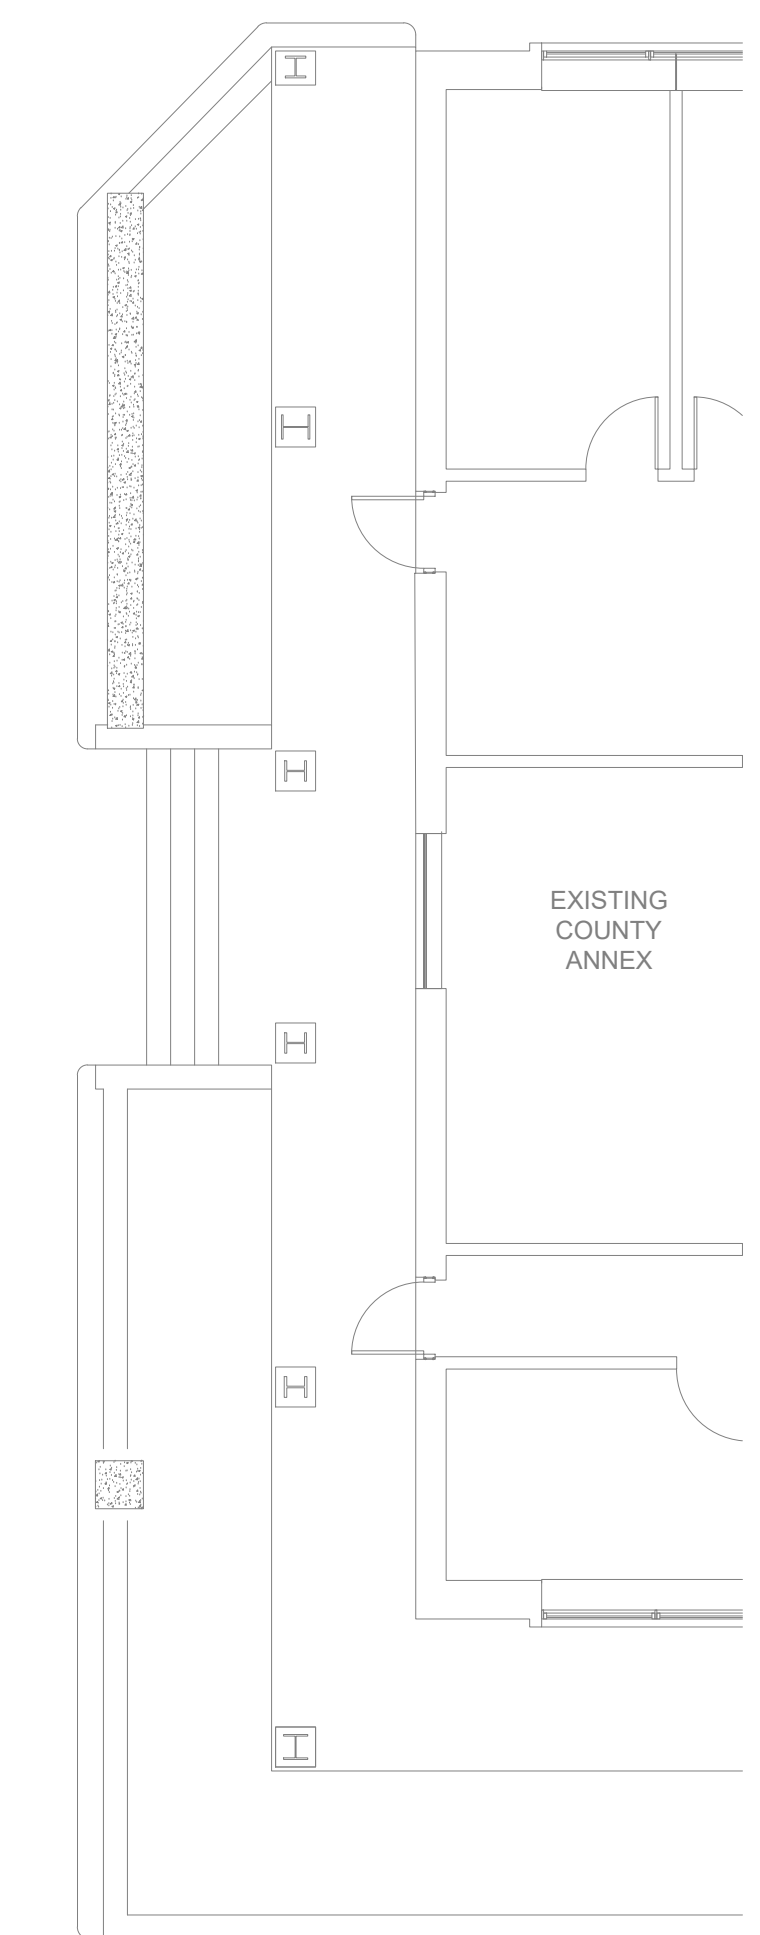

**GENERAL NOTES:**

1. FOR ALL PLUMBING WORK THAT PERTAINS TO THE SCOPE OF THIS PROJECT, REFER TO PLUMBING DRAWING P-001 FOR NOTES, ABBREVIATIONS AND LEGEND. REFER TO DRAWING P-300 FOR EQUIPMENT SCHEDULES AND DRAWING P-400 FOR ADDITIONAL DETAILS AND REQUIREMENTS.
2. CONTRACTOR SHALL PROVIDE ALL REQUIRED PIPING, VALVES & APPURTENANCES TO PROVIDE A COMPLETE WORKING SYSTEM.
3. COORDINATION OF ALL PLUMBING WORK WITH ALL OTHER TRADES IS A REQUIREMENT OF THIS PROJECT.
4. CONTRACTOR SHALL INSTALL ALL (N)EQUIPMENT IN STRICT ACCORDANCE WITH THE MANUFACTURER'S WRITTEN INSTRUCTIONS AND SHALL MAINTAIN ALL CLEARANCES (INSTALLATION AND MAINTENANCE) AS NOTED WITHIN THE WRITTEN INSTRUCTIONS.
5. CONTRACTOR SHALL PROVIDE FIRE-STOPPING AT ALL WALL, CEILING & FLOOR PENETRATIONS TO MEET UL RATING OF CONSTRUCTION PASSING THROUGH. FIRE-STOPPING SHALL BE APPLIED PER MANUFACTURER'S INSTRUCTIONS AND DETAILS. BASIS OF DESIGN: HILTI OR APPROVED EQUAL.
6. ALL PIPING IN PARKING AREAS SHALL BE ROUTED AS HIGH AS POSSIBLE TO MAINTAIN BOTTOM OF PIPE MIN 1'-0" ABOVE GARAGE CLEARANCE HEIGHT.

