

## Make Your Own Apple Tree!

One of the things people look forward to every fall is visiting the apple orchard. Since it's still too early to pick apples, we settled for making our own apple trees from toilet paper rolls, tissue paper, and a marker. This 3-D apple tree craft is so easy that you may want to make an entire forest!

### Materials Needed:

1. Paper Towel or Toilet Paper Tube
2. Scissors
3. Markers or Crayons
4. Green Tissue or Construction Paper
5. Tape or Glue (Optional)

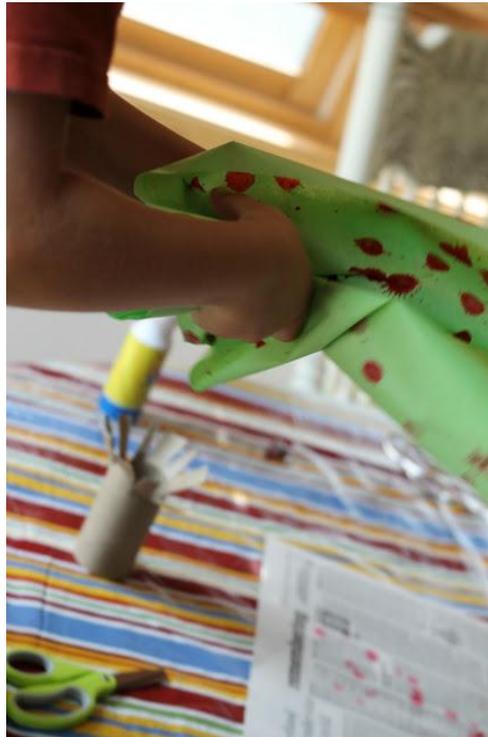

We started by making our "apples" by coloring red dots on the green tissue paper. It's recommended to put something underneath because the ink may soak through the paper.

Next, cut (or tear) some short slits from one end of the paper tube and bent them outward to create the branches.

Finally, crumple the green paper loosely and set it on top of your tree. You may use a little tape or glue to secure it if you wanted but I just tucked some of the tissue paper inside.

FUN TIP: Try using different colors to make different fruit trees like orange, yellow, or purple!  
Complete your forest by using different size tubes!!