**NEW WORK KEYED NOTES:**

GENERAL: NEW WORK NOTES ARE INDICATED WITH THE FOLLOWING SYMBOL (1) AND ARE NUMBERED AS FOLLOWS:

- 1 PROVIDE NEW GAS PIPE WITH PIPE SUPPORTS ON ROOF IN ACCORDANCE WITH DETAIL 6/P-400. GAS PIPE SIZES AS INDICATED. GAS PIPING SHALL BE FINISHED WITH TWO COATS OF SAFETY YELLOW PAINT AND PRIMER SUITABLE FOR THE PIPE MATERIAL.

HANGERS & SUPPORTS

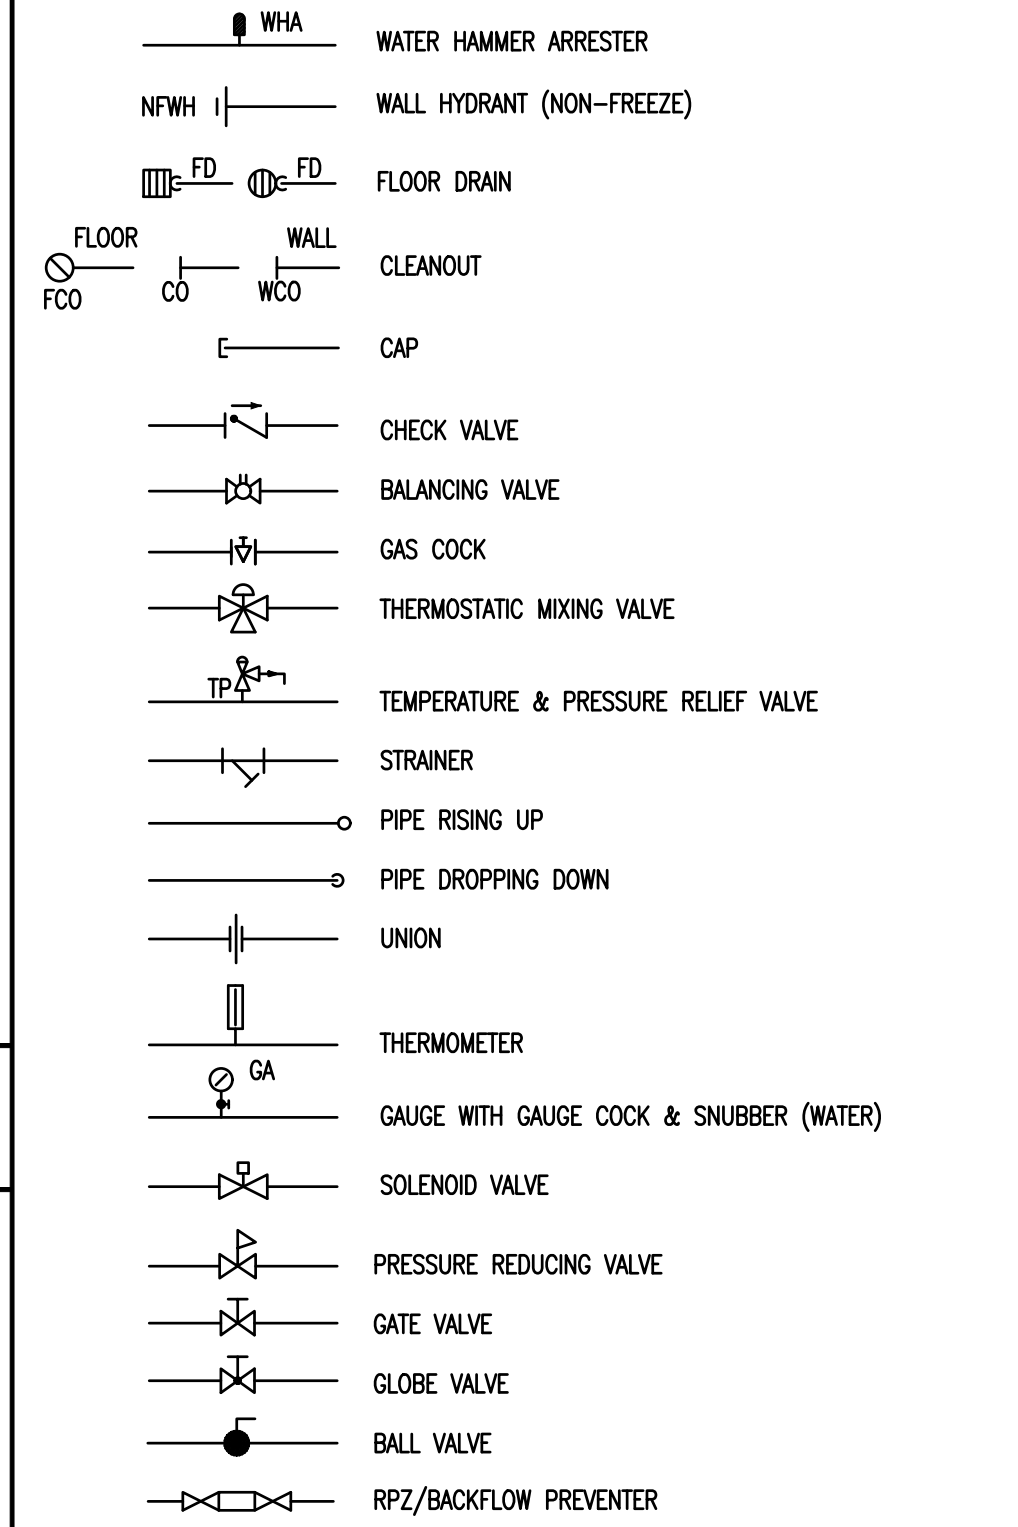

- 1. HANGERS AND ANCHORS SHALL BE SECURELY ATTACHED TO BUILDING CONSTRUCTION AT SUFFICIENTLY CLOSE INTERVALS TO SUPPORT PIPING AND ITS CONTENTS.
A. VERTICAL PIPING FOR CAST IRON SHALL BE SUPPORT AT BASE AND AT EACH STORY HEIGHT.
B. VERTICAL PIPING FOR COPPER SHALL BE SUPPORTED AT EACH STORY HEIGHT BUT NOT MORE THAN 10 FOOT INTERVALS.
C. HORIZONTAL PIPING FOR COPPER SHALL BE SUPPORTED AT 6 FOOT INTERVALS FOR PIPE SIZES 1-1/4" AND SMALL AND AT 10 FOOT INTERVALS FOR PIPE SIZES 1-1/2" AND LARGER...
2. ALL SUPPORTS IN CONTACT WITH COPPER PIPING SHALL BE PLASTIC COATED.
3. INSTALL METAL SHIELDS ON HANGERS SUPPORTING INSULATED PIPE.
4. ALL DOMESTIC WATER AND SANITARY WASTE PIPE SUPPORTS SHALL BE IN ACCORDANCE WITH NSPC CHAPTER 8 MSS SP-58, 69 & 89.
5. PLUMBING SYSTEMS SHALL BE INSTALLED SO AS TO PREVENT STRAINS & STRESS WHICH WILL EXCEED STRUCTURAL STRENGTH OF PIPE...
6. HANGERS, ANCHORS, AND SUPPORTS SHALL BE OF METAL...
7. MINIMUM ROD DIAMETER FOR SINGLE RIGID SUPPORTS SHALL BE AS FOLLOW:
FOR 1-1/4" THRU 2" PIPE: 3/8" DIAMETER
FOR 2-1/2" AND 3" PIPE: 1/2" DIAMETER
FOR 4" AND 5" PIPE: 5/8" DIAMETER
FOR 6" PIPE: 3/4" DIAMETER
FOR 8" PIPE: 7/8" DIAMETER
FOR 14" THRU 18" PIPE: 1" DIAMETER
RODS MAY BE REDUCED ONE SIZE FOR DOUBLE ROD HANGERS (3/8" DIA. MIN.)

NOTES

THE FOLLOWING NOTES APPLY TO ALL "P" PLUMBING DRAWINGS:

- 1. THE ENTIRE PLUMBING INSTALLATION SHALL CONFORM TO THE NATIONAL STANDARD PLUMBING CODE 2018 EDITION INTERNATIONAL FUEL GAS CODE 2018 EDITION, 2018 FGI GUIDELINES AND LOCAL AUTHORITIES HAVING JURISDICTION AND THE CITY OF ELIZABETH, NJ. NOTIFY CITY BUILDING CODE ENFORCEMENT FOR ALL REQUIRED INSPECTIONS.
2. PRIOR TO STARTING CONSTRUCTION, DETERMINE EXACT INVERT ELEVATION, SIZE, DEPTH AND LOCATION OF NEW UTILITIES WHERE CONNECTIONS ARE TO BE MADE OR INTERSECTIONS OCCUR...
3. VERIFY WITH OWNER, PRIOR TO STARTING CONSTRUCTION, THE LOCATION OF ALL ON-SITE UNDERGROUND UTILITIES THAT WILL BE AFFECTED BY THIS WORK.
4. INSTALL ALL WATER HAMMER ARRESTORS IN ACCORDANCE WITH THE LATEST "PLUMBING AND DRAINAGE INSTITUTE STANDARDS" FOR WATER HAMMER ARRESTORS.
5. PROVIDE AND LOCATE ACCESS PANELS IN NON ACCESSIBLE CEILING AND WALLS FOR ALL VALVES, WATER HAMMER ARRESTORS, CLEANOUTS AND ALL OTHER ITEMS THAT REQUIRE ACCESS TO PROPERLY MAINTAIN OR SERVICE THE BUILDING.
6. COORDINATE PLUMBING WORK WITH ALL OTHER TRADES FOR CLEARANCES, ACCESS AND STRUCTURAL INTERFERENCES PRIOR TO INSTALLATION OF ANY SYSTEMS.
7. DOMESTIC WATER PIPE FOR ABOVE GROUND USE SHALL BE ASTM B88 TYPE "L" SEAMLESS COPPER TUBE WITH SOLDER JOINT FITTINGS USING 95-5 SOLDER PER ASTM B32. ALL WATER SERVICE PIPING SHALL BE WATER RATED FOR NOT LESS THAN 200 PSI @ 73°F...
8. DRAWINGS ARE DIAGRAMMATIC AND INDICATE GENERAL ARRANGEMENT OF SYSTEMS AND WORK...
9. DOMESTIC WATER PIPING SHALL BE FLUSHED WITH WATER UNTIL NO DIRTY WATER APPEARS AT THE POINTS OF OUTLETS.
10. POTABLE WATER PIPING SHALL BE DISINFECTED PRIOR TO USE PER NATIONAL STANDARD PLUMBING CODE...
11. DOMESTIC WATER PIPE SHALL CONSIST OF A HYDROSTATIC PRESSURE TEST OF 25 PSIG ABOVE THE WORKING PRESSURE UNDER WHICH IT IS OPERATED FOR NOT LESS THAN 60 MIN.
12. IF LEAKS OCCUR DURING TESTING, REPAIRS SHALL BE MADE AND SYSTEM RETESTED UNTIL NO EVIDENCE OF LEAKS EXIST FOR THE DURATION OF THE TEST.
13. DOMESTIC WATER PIPE SHALL BE INSULATED WITH 1" THICK FIBERGLASS PREFORMED INSULATION WITH VAPOR JACKET AND SELF SEALING TAPE, EQUAL TO OWENS-CORNING ASJ/SSL-2...

PLUMBING DEMOLITION NOTES

- 1. EXISTING SERVICES INDICATED ON THESE DRAWINGS WERE DERIVED FROM EXISTING DRAWINGS AND LIMITED FIELD OBSERVATIONS...
2. EXISTING SERVICES, EQUIPMENT, AND FIXTURES TO REMAIN OR TO BE RELOCATED SHALL BE REPAIRED TO ORIGINAL OPERATION OR REPLACED...
3. ALL EXISTING WORK NOT SHOWN ON THESE DRAWINGS (UNLESS NOTED OTHERWISE) SHALL REMAIN AS IS.
4. ALL PENETRATIONS OR OPENINGS FROM REMOVED PIPES THROUGH EXISTING BUILDING WALLS AND FLOORS SHALL BE SLEEVED AND/OR PATCHED TO MATCH ORIGINAL...
5. CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGE TO EXISTING PIPING, FIXTURES, MED GAS OUTLETS OR EQUIPMENT...
6. CONTINUITY OF SERVICES: EXISTING BUILDING WILL REMAIN IN USE DURING CONSTRUCTION OPERATIONS...

NEW WORK ELECTRICAL NOTES:

1. GENERAL NOTES:

- A. CONTRACTOR SHALL INSTALL ALL (N) EQUIPMENT IN STRICT ACCORDANCE WITH THE MANUFACTURER'S WRITTEN INSTRUCTIONS AND SHALL MAINTAIN ALL CLEARANCES AS NOTED WITHIN THE WRITTEN INSTRUCTIONS.
- B. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE 2017 EDITION OF THE NATIONAL ELECTRICAL CODE.
- C. ALL POWER SHUT DOWNS MUST BE COORDINATED WITH THE PROPERTY/OWNER'S REPRESENTATIVE.
- D. THE ELECTRICAL CONTRACTOR SHALL MAKE AN ON SITE INSPECTION TO DETERMINE THE FULL SCOPE OF WORK AND WORKING CONDITIONS BEFORE SUBMITTING A PROPOSAL.
- E. ALL CIRCUIT BREAKERS SERVING HVAC EQUIPMENT SHALL BE UL LISTED AS 'HACR'.
- F. THE DRAWINGS ARE DIAGRAMMATIC. EXACT LOCATION OF EQUIPMENT, WIRING AND RACEWAYS SHALL BE DETERMINED BY CONTRACTOR SUBJECT TO ARCHITECT APPROVAL.
- G. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE ELECTRICAL CHARACTERISTICS OF ALL NEW EQUIPMENT, MOTORS, ETC. BEFORE INSTALLING CABLING AND RACEWAY. IF THERE ARE ANY DISCREPANCIES BETWEEN THE ACTUAL RATING OF EQUIPMENT AT THE SITE AND THE DRAWINGS, THEN THE ENGINEER SHALL BE NOTIFIED.
- H. ALL PANELS, WIRING DEVICES, BOXES, AND ENCLOSURES LOCATED INDOORS SHALL BE NEMA 1.
- I. THE ELECTRICAL CONTRACTOR TO PROVIDE MOUNTING SUPPORTS FOR ALL DISCONNECT SWITCHES MOUNTED ON ROOF. USE P1000 UNISTRUT FOR ALL INDOOR SUPPORTS AND GALVANIZED P1000 UNISTRUT FOR ALL OUTDOOR SUPPORTS.
- J. ALL RACEWAYS PENETRATING FIRE RATED PARTITIONS, WALLS, AND CEILINGS SHALL BE SEALED USING APPROVED FIRE RATED SEALANT TO MATCH THE REQUIRED WALL FIRE RATING.
- K. THE ELECTRICAL CONTRACTOR SHALL SECURE FROM OTHER CONTRACTORS ON THE PROJECT: SHOP DRAWINGS TO VERIFY CHARACTERISTICS OF ALL EQUIPMENT TO BE WIRED. IF THE CONTRACTOR FINDS DISCREPANCIES BETWEEN THE SHOP DRAWINGS AND THE ELECTRICAL PLANS, THE ELECTRICAL CONTRACTOR SHALL NOTIFY THE ENGINEER PROMPTLY. THE CONTRACTOR SHALL BE RESPONSIBLE FOR CORRECTIONS TO THE ELECTRICAL INSTALLATION IF THE DRAWING REVIEW IS NOT COMPLETED BY THE CONTRACTOR.
- L. THE CONTRACTOR SHALL SUBMIT TO THE OWNER: CERTIFICATES OF INSPECTION FOR THE ELECTRICAL INSTALLATION FROM AN APPROVED INSPECTION AGENCY UPON COMPLETION OF ELECTRICAL WORK.

NEW WORK ELECTRICAL NOTES:

GENERAL NOTES CONTINUED:

- M. THE ELECTRICAL SYSTEM AFFECTED BY THIS WORK SHALL BE TESTED FOR PROPER GROUNDING AND OPERATION. TEST HALL VERIFY THAT THE SYSTEM HAS NO SHORT CIRCUITS, OPENS, OVERLOADS, OR PANEL IMBALANCES. THE CONTRACTOR SHALL FURNISH ALL LABOR, MATERIALS AND TEST INSTRUMENTS. ALL EQUIPMENT AND WIRING SYSTEMS SHALL BE GROUNDED IN ACCORDANCE WITH THE REQUIREMENTS OF THE NATIONAL ELECTRICAL CODE.
- N. ALL WORK SHALL BE INSTALLED SO AS TO BE READILY ACCESSIBLE FOR OPERATION MAINTENANCE, AND REPAIR. MINOR DEVIATIONS FROM THE PLANS MAY BE MADE TO ACCOMPLISH THIS, SUBJECT TO THE APPROVAL OF THE ENGINEER.
- O. THE ELECTRICAL CONTRACTOR SHALL USE MAXIMUM OF 6' OF FLEXIBLE CONDUIT FOR FOR EQUIPMENT SUBJECT TO VIBRATION, NOISE TRANSMISSION, OR MOVEMENT, AND FOR ALL MOTORS. USE LIQUID TIGHT FLEXIBLE CONDUIT IN WET OR DAMP LOCATIONS. INSTALL SEPARATE GROUND CONDUCTOR ACROSS FLEXIBLE CONNECTIONS.
- P. ALL WIRING SHALL BE COPPER CONDUCTOR WITH 600 VOLT TYPE THHN, OR THHN INSULATION IN CONDUIT. THE MINIMUM SIZE WIRE FOR POWER CIRCUITS SHALL BE #12 AWG. SOLID CONDUCTORS SHALL BE USED FOR NUMBER 10 AND 12; STRANDED CONDUCTORS SHALL BE USED FOR NUMBER 8 AND LARGER. THE CONTRACTOR MAY USE METAL CLAD TYPE 'MC' WHERE ALLOWED BY THE NATIONAL ELECTRICAL CODE AND APPROVED FOR USE BY THE AUTHORITIES HAVING JURISDICTION.
- Q. ALL MATERIALS AND EQUIPMENT FURNISHED FOR THIS PROJECT SHALL BE NEW, LISTED, AND APPROVED BY UL.
- R. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS, INSPECTIONS, LICENSES AND PAY UTILITY COMPANY FEES.
- S. ALL FUSED AND NON-FUSED DISCONNECT SWITCHES SHALL HAVE: 600 VOLT RATING FOR 480 VOLT CIRCUITS. SIZE FUSES TO COMPLY WITH NAMEPLATE RATING OF EQUIPMENT SERVED.

2. NEW WORK KEYED NOTES:

GENERAL: NEW WORK NOTES ARE INDICATED WITH THE FOLLOWING SYMBOL (○) AND ARE NUMBERED AS FOLLOWS:

- ① ELECTRICAL CONTRACTOR SHALL PROVIDE AND INSTALL NEW 30AMP 3 POLE CIRCUIT BREAKER IN EXISTING LOCAL 480V 3 PHASE PANEL TO ACCOMMODATE INSTALLATION OF NEW BOOSTER PUMP INDICATED ON PLAN. ELECTRICAL CONTRACTOR SHALL PROVIDE 3 #8 & 1 #8 GND - 1" CONDUIT AND ALL APPURTENANCES NECESSARY FOR A COMPLETE INSTALLATION.
- ② ELECTRICAL CONTRACTOR SHALL PROVIDE AND INSTALL NEW 30AMP NEMA 1 FUSED DISCONNECT ADJACENT TO NEW BOOSTER PUMP SKID FOR FINAL TERMINATION.

**3**  
THROUGH-PENETRATION FIRESTOP  
SYSTEM PER UL C-AJ-1226  
P-300 SCALE: NTS

1. FLOOR OR WALL ASSEMBLY - MIN 4-1/2 IN. THICK REINFORCED LIGHTWEIGHT OR NORMAL WEIGHT (100-150 PCF) CONCRETE. WALL MAY ALSO BE CONSTRUCTED OF ANY UL CLASSIFIED CONCRETE BLOCKS. MAX DIAMETER OF OPENING IS 32 IN.
2. METALLIC SLEEVE - (OPTIONAL) NOM 32 IN. DIAMETER (OR SMALLER) SCHEDULE 40 (OR HEAVIER) STEEL SLEEVE CAST OR GROUTED INTO FLOOR OR WALL ASSEMBLY, FLUSH WITH FLOOR OR WALL SURFACES OR EXTENDING A MAX OF 3 IN. ABOVE FLOOR OR BEYOND BOTH SURFACES OF WALL.
  - 2A. SHEET METAL SLEEVE - (OPTIONAL) MAX 6" DIA., MIN. 26 GA. GALV. STEEL PROVIDED WITH A 26 GA. GALVANIZED STEEL SQUARE FLANGE SPOT WELDED TO THE SLEEVE AT APPROXIMATE MID-HEIGHT AND SIZED TO BE A MIN OF 2" LARGER THAN THE SLEEVE DIAMETER. THE SLEEVE IS TO BE CAST IN PLACE AND MAY EXTEND A MAX OF 4" ABOVE THE BOTTOM OF THE DECK AND A MAX OF 1" ABOVE THE TOP SURFACE OF THE CONCRETE FLOOR.
  - 2B. SHEET METAL SLEEVE - (OPTIONAL) - MAX 12" DIAMETER, MIN. 24 GA. GALVANIZED STEEL, PROVIDED WITH A 24 GA. GALVANIZED STEEL SQUARE FLANGE SPOT WELDED TO THE SLEEVE AT APPROXIMATE MID-HEIGHT AND SIZED TO BE A MIN OF 2" LARGER THAN THE SLEEVE DIAMETER. THE SLEEVE IS TO BE CAST IN PLACE AND MAY EXTEND A MAXIMUM OF 4" BELOW THE BOTTOM OF THE DECK AND A MAX. OF 1" ABOVE THE TOP SURFACE OF THE CONCRETE FLOOR.
3. THROUGH-PENETRANT - ONE METALLIC PIPE, TUBE OR CONDUIT TO BE INSTALLED EITHER CONCENTRICALLY OR ECCENTRICALLY WITHIN THE FIRESTOP SYSTEM. THE ANNULAR SPACE BETWEEN PENETRANT AND PERIPHERY OF OPENING SHALL BE MINIMUM 0" (POINT CONTACT) TO MAX 1-7/8" PENETRANT MAY BE INSTALLED WITH CONTINUOUS POINT CONTACT. PENETRANT TO BE RIGIDLY SUPPORTED ON BOTH SIDES OF FLOOR OR WALL ASSEMBLY. THE FOLLOWING TYPES AND SIZES OF METALLIC PENETRANTS MAY BE USED:
  - A. STEEL PIPE - NOM. 30" DIA. (OR SMALLER) SCHEDULE 10 (OR HEAVIER) STEEL PIPE.
  - B. IRON PIPE - NOM. 30" DIA. (OR SMALLER) CAST OR DUCTILE IRON PIPE.
  - C. COPPER PIPE - NOM. 6" DIA. (OR SMALLER) REGULAR (OR HEAVIER) COPPER PIPE.
  - D. COPPER TUBING - NOM. 6" DIA. (OR SMALLER) TYPE L (OR HEAVIER) COPPER TUBING.
  - E. CONDUIT - NOM. 6" DIA. (OR SMALLER) STEEL CONDUIT.
  - F. CONDUIT - NOM. 4" DIA. (OR SMALLER) STEEL ELECTRICAL METALLIC TUBING (EMT).
4. FIRESTOP SYSTEM - THE FIRESTOP SYSTEM SHALL CONSIST OF THE FOLLOWING:
  - A. PACKING MATERIAL - MIN. 4" THICKNESS OF MIN. 4 PCF MINERAL WOOL BATT. INSULATION FIRMLY PACKED INTO OPENING AS A PERMANENT FORM. PACKING MATERIAL TO BE RECESSED FROM TOP SURFACE OF FLOOR OR SLEEVE OR FROM BOTH SURFACES OF WALL OR SLEEVE AS REQUIRED TO ACCOMMODATE THE REQUIRED THICKNESS OF FILL MATERIAL.
  - B. FILL, VOID OR CAVITY MATERIAL - SEALANT - MIN 1/4" THICKNESS OF FILL MATERIAL APPLIED WITHIN THE ANNULUS, FLUSH WITH TOP SURFACE OF FLOOR OR SLEEVE OR WITH BOTH SURFACES OF WALL OR SLEEVE. AT THE POINT OR CONTINUOUS CONTACT LOCATIONS BETWEEN PENETRANT AND CONCRETE OR SLEEVE, A MIN 1/4" DIA. BEAD OF FILL MATERIAL SHALL BE APPLIED AT THE CONCRETE OR SLEEVE/PIPE PENETRANT INTERFACE ON THE TOP SURFACE OF FLOOR AND ON BOTH SURFACES OF WALL.

**FIRE ALARM GENERAL NOTES:**

1. ALL ELECTRICAL WORK TO BE INSTALLED IN ACCORDANCE WITH THE 2017 EDITION OF THE NATIONAL ELECTRICAL CODE ADOPTED BY THE UNIFORM CONSTRUCTION CODE - STATE OF NEW JERSEY AND ANY OTHER PARTY HAVING JURISDICTION.
2. THE FIRE ALARM SYSTEM SHALL COMPLY WITH ALL APPLICABLE FEDERAL, STATE AND LOCAL CODE REQUIREMENTS AND ANY OTHER PARTY HAVING JURISDICTION.
3. ALL ELECTRICAL AND EQUIPMENT FOR THE PROJECT SHALL BE NEW AND APPROVED BY UNDERWRITERS LABORATORY (UL) OR ANY OTHER NATIONALLY RECOGNIZED TESTING AGENCY UNLESS NOTED OTHERWISE ON DRAWINGS.
4. ALL NECESSARY PERMITS, INSPECTIONS, AND LICENSES SHALL BE PROCURED BY THE CONTRACTOR AND ALL PERMIT AND INSPECTION FEES PAID BY OWNER. SUBMIT TO THE OWNER DUPLICATE CERTIFICATES OF INSPECTION FROM THE APPROVED INSPECTION AGENCY.
5. UPON COMPLETION OF THE WORK, THE ENTIRE WIRING SYSTEM SHALL BE FREE FROM GROUNDS, SHORT CIRCUITS, OPENS, OVERLOADS AND IMPROPER VOLTAGES.
6. PRIOR TO FINAL ACCEPTANCE OF THE WORK, A WRITTEN STATEMENT SHALL BE SUBMITTED TO THE OWNER GUARANTEEING ALL EQUIPMENT AND SYSTEMS AGAINST DEFECTIVE MATERIAL AND WORKMANSHIP FOR ONE (1) YEAR FROM THE DATE OF ACCEPTANCE. UPON NOTICE, ALL DEFECTIVE EQUIPMENT, MATERIALS AND SYSTEMS SHALL BE PROMPTLY REPAIRED AT NO EXPENSE TO THE OWNER.
7. THIS SET OF DRAWINGS IS DIAGRAMMATIC IN NATURE AND INDICATES THE GENERAL ARRANGEMENT OF THE SYSTEM AND APPROXIMATE LOCATIONS OF THE EQUIPMENT. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO DETERMINE THAT THERE IS ADEQUATE SPACE AT THE LOCATIONS INDICATED FOR ALL EQUIPMENT PRIOR TO INSTALLATION OF SAME. THE CONTRACTOR SHALL BE RESPONSIBLE TO VERIFY ALL DIMENSIONS IN THE FIELD, PRIOR TO THE COMMENCEMENT OF CONSTRUCTION.
8. ALL DEVICES OR EQUIPMENT SHOWN IN SYMBOL FORM SHALL BE WIRED TO ITS RESPECTIVE PANEL.
9. ALL WIRING, CONNECTIONS AND DEVICES SHALL BE PROVIDED TO COMPLY WITH THE GROUNDING REQUIREMENTS OF THE NATIONAL ELECTRICAL CODE AND THE DRAWINGS UNLESS NOTED OTHERWISE. ALL EXPOSED NON-CURRENT CARRYING ELECTRICAL EQUIPMENT METALLIC PARTS, RACEWAY SYSTEMS AND WIRING SYSTEM GROUNDING CONDUCTORS SYSTEM SHALL BE GROUNDED.
10. THE ELECTRICAL CONTRACTOR SHALL PAINT RED IN COLOR ALL JUNCTION BOXES AND CONDUIT ASSOCIATED WITH THE FIRE ALARM SYSTEM. LABEL WITH PERMANENT MARKER ALL JUNCTION BOXES AND OUTLET BOXES WITH CIRCUIT NUMBER, PANEL IDENTIFICATION OR ADDRESS AS REQUIRED.
11. ALL CUTTING AND PATCHING REQUIRED FOR THE FIRE ALARM WORK SHALL BE THE RESPONSIBILITY OF THE FIRE ALARM CONTRACTOR.
12. ALL HOLES OR VOIDS CREATED TO ROUTE CONDUIT THROUGH FIRE RATED FLOORS AND WALLS SHALL BE SEALED WITH AN INTUMESCENT MATERIAL CAPABLE OF EXPANDING UP TO 8 TO 10 TIMES WHEN EXPOSED TO A TEMPERATURE OF 250 DEGREES FAHRENHEIT AND ABOVE. ACCEPTABLE SEALING MATERIAL SUCH AS 3M FIRE BARRIER CAULK, PUTTY, STRIP AND SHEET FORM SHALL HAVE I.C.B.O. AND BOCA APPROVED RATING OF 3 HOURS PER ASTM E-814 (U.L. 1479) AS PER NEC ART. 300-21.
13. A COMPLETE SET OF "AS-BUILT" DRAWINGS, (1) SET IN HAND COPY REPRODUCIBLE AND (1) SET OF ELECTRONIC FILES PRODUCED IN PDF FORMAT SHALL BE FURNISHED TO THE OWNER UPON PROJECT COMPLETION.
14. ALL EQUIPMENT, DEVICES AND CIRCUITS SHALL BE LABELED ACCORDING TO OWNER REQUIREMENTS.
15. FIRE ALARM CABLE LOCATED ABOVE ACCESSIBLE CEILING SHALL BE INDEPENDENTLY SUPPORTED FROM THE STRUCTURE. CABLES SHALL NOT BE LAID ON CEILING PANELS.
16. ALL WIRING AND EQUIPMENT INSTALLED IN DUCTS, PLENUMS AND OTHER AIR HANDLING SPACES SHALL BE PLENUM RATED AND CONFORM TO NEC, ARTICLE 300-22.
17. DO NOT INSTALL ANY A.C. CURRENT CARRYING CONDUCTORS CLOSE TO OR IN THE SAME RACEWAY WITH FIRE ALARM SYSTEM CONDUCTORS.
18. THE FIRE ALARM CONTRACTOR SHALL ASSURE THAT ANY FIRE ALARM DEVICE OR PRODUCT WHICH IS TO BE RELOCATED OR REUSED IS IN PROPER WORKING CONDITION IN ACCORDANCE WITH INSTRUCTIONS INCLUDED IN ITS LISTING OR LABELING. ANY DEVICE OR PRODUCT FOUND TO BE DEFECTIVE OR DAMAGED SHALL BE REPLACED WITH NEW.
19. SMOKE DETECTORS SHALL NOT BE INSTALLED UNTIL AFTER THE CONSTRUCTION CLEAN-UP IS COMPLETE AND FINAL DETECTORS THAT HAVE BEEN INSTALLED PRIOR TO FINAL CLEAN-UP BY ALL TRADES SHALL BE CLEANED OR REPLACED.
20. THE FIRE ALARM SYSTEM SHALL NOT EXCEED 70% OF ITS RATED CAPACITY.
21. SUBMIT FIRE ALARM SYSTEM SHOP DRAWINGS TO THE ENGINEER FOR APPROVAL.
22. ALL FIRE ALARM CABLING SHALL BE "FPLP" RATED OR RUN IN A MINIMUM 3/4" CONDUIT.
23. ALL NEW, RELOCATED AND EXISTING TO REMAIN FIRE ALARM DEVICES THAT ARE WITHIN THE LIMITS OF THIS PROJECT SHALL BE IDENTIFIED ON THE UPDATED FIRE ALARM GRAPHICS AT THE FCC.
24. CONTRACTOR SHALL PREPARE SHOP DRAWINGS, AT HIS OWN EXPENSE, PREPARED BY A QUALIFIED ENGINEER LICENSED IN THE STATE OF NEW JERSEY. SHOP DRAWINGS SHALL BE SUBMITTED FOR REVIEW TO THE ENGINEER PRIOR TO PERFORMANCE.
25. ACTUATION OF ANY NEW FIRE ALARM DEVICES SHALL SEND AN ALARM SIGNAL TO THE BUILDING'S EXISTING FIRE COMMAND CENTER (FCC).
26. ALL WIRING SHALL COMPLY WITH PROJECT SPECIFICATIONS, 2017 NEC, 2016 NFPA 72, 2018 IBC (NEW JERSEY EDITION), ADAAG, UL 1971, AND THE REQUIREMENTS OF THE LOCAL AUTHORITIES HAVING JURISDICTION. ALL WIRING IN PUBLIC AREAS SHALL BE CONCEALED. ALL EXPOSED WIRING OR WIRING INSTALLED IN LOCATIONS SUBJECT TO DAMAGE SHALL BE INSTALLED IN METAL RACEWAY PAINTED RED. ALL WIRING AND RACEWAYS SHALL BE INSTALLED IN A NEAT AND PROFESSIONAL MANNER.
27. ALL WIRE AND CABLE SHALL HAVE A WIRE MARKER ON EACH END, OR EQUAL. ALL MARKERS SHALL BE TYPED. SHIELDS ON ALL SHIELDED CABLE SHALL BE CONTINUOUS, GROUNDED AT THE FIRE ALARM CONTROL PANEL ONLY, AND ISOLATED FROM GROUND ELSEWHERE.
28. ELECTRICAL CONTRACTOR SHALL BE RESPONSIBLE FOR ALL CUTTING PATCHING AND PAINTING REQUIRED FOR COMPLETE FIRE ALARM SYSTEM INSTALLATION.
29. MOUNTING FOR ALL DEVICES SHALL COMPLY WITH IBC 2018 (NEW JERSEY EDITION), 2016 NFPA 72, 2017 NEC, AND ADAAG.
30. FOR CONDUIT APPLICATIONS, USE ELECTRICAL METALLIC TUBING (EMT) AT ALL LOCATIONS INDOORS AND SCHEDULE 80 PVC CONDUIT OUTDOORS. ALL CONDUIT SIZE SHALL BE 3/4" MINIMUM.
31. CONTRACTOR SHALL REPAIR/PATCH AND /OR REPAINT TO MATCH ADJACENT AREAS, ANY AREAS DAMAGED (OR WHERE ITEMS WERE REMOVED/DEMOLISHED) BY WORK OF THIS CONTRACT.
32. THE FIRE ALARM VENDOR MUST CALCULATE THE NOTIFICATION APPLIANCES CANDELA RATINGS AND DESIGNATE THEM ON THE SHOP DRAWINGS. ALL STROBE SETTINGS MUST COMPLY WITH 2016 NFPA 72 REQUIREMENTS.
33. ACCEPTANCE TESTING MUST BE PERFORMED IN ACCORDANCE WITH 2016 NFPA 72 AS ADOPTED BY THE STATE OF NEW JERSEY.
34. ELECTRICAL CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING ALL PROGRAMMING NECESSARY FOR THE MODIFIED FIRE ALARM SYSTEM. ALL FIRE ALARM SYSTEM PROGRAMMING SHALL BE PERFORMED BY A TECHNICIAN CERTIFIED BY THE FIRE ALARM SYSTEM'S MANUFACTURER TO PERFORM THIS WORK. SUBMIT AS PART OF THE FIRE ALARM SHOP DRAWING ALL FIRE ALARM TECHNICIAN'S MANUFACTURER CERTIFICATIONS.
35. UPON COMPLETION OF FINAL TESTING, THE FIRE ALARM SYSTEM MANUFACTURER SHALL SUBMIT ELECTRONIC AND HARD COPY SETS OF RECORD DRAWINGS DETAILING AS-BUILT CIRCUITING AND INCORPORATING ALL FIELD AND DESIGN DIRECTIVES GIVEN THROUGHOUT THE PROJECT. ELECTRONIC AS-BUILT DRAWINGS SHALL BE IN PDF FORMAT.

**FIRE ALARM PERFORMANCE NOTES:**

1. PROVIDE THE SERVICES OF A QUALIFIED FIRE ALARM CONTRACTOR/VENDOR WITH A MINIMUM OF 10-YEARS OF CERTIFIABLE PROFESSIONAL EXPERIENCE WITH EST FIRE ALARM SYSTEMS AND IS LOCATED WITHIN 100-MILES OF THE PROJECT SITE.
2. ELECTRICAL AND FIRE ALARM CONTRACTORS SHALL PROVIDE ALL MANPOWER, EQUIPMENT, AND LABOR AS NECESSARY TO PROVIDE A COMPLETE AND OPERABLE SYSTEM. TEST AND ADJUST NEW FIRE ALARM SYSTEM AS NOTED BELOW.
3. ALL FIRE ALARM TESTING SHALL OCCUR BETWEEN THE HOURS OF 9:00AM AND 4:00PM WEEKDAYS, EXCLUDING CITY HOLIDAYS.
4. TEST AND ADJUST EACH HOME RUN CIRCUIT INDEPENDENTLY FROM OTHER HOME RUNS. ADJUST SYSTEM GAIN SO THAT ALL FIRE ALARM SPEAKERS PROVIDE 100DB SPL, 1' WEIGHTED AT 5- FEET ABOVE FINISHED FLOOR. USE A CALIBRATED SOUND PRESSURE METER (PER 2016 NFPA 72) DURING FIRE ALARM SYSTEM TESTS AND ADJUSTMENTS. BEGIN ALL TESTS WITH SYSTEM GAIN COMPLETELY OFF. DO NOT ACTIVATE OR TEST SYSTEM WITH AMPLIFIER GAINS FULLY OPEN.
5. DEMONSTRATE SYSTEM PERFORMANCE TO THE OWNER AND LOCAL FIRE INSPECTOR AT THE SPECIFIED GAIN SETTINGS. ADJUST SOUND LEVELS AS NECESSARY TO SATISFY THE OWNER AND LOCAL FIRE INSPECTOR.
6. FIRE ALARM CONTRACTOR SHALL PROVIDE NEW FIRE ALARM STROBE DEVICES IN EACH ADA GUESTROOM'S LIVING/SLEEPING AREAS AND IN ALL ASSOCIATED ADA GUESTROOM'S BATHROOMS, WHERE EXISTING FIRE ALARM STROBES ARE ALREADY PRESENT. CONTRACTOR MAY TEST AND CONFIRM PROPER OPERATION OF THE EXISTING DEVICE, AND THEN REUSE THE EXISTING FIRE ALARM STROBE BEDROOM IN LIEU OF INSTALLING A NEW DEVICE.
7. FIRE ALARM CONTRACTOR SHALL TEST ALL GUEST FLOORS' EXISTING GUESTROOM AND PUBLIC AREA SMOKE DETECTORS, MANUAL PULL STATIONS, DUCT SMOKE DETECTORS, HEAT DETECTORS AND FIRE PROTECTION WATERFLOW SWITCHES TO CONFIRM PROPER OPERATION. CONTRACTOR SHALL REPORT TO OWNER ANY FIRE ALARM DEVICE WHICH DOES NOT PROPERLY PASS TESTING AND REQUIRES SERVICE/MAINTENANCE.
8. CONTRACTORS SHALL CONTINUOUSLY PROTECT AND MAINTAIN OPERATIONS OF BUILDING'S EXISTING FIRE ALARM SYSTEM THROUGHOUT CONSTRUCTION, UNTIL THE BUILDING'S FIRE ALARM SYSTEMS WORK IS SUCCESSFULLY COMPLETED, TESTED AND FINAL INSPECTIONS HAVE BEEN PERFORMED BY THE LOCAL INSPECTORS.
9. ANY REQUIRED POWER CONNECTIONS, CONDUCTOR TYPES AND SIZES, BATTERY AND VOLTAGE DROP CALCULATIONS ARE TO BE SHOWN ON THE FIRE ALARM SHOP DRAWINGS.
10. FIRE ALARM CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING A COMPLETE SET OF PROJECT SUBMITTALS INCLUDING BUT NOT LIMITED TO FLOOR PLANS, BATTERY CALCULATIONS, INSTALLATION DETAILS, ETC., TO SATISFY REQUIREMENTS OF THE LOCAL INSPECTION AGENCY FOR PERMITTING.

NOTES:  
1. ALL SYMBOLS OR ABBREVIATIONS ARE NOT NECESSARILY USED ON THE CONTRACT DRAWINGS.  
2. THE SYMBOLS FOR WORK TO BE DEMOLISHED AND REMOVED ARE THE SAME AS THOSE ABOVE EXCEPT THEY ARE DRAWN WITH A DASHED LINETYPE.

- FIRE ALARM SYSTEM RISER NOTES:**
1. THIS RISER DIAGRAM IS BASED ON AN ADDRESSABLE FIRE ALARM CONTROL PANEL FOR ASME 17.1 ELEVATOR LIFE SAFETY INTERFACE AND DRY SPRINKLER MONITORING. THIS DIAGRAM IS SCHEMATIC ONLY AND DOES NOT REPRESENT ACTUAL DEVICE QUANTITIES UNLESS OTHERWISE NOTED. IT IS A REPRESENTATION OF THE INTENDED SYSTEM FOR THIS PROJECT. SEE THE FLOOR PLANS FOR EXACT QUANTITIES AND LOCATIONS OF FIELD EQUIPMENT. SEE THE PROJECT SPECIFICATIONS FOR PERFORMANCE AND COMPLIANCE REQUIREMENTS. QUANTITY AND SIZE OF CONDUCTORS TO BE DETERMINED BY SIEMENS.
  2. THE SYSTEM SHALL BE UL LISTED FOR FIRE [UL864] AND SUPPORT GAS ALARM EVENTS FOR CO DETECTION, PER NFPA 72.
  3. PROVIDE AUXILIARY FIRE ALARM SIGNAL(S) W/ BATTERY BACKUP AS REQUIRED TO SUPPORT NOTIFICATION APPLIANCE LOADS.
  4. ALL WIRING REQUIREMENTS SHALL BE AS PER MANUFACTURER'S RECOMMENDATIONS.
  5. PROVIDE END OF LINE RESISTERS AS NECESSARY.
  6. ALL ADDRESSABLE SLC'S SHALL BE NFPA 72 CLASS B, STYLE 4.
  7. ALL NOTIFICATION NACS SHALL BE NFPA 72 CLASS B, STYLE Y.
  8. STROBE CANDELAS MUST BE SIZED PER NFPA 72 REQUIREMENTS BY THE FIRE ALARM VENDOR AND SHOWN ON THE SHOP DRAWINGS.
  9. ALL PANEL BATTERY BACKUP (STANDBY & ALARM) SHALL BE SIZED PER NFPA 72 REQUIREMENTS.
  10. A COMPLETE SET FOR FIRE ALARM PRODUCT CUTSHEETS, FIRE ALARM SHOP DRAWINGS, AND BATTERY/ VOLTAGE/ LOAD CALCULATIONS MUST BE SUBMITTED AND APPROVED PRIOR TO INSTALLATION.
  11. PRIMARY FACP POWER FED VIA BRANCH CIRCUIT(S) DEDICATED FOR THE FIRE ALARM SYSTEM.
  12. ALL EARTH GROUND PANEL CONNECTIONS REQUIRED BY THE MANUFACTURER SHALL BE CONNECTED TO THE BUILDING'S GROUND. PANEL NEUTRAL OR GROUNDING TO CONDUIT/ BUILDING STEEL NOT ACCEPTABLE.
